SIR,—I beg leave, through your journal, to call the attention of my fellow shareholders in the London and South-Western Railway, to the imperative necessity of a strict inquiry being instituted into the expenditure of this Company, if they ever hope to receive a dividend at all proportioned to its large and increasing traffic. In point of receipts, it now invariably stands fourth on your traffic list, and during the 17 past weeks of the present half-year, has actually yielded 125,283*l.*, against 112,542*l.* in the corresponding weeks of last year, being an increase of 12,741*l.*, or 750*l.* a week, which is I believe considerably more than any other railway has done; and yet, judging from the experience of the past, I doubt not that this large increase of revenue will be all frittered away, and the shareholders get a paltry dividend as before of *thirty shillings*. To show how uniformly the expenses swallow up an increasing revenue, I give a statement of the last four half-yearly balances:—

Half-year ending	Revenue.	Expenses.	Per centage.
1840, December 31	£144,462	£67,475	46¾
1841, June 30	123,017	60,173	49
,, December 31	153,307	70,284	46
1842, June 30	141,451	65,230	46⅛

In all railways, it appears to me that, other things being equal, a long line should be worked at a smaller per-centage than a short one, and one having a large traffic with only a small one. I would not, therefore, think it right to complain of the South-Western expenses not bearing so small a per-centage to their receipts as those of the London and Birmingham, which for the last half-year only amounted to 134,645*l.* on a receipt of 390,109*l.*, or 34½ per cent.; but I know of no reason whatever why the expenses of the South-Western should exceed those of the York and North Midland, which for last half-year were only 14,648*l.* on a traffic receipt of 39,299*l.*, or 37¼ per cent.; and yet the South-Western, as before stated, on the magnificent receipt of 141,451*l.* actually paid 65,230*l.* of expenses, or 46⅛ per cent.—the expenses of the South-Western thus for these corresponding periods exceeding those of the London and Birmingham 11⅝ per cent., and those of the York and North Midland 8 9-8ths per cent.

If the expenditure were reduced to the economical standard of the York and North Midland, the dividend for the last half-year, instead of being only *thirty shillings*, would have been *thirty-five shillings*, and have left a balance of 1,535*l.*, thus—

Balance of former half-year.....		£8,751
Revenue		141,451
		£150,202
Expenses 37¼ per cent	£52,720	
Interest.....	15,601	
		68,321
		81,881
Dividend 35*s.* on 45,912 shares		80,346
Balance.....		£1,535

For the half-year ending 31st December next, at the same rate of expenditure, the following would be the result, without taking into account the small balance on hand of the former half-year, or the reduction of interest, which, taking it at 4 instead of 5 per cent., should amount to more than 3,000*l.* on the half-year.

Receipt for the 17 past weeks.....		£125,283
Or, 7,639*l.* per week.		
For 9 weeks, say at 4,800*l.* per week		43,200
		£168,483
Income Tax on 69,300*l.* at 7d. per £	£2,021	
Expenses, 37¼ per cent.....	62,196	
Interest, as before, at 5 per cent. ..	15,600	
		80,417
		£88,066
Dividend 37*s.* 6d. on 45,912 shares		86,085
Balance.....		£1,981

I trust that an examination of these statements may convince the shareholders that they are, by their supineness, allowing the revenue of what is in my opinion the best and most promising as to increase of traffic of all the railways, to be thrown away from want of economical management. There are many reasons why a railway having a metropolitan terminus should cost more than a provincial one; but being made, I know of none why it ought not to be with equal cheapness worked. In no item, except in the article of coke, should the expenditure of the South-Western exceed that of the York and North Midland, and the immense difference of receipt being nearly four times the amount should more than counterbalance that paltry excess. Even on the Manchester and Leeds, a line confessedly difficult to work, for the last half-year when the receipt is at the lowest and the expenses, as its Chairman told us, were higher than on the more productive half-year, they amounted to only 45,045*l.* on a traffic of 109,748*l.*, or 41 per cent., being 5⅛ per cent. lower than the South-Western, and a reduction to which rate would give the shareholders an increase of *five shillings* on the half-year's dividend. The opinion the public entertain of the value of the South-Western shares has been shown by the fall which has taken place in them from 63 to 57, and certainly even at the latter price they are much too high, if the same system of expenditure is to be continued as at present. To the shareholders who hold for an investment, as I do, the price the shares bear in the market is of little consequence, but it is of great moment that their dividends should be increased at least *twenty per cent.*, and that a depreciation fund should be established, for which not a farthing has yet been laid aside. The Directors have the increased dividend which they, in common with others, would enjoy under a good and economical management, compensated by the 1,000*l.* per annum which they divide among themselves; but the shareholders have unfortunately no such resource. In the meantime I confess I have but little hope of any great improvement in the management, however urgent the necessity may be, as the want of union among the shareholders renders them in some measure powerless, till oppression beyond measure, as in the North Midland and Midland Counties' Companies, rouses them to action and opposition. As a first and essential step towards this unity of action, I would suggest, that at the next half-yearly meeting a motion should be made that a list of the shareholders, distinguishing those eligible for the Direction, should be sent previously to the meeting, with the half-yearly statement of accounts, to each of the shareholders. If this be carried, and I doubt it not, better dividends will be ensured.

I have the honour to be, Sir,

Your most obedient servant,

A SOUTH-WESTERN SHAREHOLDER.

November 1, 1842.

LONDON AND DOVER RAILWAY.

To the Editor of the Railway Times.

SIR,—"Idem's" letter and "Scold's" reply induce me to offer a few remarks on this undertaking.

"Scold" greatly mistakes "Idem" in thinking him unfriendly to this line; he merely warned the public against the puffings of time-serving jobbers, at a moment when calls amounting to 280,000*l.* were becoming due, which he rightly foresaw could not fail to temporarily depress instead of advance the price of shares. These calls, however, cease to-morrow, when a rebound will in all probability take place.

"Idem," believing that sufficient loans could not be procured, naturally conceived a further creation of shares inevitable, but money has since been abundant, and "Scold," in the confidence of an influential Director, announces the gratifying fact that loans are plentiful, and a further creation of shares no longer thought of.

"Idem" exhibits his friendship in boldly pointing to various sources whence competition may arise, but he states the simple remedy, viz.—"Railways from Calais to Paris and Brussels."

On the 2nd proximo the general meeting is to be held, and I now desire to impress upon the Directors and shareholders generally the immense importance of immediately pushing forward these projects. I recommend them to treat the subject as a principal business of the meeting, and not to separate without appointing an influential Committee to promote and secure as speedily as possible their accomplishment. The South-Western Railway Company have done their duty in supporting the Paris and Rouen and Havre lines; let the South-Eastern Company do their duty in supporting the Calais and Paris and Brussels lines.

It appears to me probable that if London be thus connected with Paris and Brussels, the South-Eastern Railway will have a traffic incomparably greater than that of any other line; indeed it will be the grand highway from London to the southern half of Europe.

I am, Sir, your obedient servant,

PHILOSIDEM.

November 3, 1842.

LONDON AND DOVER RAILWAY.

To the Editor of the Railway Times.

SIR,—Pray is the following a reasonable estimate of the prospects of this railway? For if so, it presents indisputably the best investment in the market:—

Weekly traffic, exclusive of Greenwich and Croydon tolls (7,000*l.*).			£364,000	0 0
Less working expenses 40 per cent.....	£145,600	0 0		
Interest on loans 740,000*l.* at 5 per cent...	37,000	0 0		
			182,600	0 0
For dividend on 56,000 shares			£181,400	0 0

Being at the par of 50*l.*, 6½ per cent. per annum; or at the present price of 23*l.*, 14 per cent. per annum.

I think it highly probable that the shares of this line will advance 100 per cent.

Your obedient servant,

QUITE SERIOUS.

NORTHERN AND EASTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—I wish your correspondent, "Northern and Eastern," who states from *high authority* "that the sum of 114,000*l.* is annually paid for the conveyance of goods on the line of direction through which this railway passes," would furnish us with some little knowledge as to the nature of the goods so conveyed, and whether they pass by water or land carriage, or both, and how he divides the sum between them? To assist him in his calculations, I can tell him that the gross receipts of the Lea and the Stort together have never much exceeded 20,000*l.* per annum, and since the late reduction of tolls will not now yield above 15,000*l.* annually. I can scarcely believe that, now that the coaches are off the road, and much of the goods traffic absorbed by the railway, any such sum as 100,000*l.* is still paid for goods by land; and if the shareholders of the Northern and Eastern Railway are hoping for any such sum to enable them to realise a good dividend, I imagine they will find themselves mistaken.

I am, Sir, your obedient servant,

ALFRED.

London, November 4, 1842.

MANCHESTER AND LEEDS RAILWAY.

To the Editor of the Railway Times.

SIR,—In a leading article in your paper of the 30th July last, page 789, (after referring to the many evils that arose from "the dread exhibited by railway shareholders at general meetings to inquire into their affairs, lest the development of the bare and naked truth should operate injuriously on the price of their shares"), you called upon your correspondents to keep you informed on every point that might assist you in the track you had prescribed to yourself to keep the public well informed as to the real merits of the different lines, and "to enable those seeking investments to compare existing prices with true value."

Responding to that call, I lately addressed two letters to you regarding the dividends paid by the Manchester and Leeds Company. Your correspondent, "A Leeds Shareholder," replies in rather an angry strain, and seems to think my object is to damage the concern. But what have I done? Why, simply pointed out that the net profit of working the Leeds line during the first 18 months after its opening throughout would only afford a dividend at the rate of 4 per cent. per annum! Had my calculations been erroneous "A Leeds Shareholder" may rely upon it that ere this time the Directors would have published an authorised contradiction through their Secretary; they have done so repeatedly to other correspondents of your's when necessary.

I at once grant that the dividends have been paid almost entirely out of the actual profits, but has not the Leeds line been partially in operation for above three years, whereas dividends have been paid for only 18 months? I know, Sir, of nothing more likely to mislead the public than the paying a larger dividend than the actual profits for the year will afford, and it would have been an easy matter for the Leeds Board to have made a dividend six months sooner than they did, or to have given a bonus. Shareholders are now in the practice of having one column in their circulars for "return on investments at present prices," 5, 6 or 7 per cent. as the case may be. What more likely to mislead a purchaser?

I still consider the expedient of debiting part of the expenses of Management and interest on loans to capital account, as unworthy any great concern, and I believe it is altogether unprecedented in railway practice. Besides, what are the Halifax and Extension lines but mere branches, and which will do well if they yield a return on the capital expended *over and above* the 2,900,000*l.* already laid out?

Had the Directors commenced *now* the plan of debiting the entire sum for depreciation (about 10,000*l.* per annum) to the traffic of the autumnal half-year, in place of doing so in the accounts of the half-year ending in June last, no one could have objected; but as it is, it does look like straining a point to eke out the 5½ per cent. dividend.

"A Leeds Shareholder" seems to fear that my letter will induce the Directors to divide only 4 per cent. for the current half-year, "*Hinc illæ lachrymæ.*" But he need not be alarmed; the expedient of debiting part of the interest to capital account is still available, and 5 or 5½ per cent. will be divided no doubt. Nay, the additional revenue at present arising from the closing of the Rochdale Canal, may possibly lead to a 6 per cent. dividend.

Your correspondent seems to feel acutely my sneering at the bright prospects of 9½ dividend, so long held out to the Leeds shareholders by the Directors and the Engineer, and says, "that most reasonable men have long ago laid aside any such expectation." But have the Directors done so I would ask? Do they not still hold out flattering hopes to the shareholders? So lately as in March last the Report stated that the reserve fund of 12,000*l.* was retained for the maintenance and *gradual increase* of a 6 per cent. dividend! Yet in September the dividend was reduced to 5½; just the old story over again—brilliant hopes followed by bitter disappointment. And even now, Sir, the shareholders are led to hope great things from the junction with the Liverpool line, the expense of which will probably be 300,000*l.*, so that an additional 600*l.* of weekly traffic will barely repay 5 per cent. on the cost.

In conclusion let me assure "A Leeds Shareholder" that I mean him no harm in probing these matters to the bottom. No mischief can possibly arise from stating facts, and doing so may prevent sad disappointment to the shareholders, and grievous losses to intending purchasers. The recent enormous decline in the price of shares has driven speculators out of the market, and the greater number of investors in railway stock of late are *bona fide* holders on investment. To protect them is one of my motives in penning these lines.

I am, Sir, your obedient servant,
HAUD CAPTUS OCULIS.

October 31, 1842.

INSIDE AND OUTSIDE BEARINGS.

To the Editor of the Railway Times.

SIR,—In transmitting you herewith a lithographic sketch of the different effects of inside and outside bearings in the construction of locomotive engines, we take the liberty of offering a few observations. It has struck us as very remarkable, that in all the discussions which have taken place on the subject of railway accidents, none, or scarcely any stress has been laid on that which is essentially the main feature in the whole case. The question of four wheels and six wheels has been discussed almost *usque ad nauseam*, and the conjoint lines of the London and Birmingham and Grand Junction, being within a trifle of the same length, and the one having none but four-wheeled—and the other none but six-wheeled engines—have been adduced as proof that there is equal safety with either plan. But the question of framing has been wholly left out of consideration. In a printed circular which we published in the spring, which has never been controverted, and which we now enclose for your perusal, we have shown that, according to all mechanical laws, a locomotive engine on four wheels, *with inside bearings*, was that which offered the greatest security, and was at the same time the most economical. Our main object in the present communication is to attract your attention, for the sake of the public, to the effect of inside and outside bearings, in the hope that this question will be practically and scientifically examined; for in such matters, where the lives and interests of so many are at stake, no system which cannot bear the severest test of practical science should be permitted to continue a day. In the sketch sent, the axle appears as a straight axle; but the same effects will be produced in a crank axle, and it is remarkable that no instance of a fore-axle, and comparatively very few of cranked axles, breaking with inside bearings have occurred. We would venture to suggest to the Board of Trade that, in the returns of accidents on railways, it should be stated which axle it is that breaks—and whether the engine had inside or outside bearings. Indeed, in all returns of accidents the number of wheels, and kind of framing, should be specified—not as affording a triumph to one party or the other, but as placing facts on record, from which positive and practical inferences may be drawn.

We are, Sir, yours, &c.
BURY, CURTIS, AND KENNEDY.

Clarence Foundry, Liverpool, November 1, 1842.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—I have searched the *Railway Times* of 1841 in vain for the unfavourable predictions respecting the Great Western, Manchester and Leeds, and North Midland Railways, which "Alpha" states that he published in your journal "about a year ago."

Will "Alpha" be so obliging as to name the particular numbers in which these ominous letters appeared?

When a writer assumes the lofty tone of a prophet, and boasts of *past prophecies fulfilled* as evidence of his prophetic powers, he *should adduce the proof;* or, instead of obtaining general credence for any new *dogmata*, he will be considered as a "vain boaster" and a "false prophet."

I am, Sir, yours, &c., L.

RAILWAY ECONOMY—GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—It is an old remark that a straw thrown up shows whence the wind blows. In the same way, if we see *waste*, or unnecessary expenditure in trifles, we may not be far wrong in suspecting that *strict* economy is wanting in essentials. We have often heard the Great Western accused of waste and lavish expenditure generally, and the result will sooner or later be one of those searching Committees such as now sits upon the North Midland Railway, and if similar results occur, the sooner such Committee is appointed the better. This train of reflection has arisen in my mind from a *perfect trifle;* yet, as it involves 100 per cent. upon cost, it is not unworthy of consideration. I was shown a circular containing an acknowledgement for an odd fifth share. This was written upon half a sheet of letter paper, and enclosed in a whole sheet, and the paper was so thick as to require a twopenny stamp. The paper and stamp would cost the office 3d.; but thinner paper, and one sheet, would have cost only, stamp 1d. and paper a 0½d. Here, then, would have been a saving of 100 per cent. Of these circulars there would be probably some hundreds, so that *pounds* were involved. A little attention to the stationery and postage department would, I make no doubt, produce a saving of 300*l.* or 400*l.* a year. The paper I write upon is just under a quarter of an ounce, so that 1d. covers two sheets, and is sufficiently thick for any *business* purpose.

This will be called Joseph Hume's cheese-paring economy. May be so; but if *everything else is upon the same scale* of unnecessary or *unproductive* expenditure, the sooner Joseph's economy is introduced the better. The Secretary is too much occupied perhaps to think of these trifles, but unless he looks to economy the shareholders will, in this as in other railways, look to themselves.

I am, Sir, yours, &c. C.

EDINBURGH AND GLASGOW RAILWAY—THE "ARISTOCRATIC" SCOTCH.

To the Editor of the Railway Times.

SIR,—My countryman, who dates his letter from Sherborne, I doubt not is a shareholder in the Edinburgh and Glasgow Railway. He appears a good deal more anxious about the character of the railway than the aristocratic feelings of his countrymen. I did not state anything against the railway or the carriages—for I consider the first very good, and the latter decent. What I complained of was, the incivility of the servants, in corroboration of Mr. Murray and his witnesses. He asks, why did I not make a complaint? I was a stranger, and heard how others were treated who complained, and therefore thought it of no use.

I have no doubt your correspondent is a very good man, and goes to kirk or church. I wish he would mind what every Christian should remember, viz., "Bear not false witness against thy neighbour;" not even by implication, which he has towards me, by calling himself "One who does not love Scotland better than the Truth"—thereby wishing to make out that I have penned a falsehood.

Where is your correspondent "Well-Wisher?" He has not yet given us the locality of Glasgow.

I am, Sir, yours, very respectfully,
A SCOTCHMAN.

Worthing Nov. 3, 1842.

GHENT, Oct. 31.—To-day the adjudication of the works for the construction of a railway direct from Ghent to Antwerp took place at the hall of the Provincial Government. M. De Ridder, the Chief Engineer, who is the author of the plan, obtained the grant of this new railway for 90 years.

THE POST-OFFICE AND RAILWAYS.

To the Editor of the Railway Times.

Sir,—I beg to express my best thanks to you for the very able manner in which you have exposed the monstrous absurdities now in operation by the *Postmaster*-General, which appear to have arrived at a point that the most ardent supporters of the present Ministry are compelled to follow your example in exposing. Much has been said by you of a mail-cart being preferred to the railway, for conveying letters between London and Brighton and Sheffield and Rotherham; but what think you of a similar mode of transit being now adopted by the absolute wisdom of the Postmaster-General, for conveying the mails between Manchester and all the important districts of Yorkshire—Manchester being the emporium for the sale of their manufactured goods, employing about 2,000,000 of inhabitants? You may hardly believe it, but I assure you it is true, a mail-cart now carries mails between Manchester and Leeds, and all intermediate towns, the removal from the railway to the cart being conducted on exactly the same terms as you have described in the Sheffield case. The mails between Manchester and the second port in the kingdom for shipments (Hull), and the port at which more manufactured goods for the continent of Europe are shipped than all the others put together (London and Liverpool included) is, if possible, on a still more absurd and inefficient footing, for the particulars of which I beg to refer you to the London *Standard* of the 8th instant; but, as if the Postmaster-General had not by these proceedings insulted the most important commercial district in the world sufficiently, he has ordered the London and Manchester mails to be carried round by Warrington and Parkside, thus depriving the inhabitants of the metropolis, and that great emporium, of 1¼ hours in the receipt and despatch of their London correspondence. In the absence of any other possible reason, people here have asked the question, whether this last instance has anything to do with the Grand Junction Company, and the railway from Lancaster *via* Lowther to Scotland!

I am, Sir, yours, &c.

A HUMBLE MERCHANT.

Manchester, November 9, 1842.

RAILWAY ECONOMY.

To the Editor of the Railway Times.

Sir,—Will railway shareholders suffer the miserable remnant of their property to pass into other hands—into the hands of bondholders and officials, for whose benefit, even now, several lines of railway are virtually worked; or will they rather strike a strong and decisive blow at once, in order to obtain needful economy in the working expenses and management of the several lines?

An immediate decision on these points is imperative! A little more delay, and the opportunity will be lost for ever!

Let, then, deputations from every line of railway in the kingdom assemble in Birmingham, not for the purpose of proposing the formation of NEW lines into the North! seeing the deplorable condition of most of those now in being, but to appoint a Formidable Committee, with power to search into the expenditure, and overhaul the management, of every line of railway in Great Britain; when it is well known in the north of England, the following results would be produced:—

	Per annum.
A saving in the working expenses alone, of the London and Birmingham line, of	£20,000
Do. Grand Junction	10,000
Do. Great Western	25,000
Do. North Midland (as per Report of Committee)	17,000
Do. Manchester and Leeds	10,000
Do. Midland Counties'	7,000
Do. Edinburgh and Glasgow	7,000
Do. Brighton	10,000
Do. South-Western	10,000

and all the other lines in proportion.

I am, Sir, your most obedient servant,

ŒCONOMICUS.

WEST LONDON RAILWAY.

To the Editor of the Railway Times.

Sir,—Can you, or any of your correspondents, afford a word of information on the following point?—

The West London Company seem to be circumstanced somewhat as follows:—Mr. Stephenson (if I understand his Report correctly) expresses his ability to finish the railway for 32,000*l.* (I say nothing of the hoped-for reduction to 25,000*l.*); that is, to perfect the railway from the Birmingham line to the northern end of the Kensington Canal. The Company propose to raise this sum by the new shares, and to settle with old creditors by shares of another class.

But no more money seems to be asked for than is necessary to complete the railway itself, and the question hence arises—how are they to provide engines, carriages, ropes, fuel, and the multitudinous apparatus requisite before a single penny can be earned? If there be any fund for this purpose, of what nature is it, and where, and of what amount? If there be not, what chance is there even of the dimly-shadowed "10 per cent.?" Again, should Mr. Stephenson find his outlay rather over than under 32,000*l.*, would not the whole affair be stopped by utter absence of funds?

I am, Sir, yours, &c.

S. T——n.

[We had understood that 32,000*l.* would include *everything*; but we have no doubt the insertion of the above will elicit an authorised explanation.—Ed. R. T.]

THE PROPOSED RAILWAY TO PLYMOUTH.

To the Editor of the Railway Times.

Sir,—What can be wanting now to accomplish the railway to this good town of Plymouth? We have Engineers in superabundance, and lecturers to boot. We have some half dozen lines handsomely laid out *on paper*; they offer to convey us by steam, water, or air. What, then, can be wanting? Must I, Sir, admit it? *The needful!* It is the hard cash; and the question is, where is it to come from? Plymouth calls on England, and England on Plymouth. But money is not at 2 per cent. in Plymouth; it is in London. Myriads of labourers are not kept from riot for want of work only by the presence of some thousand bayonets, and perhaps a score of field-pieces, in Plymouth, as they are in the northern districts. I therefore contend we are ill-treated, Mr. Editor. England should help us, as it has done other railways; and in doing that, it would help itself. It would find employment both for capital and the producers of capital. Our railway is no selfish affair—like others, it would be *pro bono publico*.

But when we call on England, as we do with all our hearts, we should show that we have omitted nothing which by the slightest possibility might mend our case. While we have many devices proposed to render our railway acceptable to the public, there is one that is overlooked, or rather, I suspect, it is but very little known. I mean the hydraulic plan of Mr. Shuttleworth, of Manchester, who has put out a pamphlet, to recommend it I doubt not. I have read his book, and though he argues closely, it seems to me a bold thing, to say the least of it, to propose to drive trains at some seven-and-twenty or thirty miles an hour by water, in his pipes or mains. Besides, his propulsion-receivers are no trifle. That he may be able to store up his power in them under a great air pressure is likely enough, for it is only using a cold gas as a permanent pressure instead of steam, which is a hot one, and therefore would not apply; but only think of eight of these truncated steam boilers, as I shall term them, every mile of the way! They would only weigh 24 tons; that's all.

Still, I say we are now in a position at Plymouth that requires we should not "leave one stone unturned" which possibly might help us; and the writer of this hydraulic railway pamphlet uses his figures well, and reasons closely, to show that his method has power enough in it to overcome steep gradients, and so save a great deal of money in constructing a railway; and also that it would be a very cheap worker of a line afterwards. Now, these are the things we want, and the public seem to me to be holding back till we can find some means of much reducing our estimates. The question therefore is, whether his plan will produce these effects, wholly or in part. I say, then, that this scheme should be well examined, and that we should be able to "aye" or "no" it at Plymouth, for good reasons shown.

And now I have to beg that either you personally, or some one of your able correspondents, will pass this plan, as soon as may be, under your criticism; and, rest assured, you will oblige many of your readers in these parts, as well as,

Sir, your very obedient servant,

LOOK-OUT.

Plymouth, October 25, 1842.

PROPOSED RAILWAY TO PLYMOUTH.

[From the *Plymouth Times*, November 5].

A NUMEROUS and highly respectable meeting was held at Mrs. Beazley's Globe Inn, Newton Abbott, on Wednesday last, the Earl of DEVON in the chair, to receive the deputation from the Plymouth, Devonport, and Exeter Railway Company, appointed at the public meeting held at Plymouth on the 30th September, and to ascertain the probability of support being extended to the proposed south line by the landowners and inhabitants of the district.

The deputation consisted of Messrs. T. Gill, M.P., C. C. Whiteford, E. St. Aubyn, T. Woollcombe, and R. Cole, accompanied by Mr. Beardmore, Engineer.

The Earl of DEVON opened the business of the meeting by recapitulating the proceedings of the Company and alluding to the different lines which had been surveyed by Mr. Rendel (whom he characterized as a gentleman of very considerable talent and experience), Mr. Brunel, and Captain Moorsom. After stating that subsequently to these surveys Captain McNeil had been employed by the Provisional Directors to examine each of these lines and to give his unbiassed opinion as to which was the best to be adopted, and that he had recommended Mr. Rendel's south line, the noble Earl said, the object of the present meeting was to ascertain whether the landlords and inhabitants of the districts through which the line would pass were in favour of the project and would give it their support. It was obvious that if it was desirable to have a railway, no time ought to be lost in forming it, but that it should be constructed as soon as possible after railway communication was extended downward to Exeter. For himself he had no personal feeling in the matter. Connected as he was more immediately with Exeter, he should not regret if the railway stopped at Exeter; but as he had already said, sooner or later the railway would be extended to Plymouth; in whatever mode, however, was partly to be decided by persons possessing local interest, and partly by capitalists (for they were not rich among themselves), as they should consider best.

T. GILL, Esq., M.P., one of the deputation, then addressed the meeting at considerable length in explanation of the several points of the subject, and dwelling on the advantages and disadvantages of the different lines. The Provisional Directors supported by the shareholders had recommended the south line as being more advantageous to the county generally. But it was right to state that the Dartmoor line could be constructed at one half cost of a south line, and as far as he knew the the landowners on the former line were anxious for its formation, which was natural, as it would doubtless be the means of improving their land. The Duchy of Cornwall was willing to promote the undertaking, not only by giving land for a station to the area of one thousand two hundred acres, but by holding out other advantages, such as mineral setts on beneficial terms. It must therefore be manifest

that as far as the western terminus and the interests of Plymouth were concerned the Dartmoor line might be advantageously adopted, especially, too, as it was five miles shorter than the south line, and therefore the cost of conveyance would be proportionably cheaper. But the Provisional Directors could not shut their eyes to the fact that the great importance of the southern district, and its large and growing population, rendered it desirable that the line should go through that district, and the object of the deputation was to ascertain the feelings of the inhabitants upon the question of the south line. If they were indifferent to the question, they would have no alternative but to adopt the Dartmoor line. And he would impress upon the meeting that they looked for more than unobstruction, they looked for active support. It could not be carried else, and unless it was afforded to them by the inhabitants on the south line, they must go to those in another direction from whom they could get it.

Col. FULFORD said that no communication had been made to him on the subject of the railway passing through his land in the valley of the Teign, and he knew that others near Exeter were similarly circumstanced.

Mr. GILL observed that Col. Fulford was doubtless correct, though as far as he knew the proprietors of land on Dartmoor had given their consent. They were not as yet in a position to make a formal application to all the proprietors on the subject.

Mr. BEARDMORE, Mr. Rendel's partner, then entered into some explanations of the Direction of the line through certain parishes and estates.

GEORGE TEMPLER, Esq., said, if the south line were formed, he believed that it would bring a large influx of people to Newton, and lead to the establishment of a packet station at Dartmouth, but if the railway went over Dartmoor neither of these objects would be obtained. As far as his assent went, therefore, he would give it to the measure, but as to money, he would candidly tell them they must look elsewhere. It was indisputable, however, that a railway would be advantageous to the neighbourhood.

W. M. PRAED, Esq., said, if the line went round the coast from Newton he should oppose it as a nuisance.

T. WOOLLCOMBE, Esq., read an abstract from the Directors' Report in which they abandoned the project of a coast line.

C. WHITEFORD, Esq., the Secretary to the Company, said the Directors asked only for support according to the means of the district. They would expect that encouragement to be afforded not in large amounts to be subscribed by few individuals, but by numerous parties taking even one or two shares, according to their ability, which would afford proof that they really felt an interest in the undertaking.

Sir J. B. Y. BULLER, Bart., M.P., having asked the comparative expense of the southern and Dartmoor lines,

Mr. WHITEFORD replied that the cost of the Dartmoor line was estimated at 700,000*l.*, Mr. Brunel's at 1,250,000*l.*, and Mr. Rendel's southern line, at 1,500,000*l.* Mr. Whiteford further observed, in reply to questions from Mr. Templer and Mr. Woolster, that the Company had not the least wish for any gentleman to commit himself to the details, but only to the principle of the southern line. The Provisional Directors were at present paralysed; they were unable to frame a prospectus, or to take any other measure for advancing the undertaking, until the line should be decided.

After some further explanations from Mr. T. WOOLLCOMBE,

D. MARTIN, Esq., Steward to the Duke of Somerset, proposed that "it is the opinion of this meeting that the southern line of railway, designated as Mr. Rendel's Southern line, taking the valley of the Teign, would prove generally advantageous to the inhabitants of Newton and its neighbourhood."

This was briefly seconded by the Rev. Mr. Coleridge.

Sir WALTER CAREW, Bart., then stated that Colonel Taylor and Lady Carew believing the proposed line would injure their property, the Directors might expect at their hands the most strenuous opposition to the undertaking.

Mr. GILL said that was exactly what they wanted—a plain, straightforward expression of opinion; and if other landowners would follow their example, and speak as freely as they had done, the Directors would then know what course to pursue.

The resolution was then put from the chair, and carried almost unanimously, there being but two hands held up against it.

Mr. GILL remarked that as far as that resolution went it was very well; but it was essentially necessary not only to know that the meeting was favourable to a railway through the southern part of Devon, but that they would be prepared to give the project their hearty co-operation and support. The only course then was, to propose a resolution to that effect.

— KITSON, Esq., believed the proposed railroad would benefit Newton, but it would injure his property, and therefore he should oppose it.

Sir WARWICK TONKIN, Bart., considered that it would be very wrong for the meeting to pledge the landowners generally to any resolution, especially after the opposition which it appeared would most probably be offered by many gentlemen.

Mr. GILL explained that the deputation did not wish to pledge the landowners to all the details of the measure, but merely to the general principle of a southern line.

A resolution was then drawn up, embodying an expression of warm approval of the line, and an assurance of support, but it was not put to the meeting.

Mr. T. WOOLLCOMBE said, he perfectly agreed with Mr. Gill in believing that the interests of their own locality would be far better supported by the Dartmoor line, where they had met with the most cordial support. It therefore remained a question solely for that meeting to decide whether the southern line should or should not be adopted.

Mr. WHITEFORD said that, in the absence of any assurance of support, the meeting could not complain if the Directors put their own interpretation upon their silence.

Mr. GARROW did not mean to say that the deputation had exercised a right in any way offensive, but that they had got all they could expect.

The noble CHAIRMAN said, that from what had fallen from the various speakers, he must say to his friends from Plymouth that they had got all they were likely to get. If no gentleman had a resolution to propose, it only remained for him to thank them for the attention they had paid, and the good order which had prevailed, and to dissolve the meeting.

The meeting then broke up, after passing a vote of thanks to the Chairman.

MANCHESTER AND LEEDS RAILWAY BRIDGE.—Between five and six on Thursday [week], as the workmen employed in the construction of the viaduct which carries the Cheetham-hill-road over the line in York-street, near Ducie-bridge, were engaged in loading the first arch, on the east side of York-street, it suddenly gave way, and the men, along with Mr. Smith, one of Mr. Brogden's managers, were precipitated to the ground, a distance of from 12 to 14 feet. Fortunately they fell upon the rubbish, and only one of the men sustained a serious injury—a fracture of the right thigh. He was removed to the infirmary, and is likely to do well. It appears that the centres were taken from the arch eight days ago, two days before the commencement of the late rains. The wet weather prevented the operations of the workmen continuing, and the arch was left unfinished for several days. The rain had the effect of completely saturating the mortar, and this accounts for its giving way. That this is the true cause of the accident there can be no doubt, as the foundation and abutments do not show the slightest appearance of weakness or imperfection.—*Manchester Guardian.*

EASTERN COUNTIES' RAILWAY.

THE very rapid progress of the works in this district towards completion clearly shows that the contractors, Messrs. Sherwood, are anxiously exerting themselves, under the directions of the Engineer, to comply with the wishes of the Directors and shareholders, expressed at the recent meeting, to bring the line into speedy operation; and, we doubt not, a similar energy is manifested on the part of the other contractors not so immediately under our notice. The last of the eighty-nine arches of the viaduct, over Duke-street, in this town, was keyed in on Friday last, by Mr. Purnell, the superintendent, whose unwearied zeal in his employer's service is commensurate with his liberality and good-feeling towards the men, and the occasion was marked with an ample supply of ale. Nearly the whole of the viaduct is ballasted, and ready for the permanent way; and the Springfield embankment, under the active management of Mr. Payne, is now closed up to the east end of it. The centres of Springfield Green-bridge, which is the flattest segment upon the line, having a rise of only two feet from the springing, were struck on Tuesday last, and the structure is now complete, with the exception of the parapet. This bridge makes a total of 127 arches turned over the line by Messrs. Sherwood; and we are informed that not the slightest fracture is perceptible in any one of them. The permanent way is complete over the Cann viaduct; and the Wickford tip, which has been surprisingly facilitated by Mr. Mitchell, is now within forty feet of the finish. The permanent way throughout the whole of Messrs. Sherwood's contract, we are credibly informed, will be completed in a week. The interior fittings of the station, which will be a very neat and commodious building, are progressing, the access being by a bold and easy stone staircase, whilst a ready approach for horses, cattle, and carriages is being formed on either side of the line.—*Chelmsford Chronicle.*

FOOL-HARDINESS.—On Sunday evening, shortly before the arrival at Slough of the eight o'clock up-train from Maidenhead, a lad about 16 or 17, who had ridden from Maidenhead, having by some means managed to get into a second-class carriage without a ticket, clambered over the door of the carriage and after standing for a few seconds on the step threw himself into the middle of the road. The train at this time (the speed having been slackened for the purpose of stopping at the Slough station) was proceeding at the rate of at least twenty miles an hour. The lad for the moment appeared somewhat stunned from the force with which he was impelled, but he almost immediately recovered himself, and climbing up the high embankment, started across the fields towards Chalvey, and got clear away.—*Daily papers.*

WIND *v.* STEAM.—Very early on Monday morning last one of the cattle waggons at the Northallerton station of the Great North of England Railway was shifted by some mischievous person from the side rails to the main way, and the wind blowing most tremendously from the north, it was forced forward in a southerly direction at the rate of twelve or fourteen miles an hour, and not discovered until it reached the Alne station, a distance of 20 miles from its starting point.—*Yorkshire Gazette.*

BRISTOL AND GLOUCESTER RAILWAY.—The Directors of this railway are, we understand, acting with great promptitude and energy in perfecting the whole line of railway between the two cities. They last week gave notice to the Directors of the Cheltenham and Great Western Union Railway Company that they intend forthwith to make the line from Standish to Gloucester, under the provisions of their Act obtained in the last session of Parliament, in order that the railway may be opened from Bristol to Gloucester in the next year. The works between Bristol and Stonehouse are in a very forward state, and the Wickwar tunnel, it is said, will be finished in the month of May, and the entire of the works in the month of October, 1845.—*Gloucester Chronicle.*

RAILWAYS IN FRANCE.

The Siecle states, that Messrs. Mackenzie and Brassey, contractors for the Paris and Rouen Railway proposed to execute the first portion of the Paris and Belgian line. Their offers were rejected; but now it seems the Minister has thought better of it, and accepted the proposals of these gentlemen. The contractors are Messrs. Mackenzie, Brassey, Locke, C. Laffitte, Thibaudeau, and an Englishman of the Jewish persuasion named Mozley. These gentlemen set off on Friday week to visit the line.

The *Journal des Debats* states that "the works of the railway from Paris to Belgium, contracted for on Monday, will cost 1,122,000f., of which 400,000f. will be expended on embankments, the remainder on works of art. Messrs. Sherwood, who constructed the line from London to Croydon, under the direction of Mr. Gibbs, the Engineer, are the contractors.

The *Moniteur* announces that the adjudication of the works of the first section of the projected railway from Paris to the Belgian frontier, was made at the Prefecture of the Seine on Monday last.

RAILWAY STATION, DERBY.—Gentlemen and Families travelling this route are particularly invited to visit the Brunswick Railway and Commercial Inn, adjoining the Station, where they will find every comfort combined with very moderate charges, they being quite on the usual commercial scale; the beds are only one shilling the night, and there are no fees required for servants.

Parties must be particular in inquiring for the *Brunswick Inn*.

N.B. The house is open to Travellers for Refreshment night and day.

Price 6d., on a broad sheet of royal,

THE COMMERCIAL ALMANACK for the NEW YEAR contains—besides the Calendar, Tide-Table, Eclipses, and other usual Astronomical Information—full Conveyance Intelligence, (*peculiar to this Almanack*) comprised in the following Lists:—1. All the Railroads from London, their stations and adjacent towns, and the times at which each Train leaves the London terminus.—2. A List of Towns, with their distances from London, and the Inns, and times of Coaches, Railways, Vans, and Waggons, to these towns.—3. Her Majesty's Ministers, and the principal Government offices.—4 A List of wharfs for coasting vessels and canals, &c.—5. A List of Steam Packets, English, Irish, Scotch, and Foreign, their offices and times of sailing. Also, Post-office Regulations, with particulars of the dispatch and return of Foreign and Colonial Mails.—A List of Stamps.—A Table, showing the proportion (per 100*l.* stock) the public funds should bear to each other to yield the same interest; and likewise what proportion they bear to the value of landed estates.—A new Time-table, showing the number of days from any day in one month to any day in another month.—A List of the London Bankers.—Interest Tables at five and four per cent.—Stocks transferrable at the Bank of England and East India House.—Holidays kept at the public offices—Terms and Returns.

London: Published by Harvey and Darton, Gracechurch-street.

On Nov. 25 will be published, price 1s.,

THE MECHANIC'S ALMANACK and ENGINEER'S YEAR BOOK for 1843.

Besides a complete Calendar and Ephemeris, and all the customary Tables for the Year, this Almanack will contain a great variety of articles of peculiar interest to Mechanics and Engineers, including, among others, a Classified List of all Patents for New Inventions granted during the past year; Abstract of the New Copyright of Designs Act, with Instructions for Registration, Table of Fees, &c.; Improvements in the Construction and Internal Regulation of Factories; State of Labour in the Coal, Iron, Copper, Lead, and Zinc Mines and Works; with Abstract of Lord Ashley's Act for Abolishing the Employment of Females and Children; Table of the Strength and other Properties of British Irons; Table of Approved Proportions of Steam Engines; Table of the Deliverable Capacities of Gas Mains, the Dimensions and Prices of Station and Consumers, Meters, the Weight and Price of Socket Pipes, &c.; Table of British Sailing Vessels and Steamers; Table of the Velocities of Steam Vessels; Table of the Tonnage, Dimensions, &c., of the present Crack Ships of the Royal Steam Navy; Admiralty Regulations respecting the Appointment, Pay, Allowances, &c., of Engineers in the Steam Navy; Returns of the Real Property, in Lands and Houses, of England and Wales; Produce and Returns of English and Foreign Mines for 1841-2; Return of the Number of Fundholders, and Savings' Bank Depositors; Population, Health, and Mortality Tables; Laws for Regulating the Weight and Quality of Bread, &c. &c.

Printed for the Company of Stationers, and sold by George Greenhill at their Hall, Ludgate-street.

SOUTH-EASTERN (LONDON AND DOVER) RAILWAY COMPANY.—NOTICE is hereby given, That the TRANSFER BOOKS of this Company will be Closed on Saturday, the 19th day of November next, and will remain Closed until after Friday, the 2nd day of December next.

By order of the Directors,
JOHN WHITEHEAD, Secretary.

Railway Office, No. 10, Coleman-street, London,
October 18, 1842.

SOUTH-EASTERN (LONDON AND DOVER) RAILWAY COMPANY.—The Half-yearly General Meeting of the Proprietors will be held at the London Tavern, Bishopsgate-street, in the City of London, on Friday, the 2nd day of December next, at One o'Clock in the afternoon precisely, on the general business of the Company, at which meeting certain Resolutions passed by the Board of Directors on the 30th day of August last, declaring forfeited certain Shares then in arrear by non-payment of the Calls due thereon, except in so far as such Resolutions relate to Shares the forfeiture of which is or shall have been then redeemed by payment of the Calls due and interest thereon, will be submitted for confirmation.

JOSEPH BAXENDALE,
Chairman of the Board of Directors.
JOHN WHITEHEAD, Secretary.

Railway Office, No. 10, Coleman-street, London,
October 18, 1842.

BIRMINGHAM AND GLOUCESTER RAILWAY.—WINTER TRAINS.—Conveyance between London and Worcester, Cheltenham and Gloucester, by the same Carriage throughout.

The only Alterations proposed to be made during the Winter Months are in the Goods' Trains which convey Passengers. These Alterations will take place on the 14th instant, when the Time of Departure of the several Trains will be as follows:—

FROM BIRMINGHAM.

12h.	44m.	Night (Mail).
3	10	Morning (Mail).
5	15	Morning (Goods, with Passengers).
8	45	Morning.
12	15	Noon.
2	45	Afternoon.
3	45	Ditto, (Goods, with Passengers).
7	15	Evening.

FROM GLOUCESTER.

5	15	Morning (Goods, with Passengers).
8	15	Morning.
11	15	Ditto.
1	0	Afternoon.
4	0	Ditto.
4	15	Ditto, (Goods, with Passengers).
7	15	Evening (Mail).
9	0	Ditto (Mail).

The Company cannot ensure the Goods' Trains so keeping time as to secure Passengers being forwarded by the Trains of the Companies.

SHORT TRAINS BETWEEN CHELTENHAM AND GLOUCESTER.

FROM CHELTENHAM.

10	15	Morning.
6	15	Evening.

FROM GLOUCESTER.

9	45	Morning.
5	45	Evening.

First and Second-class Carriages with all the Trains; Third-class Carriages with the Goods Trains only.

For the accommodation of Passengers between London and Worcester, Cheltenham and Gloucester. First-class Carriages of this Company will be attached to the London and Birmingham Company's Mail Trains leaving Euston Station at a quarter to Ten Morning, and the Four o'Clock Afternoon Train from Birmingham, both these Trains call only at First-class Stations.

From London, quarter to 10 in the morning, arriving at
Worcester 4 past 4
Cheltenham 5
Gloucester 4-past 5

From Gloucester at 1 in the Afternoon; Cheltenham 20 minutes past 1; Worcester 20 minutes to 2; arriving in London at 9 in the Evening.

By order
GEORGE KING, Secretary.

Birmingham, November 8, 1842.

HORSE CLOTHS.—HORSE CLOTHS made WATERPROOF by the celebrated Burmese Japan Process of Newbery & Co. This excellent protection for that good and useful animal, the Horse, is fast superseding every other cloth or covering. It is totally impervious to rain, does not shrink, shrivel, or crack, and is very strong and lasting. The prices are moderate.

Improved Horse Cloths.—Horses, like ourselves, are benefited by a clothing, which, while waterproof, will not impede the free escape of perspiration. Newbery's Lycopodium, or ventilating process of waterproofing, is admirably adapted, and may be safely applied, for saturating the clothing of gentlemen's horses.

When very hard wear is required, and for common use, their Burmese Japan Canvass will be found all that can be desired, for it is at once the most impervious, tough, flexible, and durable composition ever offered to the public.

7, Cripplegate-buildings, Fore-street, City; 30, Pall-mall; 34, King William street; or, by post, at the Manufactory, Church street, Deptford, Kent.

SHEFFIELD, ASHTON-UNDER-LYNE, and MANCHESTER RAILWAY.—MAINTENANCE OF WAY.—The Directors hereby give Notice, That they are prepared to receive TENDERS for the Maintenance of Way between the Ardwick Junction and Godley Station, on the above line of Railway, for the term of Three Years. The draft of the Contract, containing a full Specification of the Works required to be done, may be seen on application at the Company's Offices, No. 15, Piccadilly, Manchester.

Tenders, addressed to the Secretary, and endorsed "Tenders for Maintenance of Way," to be sent in on or before Tuesday, the 22nd instant.

The Directors do not bind themselves to accept the lowest Tender.

By order of the Directors,
JOHN PLATFORD, Secretary.

15, Piccadilly, Manchester, Nov. 7, 1842.

EASTERN COUNTIES' RAILWAY.—Shareholders and others interested in this Railway should read the *Essex Standard* of this Day (price 5d.), wherein is given a full Report of the Commissioners' Meeting for opening a communication direct from the Railway Terminus at Colchester to the Port at Wivenhoe, by means of a Ship Canal, Dock, and Barge Navigation, with estimates of cost and revenue, together with the Report of the Engineer (Peter Bruff, Esq.) to this important undertaking.

Colchester, Nov. 12, 1842.

THE BRIGHTON NEWSPAPERS—LATEST OFFICIAL RETURN.

Extract from a Return of the Stamps paid by Newspapers in April, May, and June, 1842, ordered by the House of Commons July 12th, and laid on the table August 10th, 1842.

	April.	May.	June.	Total.
BRIGHTON GUARDIAN	6,000	5,000	6,000	17,000
Brighton Herald	4,000	5,000	6,000	15,000
Brighton Gazette	5,000	5,000	—	10,000

For the Twelve Months ending June 30th, 1842, the issues have been—

BRIGHTON GUARDIAN.....	70,000
Brighton Gazette	60,000
Brighton Herald	53,000

The BRIGHTON GUARDIAN is published early every Wednesday morning. Advertisements must not therefore be delayed beyond Tuesday's *Day* Mail from London.

NEW EDITIONS of the following useful Works are just published at the *Railway Times* Office, 122, Fleet-street:

I.

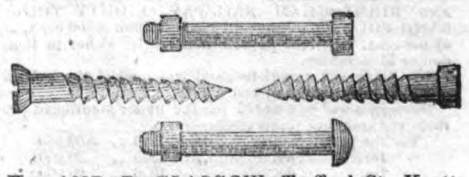
TUCK'S MAP OF THE RAILWAYS for 1842 throughout ENGLAND and WALES to the Capital of Scotland, beautifully coloured, distinguishing the Lines open from those in progress, and showing the nearest route by Railway to the Continent, the north and south of Ireland, and the Lakes of Westmoreland and Cumberland. The cheapest Map ever published.

Bound in cloth, 1s. 6d.; in paper covers, 1s.; mounted on canvass, in cloth case, 2s. 6d.; on rollers, 3s. 6d.

II.

ROBINSON'S RAILWAY TIME AND FARE TABLES, containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources, with Map, and an official List of Coach and Cab Fares to all the Metropolitan Railways. Corrected to August. Price 1s., in cloth.

III.



ROBINSON'S RAILWAY DIRECTORY FOR 1842, containing the Names of the Directors and principal Officers of the Railways in Great Britain, derived from authentic sources, price 1s.

IV.

TABLES OF HACKNEY CARRIAGE FARES from the BIRMINGHAM RAILWAY to all parts of the METROPOLIS, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand with a Map of London. Price 6d.

V.

TABLES OF HACKNEY CARRIAGE FARES from the GREAT WESTERN RAILWAY to all parts of the Metropolis, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.

I. AND D. GLASGOW, Trafford St. Knott Mill, MANCHESTER, Manufacturers, by Improved Machinery, of Wood Screws, Screw Bolts, Spikes, &c., for Railways; also Boiler Rivets, &c.

NORTH MIDLAND RAILWAY.—NOTICE is hereby given, That a Special General Meeting of the Proprietors of the North Midland Railway, will be holden on Wednesday, the 16th day of November, instant, in the large Room at the Commercial Buildings, in Leeds, at Twelve o'Clock precisely, to receive the Report of the Committee instituted at the Half-yearly Meeting held at Derby on the 25th of August last, "for the purpose of examining the position and future management of the North Midland Railway Company, with a view to increase the prosperity of the undertaking."

W. LEAPER NEWTON, Chairman.
ROBERT FROST, Secretary.

Secretary's Office, Derby,
Tuesday, the 1st day of November, 1842.

TO THE PROPRIETORS OF THE NORTH MIDLAND RAILWAY.—Gentlemen,—In consequence of the proposed reduction of the Directors and the Committee of the North Midland Railway, the reports of which appeared in last week's *Derby Reporter*, considerable excitement has been caused amongst the workmen in the locomotive and carriage departments. A further statement has also appeared in the *Railway Times*, in consequence of which it was deemed necessary amongst we, the workmen of the North Midland Railway, to call a meeting upon the subject; which has taken place, and the particulars of which we now wish to relate. It is with the utmost regret that we should have to report to the proprietors of a Railway, through this medium, such grievances as are now presented before us. Such reductions are considered by the workmen and all reasonable men to be quite inconsistent, and will be resisted to the utmost should the like take place. We have considered well the causes and the necessities of a reduction in the expenditure and the enormous outlay of capital, and which in some cases we believe to be a most useless outlay. Is it to be thought that the workmen are not capable of judging what is right and what is wrong? Are the hard earnings of our labour to be made a sacrifice to the faults and bad calculations of others? We have no desire to cast blame upon any one. We hold all our superiors in the highest estimation; but, as regards the locomotive departments, we say without fear of contradiction, if we may be allowed to be capable of judgment in our own capacities, that everything is done for the best interests of the Company. Then, if this be true, we appeal to all reasonable men, will you sacrifice the integrity we have hitherto held towards you, thinking that reducing our wages will prove to your future interests? We tell you with all faithfulness that it will not prove so. You will find that very few of us will remain with you; others may come, but under such a reduction it will never claim the interests of any men to the benefit of their employers. A spirit of rebellion exists under oppression; it drives honest and upright men to despair. We do say as workmen of long experience, that our superiors in the locomotive department are men well qualified for their situations, and have good and sound judgment in all affairs; we hold them in the highest esteem, not from any favours received from them more than is due in accordance with the Company's interests, but for their honest and upright conduct. We have always endeavoured to work with them and for them to the utmost of our abilities, but should any reduction take place all will be in confusion. Your sacrifices may be greater than your anticipated benefits, and we as workmen should suffer greatly from such results, but in maintenance of our just rights and most reasonable demands in support of our trade and labour. But we do hope that we shall find friends in such an honourable Company as the North Midland about to meet together on the 16th of this month, that will utterly reject such propositions rather than set so disgraceful an example as oppressors of the working classes. We wish you to bear in mind our present rate of wages. Compare them with others, not with those disgraceful grinders or oppressors, but with the honest, upright, well-thinking, true-hearted, right minded Christian men. Will you allow the noblest mechanic in the land to be brought upon a level with the fireman of an engine? We do not disrespect that man because he is on such a level; we say they are worthy of what they get; they are exposed to great danger and the inconveniences of all weathers; we are likewise exposed to danger by accidents which frequently happen, and many have been great sufferers not only from the accident itself, but from the means of support during such time. Are not these railway considerations, or are we to remain a cipher in the account? We do hope, gentlemen, in closing these few remarks, that you will do justice to our claims.

FROM THE WORKMAN OF THE
NORTH MIDLAND RAILWAY.

MORTGAGES.—WANTED, on MORTGAGE of the TOLLS and WORKS of the MANCHESTER AND BIRMINGHAM RAILWAY, EIGHTY THOUSAND POUNDS, in Sums of not less than £500 each, at 4½ per cent. Interest payable half-yearly, either in London or Manchester.

The Railway is completed, and was opened throughout for Traffic on the 10th of last month.

Mortgages will be granted for the under mentioned periods and amounts respectively:—

For the period ending 25th Dec.,	1844 ..	£30,000
Do. do.	1845 ..	30,000
Do. do.	1846 ..	20,000

For further particulars apply at the Company's offices, in Manchester; or at the office of Messrs. Slater and Heelis, Princess-street, Manchester.

THOMAS ASHTON, Chairman.
Manchester, September 19, 1842.

DUBLIN AND DROGHEDA RAILWAY COMPANY.—Call of £5 per Share, being the 11th Call, and making £40 per Share now called up.—NOTICE is hereby given, That the Directors of this Company have this day passed a Resolution (in conformity with the provisions of the Act of Parliament in that case made and provided), calling upon the several Proprietors of Shares in the said Company to pay a further subscription upon their Shares of £5 per Share; and such Proprietors are accordingly hereby required to pay up such further Call, on or before the 30th instant, to any of the undermentioned Bankers, who are appointed to receive the same:—

Dublin—The Bank of Ireland; the Royal Bank, Foster-place; Messrs. Labertouche and Stafford, 25, College Green.
Manchester—The Manchester and Salford Bank.

GEORGE ALEXANDER HAMILTON,
Chairman of the Company.

Office, 22, Marlborough-street, Dublin,
4th November, 1842.

LONDON AND BIRMINGHAM, GRAND JUNCTION, CHESTER, LANCASTER, MIDLAND COUNTIES', NORTH MIDLAND, YORK AND DARLINGTON, RAILWAYS.—In connection with the above lines of Railway, Places can be secured by

A HISTORY OF INFUSORIA, Living and Fossil, with descriptions of every species of Animalcules, illustrated by 500 coloured engravings.

Also, enlarged edition, price 4s. 6d.,

MICROSCOPIC ILLUSTRATIONS, with Descriptions of the new Microscopes, their use, &c.

Also, second edition, price 1s.,

A LIST OF 2,000 MICROSCOPIC OBJECTS, with Remarks, &c.

London: Whittaker and Co., Ave Maria La[ne]

CAUTION.—This is to Caution the Public against employing William Forster, who has been lately at work on the Paris and Rouen Railway, near Pont de L'arche, 12 miles from Rouen, as a brickmaker, and who has absconded, leaving his workmen and other creditors unpaid, although 3,000 francs (about £120) was given him for these purposes. He has besides left debts owing to various tradesmen to the amount of about 16,000 francs (£640).

The said William Forster is about 35 years of age, of dark complexion, and about 5 feet 8 inches high, and belongs to Portsmouth. He was last employed in England on the Gosport branch of the Southampton Railway, and resided near Fareham.

Previous to absconding, he had been in the habit of remitting the greater part of the money he received for his work to his brother in England, and it is reported he is now at work on the South-Eastern line of Railroad.

MACKENZIE AND BRASSEY,
Contractors on the Paris and Rouen Railway.

6, Petite Rue Verte, Paris,
28th October, 1842.

HUNGERFORD AND LAMBETH SUSPENSION FOOT-BRIDGE COMPANY.—Eighth Call of £2 10s. per Share.—NOTICE is hereby given, That the Directors have this day made a Call of £2 10s. per Share; and that, in pursuance thereof, the Proprietors of Shares in this undertaking are hereby required to pay the same, on or before the 15th day of January next, to the credit of Alexander Rogers, Esq., the Treasurer of the Company, at the London and County Joint Stock Bank, 71, Lombard-street.

Dated this 1st day of November, 1842.

W. HAWES, Deputy-Chairman.

SIR W. BURNETT'S PATENT PRESERVATIVE FOR TIMBER, CANVASS, CORDAGE, WOOLLEN, &c.—This process is a very cheap one. It effectually protects even the commonest domestic or Colonial Timber and Deals from Dry-rot, and other causes of premature decay; and it renders them equal to the best Timber from the Baltic. No doubt can exist of its efficacy in the preservation of all the above-named articles, after the Official Reports from the heads of various Government Departments, which may be seen, together with the specimens, at the Company's Office, No. 4, Castle-court, Birchin-lane, Cornhill, London.

THE ELEVENTH THOUSAND.

Just published, *in a Sealed Envelope*, price 3s., and sent free, on receipt of a Post-office Order, for 3s. 6d.,

MANHOOD: the Causes of its Premature Decline, with plain Directions for its Perfect Restoration; addressed to those suffering from the destructive effects of excessive indulgence, solitary habits, or infection, followed by observations on the treatment of Syphilis, Gonorrhœa, Gleet, &c., illustrated with cases, &c.

By J. L. CURTIS and Co., Consulting Surgeons, London.

TENTH EDITION—Published by the Authors, and sold by Burgess, Medical Bookseller, 28, Coventry-street, Hay Market; Mann, 39, Cornhill; Strange, 21, Paternoster-row, London; Guest, 51, Bull-street, Birmingham; T. Sowler, No. 4, St. Ann's-square, Manchester; G. Philip, South Castle-street, Liverpool; Fannin and Co., 41, Grafton street, Dublin; Drummond, 114, High street, Edinburgh; and sold in a *sealed envelope*, by all Booksellers.

OPINIONS OF THE PRESS.

"This work, *a tenth edition* of which is now presented to the public, *ten thousand copies having been exhausted since its first appearance*, has been very much improved and enlarged by the addition of a more extended and clear detail of general principles, as also by the insertion of several new highly interesting cases. We feel no hesitation in saying that there is no member of society by whom the book will not be found useful, whether such person hold the relation of a *parent*, a *preceptor*, or a *clergyman*."—*Sun* evening paper.

"This is a work that we fear there exists too much need for to cause us to hesitate to recommend it for general perusal. Every branch of those frightful maladies, whether the result of immoral habits or secret vices, is here succinctly treated, and divested of all medical technicalities, plain and easy directions are given for the best mode to be pursued in all cases, however complicated or apparently hopeless. To the married, as well as the unmarried, this little work alike affords consolation and cure in peculiar cases, and we are doing a service to society in recommending it to general notice."—*Essex and Herts Mercury*.

"Messrs Curtis's work, entitled MANHOOD, is one of the few books now coming before the public on such a subject which can lay claim to the character of being strictly professional, at the same time that it is fully intelligible to all who read it. The moral and medical precepts given in it, render it invaluable."—*Magnet*.

Messrs. Curtis and Company are to be consulted daily at their residence, No. 7, Frith-street, Soho-square, London.

Country Patients are requested to be as minute as possible in the detail of their cases. The communication must be accompanied by the usual consultation fee of £1, and in all cases the most inviolable secrecy may be relied on.

LONDON: Printed by JOHN THOMAS NORRIS, 137 and 138, Aldersgate-street, in the Parish of St. Botolph Without, Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet-street, (*facing* Saint Bride's Church), in the Parish of Saint Bride, Fleet-street, Middlesex.—Saturday, November 12, 1842.

NEWCASTLE AND DARLINGTON JUNCTION RAILWAY.—TIME FOR MAKING TENDERS ENLARGED.—TO RAILWAY CONTRACTORS AND OTHERS.—The Directors of this Railway are ready to receive Tenders for the Execution of the whole of the Works necessary for the Formation of that Portion of their Line extending from Rainton to Shincliffe, and the Branch to Durham, together about 8¼ miles, including the Construction of 3 Timber Viaducts over the Shincliffe, Sherburn, and Cassop Becks.

Plans, Sections, and Specifications of the Works, may be seen at the Office of the Company at the Railway Station, York, and at the Office of Mr. Thomas E. Harrison, South Shields. Sealed Tenders, addressed to the Secretary, must be delivered at the Company's Office at York, on Wednesday, the 16th day of November, before One o'Clock. The Directors will meet at their Office, in York, on Thursday, the 17th of November, at Twelve o'Clock at Noon, to Let the Contracts, when parties who have previously sent in Tenders, or persons duly authorised by them, are requested to attend.

The Directors do not bind themselves to accept the lowest Tenders.

GEORGE HUDSON, Chairman.

BRISTOL AND GLOUCESTER RAILWAY.—Notice is hereby given, That the Directors of this Company are ready to receive Tenders of LOANS of MONEY, in sums of not less than £200, and for terms of not less than Three, nor more than Seven Years, on security of Loan Notes, under the Corporate Seal of the Company, with Interest Warrants attached, bearing Interest at the rate of 5 per cent. per annum, payable half-yearly in London.

Tenders, expressing the sum, the term of years, and the residence of the Lender, to be addressed to the Secretary.

By order of the Board of Directors,
ROBERT FLETCHER, Secretary.

Bristol Office, Exchange-Buildings,
November 7, 1842.

BRISTOL AND EXETER RAILWAY.—Notice is hereby given, That in pursuance of a Resolution of the last General Meeting of Proprietors, the Directors of this Company are ready to receive Tenders of Loans of Money, in sums of not less than £200, and for terms of not less than three, nor more than seven years, on security of Loan Notes under the corporate seal of the Company, bearing Interest at the rate of 5 per cent. per annum, payable Half-yearly.

Tenders expressing the sum, the term of years, and the residence of the lender, to be addressed to the Secretary.

By order of the Board of Directors,
J. B. BADHAM, Secretary.

Bristol, Office, 30, Broad street, 14th Oct., 1842.

Interest Warrants will accompany the Loan Notes.

MANCHESTER, BOLTON, AND BURY CANAL NAVIGATION AND RAILWAY.—LOANS.—The Committee of Management are prepared to receive Tenders for the Loan of a limited amount of Money, in sums of not less than £1,000 each, to be secured by the Bonds of the Company, bearing interest at 4 per cent. per annum, payable half-yearly. Period of the Loans to be either for three, five, or seven years, the term preferred to be mentioned in the Tenders, which must be addressed to the undersigned.

By order,
JOHN HAWKSHAW, Clerk of the Company.

Canal and Railway Office, Salford, Sept. 22, 1842.

BIRMINGHAM AND GLOUCESTER RAILWAY.—Interest on Scrip, to 25th November, 1842.—Persons holding the Scrip Quarter Shares of this Company are requested to send them to the Company's Office, Waterloo-street, Birmingham, for the purpose of having the interest (payable on 25th November) noted thereon; which done, they will be returned, together with a check for the amount.

By order,
GEORGE KING, Secretary.

12, Waterloo-street, 15th November, 1842.

In Royal Octavo, 3s. 6d., cloth, lettered, with four Engravings.

TELEGRAPHIC RAILWAYS; OR, THE SINGLE WAY, recommended by Safety, Economy, and Efficiency, under the safeguard and control of the Electric Telegraph; with particular reference to Railway Communication with Scotland, and to Irish Railways. By WILLIAM FOTHERGILL COOKE, Esq.

Contents: Objects of the Treatise—Distinguishing Characteristics of present Railways—Evidence before Select Committee—Advantages of Telegraphic Communication—Mode of working the Blackwall Railway, by the Electric Telegraph—Description of the Electric Telegraph—Plan for a "Telegraphic" Railway—Course of an Express Train—Ballast Waggons—Permanent Obstruction—Crossing of Two Trains—Description of Signals—Concluding Remarks on Single Way—Mixed Lines—Scottish Junction Line—Irish Railways—Advantages common to Single, Mixed, and Double Lines—Public Confidence—Reduction of Stock—Income from Telegraph—Alertness—Adaptation to Wants of Country—Conclusion.

London, Simpkin, Marshall, and Co.; Liverpool, Wareing Webb, Castle-street; Manchester, Simms and Dirham; Birmingham, Wrightson and Webb; Leeds, Slocombe and Simms.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secresy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

Will be published on the 1st December,

TUCK'S ROLLER CALENDAR FOR 1843.—This is a mode of affixing the Calendar for the whole year on two revolving cylinders, within an elegant case, so as to exhibit each day's information in a bold and novel manner, presenting Daily Memoranda indispensable to every housekeeper and man of business. It possesses the advantage of a Date Box and Almanac, and is adapted for the Library, Board Room, Counting-house, Warehouse, or Parlour; and is the best application of the Calendar ever yet devised. In Mahogany Box, price 5s. 6d.; in Ornamented Box, 6s. 6d. In addition to much useful information relating to business, &c., the Calendar contains the times of High Water at London, Liverpool, Dublin, Glasgow, Leith, Bristol, and Hull, for every day in the year.

Railway Times Office, Fleet-street; Letts, Cornhill; and Ackerman, Strand.

THE PARISIAN BITUMEN COMPANY take leave to inform their numerous friends and the public that offices are established at 4, Great Winchester-street, Broad street, for the City, and at 8, Denbigh-street, Belgrave-road, for the West-End and its vicinity, where every information will be promptly given.

SCALE OF PRICES PER FOOT.

SCOTTISH (WIDOWS') LIFE ASSURANCE. Founded A. D. 1815.—Constituted by Act of Parliament.

Capital Accumulated and Invested—Upwards of One Million Two Hundred Thousand Pounds.

Annual Revenue, nearly Two Hundred Thousand Pounds.

At 31st December, 1838, the Society's third periodical Investigation, the Bonus Additions then declared amounted to Two per Cent. per Annum, not only on the original sum assured, but likewise on the Bonus Additions previously declared.

The fourth periodical Investigation takes place at 31st December, 1845.

Assurances effected through the Head Office, No. 5, St. Andrew's Square, Edinburgh, or Agencies before the books are shut for the current year, will have the advantage of a Full Year's Standing over those Assurances which may be delayed beyond that period.

Copies of the Prospectus, Forms of Proposals, and every necessary information, may be obtained at the London Office, No. 7, Pall Mall.

HUGH M'KEAN, Agent.

November, 1842.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

DOUCEUR of from £50 to £500 will be given to any gentleman who will procure the Advertiser a Situation.—A most respectable young person, having been engaged for many years on railways and public works, wishes to obtain a Situation either at home or abroad, where a practical knowledge of levelling, setting out, and measuring works, and engineering generally, would make him useful. The greatest secresy will be observed. Highly satisfactory testimonials from eminent engineers, &c., can be produced. Address to L. M., 5, Johnson's-court, Fleet-street.

THIRTY REMARKABLY GOOD CART HORSES, and TWO SUPERIOR CHAISE HORSES.—To be Sold by AUCTION, by Mr. DIXON, at his Repository, Barbican, on Friday, November 25, 1842, at One o'Clock, Thirty fine-shaped, young, powerful, active Cart Horses, the genuine property of Mr. W. S. Simpson, of Brentwood, being the first portion of their well known good stock, that have been employed on the Ingatestone and Mountnessing Contract of the Eastern Counties' Railway, sold in consequence of it being partly completed.

Also, a very handsome and remarkably fast and clever Brown Cob, and Bay Chaise Mare.

Colours—Bays, Blacks, Browns, and Greys.

☞ The above lot of capital seasoned Cart Horses are worthy the attention of Brewers, Distillers, Wharfingers, Wholesale Warehousemen, Corn and Coal Merchants, Contractors, and all persons wanting them for immediate work, having been purchased expressly for the above Contract, and are now in fine condition.

On view, and catalogues may had two days previous.

A great variety of new and second-hand Carriages, of every description, always on Private Sale at this Establishment, remarkably cheap.

NORTH MIDLAND RAILWAY COMPANY—SPECIAL MEETING.

[From the *Leeds Mercury* of this day.]

A SPECIAL general meeting of the proprietors of the North Midland Railway Company was held on Wednesday last, at the hour of 12 o'clock at noon, in the large room of the Commercial Buildings, Leeds, to receive the Report of the Committee instituted at the half-yearly meeting held at Derby, on the 25th of August last, for the purpose of examining the position and future management of the North Midland Railway, with a view of increasing the prosperity of the undertaking.

The attendance of proprietors was very numerous.

Directors present:—Mr. W. L. Newton, Chairman; Mr. Titley, Deputy-Chairman; Messrs. Holdsworth, H. H. Stansfield, Tee, Pease, Carbutt, Laycock, and Pickersgill.

Committee of Inquiry present:—M. P. W. Brancker, Chairman; Messrs. Alston, Hudson, Waddingham, Murgatroyd, and Wilson.

Among the shareholders present, we observed—Wm. Aldham, jun., Esq., M.P., Sir John Simpson, Messrs. Aldham, Baines, G. Goodman, John and W. Rand, Brackenridge, Michael Stocks, D. W. Nell, T. Beaumont, Carr (of Sheffield), Carr (of Wath), Driver, S. J. Birchall, John R. Hubbard, W. H. Leatham, Burton, — Maude, Shann, E. Birchall, Peckover, Benj. Thompson, Henry Leah, Starkey, R. Arthington, R. Jowitt, W. West, J. B. Moore, C. Makins, Maclea, John Nussey, Vickers, Rev. C. Wicksteed, B. Lupton, Roebuck, Wm. Gatliff, Wm. Smith (Burley), Wm. Smith (Gledhow), Cook, Meek, &c. &c.

W. L. NEWTON, Esq., Chairman of the Board of Directors, presided.

Mr. FROST, Secretary to the Company, having read the advertisement convening the meeting,

The CHAIRMAN rose and said, he apprehended that it would be unnecessary for him to say more than one word on the present occasion. The notice which had just been read would sufficiently explain the object of the meeting, which was to receive the Report which would now be presented by the Committee appointed at the last half-yearly meeting to investigate the affairs of this Company, and the Chairman of that Committee would present that Report, accompanied by such observations and explanations as he might think proper.

Mr. P. W. BRANCKER, Chairman of the Committee of Inquiry, then presented the Report, hoping that subsequently the Address of the Directors to the shareholders, in reply to the Report, would also be read.

Mr. FROST accordingly read the Report of the Committee.

Mr. FROST then read the Reply of the Directors.

Mr. BRANCKER now moved that the Address of the Committee of Inquiry be also read.

The CHAIRMAN observed that the last-mentioned Address was only put into his hands as he entered the room, and of course it was impossible for himself or the shareholders to have gone through it with that care and attention which the document demanded. He had no objection to its being read on that occasion, though he thought it quite impossible that the meeting could take it into consideration at present. (Cries of "Read, read.")

Mr. FROST then read the following document:—

ADDRESS.

The Committee of Inquiry, appointed at the last half-yearly general meeting, submit the following observations to the shareholders, with a view to their understanding aright the points of difference between the Committee and the Directors. Independent of certain questions of fact, which will probably furnish matter for discussion, the large retrenchments recommended in the Report, as safely practicable, but denounced by the Directors as dangerous, will have to be adopted or rejected by this meeting, and the Committee are anxious, if possible, to put every shareholder in a position to judge for himself. The Committee have carefully considered the Directors' Address, with a view to modify, retract, or confirm their previous conclusions; but they have looked in vain for new facts or arguments; great evils are confidently predicted, but there is no attempt to trace them to their causes, or to connect them with the suggestions of the Committee, unless it be assumed that efficiency and expense are the same thing. Under these circumstances, the duty of the Committee is to explain why they abide by the recommendations embodied in the Report, and then to leave the question in the hands of the proprietors.

Some dissatisfaction having been expressed at the delay which has taken place in the circulation of the Report, the Committee think it due to themselves to state, that it was forwarded on the 24th of September to the Chairman and Deputy-Chairman, with a request that it might be published immediately. The Board, however, declined to do so, until they had prepared a reply which they could append to it. Whether this was the proper course or not, is a question of no great importance; but it is the opinion of the Committee, that the Report ought not to have been withheld from the shareholders, inasmuch as it was addressed to them, and not to the Directors. The details were furnished as soon as asked for.

Nothing has caused more astonishment to the Committee than the inaccuracy of the published details, although the Directors express a hope that they will furnish to the proprietors the fullest information. The Committee have also to complain of certain liberties which have been taken with their list of staff, in the way of needless alteration, and it cannot be concealed that the tendency of all this has been to place some of their recommendations in an unfair and distorted point of view. Among the errors may be mentioned that 6 policemen at Derby, in the Committee's list, are made into ladies' attendants, whilst the 10 policemen retained by the Directors, are called porters. As a consequence of this, the Committee are made to strike off 20 porters at Derby, whilst in fact they only reduce 10. At the different road stations are 7 or 8 night watchmen, whom the Committee propose to discharge for reasons which will appear hereafter, but they are nowhere mentioned as such. Some other mistakes of a similar kind will be pointed out in the proper place.

The Directors assert as a fact, that when the different servants of the Company were put to the question, they hesitated to repeat the testimony they had previously given before the Committee. Considering the difficult position of these gentlemen, and the dependent condition of many of them, there may be doubts as to the propriety of this examination on the part of the Directors, but there can be no surprise that it should lead to discrepancies and contradictions. The Committee have no hesitation in repeating the assertion contained in the Report, "That the most intelligent servants of the Company admit the practicability of the proposed 'reductions.'"

The language used in reference to certain reductions effected, or intended by the Board, previous to the appointment of the Committee, admits of the construction that a reproach is intended, otherwise the stress laid on them is unintelligible. If it is meant that the Directors have not been fairly and even handsomely treated on this point in the Report, the Committee reply that they never heard of the item of 3,500*l.* (said to have been saved in the locomotive department on the staff of 10th August, before their appointment) until they saw it mentioned in the Directors' Address, and, *so far as their knowledge extends*, all the persons included in the staff-list of 10th August, with some trifling exceptions, were receiving the Company's wages, not only at the date of the Committee's appointment, but up to the time of their assembling at Derby. Should this be an error (as would seem to be the case), the fault is not with the Committee, because the lists of staff, made out expressly for them during their stay at Derby, agree in amount with the pay-bills of 10th August, although they differ in some of the particulars.

In regard to the unsettled contracts for construction of parts of the line, and accounts with other Companies, the Directors assure the shareholders that they have used all the efforts within their power to close them, consistent with a due regard to the pecuniary interests of the proprietors. Notwithstanding this assurance, the Committee regret to say, that after a careful inquiry into all the circumstances, they are of opinion that both the character and the pecuniary interests of the Company would have been better consulted by a more decided course.

Though the Directors acquiesce in the reduction of the Secretary's and Engineer's establishments nearly to the Committee's standard, it will not have escaped the observation of the shareholders that these reforms are made contingent on the settlement of accounts with other Companies and with contractors. The reason of this does not very clearly appear, supposing the North Midland accounts to be *ready* for settlement. At all events it requires explanation why the proposed saving in the Secretary's and Superintendent's offices, and the union of both duties in one person, should be put off indefinitely on this account.

The Directors pointedly contradict the opinion of the Committee, that the permanent way is not in so good a state as it ought to be, considering the high price paid to the contractors for maintaining it, and they appeal to the opinion of an engineer. As a shorter way of arriving at the truth, the Committee beg to refer to the engine-drivers of the Company, and the managers of the locomotive department, who have already expressed themselves very strongly to the Committee. Without relying on that, however, the Committee convinced themselves, by personal inspection, that there was much room for amendment; and as any imperfection in the road has a most injurious effect on the engines and carriages, it inflicts on the Company a considerable expense for additional repairs.

In the detailed list of the coaching department, after correcting three erroneous additions, and allowing for the transfer of the Sheffield goods' clerk to the goods' department, the difference between the list of the Committee and that of the Directors consists of 42 persons and 2,393*l.* 8s. Of this sum, the reduction of wages makes 357*l.* 12s., and the dismissals make 2,005*l.* 16s., so that the difference resolves itself mainly into the question, whether these 42 persons are necessary or not?

In speaking of this subject, the Directors use the following language:—"The regularity of the trains, especially of those connected with Scotland and the north of England, the accommodation afforded to passengers, the due care of luggage, the guarding of the Company from fraud, and, above all, the public safety, would be so impaired by adopting the recommendation of the Committee, as seriously to affect the prosperity of the railway." The Committee are of opinion that this language is altogether unwarranted by the facts, and they propose to prove this by a minute analysis.

In the reduction of salaries and wages, there is nothing that requires explanation except that the salaries of clerks at the road stations are adjusted according to the amount of business transacted there—the salary having reference to the place, and not to the person.

The 42 servants of the Company whom it is proposed to displace, are—

1 booking clerk at Derby, whose dismissal was recommended by the head of his department.

2 switchmen at Derby, who, instead of being dismissed by the Committee, have no existence, and are not found in the list of 10th August.

4 policemen at Derby. At present there are 10, the Committee think they may be reduced to 6

10 porters at Derby. At present there are 50, including the goods' porters; by allowing them to assist one another under certain restrictions, it was considered that 40 would be fully sufficient for the work.

1 policeman at Duffield was not struck off by the Committee, but replaced by one of the contractor's men at 7s. per week. The reason why this does not appear is, that Duffield is omitted in the List of Staff which was furnished to the Secretary of the Committee

2 pointsmen at Ambergate were removed by advice and consent of Mr. Binger, chief coaching clerk.

2 pointsmen at Normanton displaced, and 2 flagmen changed for boys or signal posts on the advice of Mr. Carbrey, Engineer of the York and North Midland; but this is contingent on an alteration of the points.

3 ticket-collectors at Swinton, Barnsley, and Oakenshaw. The clerks or porters to collect the tickets at these small stations; and if it be found needful for this purpose, the gates are to be closed on the arrival of the train, as is practised on the London and Birmingham line.

10 porters at different local stations, who appear to have no sufficient employment.

7 night watchmen at different small stations, who may be spared if each day's receipts be sent to Derby or Leeds by the last train at night, instead of keeping the money on the premises to go by the first train in the morning. Arrangements to be made for a clerk or porter to sleep at each station.

At Staveley there are three persons omitted in the Committee's list, and at Claycross there are three persons omitted in the Directors' list, so that the two errors balance one another.

Such is a brief explanation of the Committee's reasons for recommending the removal of these 42 persons, whose loss in the exaggerated language of the Directors is to entail such serious evils on the Company and on the public.

The number of persons, with the rate of wages required for working the locomotive department, was fixed by Mr. Marshall, the Superintendent of that department, and Mr. Dobson, the foreman; and although their scale did not accord in all respects with the views of the Committee, some of the items being excessive in comparison of other lines, it was thought best to adopt it, these gentlemen vouching for its adequacy on condition that the permanent way were kept in a good state of repair. The Committee have seen with surprise that instead of printing the scale of wages in its original form, the Directors have contrived to reduce the rates by averaging the wages of boys with those of men, which the Committee had kept separate. What the effect has been on the servants of the Company is already known, and the proprietors will be much surprised to learn that the Committee's allowance—

For fitters, is 4s. 4d. instead of 4s. per day.
For joiners, 3s. 8d. instead of 3s. 5½d. per day.
For labourers, 2s. 6d. instead of 2s. 3½d. per day.
For planers, 3s. instead of 2s. 7d. per day.
For smiths, 4s. 4d. instead of 3s. 9½d. per day.
For strikers, 2s 8d. instead of 2s. 6½d. per day.
For turners 4s. 8d instead of 4s. per day.

And that a coach trimmer at 4s. has been metamorphosed into a coppersmith!

The Directors remind the shareholders of a pledge in their last Report, which they reprint in italics, "not to relax in their efforts until the expenses are reduced to the lowest point compatible with the efficient working of the line." Unfortunately for the consistency of this declaration, it is not very long since the salary of the Secretary was raised from 500*l.* to 600*l.*, and the salary of the new goods' Manager has just been fixed at an advance of 50*l.* on that of his predecessor in the office, although he is untried and has much to learn, not having been connected with a railway before. In alluding to this subject the Committee give no opinion either of the appointments or of the salaries *per se*; but they object simply to the increase, and wish to record their conviction, that so long as this unfortunate undertaking is only paying 2½ per cent. per annum to the proprietors there is a special reason for not increasing the scale of remuneration, but rather reducing it, in the language of the Directors, "to the lowest point compatible with the efficient working of the line."

The Committee think it is a sound principle that the managing servants of the Company shall sympathise with their employers, and when, by means of their exertions, an increased dividend is realised, the heads of departments should receive a progressive advance. In plain words, the proprietors of the North Midland Railway cannot afford to be generous, much less to be extravagant: but in proportion as their circumstances improve, they wish their servants to partake of their prosperity.

As regards the future improvement of the revenue, the Committee had a long conversation with the goods' Manager, and they repeat their recommendation "to re-consider the passenger fares and the rates paid by carriers for the conveyance of goods," assuring the Directors, that in their opinion the latter especially are susceptible of improvement; but they do not choose to take the responsibility of such changes, when they are to be carried out by a reluctant Directory. Representations have been made to the Committee, that although the Company's charge for goods is very low, they have neglected in some cases to take security from

Digitized by Google

the carriers that the public should have the benefit—so that the Company does the work and the carrier takes the profit.

The Committee concur with the Directors in thinking that on the development of the traffic mainly depends the prosperity of this great undertaking; and it is with a view to promote this development that the Committee have recommended the appointment of an efficient head—"a person of knowledge and experience in railway management," who shall have the requisite talent and industry to draw out the resources and stimulate the capabilities of the line.

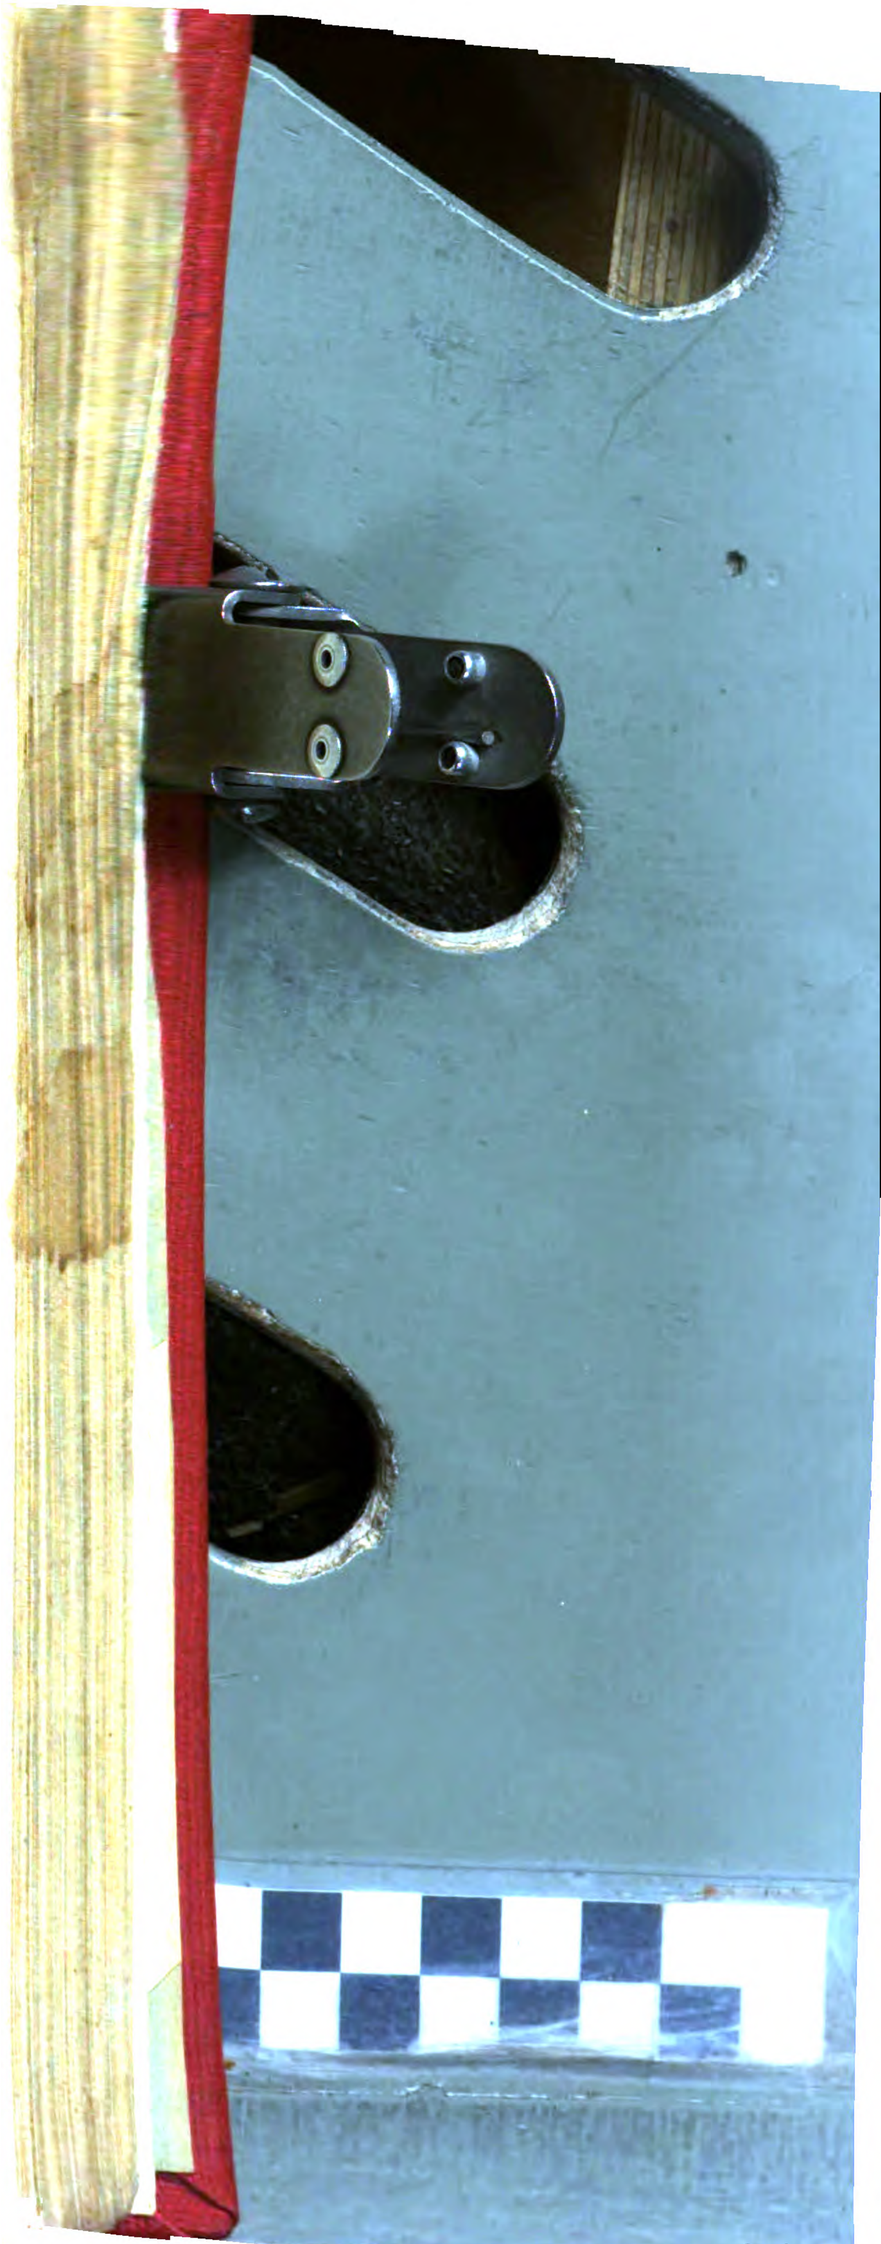
The total amount of difference between the Directors and the Committee is 6,862*l.* 15*s.* This sum makes, it is true, scarcely ½ per cent. in the dividend; but as the shareholders are accustomed to small distributions, no doubt even such an addition will be valued.

In conclusion, if the shareholders approve of the Committee's Report, they will do well not to suffer their attention to be diverted from the amount of saving by discussions about particulars—a pointsman less or a porter more. The Committee are unanimous as to the propriety and justice of their recommendations, taken as a whole; they anticipate from the adoption of their views not merely diminished expenditure, but an increase of revenue; and they consider the forebodings and fears of the Directors as being altogether without foundation.

P. W. BRANCKER, Chairman.

Mr. J. CARR, surgeon, of Sheffield, rose and said, that from the great depreciation in the price of North Midland Railway Shares, from the small dividend paid to the proprietors, with that dividend growing half-yearly less, the proprietors resident in and near Sheffield thought it wise to organize themselves into a body for the purpose of trying if they could by any means aid and assist the Directors in improving the resources of the undertaking, by either increasing its income, or diminishing its expenditure. He came before the shareholders in August last prepared to propose a Committee of Inquiry; that Committee of Inquiry was appointed, and they had brought forward a Report, which stated that a decrease in the expenditure might be effected to the amount of 17,788*l.* a year. (Hear, hear.) The Directors since then had admitted that a saving to the amount of 11,000*l.* per annum might be effected. (Hear, hear.) Surely this must be a convincing proof to the proprietors in that room, that the proprietors residing at Sheffield had sufficient reasons for their apprehensions, and were perfectly justified in pressing for the appointment of the Committee of Inquiry. ("Hear, hear," and applause.) The Chairman (Mr. Newton), in the conclusion of his speech at Derby, on the 25th of August last, said that the Directors hoped for a decrease in the expenditure, and an increase of the revenue, but still he could not hold out the hope that any further great reduction in their expenditure could suddenly be made. Yet so soon as two months had elapsed, when the Committee of Inquiry had paved the way, the Directors came suddenly to the conclusion that 11,000*l.* per annum in the expenditure might be saved. (Applause.) The Directors could not for one moment suppose this would increase the confidence of the proprietors in the Directorship as at present constituted. (Applause.) As far as he was concerned, it had had a very different effect indeed, and he must at once tell the Directors that he had lost all confidence in them. He was an original proprietor, and took all the half and third shares allotted to him. He had invested nearly the whole of the savings of his hard earnings for 10 years. (Hear.) He never attended a railway meeting in his life before August last; he had placed the most implicit confidence in the Directors until he found his capital reduced nearly one half, and his dividend less than one half. (Hear, hear.) What must be the consequence of such a state of things to those who had no other resources? He felt prepared to remove his confidence from the Directors, and place it upon the Committee of Inquiry. (Hear, hear.) There appeared to be a difference between the Directors and the Committee amounting to upwards of 6,000*l.*, but 3,600*l.* of that sum would be found to be in one item, that was the locomotive and coaching department, or rather the workshop department. The Committee of Inquiry stated that the maintenance of way was not in that order it was when the contractors took it. (Hear, hear.) They were all aware that if a railway was not in a good condition, the inequalities of the road opposing, as they did, the progress of bodies of immense weight, and proceeding with the great rapidity of railway trains, must inevitably occasion enormous wear and tear in the machinery, and consequently enormous expenses in the locomotive department. (Hear, hear.) The Committee were of opinion, that if the road was kept in good order, the expenses of the locomotive department might be reduced to 9,000*l.* per annum; but this the Directors denied. What means did the Directors take to keep the road in proper condition? He (Mr. Carr) stated at the meeting of shareholders at Derby, in August last, that a million of money had been thrown away in making this railway; and yet, the very same officers, who in the commencement blighted the prospects of the undertaking, were still kept in connection with it, and were now blighting their dividends. (Applause.) The very persons who had the superintendence of the maintenance of way, were the same persons who had the letting of it; and he had little hope of any beneficial alteration unless it was entrusted to other parties. (Hear, hear.) Mr. Carr then alluded to a letter purporting to be from the workmen of the North Midland Railway, which appeared in some of the railway journals of last week, with reference to the proposed reductions, and said, he thought that the workmen had been very ill-advised in sending it. The condition of the Company's affairs required that the reductions should be made; and if anything like anarchy arose in the workshops, what other result could they expect than a total dismissal of every man? (Hear, hear.) He expressed his desire that the workmen should be fairly remunerated, and said, that he would even suggest, as soon as the railway paid 5 per cent. dividend, that a Committee should be appointed with a view to the increasing of the wages of the steady, sober, and industrious workmen of the Company. (Hear, hear.) It became his duty to move, that this Report of the Committee of Inquiry be read and adopted; and, in doing so, he thanked the meeting for the very kind and silent manner with which they had listened to his remarks, and he hoped nothing he had said had given offence, or hurt the feelings of any one. His great wish was the prosperity of all the proprietors; and, simply upon that ground, he moved that the Report of the Committee be adopted. (Applause.)

Mr. JOSHUA BOWER seconded the proposition, and spoke highly of the valuable results of the labours of the Committee of Inquiry, and considered the appointment of that Committee one of the best things that had ever happened to the North Midland Railway Company. (Hear, hear.) He agreed with every word that Mr. Carr had said but one, and that was, that he said he had lost all confidence in the Directors. He (Mr. Bower) had not lost all confidence in the Directors; he knew some of them too well. (Laughter.) He thought the Committee would be a check upon the Directors, and he was highly gratified with it. (Hear, hear.) He expressed his concurrence with Mr. Carr in the opinion expressed by him as to the condition of the road, and observed, that a good deal of the Company's money had been thrown away by the Directors being too much influenced by the advice of their officers. (Applause.) He also alluded in terms of censure to the increase of Mr. Frost's (the Secretary's) salary from 500*l.* to 600*l.* a year, without consulting the shareholders. He mentioned this without intending any disrespect to Mr. Frost, whom he thought worth two of the former Secretary, but he pitched upon him, because he knew him best, and respected him most. (Laughter and applause.) He concluded by seconding the motion.



Mr. R. JOWITT rose and said, he was one of those who recommended the appointment of the Committee at Derby, and he now took the opportunity of saying, that what they had heard that day had fully justified the appointment of that Committee. (Hear, hear.) He thought the shareholders ought to be much obliged to the gentlemen of Sheffield for originating this movement, and to the Committee for the indefatigable way in which they had prosecuted the inquiry. (Hear, hear.) He considered them men of honour and integrity. (Hear, hear.) He considered also that the Directors were men of honour and integrity. (Hear, hear.) Here they had the Committee recommending one thing, and the Directors another; and he gave them both credit for being men of honour and integrity. (Hear, hear.) They had all of them certain stakes in the concern, and therefore, in one respect, they were on the level with all the rest of the proprietors, and were all dissatisfied with the small dividends they had had, and all wished to have them by fair and honourable means increased. (Hear, hear.) They were all agreed on this point. They found the Committee proposed a reduction of about 17,000*l.*, and the Directors said it could not be done with propriety and safety. What was he (Mr. Jowitt) to do!—how was he to judge? He confessed that he had read the Report, but had not considered the details of the reductions proposed; he thought it would be quite in vain for him to do so, and he thought in that respect he was situated like nine-tenths of the Company. To go into the details, he considered quite out of his line. He took it for granted that the Committee, and the Directors also, knew something about it, having gone into the details. The Directors had most certainly proved themselves to be very fallible men. ("Hear, hear," and applause.) The fact was that the dividends were so small that it was necessary that the circumstances of the Company should be looked to. The Committee set themselves assiduously to this inquiry, and found that large reductions could take place. (Hear.) But the Directors could not go so far as the Committee proposed. He would, therefore, while he said the Directors had proved themselves to be fallible men, say that he believed the Committee were also fallible men. (Hear, hear.) It had been said that extremes produced extremes, and in endeavouring to avoid one extreme there was great danger of running into the other extreme. (Hear, hear.) They had had extreme depression with regard to the dividends, and it would seem from what the Directors themselves admitted, that there had been extreme expenditure, but it was quite possible that they might be driven to the other extreme. (Hear, hear.) With regard to the wages, he must say, though it may be true that men might be obtained for half the sum at the present time, yet he held that it would be very bad policy in the railway Directors to fill their different offices with inferior men, simply because they would take low wages. Hear, hear.) They could not expect that such men would do the work as it ought to be done. He again said they might be driven to an extreme on the other hand. That they had had extravagant expenditure there could be no question. But to prevent the extreme on the other hand, he would venture to propose an amendment to the motion which had been made. He did not know that he should have a seconder, but he did not care about that; he stood there independent of any party whatever—(hear, hear)—for he had not conversed with any party on the subject, except a few minutes with one of the Committee, and a few minutes with one of the Directors; he looked at the matter as a man of business. There were three things they could do—they could adopt the recommendations of the Committeee—they could adopt the recommendations of the Directors; or they could compromise. Some might object to compromise, and attribute it to want of decision. But in most cases in human affairs it was found that a medium course was the best. It appeared to him that they might safely, and with advantage to the concern, adopt for the present the recommendations of the Directors; and with respect to those things which they had not yet seen the propriety of adopting in the recommendations of the Committee, the Directors should be strongly recommended to exercise close and vigilant attention with a view to effecting every possible retrenchment, and, if possible, bringing down the expenditure to the standard of the Committee. With those sentiments he begged leave to propose—

"That this meeting, after hearing read the Report of the Committee appointed, and the remarks of the Directors upon it, direct that the reductions proposed shall be carried out so far as the Committee and Directors are agreed; and that those particulars in which the Directors do not at present think the views of the Committee can be carried out with safety and advantage to the concern, are hereby recommended to the close attention of the Directors, in order that all further practical and safe reductions may be made in the expenditure."

Mr. W. ALDHAM, sen., said, he did not see why the Committee and Directors should not have had confidence in each other. It seemed to him that they had been at daggers drawing with one another, and he should be glad to second the proposition of Mr. Jowitt, on the understanding, when three of the Directors went out of office in February next, that their places should be supplied by three of the Committee of Inquiry. They might then try what could be done.

Mr. J. RAND, of Bradford, said, it appeared to him that the question for them to consider was, whether they should adopt the Report or agree to the provisions of the amendment. He considered it to be his duty to support the motion which had been made, that the Report of the Committee be adopted. (Applause.) He should make no reflection upon any one, but after as careful a consideration as he could give to that Report, and at the same time having examined the document which had been put out by the Directors, it was his full conviction, believing the saving which the Committee stated could be effected without impairing the efficiency of the line, or endangering the traffic upon it, that the Report ought to be adopted. (Applause.) He therefore called upon the meeting to give it their cordial support.

Sir J. SIMPSON, of York, said, that at the meeting at Derby, in August last, he had been thought extremely absurd and foolhardy, when he stated his conviction that an active Committee would be able to point out savings to the extent of 20,000*l.* a year. He would not ask whether the result had justified him in making that assertion, but he would now express his

belief that reductions might be made to the extent not only of 17,000*l*., but of 25,000*l*. (Hear, hear.) He respected the Directors as individuals, but as Managing Directors of the railway, he told them openly that he had lost all confidence in them. (Loud applause.) He expressed his opinion that they had been led too much by the nose by their higher officers, and asked, had they no opinion of their own? He would have them discharged immediately and altogether. (Loud applause.) His conviction was, that the proposed improvements could not be carried out, except by an entirely new body. The Directors had been so long used to extravagance, and to giving way to the opinions of their higher class of servants, that he could not believe they could carry out the views of the Committee honestly and conscientiously, and he therefore hoped that the meeting would not be led away by any side-wind motion such as he considered the amendment. (Applause.)

Mr. J. HUBBARD, of Leeds, referred to certain letters and documents left by his father, the late Alderman Hubbard, who held the situation of Deputy-Chairman of the Company, for the purpose of showing that, for a considerable time previous to the appointment of the Committee of Inquiry, the Directors had been endeavouring to reduce the expenditure of the Company. (Hear, hear.)

Mr. J. ROEBUCK, of Sheffield, supported Mr. Carr's motion, in an energetic speech, and expressed his concurrence in all that had fallen from Sir John Simpson. He was convinced that it was quite necessary that there should be an infusion of new courage into the Directory, to enable them to lift from their shoulders that sort of incubus of engineering influence that had hitherto paralysed their energies. (Applause.)

Mr. COCHRANE (we understood, of Dublin) said, if three of the Directors would retire, and make way for three of the Committee, he should be satisfied. (Hear, hear.) He wished them not to disagree, for they had difficulties enough to contend against without fighting amongst themselves, and he wished them to leave that room with unanimity. (Hear, hear.) He hoped that by the future management of the Directory, when its efficiency was thus increased, the character of the undertaking would soon be changed, and that when hereafter a man announced himself a shareholder in the North Midland Railway, he would not be received with the leer of an enemy, or the piteous look of a friend. (Laughter and applause.)

Mr. T. BEAUMONT, surgeon, of Bradford, said, though he had perfect confidence in the honour and integrity of the Directors, yet he deemed it to be absolutely necessary that they should be more independent than they had hitherto been of the influence from within, which it was said had been exercised by the servants of the Company. He thought they owed an immense debt of gratitude to the Committee, for the patience, courage, integrity, and gentlemanly bearing with which they had executed their unpleasant and arduous duties, and, above all, for the Report they had communicated to that meeting. He thought they were bound to receive that Report. He was not one of those who thought the Directors ought to be turned completely right-about, but a consolidation of the Committee and the Directors would be a valuable arrangement. (Hear, hear.) He did not look upon the amendment as a compromise, for it was an adoption of the Directors' plans. He thought the only compromise which, as honourable men, they could accede to, was the bringing together the two bodies; and he was of opinion that the Company would receive from such a combination an indemnity for the future. (Applause.)

Mr. G. GOODMAN supported the view taken by Mr. Beaumont, which he believed would tend to heal the breach that had taken place.

Mr. BRANCKER (Chairman of the Committee of Inquiry) observed, that no breach had taken place.

Mr. GOODMAN said, he was glad to hear that, and in some further observations advocated the adoption of some such plan as that proposed by Mr. Beaumont.

Mr. W. RAND said, he had heard no arguments against the adoption of the Report of the Committee of Inquiry, and he hoped it would be carried by a large majority.

Mr. J. MEEK, of York, said that he understood the object of the meeting was to take into consideration the best means of reducing the expenditure, and also to adopt such measures as would increase the income of the Company. (Hear, hear.) The present Directory (he meant nothing disrespectful to any gentleman upon it), and the Engineers connected with it, had not, in his opinion, pursued that economical course which they might have done. They had neither carried on in a business-like way, nor assisted in developing the capabilities of the line as they ought to have been developed. (Hear, hear.) He did not mean to charge them with anything but honourable conduct, but the proprietors must form an opinion in reference to the course they had taken. The original outlay was gone, and they could not bring it back again. He did not think that the gentlemen who had hitherto managed the affairs of the Company would carry out what the shareholders expected, and what they had met to-day to carry into effect. (Hear, hear.) To make a compromise would be a mere nullity. The wishes of the shareholders could only be accomplished by making a great change in the Directory, and he should certainly like to see the Committee of Inquiry form part of it. (Hear.) The business-like Report the Committee had presented, ought, in his firm conviction, to be adopted for the benefit of the proprietors, for the benefit of the public, and for the satisfaction of all. (Applause.)

The CHAIRMAN now rose to reply. He had been naturally anxious to hear the opinions of almost every shareholder who was disposed to offer an opinion on this occasion, before he rose to address them, because he wished, at the same time that he was desirous of supporting the opinions embodied in the Address of the Directors, also to be enabled to consider what ground had been taken by gentlemen who had addressed the meeting, for supporting the opinions of the Committee. He thought, perhaps, the best way for him to adopt on this occasion would be to go as short as he possibly could through the different topics brought forward by the Committee in their Report, and take it step by step, and then follow it out by some observations upon the different remarks made by the preceding speakers. He would begin then, with the first point to which the Committee referred. They found fault with the Directors for not having used sufficient exertions in bringing the contracts of the Company for the construction of the line to a completion. It was very easy to recommend that these contracts should be brought to a conclusion. Did they think there was any body more anxious than the Directors on that head? The Directors had done, he repeated here what was said by them in their address, — they had done all that men could do, either the shareholders, the Committee, or any other individuals, for bringing these contracts to a conclusion. What was necessary for that purpose? It was manifest, in the first instance, that the Directors should get in the accounts of those contractors which were not yet received, and as soon as they got them in, they should either allow them or disallow them. If the Directors had disallowed them, as most assuredly they should do and had done, their next step was—what? To say to those contractors, "If we cannot agree with you in the settlement of these accounts, the only next course we can take is either to proceed against you legally, or refer the matter to arbitration." Now, the legal proceeding was a Chancery suit. Was there any one present bold enough to say that the Directors did wrong in abstaining from involving the Company in a Chancery suit? He thought not. And if the Directors were not to involve the Company in a Chancery suit, the only remaining step they could take, was, to refer the matter to arbitration. The Directors had proposed arbitration to every one of these contractors. Some of them had agreed to it; others had not yet assented. But tell him (the Chairman), and he asked also the Committee to tell him, what other steps the Directors could have taken beyond the steps they had taken? They had insisted from time to time that these accounts should be delivered, and had got them in with difficulty. When the Directors got them they examined them immediately, and after the examination they had interviews with the contractors, and failing to settle the accounts amicably, they had referred them to arbitration. Tell him if the Directors had not done all they could do, and in the way in which the shareholders would have recommended them to do? The next point was, that there were unsettled accounts with other Railway Companies, and the Committee had recommended that those unsettled accounts should be immediately settled. What had the Directors to do in this case? They had to arrange the unsettled accounts with the Manchester and Leeds, the Birmingham and Derby, and the Midland Counties' Railway Companies. The settlement of these accounts required a general meeting of the parties. Now, he had frequently applied to these parties, and said "Fix your time, accommodate yourselves any way you please; no engagement on my part, however important it may be, shall induce me, if possible, to postpone the settlement of these accounts, merely to suit my own private convenience." Times had been fixed, meetings had been settled upon, arrangements had been made, and what had been the result? The Chairman of one of the Companies wrote him word that a very pressing engagement had taken him to London. On another occasion, the Chairman of another Company wrote him word that he had an engagement, and could not possibly come, and this was the way in which they had gone on from time to time, meetings having been appointed but not held, though invariably kept by himself. How was he to do? He appealed to the Committee as men of business to tell him, if they could, how he was to compel those parties over whom he had no control to come and meet him. He had done all he could to get a settlement, but had not been able. He would now go to the next point, upon which he would not dwell at any considerable length, as they agreed with the recommendations of the Committee in regard to the amalgamation of offices. With regard to the coaching department, there the Directors were at issue in some degree with the Committee. The Directors said, and they gave the shareholders the best information they could give them to enable them to form a decision—they said that the reduction in the coaching department, recommended by the Committee, could not be carried into effect without diminishing the efficiency, and, in some degree, impairing the safety of the line. He would now beg to call the attention of the shareholders to a very material fact; one which he thought ought not to be lost sight of at this meeting. The Directors had been long silently working, and said nothing about it. Their accounts would show that from the year 1840 to the year 1842, they had been gradually diminishing their expenses after the rate of 4,250*l*. in the half-year, making an annual saving of 8,500*l*. Why, he really thought that reduction was not a trifling one. And then let him call their attention to another point, in the coaching department, that out of the 13,003*l*., there was no less a sum than 5,203*l*. paid by other Companies, which reduced the net expenses of that item to 7,800*l*. He thought when the shareholders considered this they would not suppose that the Directors had been reluctant to make reductions. He honestly told the shareholders, and he challenged anybody to say otherwise, that the Directors, instead of being reluctant, had been as earnestly and anxiously desirous of reducing the expenditure of the line as either Mr. Carr or any member of the Committee. They had interests like the shareholders, and were as anxious to promote the benefit of the concern as any person present; and they anxiously desired to reduce the expenditure in every possible way which could be shown, and be done with safety. They had no feeling of favouritism, either as regarded the engineers, or any other officers of the Company; they had no desire to retain any single servant of the Company, or to avoid any reduction which they honestly thought could be made. (Hear, hear.) They came next to the goods department, in which the Directors thought very little saving could be effected, because he was happy to tell the shareholders that the traffic in the goods department was increasing, and therefore, instead of diminishing the expenditure, they would probably soon be called upon for an increased outlay in that department. (Hear, hear.) With regard to the engineering department, the Directors said it could not be reduced to its lowest amount until the remaining contracts were completed. Mr. Carr stated, as an offence the Directors had committed, that the same officers were kept in connection with the Company who had originally burthened them with unnecessary expenses in the formation of the line; and in making that statement he manifestly alluded to the salary given to Mr. Swanwick. The Company were in eight contracts; and in disputes with the contractors to the amount of 100,000*l*. (Hear.) Now, no other man could wind up these contracts but Mr. Swanwick. There was no other means of saving the Company this large amount, or at least a considerable portion of it, but by the retention of Mr. Swanwick in the establishment. Tell him whether he had not done the best for the Company in the arrangement which he had made with Mr. Swanwick? He was now in the receipt of 1,200*l*., and might have insisted upon the continuance of that salary, and the Directors could not have helped themselves. But, instead of that, he had consented, for the present year, till this difficult business was settled, to relinquish 200*l*. of that amount. ("Hear, hear," and laughter.) And whether these contracts were wound up or not, he had consented next year to be reduced to 600*l*. for that year, and he had agreed that after that period it should be left to the proprietors to determine his further remuneration. He (the Chairman) thought this was positively the best arrangement that could be made under the circumstances. In the locomotive department, there was considerable difference between the Committee and the Directors. The Directors had given the accounts most careful and minute considera-

don. With regard to the wages, on which so much had been said, he thought, when the shareholders found how matters stood, they would not find much fault with the Directors in that respect. But supposing that they could get workmen at very reduced wages from the north, every day's experience proved that when men came into a district where higher wages were paid, they endeavoured to obtain the wages of the district. They might as soon expect water not to find its own level, as the rate of wages. They had taken the average of private establishments, and they thought that the most reasonable mode of fixing the scale of wages. He next came to the reductions which they had made. He did not mean to undervalue the labours of the Committee. He felt that the Company owed much to that Committee; they had done their duty in a manner highly creditable to themselves, and deserving the thanks of the Company—an acknowledgment which he was sure he would be the first to support. (Applause.) After this it would readily be believed that he had no desire to depreciate the labours of the Committee; but they must come to facts, for he considered their characters were at stake, from what the Committee had stated. Now let them examine the proposed saving of 17,800*l*. Of this there was 6,000*l*. which the Directors felt it was impracticable to effect with due regard to the efficiency of the line and the public safety. The reductions already made by the Directors amounted to 3,500*l*., and they had decided upon further reductions of 1,300*l*., making altogether reductions to the amount of 4,800*l*. The Directors had long ago decided on reductions in the engineering department, but these reductions were prospective, and could not be made now. These reductions, and various others already made, or which had been some time in contemplation, amounted together to a sum which brought down the 17,800*l*. to 3,747*l*., after deducting the 6,000*l*. before mentioned as impracticable. From what he had said it would be seen that the assertions as to the suddenness with which the Directors had seen the possibility of effecting reductions to the amount of 11,500*l*. after the appointment of the Committee of Inquiry, were not correct, for considerable reductions had been previously made, and others were in contemplation. Whether the reductions were carried out by the Directors or the Committee, they must be prospective. The Chairman touched upon one or two other points in the Report of the Committee of Inquiry, and afterwards said that the next point to which he must advert was a very painful one, because it was the point which brought them so directly into collision with the Committee. The Committee had said that the reductions proposed by them were admitted by the principal servants of the Company to be practicable. Now, if this had been allowed to remain uncontroverted, it might have led the shareholders to very erroneous conclusions, and therefore the Directors, delicate as they felt the matter to be, considered themselves bound to ascertain which of the officers had made this admission. They found on inquiry that every one of them denied having made this admission; not one of them admitted the practicability of the proposed reductions by the Committee. All he (the Chairman) could say was, that if the officers of the establishment stated one thing to the Committee and another to the Directors—(Cries of "Nothing so likely")—they must answer for themselves.

Mr. J. Rand, of Bradford, here interrupted the Chairman, and said he thought it was very undesirable to refer more than was absolutely necessary to this subject.

Mr. J. T. Alston said, he was quite willing, if the meeting thought proper to constitute itself into a judicial assembly to try the veracity of the Committee, to go over the details of the evidence, and he would stand or fall by the Report which had been delivered. (Hear, hear.)

The Chairman then proceeded to the observations of the Committee as to the maintenance of way, and said, that the Engineer stated that the road was in good repair.

Mr. Brancker said that the Committee had personally inspected the road, and formed their opinion from that inspection.

A Shareholder said that 200 men had been placed on the road by the contractors since the Committee had made their Report.

The Chairman replied—Supposing there were 400, it should be followed by another question, what was the usual number put on at this time of the year? The Chairman then entered into a defence of the Directors from the charge made against them of inclining too much to the opinions of their officers; and said, that Mr. Carr was wrong when he stated that the line was let by the Engineer. No such thing. The permanent way was let by open competition, and the lowest tender was taken. He believed, and he was instructed to say, that for a very small premium the contractors would be willing to give up their contracts. The Chairman, in conclusion, noticed that the Committee of Inquiry had not made any suggestions as to the improvement of the revenue, and he thought that this might fairly be taken as something in favour of the present Directors. The Directors had spared no pains to increase the revenue, and were at this moment making progress in bringing new traffic on the line; and let it be remembered, that a very small increase in the traffic would out-weigh all the proposed reductions. (Hear, hear.)

Mr. Bradley, of Sheffield, thought the Committee ought to be supported in what they had done, whether it was for or against the Directors. He was of opinion that far more than 17,000*l*. might be saved in the yearly expense of the line, and he was glad that the Committee had not recommended a less sum.

Mr. H. Stansfield thought the Directors would fail in their duty if they were not careful of the public safety, and it seemed to him that one of the alterations proposed by the Committee, namely, the substitution of two boys instead of two flagmen, at the important junction of the North Midland and Manchester and Leeds, was one likely to endanger that safety. The Committee also proposed to have only one clerk and one porter at the Oakenshaw station, which he thought quite insufficient.

Mr. G. Hudson, one of the Committee of Inquiry, next made some observations, in which he alluded to the painful nature of the inquiry in which they had been engaged, but they had felt it their duty to prosecute it with care and faithfulness. (Applause.) With reference to the wages of workmen proposed in the Report of the Committee, he said they were higher than those paid by the York and North Midland Railway Company, of which he was Chairman, and he did not see why the North Midland Company should pay higher wages to their servants than were paid to the workmen on the former railway. As to locomotive and carriage repairs, Mr. Hudson said that the York and North Midland Railway Company had run 14 engines and 1 pilot engine daily, and the North Midland ran 13 engines and 4 pilots; therefore, there was not much difference between them. The costs of repairs on the former line per year were 7,295*l*. 14*s*. 8*d*., to which add 33 per cent. for the disadvantageous circumstances connected with the North Midland line, and there would be the sum of 9,727*l*. 12*s*. 9*d*. for the locomotive repairs on the latter. In the Committee's Report, the sum allotted for these repairs was 9,913*l*. 18*s*., which, according to this calculation, must be amply sufficient. From what the Chairman said, he seemed to suppose that the Committee did not intend to keep the locomotive department in as efficient a state as at present, but in this he was mistaken; for this object, which the Committee thought an important one, had been kept steadily in view throughout their investigations. He also observed that the reason why the Committee had not made any suggestions as to the improvement of the traffic, was because they thought those suggestions could not be fairly carried out except by parties who would interest themselves in their development.

Mr. J. T. Alston expressed his regret that a proposition he had formerly made to Mr. Glyn, the late Chairman of the Company, had not been acted upon. He suggested that there should be a Committee of Investigation, composed of six of the Directors and six of the proprietors. That proposition was rejected; had it been acted upon there would not have been the present collision. Mr. Glyn had sown the wind, and the shareholders were reaping the whirlwind. (Hear, hear.) After some observations as to the omission of suggestions for the improvement of the traffic in the Committee's Report, and as to the manner in which the Committee had collected evidence confidentially of the clerks of the Company, he proceeded to remark on the painful and unpleasant nature of the inquiry they had had to conduct, and said, that when they were requested to undertake it, they might have answered, like the poor apothecary in Shakspeare's play, "Our poverty, but not our will, consents." (Applause.)

Mr. Beaumont asked of the Solicitor of the Company what could be done that day under existing circumstances, with regard to the introduction of more individuals into the Directory, according to the Act of Parliament.

Mr. R. E. Payne, Solicitor, said the Act of Parliament did not authorise the appointment of any Directors except at the annual meeting, unless when vacancies occurred, in which case the Directors had the power to supply them.

The Chairman now rose to put Mr. Jowitt's amendment, in favour of which only five hands were held up; and immediately afterwards the original proposition, for the adoption of the Report of the Committee of Inquiry, was carried nearly unanimously.

Mr. J. Rand begged to move the thanks of the shareholders to the Committee of Inquiry, for the manner in which they had discharged the unpleasant duty imposed upon them. (Applause.)

Mr. Bradley seconded the motion, which was carried unanimously, and amidst loud acclamations.

Mr. Brancker, as Chairman of the Committee, acknowledged the vote of thanks on behalf of himself and his colleagues.

Mr. Beaumont proposed, that as the Committee could not be added to the Directory, it should remain as a standing Committee. (Applause.)

The Chairman—I am afraid that could not be done, this being a special meeting for a special purpose.

Sir J. Simpson said, I have a recommendation to bring before the meeting—that a certain portion of the Directors will have the goodness to retire from the Board, that others may be selected to supply their places. (Loud cries of "Hear, hear.") I would not have the invidious task of naming others, but I think our obligations to the Committee who have recommended these reductions, will point out to us at least six gentlemen as most fit to carry out the resolution of the meeting with effect. (Applause.)

The Chairman—I think it very competent for the Directors to attend to the recommendations of any shareholder, and I have no doubt they would feel it to be their wish as well as their duty to do so; but this is a meeting for a special object, and by the provisions of the Act of Parliament we cannot introduce any other business.

Sir J. Simpson—I am quite aware it cannot be passed as an effective resolution. It is merely a recommendation to show the feeling of the meeting. (Hear, hear.)

Mr. A. Titley, one of the Directors—I would recommend that one or two of the Committee should be amalgamated with the Directors. (Loud cries of "All, all.")

Sir J. Simpson—I submit this recommendation to the shareholders—"That in the opinion of this meeting it would greatly tend to restore the confidence of the proprietors if nine of the present Directors retired from the Board and nine other gentlemen were appointed in their place." (Loud applause.) Some odium may attach to me for bringing forward this recommendation, but I have a duty to perform to myself and the proprietors at large, and I think this recommendation is the only course which can be adopted to carry out effectually the Report of the Committee. (Hear, hear.)

A Shareholder—Is there any objection to the Directors stating now how they intend to act?

The Chairman—I think that can hardly be expected. We must have time to consider.

A Shareholder—Can the meeting then adjourn for one hour to give the Directors time to consider? (Hear, hear.)

The Chairman—No; I think not.

Mr. G. Goodman—This meeting having adopted the Report by a large majority, there could be no doubt of its being carried into effect by the Directory.

Mr. J. Rand—They cannot; they cannot.

The Chairman—We are unanimously of opinion that the recommendations of the Committee cannot, with safety, be carried into effect. (Cries of "What will you do, then?") The only course I can see that can be taken by the Directors will be to apply to the Board of Trade. (Exclamations of "To what?")

Mr. J. Rand—For what object? (Hear, hear.)

The Chairman—As to the safety of the public. (Great confusion.)

Sir J. Simpson—I merely want to obtain the sense of the meeting as to how the Report is to be carried into execution; otherwise the resolution of the meeting will be of no effect. You, Sir, and the Directors have declared that you cannot carry it into effect. (Hear, hear.)

The Chairman—It is my desire to put the recommendation to the meeting, if I could, but I think the Act of Parliament precludes that. (No, no.)

Mr. G. Goodman—I think the difficulty is easily obviated: the annual meeting will be held in Februar —(cries of "That will not do,")—and I suggest that if the Directors proceed in the reduction of the expenditure according to their own view till that time, then the difficulty of carrying out the Report will be lessened. (No, no.)

Mr. J. RAND—But then, my dear Sir—the principle involved!

Mr. TITLEY—Would it be agreeable if three of the Committee were amalgamated with the Directors. (Cries of "No, no."—"All, all."—"Let's have them every man!")

Mr. ALSTON—A great majority of this meeting have decided in favour of our Report, and I am sure the Directors are bound to carry it out. (Hear, hear.)

A SHAREHOLDER—May I beg to ask the present intentions of the Directors?

The CHAIRMAN—I cannot really tell.

Mr. J. RAND—I think it is a very fair question to ask. Here is a Report adopted almost unanimously. The next legitimate question is, what steps do the Directors intend to take, after stating that they cannot carry it out!

In the midst of great confusion, the Chairman declared the meeting dissolved, and vacated the chair.

Sir J. SIMPSON—Gentlemen, the Chairman has just declared the meeting dissolved, and I now call on those present to pass an opinion in favour of my recommendation. ("Hear, hear," and "No, no.")

A SHAREHOLDER — But it is utterly impossible, the meeting is at an end; there can now be no business proceeded with.

A large portion of the meeting then held up their hands in favour of Sir J. Simpson's recommendation, and not above three or four against it.

Mr. J. HOLDSWORTH—It may be advisable for this meeting to state whether they think it desirable that all the Directors should retire, or that a certain portion should retire—(Yes, yes)—because, if the opinion of the proprietors present were ascertained upon that point, it may induce some of them to retire.

Mr. J. RAND requested Mr. Newton to resume the chair.

Mr. NEWTON complied with the request, but said, in his opinion, nothing could be done consistent with the objects of the meeting.

Mr. HOLDSWORTH resumed, and said, if he might judge of the feelings of the other Directors by his own, his feeling was to retire altogether. He was quite willing to retire in favour of any gentleman whom the meeting might wish to introduce.

Mr. TITLEY expressed his willingness to work heartily with any gentleman who might be introduced into the Directory, but thought that the retirement of the whole of the Directors, to make way for a body of men unacquainted with the affairs of the Company, would be very injurious to its interest. (Hear, hear.)

Mr. W. RAND proposed—"That it is the opinion of this meeting that the regulations proposed by the Committee of Inquiry for the reduction of the expenditure, will never be carried properly into effect without the introduction of the whole of that Committee into the Directory." (Hear, hear.)

Mr. CARR felt great pleasure in seconding the proposition.

Mr. TITLEY said this could not be at present.

The CHAIRMAN said he had better retire, as he felt the proceedings of the meeting to be inconsistent with the object for which it was called.

After some desultory conversation, and a vote of thanks to the Chairman, the meeting broke up about four o'clock, without Mr. Rand's proposition having been formally put to the vote.

SHEFFIELD AND MANCHESTER RAILWAY COMPANY—SPECIAL MEETING.

[From the *Sheffield Iris* of this day.]

A SPECIAL meeting of the shareholders of this Company was held on Wednesday morning last, at the Cutlers' Hall; MICHAEL ELLISON, Esq., in the chair.

The CHAIRMAN opened the business of the meeting by requesting the assembled shareholders to observe that they were called together for the special purpose of negociating a loan of some money with the Exchequer Bill Commissioners, on the security of the Manchester and Sheffield Railway. The Directors had given orders that a sum of money (50,000*l.*) should be borrowed, and the solicitor to the Exchequer Bill Commissioners had considered it expedient that there should be a special power given for that purpose. To give that power, the shareholders had been then called together; and it must be distinctly understood, for no other purpose. That was the object for which they were met—that was the only point on which there could be any discussion, and to that point only the business of the meeting must be strictly confined. Perhaps the best way would be to read the resolutions which had been adopted by the Directors.

The Solicitor to the Company, Mr. STEPHENSON, of Manchester, then read the resolutions (which will be found in our advertising columns), and the substance of which was that the Directors deemed it necessary to borrow 50,000*l.* at the present time; that an additional 50,000*l.* should be borrowed hereafter; and that they be further empowered to borrow any sum not exceeding 100,000*l.* as the Directors for the time being might think advisable for the interests of the Company.

Mr. THOMAS BLAKE moved that the foregoing resolutions be adopted.

Mr. HOYLAND seconded the motion.

Mr. HENRY W. PARKER, of London, solicitor, wished to know at what rate of interest the money was to be borrowed?

The CHAIRMAN replied, it was 5 per cent.

Mr. H. PARKER said, he believed it was usual for that rate of interest to be paid for the first year; but after that term, on requisition of the Directors, he thought the Exchequer Bill Commissioners would take a less rate of interest if it was found necessary.

The CHAIRMAN said, he agreed that it was highly desirable to get it at 4 per cent. if possible.

Mr. H. PARKER said, he did not agree in the one observation which had fallen from the Chairman—viz. that the meeting was bound to confine itself to the object for which it was called.

The CHAIRMAN begged Mr. Parker to look to the Act of Parliament.

Mr. H. PARKER—The object was to borrow a sum of money, but he would submit that that clearly opened the question for fully discussing the affairs of the Company. That was not only his own opinion as a lawyer, but it was also the opinion of a most eminent equity counsel whom he had consulted upon the subject.

The CHAIRMAN said, that his also was an advised opinion—at the same time it exactly coincided with his own.

Mr. H PARKER said, the question seemed to be whether the concern was in such a state as to require an advance of 200,000*l.* or not? Were the finances of the Company in such a state as to require that advance? He thought the whole state of the concern should be looked at, to ascertain whether the money were really wanted or not.

The CHAIRMAN said that the Directors had already decided that they did want the money.

Mr. H. PARKER said, perhaps the money might be wanted; and he wished to know what was the exact sum that was required; but he wished to make these observations, with a view of its going forth to the world that he was of opinion the shareholders were bound to say "Aye" or "No" to the proposition before the meeting. The question did seem to him to open the whole financial state of the Company.

The CHAIRMAN said, he should like to take the sense of the meeting on that point. But before he did that, he wished to inquire if the object of the gentleman was to move any negative resolution or not?

Mr. H. PARKER said, he certainly wished to move an amendment, but apprehended that at that moment he was not bound to state the nature of it.

The CHAIRMAN said, he thought Mr. Parker was bound to do so.

Mr. H. PARKER then said, that the object of his amendment was to introduce words into the resolution restraining the Directors from applying the money in any other way than laying it out upon the works.

The CHAIRMAN said, he thought such a question could not be entertained. In fact it would be virtually rescinding a resolution that had been passed at the general Board of Directors. The payment of interest was not the purpose for which the money proposed to be borrowed would be applied; and he was of opinion that that meeting could not pass a resolution which would interfere with one already passed.

Mr. H. PARKER said that the Directors were already paying the interest of money out of their capital.

The CHAIRMAN said that the Company were fully authorised to pay interest out of the money coming into their hands.

A resolution passed at a former meeting was here referred to, by which it appeared that the Directors had agreed to pay 5 per cent. interest for the money they might borrow.

Mr. H. PARKER said that that resolution was an illegal one, and the Directors had no authority to pass it. If it had been passed on the 13th of May, 1842, it would have been a legal one. He would therefore maintain that that resolution was illegal from the beginning to the end, and was altogether void, nor did it legalise the one which had been passed before it. He found in the calls upon shares to landowners the sum of 9,487*l.* 10*s.*, and supposed, by that sum being placed on the credit side of the account, that there must have been some previous payment. That amount however was extinguished by its being on the credit side, and the whole account should be minus the above sum; no doubt the Directors would see the difference.

The CHAIRMAN intimated that the Solicitor to the Company had just found a resolution of the Directors which had been passed after the Act of Parliament had been carried.

Mr. STEPHENSON read the resolution passed June 29th, authorising an interest of 5 per cent. to be paid to those shareholders who were not in arrear on account of money for their shares to the first of July next.

The CHAIRMAN said, he really thought that the meeting would support him in stopping this discussion, as it was not within the limits of the subject for which the meeting had been convened. That was his decided opinion, but if any shareholder had any observations to make in support of the gentleman's proposition, he would hear him.

Mr. H. PARKER said, that the whole of the affairs of this Company were carried on in a juggling manner, and Mr. Timms had called them no less than a bubble and a fraud.

The CHAIRMAN said, he would put it to the meeting whether they were of opinion that Mr. H. Parker should go on.

A SHAREHOLDER wished the Chairman to explain the resolutions that had been read to the meeting, as some gentlemen had come into the room since the meeting began, and were ignorant of what it was.

The CHAIRMAN explained that a negociation was going on with the Exchequer Bill Commissioners for the loan of 50,000*l.*, and the Directors were then come before the shareholders for a special authority to borrow the money, with more in future that might be necessary.

Mr. H. PARKER—If the Chairman decided upon not hearing him, he should be glad to communicate with Mr. Winter on the following morning, who would, no doubt, take his own course.

The CHAIRMAN again said he thought Mr. Henry Parker should not introduce business that was not entitled to be brought before the meeting.

Mr. STEPHENSON said, that the question had been previously brought before the shareholders, and under the sanction of the Report they had then said that they would borrow 50,000*l.* There was nothing new in the present proposition—it was merely a formal resolution, and only supplementary to the one which had been already decided upon at the last meeting. The present meeting had been called for the purpose of authorising and ordering the Company to borrow any sum of money not exceeding 200,000*l.* For that sum the Directors were already in treaty with the Commissioners of Exchequer Bills.

Mr. H. PARKER said, he wished the money that was borrowed to be employed in carrying on the works, and not in paying interest. He would not trust anything to the Directors of the Sheffield and Manchester Railway Company, seeing that they had paid interest out of the money already obtained.

The CHAIRMAN said that Mr. Parker need not be alarmed, for if the Company borrowed the 150,000*l.*, the Exchequer Loan Bill Commissioners would take especial care that the money should be appropriated to the objects for which it was borrowed.

Mr. H. PARKER said, if the Directors got the money, they would appropriate it in any way they might think proper.

Mr. STEPHENSON said he thought the proposition of Mr. Parker was of no moment, because the money must be applied to the formation of new works hereafter to be made. The Directors were also bound at the same time to raise an equal sum of their own to be expended simultaneously with that which was spent upon the works. In fact, whatever sum of money was borrowed from the Exchequer Commissioners, they bound the Directors to lay out an equal sum of their own.

Mr. H. PARKER said that whatever conditions might be imposed upon the Directors, they would still have it in their power to apply the money borrowed in payment of interest. The word "funds" had been so introduced into the 2nd Act of Parliament, that without any infringement of its provisions those funds could be applied to the payment of interest, if the Directors thought proper to do so. Therefore, whatever could be said on this subject was of no consequence. He would again put it to the meeting whether he was not entitled to propose an amendment; and if not, he would then take proceedings against the Directors, and most assuredly did they deserve it.

Mr. STEPHENSON said, he had been in London for

Digitized by Google

some time, and had got to the final part of the arrangements with the Exchequer Loan Bill Commissioners before paying the money. The resolution had *been* passed to adhere strictly to the Act of Parliament, and the Commissioners wished the Directors to have a specific resolution to be sanctioned by the whole body of shareholders. That resolution provided for the present loan of 50,000*l.*, and also for a further advance on a similar sum, besides another advance not exceeding 100,000*l.*, at any time that the Company might require it. The condition that he had before named was this, that if they lent 50,000*l.*, they would require the Directors to lay out a corresponding *sum.*

Mr. H. Parker denied that such was the case.

Mr. T. J. Parker, Solicitor to the Company, confirmed the statement of Mr. Stephenson.

Mr. H. Parker wished to know whether, by the 187th clause of the Act, any means had been taken for the redemption of the loan?

Mr. Stephenson replied, that the term given to the Company for the repayment of the loan was 20 years, and therefore the annual sum of 2,500*l.* would be required for 20 years in succession; unless indeed the Company had it in their power to return the loan at one payment; and if so, it could be done.

Mr. H. Parker said that the money ought to be borrowed for the purposes enacted by the 7th of Wm. the 4th, and not for the purposes of interest.

The Chairman said he had no objection to such a resolution, and if Mr. Parker would attend the next half-yearly meeting, and make such a proposition, he would support him in it. His (the Chairman's) object was to confine the present meeting to the object for which it was called.

Mr. H. Parker said that he saw there had been the sum of 10,000*l.* paid for the shares of some favoured individual, and he wished to know who that gentleman was? If he could not get the information there, he could perhaps obtain it from a court of equity.

Mr. Collier, said he hoped the money would be applied to the purposes for which it was intended by the original Act.

The Chairman said, it could not be applied in payment of interest.

A Shareholder said, he thought the Chairman could not entertain the question of rescinding a former resolution, since it had not been specified in the notice convening the meeting. The business of the meeting should be confined to the object for which it had been called; as there seemed to be some misconception on the subject, it would be as well to state that a previous meeting had resolved that interest at the rate of 5 per cent. should be paid on those shares that had already been paid up. It would be a breach of faith to those shareholders who had paid up their shares, and certainly would not be acting righteously by them, to rescind the resolution passed at the former meeting.

Mr. Fowler said, he was not of the opinion that had been expressed by Mr. H. Parker with regard to the Directors, but had high faith in them, both for honesty and candour. He thought the meeting should have been better advertised in the newspapers, and perhaps there would have been a fuller attendance.

The Chairman replied that it was a special general meeting, and even he himself did not know of it until Monday, and attended it at considerable personal inconvenience. Nevertheless, he considered it to be his duty to do so. He agreed with the last speaker, that it would have been most desirable if a more numerous attendance could have been obtained. But one reason was that there was on the same day a special general meeting of the North Midland Railway Company, held at Leeds. The Chairman then put the resolution, which was carried—Mr. H. Parker being the only dissentient.

The Chairman then announced that the business of the meeting was over. He could assure every gentleman present that the Directors were unwilling to withhold any information which it was in their power to give them; and if Mr. Parker would attend the next half-yearly meeting, he would obtain all the information he wanted, cheaper than going to a court of equity. He himself was satisfied that the Directors would be found deserving of the confidence of the shareholders, and nothing would ever touch them as men of character, and men of honesty. (Loud cheers.)

Mr. H. Parker said, he was afraid that the Directors would do things as a body, which they would not do as individuals.

A vote of thanks to the Chairman, for his able and impartial conduct in the chair that morning, was then carried unanimously, and the meeting was dissolved.

RAILWAY ADJUDICATIONS.

STORER *v.* GREAT WESTERN RAILWAY COMPANY.

Vice-Chancellor Bruce's Court, Nov. 14.—This cause, which was part heard on Saturday, stood until to-day, in order that certain decrees of the Court should be examined.

Mr. Wigram (with whom was Mr. Bazalgette), stated that the object of the bill was the specific performance of an agreement on the part of the Company to make an archway and tunnel under the railway at Purley, in Berkshire, to connect together parts of the plaintiff's park and pleasure grounds which had been divided by the railway. The Company had paid the plaintiff a sum of 10,000*l.* for the damage done to his estate, but the archway had never been constructed. The question was, whether the Court could decree a specific performance of an agreement to build? Such a decree had been made by Lord Hardwicke in "Pembroke *v.* Thorpe," reported in a note to 3 Swanston, 437, and a similar one had been made by Sir John Leach, in "Franklyn *v.* Tuton," 5 Maddock.

His Honour suggested, that if an amendment of the bill were made, the difficulty of the jurisdiction of the Court to decree a specific performance of a contract to build would be obviated.

Mr. Cooper, Mr. Stevens, and Mr. Osborne, for the Great Western Railway Company, said that the Company were anxious to perform their contract, but there were engineering difficulties in the way. It had been originally intended that the railway should pass over the surface of the park, so as to be on a level with the land on each side of it: but eventually it had been made in a deep cutting, and it would now be requisite to take a large portion of the estate to make the approaches. The mansion-house was on a hill, and the land sloped down to the railway, so that the approaches to the tunnel must commence half a mile off. If, however, the Court thought that it had jurisdiction to make a decree, the Company would do all in their power to obey it.

His Honour desired that that question should be argued by the defendant's counsel.

Mr. Cooper said, that there was no doubt that wherever an injunction was required the Court would compel the erection of a building, or would decree it to be pulled down or altered if already built. The distinction was this:—When nothing was required but a building entirely new, then damages would answer to purposes. If A. B. would not build C. D. might, provided he had the money found him. "Franklyn *v.* Tuton" was the case of a building erected at variance with a plan. As early as the year-books there were decrees of that kind. "Pembroke *v.* Thorpe" was the only case of a decree for the mere performance of an agreement to build a house; but subsequently Lord Hardwicke changed his mind, and thought an action for damages was the proper course, which was apparent from the case of "The City of London *v.* Nash," decided seven years later and reported in 3 Atkyns. Such had been the opinion of later Chancellors, Lord Thurlow among them. If there was jurisdiction to decree simply the making an archway or building a house, why not decree the digging of a well or the papering of a room? Supposing this jurisdiction to exist, the absence of modern decrees was remarkable. Still the Company were willing to obey, if the Court had authority to make the decree.

His Honour said, if the counsel for the defendants had argued the case in a hostile manner, he should have felt bound minutely to examine all the authorities. As it was admitted that the plaintiff was entitled to relief in some shape, and as an amendment of the record would remove all doubt as to the jurisdiction, he should not hesitate to make a decree. From the course the arguments had taken, and the conclusion the case had arrived at, it was rendered unnecessary to give that further consideration to the authorities he had intended, on the supposition that the point of jurisdiction had been argued to the last. Consistently with the principles of "Flint *v.* Brandon," it was competent for and the duty of the Court to interfere for the specific performance of a contract to do a defined work in the plaintiff's property, in the performance of which he has a material interest, and such an interest as cannot be compensated by damages. Here there was a contract, and upon that contract the defendants had acquired part of the plaintiff's estate, and now difficulties were raised to the performance, but what those difficulties were had not been very clearly made to appear. Damages would be anything but adequate compensation. In his Honour's opinion, the plaintiff had a right to come for a performance of the contract, and the Court ought to see that the work was properly done. The Company seemed to think that the Court might use them better than a jury, and in that they were possibly right. They were bound to perform their agreement; but, on the other hand, the plaintiff must give them every facility for making the approaches and must put them in possession of the necessary quantity of additional land.

It was finally arranged that the plaintfff should have a decree for the defendants to make the archway, and that the defendants should have a reasonable time to complete the work.

THE CLARENCE RAILWAY COMPANY *v.* THE GREAT NORTH OF ENGLAND, CLARENCE, AND HARTLEPOOL RAILWAY COMPANY.

Court of Queen's Bench, Nov. 11.—This was an issue directed by the Court of Chancery to be tried in order to ascertain the opinion of the Judges of this Court as to the construction of various Acts of Parliament authorising the construction of the two railways. The defendants claimed a right to cross the plaintiffs' railway at a level, contending that they had the power so to do by their (the defendants') Act of Parliament. The plaintiffs denied the right, contending that there were clauses in defendants' Act saving all the plaintiffs' rights, and the defendants had merely a permission, not a compulsory power, to enter on plaintiffs' railway. The Court of Chancery had directed this fictitious action for trespass to be brought, and a justification to be pleaded, and the plea to be demurred to, so as to enable the parties ultimately to carry the case by way of appeal to the House of Lords, by which tribunal the case will be ultimately decided, as it is admitted on all hands that the question involves little less than the existence of one of the two Companies. It was stated that if the decision should be adverse to the defendants this railway would be rendered useless.

Mr. Thomlinson argued the case for the defendants, and the Solicitor-General for the plaintiffs. The arguments were purely of a technical nature, turning entirely upon the construction to be placed upon apparently contradictory sections of the same Act of Parliament.

The Court took time to consider its judgment.

THE QUEEN *v.* MANCHESTER AND LEEDS RAILWAY COMPANY.

Bail Court, Nov. 16.—Mr. Butt applied in behalf of Mrs. Stansfield for a rule to show cause why a mandamus should not issue, commanding the Company to issue their warrant to assess compensation claimed by her for injury done to her house in Halifax by the Company. The first Act of Parliament for making the Manchester and Leeds Railway was passed in 1836, which gave the Company power to raise embankments, &c, on making compensation to the parties injured. In the year 1837, the Company obtained another Act of Parliament, empowering them to alter the line of railway. The house of Mrs. Stansfield was near the second line, and the affidavit stated that its foundation was injured by the works of the Company, and that it sustained other injuries. Application for compensation was made to the Company in 1840, but the Company refused to make any compensation.—Application granted.

LEEDS AND HARROGATE PROPOSED RAILWAY.

Our readers will perceive that a railway from Leeds to Harrogate is likely to be carried, and we understand that it is intended that an early application shall be made to Parliament. One great object of this projection is, that it should communicate with the Leeds, Bradford, and Halifax intended railway, and that both lines should form a junction with the North Midland Railway station, in Hunslet-lane for goods and passengers; and it is also intended that a new station for all the three lines should be made at or near the public baths, Wellington-street, Leeds, principally for passengers, whereby a great saving in time and distance would be effected, principally to the central and western parts of Leeds and the neighbourhood. By this plan, which we understand is quite practicable, and which has been projected by Mr. Fowler, and has met the approbation of all parties, it is intended that Leeds should be made the great central railway station for the West Riding of Yorkshire. By the Leeds and Harrogate, and the Leeds, Bradford, and Halifax proposed railways, Leeds would be the most direct route from the south and west to the north, and about equal in distance from the western to the eastern parts of England. We think, if the North Midland shareholders would examine into these facts, they would be strongly induced to give every encouragement to these projected lines, as material feeders to the North Midland Railway, and a great means of their shares being improved in value. We recommend to the shareholders the consideration of this statement. Our correspondent adds the following comparison of distances between the lines here proposed and the route by Bolton Percy:—Saving in distance from Halifax to Leeds, by Bradford, 18¾ miles; saving from Halifax, by Bradford and Leeds, to Harrogate, 20½ miles; saving between Leeds and Harrogate, by the Leeds and Harrogate Railway, instead of by the Bolton Percy line, 23¼ miles; saving between Normanton and Harrogate, by Leeds, 6¼ miles.—*Leeds Intelligencer.*

THE PLYMOUTH RAILWAY AND HYDRAULIC PROPULSION.

To the Editor of the Railway Times.

Sir,—Your last paper (November 12) contains a letter signed "Look-Out," and dated Plymouth, October 28. In the course of that letter, the writer, in reference to my system of propulsion, remarks:—"It seems to me a bold thing, to say the least of it, to propose to drive trains at some 27 or 30 miles an hour, by water in his pipes or mains." I answer—It is a bolder thing to attempt to found an argument on the faint conjectural expression "*it seems.*" *It seems* still, to the uninitiated, almost as bold a thing to be called upon to yield assent to the existence of the wonders now daily performing through the agency of electro-magnetism, as it would have done to the well-informed in science, only a very few years back, to have prognosticated the accomplishment of such things by the present time. *It seems* a bold thing to blow up the *Royal George*, 13 or 14 fathoms under water, by gunpowder. *It seems* a bold thing to propel vessels by the celebrated Archemedes screw; but of *seeming*, there is no end: it is a most unphilosophical mode of proceeding, and has nothing to do with well-founded conclusions on which reliance can be placed, and which may accelerate the progress of improvement. If the reasons I adduce in the pamphlet entitled "The Hydraulic Railway," which "Look-Out" alludes to, for claiming a speed as due to my mode of propulsion of from 27 to 30 miles an hour, be fallacious or specious, let him prove this, and thus at once arrest that discussion which must otherwise shortly arise, in order to determine the position which hydraulic propulsion should occupy in public estimation. The general, as well as the railway public, either will or will not be benefited by this invention; and as it has thus far passed through the ordeal of criticism much more favourably than frequently falls to the lot of new discoveries, *they* will expect, as soon as their attention is sufficiently drawn to the circumstance, to have this matter decided. These are not times to fling aside opportunities, or well-founded probabilities, of improvement, whether moral, physical, or *pecuniary*. But "Look-Out" appears to decline the task himself of examining the grounds on which this invention invites public support, and calls upon any other party to relieve him of the undertaking. If, then, any gentleman respond to the invitation of "Look-Out," and "well examine the scheme," in order that the Plymouth people may be able to 'Aye' or 'No' it, for good reasons shown," and if, as that writer wishes, he considers what the nature of the gradients may be which it might overcome, and consequently whether there might not be great economy in constructing a line on the principles which it embodies, and also the amount of saving of annual recurrence as a worker of a railway which this system might effect for the material improvement of the dividends,—if, I repeat it, any gentleman undertake to examine, with serious care, the pretensions of this invention on any of these heads, I have only (on my own part) to express a wish that the thing may be undertaken in that proper spirit of courtesy which is usually indicative of a frank, honest wish, to have the truth of the matter determined and acknowledged, whatever it may be. A discussion or consideration of the scheme, undertaken with that object, and on such basis, will satisfy the engineering and reflecting public, and railway proprietors. No other can.

In reference to my propulsion-receivers, "Look-Out" remarks, "that he may be able to store his power in them under a great air pressure is likely enough, for it is only using a cold gas as a permanent pressure instead of steam, which is a hot one, and therefore would not apply; but only think of eight of these truncated steam-boilers, as I shall term them, every mile of the way. They would only weigh 24 tons; that's all." I admit they would add 24 tons of iron every mile of the way, *but what would the system save?* The average weight of the rails may now be taken at 75 lbs. per yard. After careful consideration, I anticipate that I shall not incur the charge of being impractical, when I propose to reduce them for the Hydraulic Railway, to 44 lbs. per yard. The original rails on the Liverpool and Manchester Railway were about 35 lbs. per yard. Now, if I allow a quarter more, and call them, as just proposed, 44 lbs., I believe I shall preserve that description of firm, rigid, and trustworthy bearing which is looked for in the railway system to produce easiness of motion, and to avoid wear and tear. This observation of course applies only to carriages and trucks (with their loads) of the present ordinary weight, strength, and construction, and not to locomotives and tenders, both of which cumbrous machines would be removed in the Hydraulic Railway, and their immense weight, particularly that of the engine, would no longer, in the friction, breakage of rails, sinking of sleepers, &c., which it now always occasions, act as a direct property tax of no trifling per-centage upon the income of railway proprietors.

Taking the rail then at 44 lbs., I reduce the weight of iron 31 lbs. per yard; and this I do without taking into account *a similar proportional reduction in the weight of the cast metal chairs.* As a double line of railway requires four lines of rails, the practical saving the system here might effect will be (31 × 4 × 1763 = 218,240 lbs.) 97 tons per mile. Let "Look-Out" then deduct the addition of 24 from reduction of 97 tons, and I hope he will be quite satisfied with the result.

There is one point in particular on which I have not been so clear in the pamphlet already alluded to as I might have been, and upon which I now beg to say a word or two. It may possibly cause "Look-Out," and many other parties, to incline strongly to the opinion that the speed, which in that little publication I estimate as due to this system of propulsion, on the joint authority of Tredgold and Young, must be decidedly underrated. That speed, at the end of each section of propulsion-pipe, I have taken as being 27 miles an hour. This velocity I deduce from the formula; and it affords it, on the assumption that the current of water starts from a state of rest into one of activity at that point; namely, at the further end of a section of horizontal piping of 70 yards in length. Now, what are the real facts of the case? They are these: that the column of water starts into a state of activity at the bottom of the pillar of vertical piping (or its equivalent), and just as it enters the beginning of the horizontal pipe; and then running up that pipe, at first with all the momentum it has acquired from the very great vertical load or pressure (and before any part of it can be deducted, as being required to countervail the friction of the horizontal pipe), it rushes along till it reaches the further end of it; at which point only the whole friction or retardation due to the 70 yards of horizontal piping can be justly chargeable. Hence, as the water starts opposed by no horizontal retardation, and is exposed to the whole of that amount of it which the formula assumes as being constant only just as it finishes its work, it is manifest that the speed estimated by this formula, or rule, must be considerably under that which the practical result will afford. In point of fact, the rule was not formed for the case in question; but only for circumstances much less favourable for developing high velocities. This explanation might be esteemed as of very great moment in favour of the system, if we could avail ourselves of the whole velocity which the initial speed could supply; but as that must be controlled down to the final speed, whatever it may be, the advantage probably may not exceed an increase in the average and regular speed of more than from 5 to 8 miles an hour. It is true, undoubtedly, that if the water were suffered to discharge itself from the orifice at the further extremity of the horizontal pipe, *for any length of time*, the velocity would soon subside down to that due to the position, whether it be 27 miles an hour or more, as I have surmised in the pamphlet; but the first rush of water up the pipe (which is all I want to work with) will, I contend strongly, for the reasons already adduced, produce a velocity much greater, at the moment of its arriving at its further extremity, than what would be due to its "ferial speed" after the first *flood* of momentum is gone by; and, the only point requiring care will be to arrange the initial speed at that velocity which it shall be found, the free momentum and impetus can maintain equably to the further end of horizontal or propulsion pipe. It probably would not increase public confidence in this invention if I now stepped forth more prominently as the advocate of its merits. I shall therefore merely invite those gentlemen who may feel interested in the establishment of a railway between Exeter and Plymouth, before they decide upon giving their support to any particular scheme, to read carefully over the pamphlet I have written to describe Hydraulic Propulsion; and as I have taken care that it shall not be an expensive work to the purchaser, and it is to be procured in Bath, Bristol and London (as well as in other places), this request may probably be considered not unreasonable. After its perusal, gentlemen will be able to form a judgment whether by adopting the Hydraulic system, they would in all probability most materially reduce the estimates, increase the working power on the line, and facilitate its completion, as most of the deep cuttings and embankments might probably then appear capable of being easily dispensed with. If a conclusion thus favourable to this system, and to their own purses, should be arrived at, or even if a reasonable probability should be established in the minds of the parties interested, that this system might be beneficially applied on the proposed Plymouth and Exeter Railway, they will probably see the propriety of having this matter fully and clearly considered, and settled to their entire satisfaction, before they proceed to stake their property in support of any scheme whatever. I am, Sir, yours, &c.

J. G. SHUTTLEWORTH.

LONDON AND DOVER (SOUTH-EASTERN) RAILWAY.

To the Editor of the Railway Times.

SIR,—May I request a small space in your valuable journal for the purpose of pointing out what I conceive might be the means of improving the *receipts* of the Dover line, which I believe are generally admitted to have fallen far short of the just expectations of the shareholders.

On the opening to Tunbridge in the month of May last, the fares charged by first and second-class carriages were pretty much on the same scale as those of other metropolitan railways, but owing to the circuitous direction taken by this line, and the facilities afforded to passengers to the towns north of the line by other rival conveyances, especially by the numerous steam-boats plying up and down the river (which latter, I fear, will always prove a serious obstruction to the success of the Dover line), it was soon discovered that an alteration of the fares was indispensable. Now, I do not find fault with the Directors for yielding to the necessity of circumstances, but I really cannot but think that, on this occasion at least, they have overstepped the bounds of prudence. With every respect for the judgment of the Directors, and bearing in mind too the many excellent remarks which have from time to time appeared in the *Railway Times*, in the course of its advocacy of low fares generally, I should like to know whether the present receipts of the South-Eastern Railway, which is now open 55 miles, are paying the expenses, it being the opinion of many intelligent persons, with whom I have conversed on the subject, that they are not. I would therefore suggest to our excellent Chairman the necessity of revising the fares, and striking a mean between the present and old rate of charges, as the only available expedient of affording to the shareholders within a reasonable time some little prospect of a dividend.

As I shall not have an opportunity of attending the approaching half-yearly meeting, I have ventured to forward you the foregoing remarks, in the hope that they may lead to something practical.

I am, Sir, yours, &c.

A SHAREHOLDER.

Leeds, November 15, 1842.

LONDON AND DOVER (SOUTH-EASTERN) RAILWAY.

To the Editor of the Railway Times.

SIR,—Permit me to trouble you with a few lines in reference to this important railway, the half-yearly meeting of which is just at hand. Being so far distant, I cannot without much inconvenience attend the meeting, but I am anxious, like many other shareholders, to know the fact of a report which has several times been adverted to in your invaluable paper during the last three months, in respect to the capital which this railway will require to complete it. I have more than once recently heard it very confidently asserted that 500,000*l.* more will be required above what was stated at the last meeting, and if so, another 28,000 shares must be created at 30 discount to raise the amount. I hope that some shareholder who will be present at the meeting the week after next will put this important question to the Chairman, and in such a manner as to call forth a direct reply.

I am, Sir, your obedient servant,

A SOUTH-EASTERN SHAREHOLDER.

Manchester, November 16, 1842.

LONDON AND BRIGHTON RAILWAY.

To the Shareholders of the London and Brighton Railway Company.

GENTLEMEN,—I most earnestly solicit the attention of my fellow proprietors to the proceedings of the North Midland Railway Company at present. You will observe from the Report published in the *Railway Times* of last week, what extraordinary reductions may be made in the working expenses of a line. The North Midland, in length 72 miles, must surely require a larger sum to work it than the Brighton, which has only 46 miles of its own. Even previous to this searching scrutiny the North Midland exhibited economy in several important departments, as compared with the Brighton. As for instance:—

BRIGHTON.		
Direction for six months		£1,050
Police, ditto	£3,330	
Clothing, ditto	745	
		4,075
Printing, stationery, and advertising		1,958

NORTH MIDLAND.	
Direction for six months	£325!!!
Police, both wages and clothing	476!!!
Advertising and printing	297!!!

Surely there is a wide margin here for reduction. I would solicit some of the large shareholders in London and its vicinity to form themselves into a Committee immediately. I would suggest that they should announce their names by advertisement in the *Railway Times*, in order that the shareholders in the provinces may know to whom they ought to send their proxies. Were an influential opposition organised *previous to the next half-yearly meeting*, it would then be in the power of the proprietors, if they saw fit, to exclude the present Directors altogether; or if they were dissatisfied with the small appearance of economy then exhibited, to appoint a Committee to revise and report on the whole establishment. With rigid economy this line may still pay a fair dividend; but I am fully satisfied that unless the proprietors force the Directors into such measures, they will look in vain for a profitable return on their investments. Men who can coolly take 2,100*l.* per annum for their services, from an irritated and disappointed proprietary, surely require to be looked after very sharply.

I am, Sir, your obedient servant,

MERCATOR.

Glasgow, November 10, 1842.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

SIR,—The incapacity of the Brighton Railway Direction being acknowledged on all hands, I propose that the shareholders be convened early next month, or sooner, to agree upon a plan of combined operations to be pursued at the next general meeting, in order that a stop may be put to the reckless expenditure of their capital, and of fixing upon able and energetic Directors to manage their concerns. It is high time that combined efforts were adopted by the shareholders (both of this and of other mismanaged lines) to prevent the further waste of property, by insisting on a thorough simplification of accounts, by curtailing the duration of the Directors' power, and by making them more responsible to those whose property they profess to manage. In general, shareholders after having once set up their Chairman and Directors, seem disposed (as the Israelites with their golden calf) to fall down and worship the idols they themselves have made. The awful appearance of these brazen images fills the shareholders with terror. When will English shareholders, a great number of whom must be men of business, and, therefore, accustomed to clear and exact dealings—when will they show that strong common-sense and self-respect for which they are famed, by resolving that their property shall be well managed? The shareholders themselves possess the power of righting the concerns of every Railway Company. Let then those of the Brighton Company meet and discuss the important matters connected with the line, and determine on a plan to be adopted at the next general meeting. If no discussion take place, nor any plan be matured previous to the next general meeting, I foresee very little improvement in store for us; a combined plan alone will save us.

I am, Sir, yours, &c.

R.

London, November 14, 1842.

LONDON AND GREENWICH RAILWAY—FARES.

To the Editor of the Railway Times.

SIR,—The scale of fares which has lately been adopted by the Directors of the Greenwich Railway is of such a novel character that it may not be unworthy of notice in your journal. Although this line is not more than 3¾ miles in length, and has only three stations on it, there are no fewer than five distinct rates per mile, viz., 2d., 2½d., 2⅝d., 4d. and 8d., (second class.) The effect of these charges will be more clearly shown by calculating the fare to Birmingham by them, thus:—

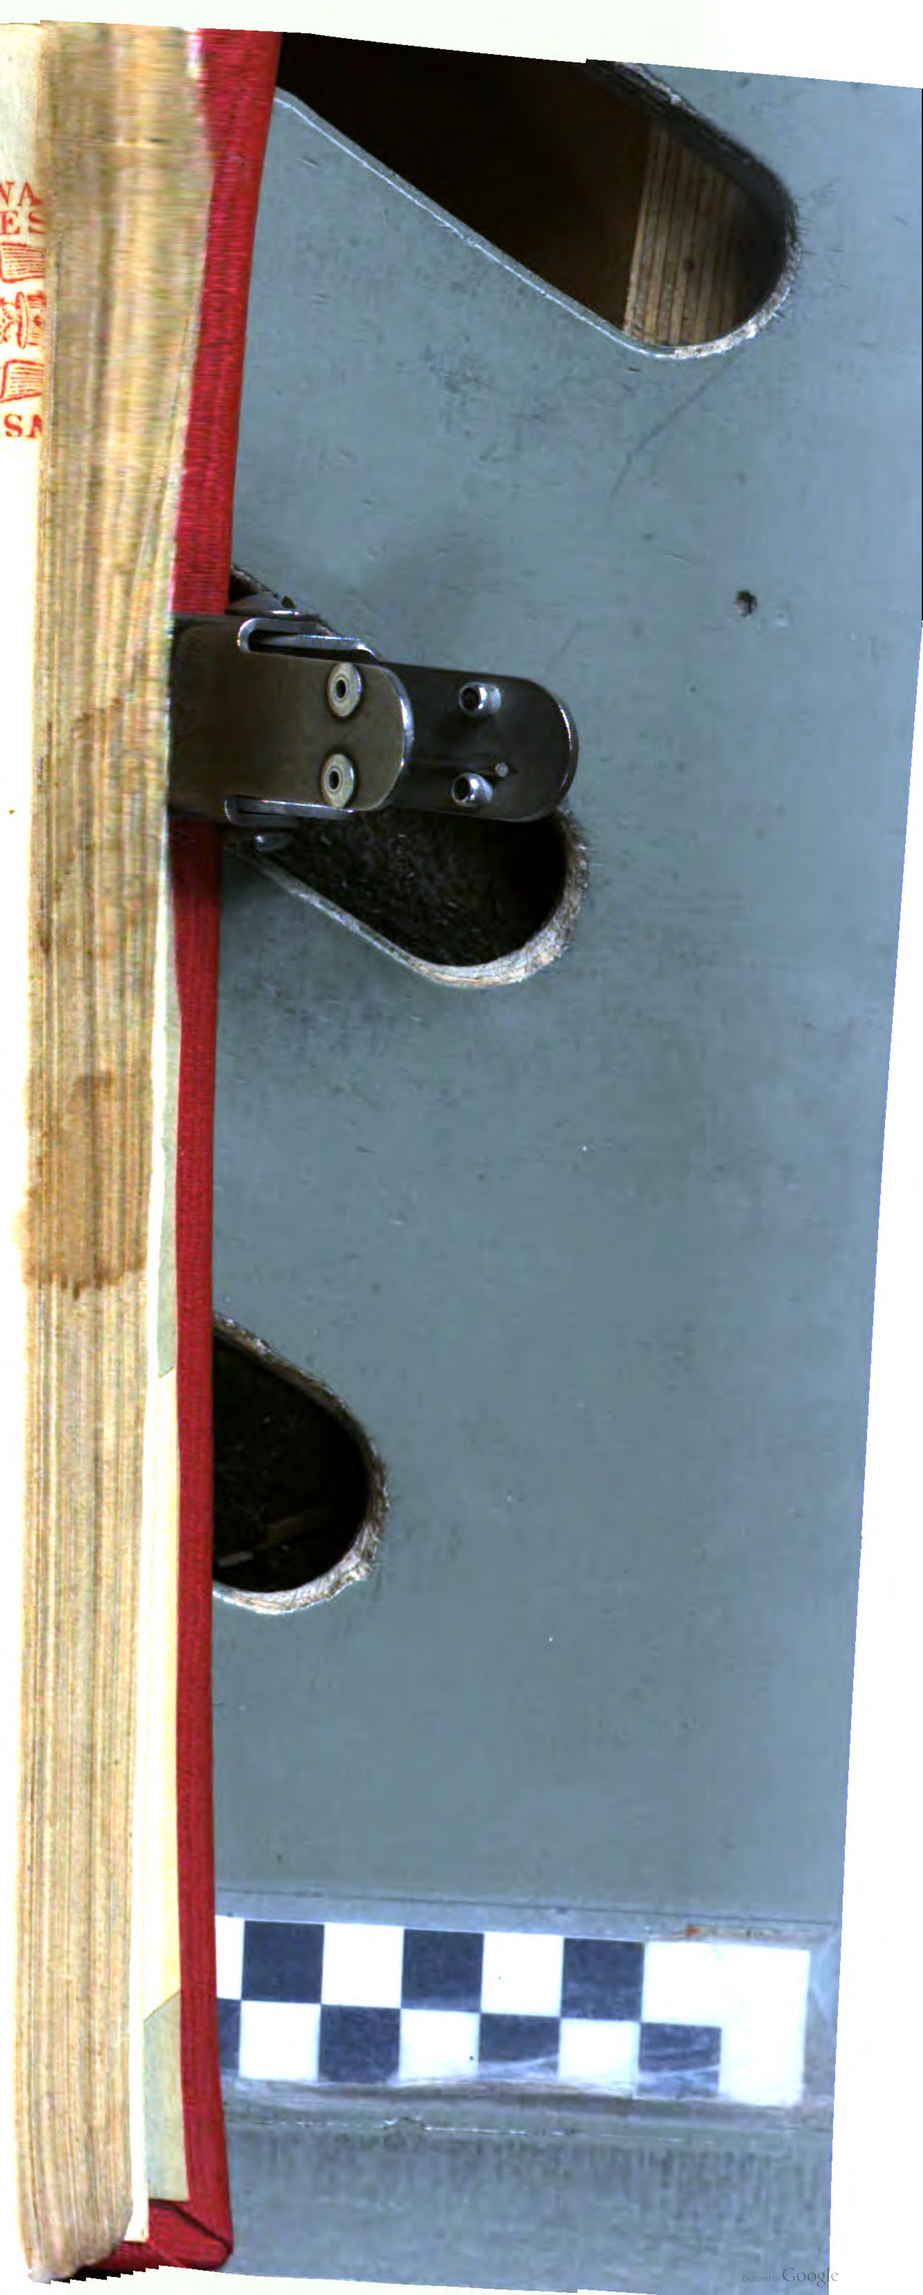
By the Greenwich Fare the Fare to Birmingham would be:—

	1st Class.	2nd Class.
From London to Greenwich ..	£1 0 0	£1 10 0
,, ,, Deptford	1 5 0	1 17 6
,, ,, Spa-road....	3 15 0	5 12 6
,, Deptford to London	0 18 9	1 8 0
,, Spa-road ,, ...	1 17 6	2 16 3

The fare to Greenwich is therefore in exact proportion with that to Birmingham; those for the intermediate stations are 7½ per cent. under, and 25, 75, and 290! per cent. over it. It would be very natural to suppose that these extraordinary differences were caused either by the situation of the railway, the nature of the district through which it passes, or the competition it has to contend with; but the more we examine the fares in relation to these subjects, the more likely are we to conclude that they are at variance with reason and common sense. It may be said that it is impossible to calculate the fares on short lines at a rate per mile, but this objection would not explain how it can be the interest of this Company to charge 100 per cent. more from London to Spa-road than from the Spa-road to London, and 25 per cent. more from London to Deptford than from Deptford to London. Why should return tickets be issued at the Deptford and Spa-road stations, and not at the London?

In order to understand the reasons which have induced the Directors to adopt these fares, it is necessary to describe the manner in which they are collected. This is done in the same way as the toll is collected on the bridges. The passenger after having paid his fare passes through a turnstile, which is so contrived as to mark the *number* that pass through during the day, and is an excellent check so long as the fare is uniform; but if there be 3 or more fares to be received at the same station, it becomes entirely useless, marking only the number of passengers, and being no check on the money received. When this railway was first opened there were 2 fares—8d. and 1s.; they were afterwards made 6d., 8d., and 1s.; and there were 2 turnstiles, one first, and one second-class. With these fares the system worked tolerably well, but by the late alterations it became necessary either to abandon this mode of collecting the fares, or sacrifice the interests of the railway in order to preserve it, for if the fares from and to London were the same, there would (with the return tickets) be 5 different discriptions of fares to pass through the same turnstile, which would make this system about the same value on the Greenwich as it would be on the Birmingham Railway. I am, Sir, yours, &c.,

F. F. F.



EASTERN COUNTIES' RAILWAY.

To the Editor of the Railway Times.

SIR,—I rejoice to find that the haste of the Directors to get the railway opened by this time, has been overruled by retarding circumstances of construction. When will Directors learn wisdom in this matter? The memorable accident on the Brighton line should effectually check all such haste, and I hope will make General Pasley duly cautious in opening new lines. The practice of the Great North of England Railway will now, I trust, be adopted by our Directors, and all others—to open the line with goods, and so work it for *three months*, before encountering the serious responsibility of passenger traffic.

I am, Sir, yours, respectfully,

A PROPRIETOR'S SON.

RAILWAY TIMES

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—In reply to the letter of "L.," in your last number, it is necessary to state, that the letter containing the strictures on the Great Western and Leeds and Manchester Railways appeared under a different signature, the last letter, which appeared on the 29th ultimo, being sent, owing to inadvertence, without signature—the signature of "Alpha" being appended by yourself, or some one in your office, as a means of distinction.

Having disposed of this matter, I again, and with much pain, recur to the Great Western Railway; and to ask the following questions of the Directors through your columns:—

Are the Directors of the Great Western prepared to say what extent of the line will require new rails?

Are the Directors prepared to state the amount to which present liabilities, and works *now in progress*, will raise the capital?

Can they say that the amount already due, added to that for works in hand, DOES *not* exceed 35,000*l.*? and can they state that the amount due, in hand, and if not irrevocably decided upon, yet purposed and more than in contemplation, *will* not exceed 500,000*l.*?

To those who reason, one fact is enough. The receipts of this line, after deducting the amounts paid for rent and tollage, are about two-fifths of what is received per mile on the Birmingham; and yet, with expenses which I aver are equal per mile to the Birmingham, the Directors make a dividend of 6 per cent.!!! I am, Sir, yours, &c.,

ALPHA.

London, Nov. 14, 1842.

LONDON AND SOUTH-WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—In the *last* half-yearly account of this line, the Directors omitted to state the amount of balance which would remain in their hands after payment of the dividend. On previous occasions, I believe, this information has been furnished by them; at all events, I perceive, on reference to the half-yearly printed statement of the 1st of January last, that a balance of 8,750*l.* 14*s.* 9*d.* remained in hand.

Permit me, therefore, to inquire what amount remained in hand *on the 30th June last*, after providing for the dividend and income tax?

I am, Sir, yours, &c.

AN OLD SUBSCRIBER.

November 11, 1842.

LONDON AND BLACKWALL RAILWAY.

To the Editor of the Railway Times.

SIR,—Permit me to say a word or two about the tampering with the fares of the Blackwall Railway, by the Directors. They appear to me to be acting most obstinately and injuriously. Experience has demonstrated that the raising the fares to 6*d.* and 8*d.* was productive of very great loss to the Company. The Directors persisted, however, in charging those fares some weeks after the result was a matter of certainty. But injurious as was the raising the fares, it was not so mischievous as the recent modification of those fares will prove to be. The last week's traffic was, as I and some friends were positive it would be, much smaller than the preceding week of high fares, and some 200*l.* less than the corresponding period of last year, with the low fares. For the Directors to say that the falling off in the Company's receipts is attributable to the stagnation of business in the ship-yards and docks at Blackwall, is absurd. The fact is this: The raising the fares nearly destroyed the traffic of the railway wharf at Blackwall, and the recent modification of fares, as it leaves untouched the fares to and from Blackwall and London, leaves the evil as it was. Persons can get from Gravesend to London cheaper than by the railway, and likewise from Woolwich and other places on the banks of the river. When the railway fares were 4*d.* and 6*d.*, there was no cheaper communication between London and those places, and the railway got a considerable portion of the traffic. *The fares then, common sense says, must again be 4d. and 6d., to and from the Brunswick Wharf and London.* I just give my reason for saying the *present fares* are more objectionable than even the late ones. There was no cheaper way of getting to the West India Docks than by the railway; the number of passengers, therefore, to and from that station, which is by much the best station on the line, was very considerable at the high fares. And I am informed that in the case of the West India Dock station, the high fares were more productive than the low ones. I am, Sir, yours, &c.

A CITIZEN.

Leadenhall-street, November 14, 1842.

EDINBURGH AND GLASGOW AND BIRMINGHAM AND GLOUCESTER RAILWAYS.

To the Editor of the Railway Times.

SIR,—The greatest anomaly at this time in the share-market is the price of the above two lines, the Gloucester being 42*l.* for 100*l.* paid, and the Glasgow 46*l.* for 50*l.* paid—the cost of Gloucester 1,438,000*l.* for 55 miles, and the cost of Edinburgh and Glasgow 1,383,000*l.* for 46 miles. The last week's receipts for Gloucester are 1,862*l.*, and for the same time on Glasgow, 1,777*l.*, which for the difference in length and cost appears quite reasonable, and one would think the market would be something like the same;. but what are the prices? Why, the Scotch line is only 8 per cent. discount, whereas the English is 58 discount! Can you, Sir, or any one of your numerous correspondents, give the cause of this very great disparity in the price?

I would simply advise the holders of Gloucester to keep their shares, for a great advance must very shortly take place.

I am, Sir, yours, &c.,

T. W.

Leicester, November 11, 1842.

EDINBURGH AND GLASGOW RAILWAY.

To the Editor of the Railway Times.

SIR,—Referring to the jotting which appeared in your journal of the 1st October, it is to be observed that the average return for the past seven weeks has amounted to 1,922*l.* 7*s.*, in place of 2,000*l.*, as therein assumed.

This occasions a deficiency for that period of	£543
And supposing the returns for the next six weeks do not exceed 1,900*l.*, a further sum must be deducted of	600
Total.....	£1,143

This deficiency, however, will be more than compensated by the *profits* of the *seventh* week, which come into this year, and will still leave 2,512*l.* to be added to the reserve fund of July, after paying all the proprietors a half-yearly dividend at the rate of 6 per cent.

I am, Sir, yours, &c.

PHŒNIX.

Edinburgh, November 15, 1842.

THE LATE ACCIDENT ON THE LONDON AND BIRMINGHAM RAILWAY.

To the Editor of the Railway Times.

SIR,—On perusing the official account of this accident, one obvious question occurred to me—*who overdrove the bull*, and why did not the Directors immediately prosecute the drover for such intolerable carelessness? Surely it is an actionable offence. True, the accident was not attended with serious consequences to the passengers; but who shall dare to warrant that a similar obstruction might not the next time occasion sad results? Let neither the Directors nor the public comfort themselves with too much confidence on that point. It would be well for the interests of the former, and at least the *nerves* of the latter, if all such instances of recklessness were duly investigated and severely punished.

I am, Sir, yours,

J. C.

BRISTOL AND GLOUCESTER RAILWAY.

To the Editor of the Railway Times.

SIR,—Allow me, as a shareholder in this line, to request the favour of your inserting the following in your independent publication.

Until within the last few days, I understood that the gauge was to be similar to that upon the Birmingham and Gloucester Railway, it having been from the commencement *so understood* and determined on at *two general meetings of the proprietors.*

Circumstances have transpired, by which it appears that an attempt will be made to introduce the *broad gauge* for the purpose of forming a junction with the Great Western Railway at its terminus here.

The object of the promoters of the Bristol and Gloucester Railway was to complete a direct communication between this city and the North of England; to do this, and secure the greatest amount of traffic, *particularly in goods*, it is evident that an unbroken line of transit should be provided to avoid the necessity of shifting packages at Gloucester.

I do hope that my fellow-shareholders will bestir themselves, and prevent the mischief and ruin that must unavoidably be the consequence, should so mischievous a scheme succeed.

I am, Sir, yours, &c.

A CONSTANT READER.

Bristol, November 17, 1842.

MANCHESTER AND BIRMINGHAM RAILWAY.

To the Editor of the Railway Times.

SIR,—Allow me to call your attention to the very tantalising amount of weekly receipts per mile on the Manchester and Birmingham Railway, as given in your tables of traffic; for though the exaggeration is too palpable to mislead any one who reflects on the matter, it is as well to come as near to the truth as we can.

You know that a large part of the gross earnings of the Company is obtained from the use of 54 miles of the Grand Junction Railway; and yet, to divide the receipts by 85 would be as great an error on the other side, as dividing by 31 is on the side of excess; because no benefit is allowed to be derived from *inter-stational* traffic on the Grand Junction line.

The nearest approximation that, in the absence of official documents, I can make to a fair estimate of these returns is, by deducting from the gross amount such a sum for local traffic as former experience may justify, and which at the present season may be reckoned at about 500*l.* a week; then by taking 36 per cent. of the remainder as the share of the thorough traffic belonging to the Manchester and Birmingham Company in respect of their own line, such being in round numbers the proportion which 31 bears to 85; and finally, 30 per cent. of what remains after the previous operations, as the Company's share of what is earned by their traffic passing over the Grand Junction line—the sum total of these three items may be taken to represent pretty nearly the actual weekly receipts of the Manchester and Birmingham Company, and may fairly be divided by 31 to show the rate per mile.

The last return (November 5) of 2,735*l.*—exceeding that of any former week in consequence of the passage of large bodies of troops—when submitted to the above rule, will give the following result, omitting fractions:—

For local traffic	£500
36 per cent. on 2,235*l.*.....	804
30 ditto on 1,430*l.*.....	429
Total.....	£1,733

which is equal to 55*l.* 16*s.* per mile, instead of 88*l.* 4*s.* 8*d.*, as published; or of 32*l.*, as under another view it might be represented.

The Grand Junction Company's share of the above receipts would thus appear to be at least 1,000*l.*; and unless you have official information

Digitized by Google

of the fact stated in Note 12, to the Traffic Table, *I trust* that the receipts from Manchester traffic are *not* included in their weekly returns. The Company do not now carry either persons or goods *between* Manchester and Crewe, or places to the south of it.

I am one of your correspondents who formerly expected better things from the Manchester and Birmingham Railway than have hithirto been realised; and I still believe that my estimate would not very much have exceeded the truth but for the continual depression of trade, and the desperate course of the Manchester and Leeds Company, and their needy allies on the North Midland and Midland Counties' lines, in conveying merchandise (47 miles round) to Rugby, at the unsatisfactory rate of 1d. a ton per mile.

I am, Sir, yours, &c.,

Manchester, November 16, 1842.

P.S. The *Manchester Guardian* of this day contains evidence of a better understanding between the above-named Companies, in the form of a renewed notice of application for an Act to authorise the formation of a junction (by tnnnel) between the several Manchester lines.

WEST LONDON RAILWAY—DIRECTORS' ALLOWANCES.

To the Editor of the Railway Times.

SIR,—I was much amused at the meeting by the observations of the Chairman on the subject of Directors' allowances. I quote from memory:—"The Directors had had some discussions relative to the ceding of their allowances, and some were in favour of it; they had also letters from some of their late colleagues, but not sufficiently definite to act upon. Mr. Garland, who had raised the question at the last meeting, he observed was not present, but he (Mr. Garland) had attended a meeting of the Directors, *and had seen the difficulty.*" "*The difficulty*"!! *Risum teneatis amici?* It now appears that the said Mr. Garland was for a *very* short time himself a Director, and the sum of 4*l.* 17*s.* 10d., or thereabout, is appended to his name for *one* attendance at the Board; *is* THIS *the difficulty?*

Lord Kensington has found no difficulty; Mr. Sturch has found no difficulty. Let every Director, who wishes to behave *handsomely* (as these two gentlemen have done), write to the Secretary—or perhaps your columns might be afforded—to the following effect:—

"I, *A. B.*, hereby decline receiving the amount due to me for my services as a Director, and request the Company's fund may be credited therewith."

There is a large sum set against the name of a Director, a defaulter, who lately retired. What becomes of *it?*

Especially at a time like this, when we are seeking aid from the public, and the public has so ably seconded our wishes, "Honesty is the best policy."

I trust there will be no necessity, *on my part*, for further comment.

I am, Sir, your obedient servant,

INQUISITOR.

November 14, 1842.

RAILWAY FARES.

To the Editor of the Railway Times.

SIR,—In your last number I observe two cases in which parties have been punished for non-payment of fares. Can you inform me if there is any penalty imposed on a Railway Company for taking more than the fare authorised by Act of Parliament? Is it not a forfeiture of the Act, or is it by an action at law? If the latter, *who would*, for the sake of a small sum, go to law with a large Company? If you remonstrate, you are taken before a magistrate for obstructing a railway official. I am, Sir, &c.,

YOUR CONSTANT READER.

November 16, 1842.

HULL AND SELBY RAILWAY.

To the Editor of the Railway Times.

SIR,—"A Shareholder" in your last number inquires how it happens that the Hull and Selby Railway, with a cheaply executed line, excellent gradients, and a good locality, makes so small a return to its proprietors.

I would suggest, as the principal reason of the failure, the unnecessary lowness of the fares. This I believe to be occasioned by a most exaggerated fear of river competition. The Directors seem to have fixed the fares as if the locality were Glasgow, and they had the Clyde to deal with, instead of a long, tedious, and difficult navigation, which, with all except the poorer classes, can hardly enter at all into competition with the railway, I mean as far as passengers are concerned, and those to whom time is of any value as compared with one or two shillings, more or less. The distance by river is more than 50 miles; by the railway barely more than 30. The journey by the one may be performed in little more than an hour; by the other it takes from 6 to 9 hours. Yet the fares for the first-class are less than twopence per mile, and less than a penny for the third. By placing them on the footing of the York and North Midland Railway there would be an addition to the receipts of 9,000*l.* per annum, allowing for the loss of 40,000 passengers, and without including any consequent diminution of expense. The experiment, therefore, is worth the trial. The difference in dividend would be at least 2 per cent. per annum.

It is probable that another cause of non-productiveness to the shareholders is extravagance in the working of the line, which, considering the goodness of the gradients, bears a very high proportion to the receipts, a proportion greater than seems to be accounted for by the lowness of the fares. An addition to the net receipts might fairly be expected from this source.

I am, Sir, yours, &c.,

SYMPATHISER.

SUNDAY TRAVELLING ON RAILWAYS.

To the Editor of the Railway Times.

SIR,—Your correspondent "R. W. T." admits "that there may undoubtedly be cases where the plea of necessity or charity would justify it," (Sunday travelling). Then he will hardly question the propriety of making some provision for such contingencies: that is, Railway Directors may allow some trains to run on Sundays—and if so, those who refuse to use any railway at other times, because of such arrangement on Sundays, are wrong in their judgment. It was the notice of such a determination on the part of some persons in Scotland, mentioned in your paper of the 1st of October, which led me to say a word on the subject.

Your correspondent thinks my inference that we are free from one and all of the observances of the Mosaic Law proves too much, as in that case we should be at liberty to "worship images, commit murder, or steal." Does he consider these things *ceremonies?* Whatever of the moral law of the Old Testament received the sanction of the Founder of Christianity the followers of Jesus are bound to observe. The Sabbath did not receive his sanction, therefore the observance of the Sabbath is not incumbent on the followers of Jesus. I here take for granted what is the foundation of your correspondent's argument that the observance of the Sabbath is a requirement of the moral law. But is this true? Might not a man observe the Sabbath with the utmost rigour, and yet be at that very time planning in his own mind the most dreadful immoralities? It has been well said—"Two attendances upon public worship is a form complied with by thousands who never kept a Sabbath in their lives."

I am astonished to find Gen. iii., 3, quoted as any part of an argument for our observance of the Sabbath. Does any reasonable being think that the Great Creator ever "rested from all his work?" Does not the sun shine, the rain descend, the wind blow on the Sunday, as well as on any other day? "Hast thou not heard that the Creator of the ends of the earth fainteth not, neither is he weary?"

Many arguments might be advanced why men should set apart one day in the week for relaxation from business, and for the purposes of religious worship. The practice of making Sunday a travelling day in preference to any other day is, in my opinion, blameable. But if the men who do this cannot be convinced of their error by demonstration of their duty as reasonable and accountable beings, and of the advantages attending a different conduct, they will not be reformed by representations of the divine command in the pages of the Old Testament, applied as that command is to a different day (the first, not the seventh), unconfirmed as it or its application is by Jesus Christ, and classed among "shadows and beggarly elements" as it has been by St. Paul.

Not one day in a week, but every day in the whole life of a sincere follower of Jesus will witness his endeavours to act upon the fundamental principles of the gospel—love to God and man.

I am sorry I was unavoidably prevented sending a reply last week.

I am, Sir, yours, &c.

CHRISTIAN.

November 9, 1842.

NORTHERN AND EASTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—Your correspondent, "Alfred," states that "the gross receipts of the Lea and Stort together have never much exceeded 20,000*l.* per annum," and wishes to know how your other correspondent makes out "that the sum of 114,000*l.* is annually paid for the conveyance of goods on the line of direction through which this railway passes." It appears to me that "Alfred" has answered the question himself, by stating that upwards of 20,000*l.* has been received per year by the Lea and Stort jointly, because, if the portion received for conveyance of goods by the Lea and Stort be as stated above (their portion being toll only), the gross payment must be a sum approaching to 114,000*l.* Below I give the exact statement of tons that passed along the river Lea in the years 1839, 1840, and 1841, from which you will receive a corroboration of the opinion that 114,000*l.* is about the true sum paid for transit of goods.

Knowing that the article of malt pays 10s. per ton, and that grain and flour pays about that sum per ton, coals 6s. per ton, and other articles 7s. 6d. per ton, I believe I have good grounds for estimating the average to and from Stortford at 8s., and that from Ware and Hertford at 7s. per ton, and that the average will be 7s., which upon 300,000 tons is 105,000*l.* The actual quantity carried in the last year is 299,290 tons.

Now the railway will be well paid at 5s. 4d. per ton to and from their terminus at Shoreditch, and the bulk of the articles can be as cheaply delivered from the railway terminus within 24 hours, as they now are from the quays, which takes three or four days; it follows that the railway is likely to get the goods' traffic, which has heretofore passed on the rivers. The railway being only 32 miles in length, will not command the goods that are brought per waggon three or four times that distance, but it will no doubt get a portion of them.

I am, Sir, yours, &c.

NOTES TO THE TRAFFIC TALBE
(on the opposite page.)

3. Main line, 53 miles; Tewkesbury branch, 2. — Total *leagth*, 55 miles.

4. The total length of line and branches is 25 miles:—15 miles of passenger and general traffic, and 10 miles of coal traffic alone. The Company are now before Parliament for power to raise the capital to 500,000*l.*

5. The total amount of stock on which dividends are payable is 750,000*l.*

8. *Receipts* include the Northern and Eastern toll, &c.

12. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the Liverpool and Manchester and Chester and Crewe lines, as also the toll from the Manchester and Birmingham Company. The divisor employed to ascertain the daily receipts per mile is 121 (85+15+21.) The Company do not now carry goods to Manchester.

14. The receipts include those derived from the Cheltenham and Exeter lines; the former opened for 18 *miles*, and the latter for 44¼. The divisor employed to ascertain the daily receipts per mile is therefore 180¾ (118¼+18+44¼.) The *rent* of the branch lines is together about 1,163*l.* per week. There is likewise a *toll* payable to the Exeter Company of a farthing per passenger and per ton of goods per mile travelled.

15. The dividends have been hitherto (up to 31st December, 1841) appropriated to completing the line and works.

18. Ten per cent. is the maximum dividend allowed by the Company's Act.

19. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. The dividend is *nominally* at the rate of 10*l.* per cent., but to the original shareholders it is equal to upwards of 11*l.* per cent., as the dividend on the original shares is paid upon 100*l.*, although only 90*l.* has been called for. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.

20. At the last meeting no dividend was declared, the disposable balance from the previous six months' working being only 1,472*l.* 10s. 9d.

21. The length stated includes the Shoreham branch. The Croydon and Greenwich tolls are not deducted from the amount stated in the Table. The traffic of the six months produced 63,326*l.*, and there was a balance from the previous half-year of 12,479*l.* Out of these two amounts combined, the dividend (after making certain deductions) was paid.

22. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company.

23. Capital of 993,300*l* includes new capital for widening the line, &c. The dividend of 7s. 6d. per cent. does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table includes the receipts from the footpath, but is exclusive of the Brighton, Croydon, and Dover toll.

24. Capital includes that provided for the Gosport branch. The dividend is calculated on the money actually paid up, a portion of the shares having been issued at 50 per cent. discount. The Gosport branch is included in the length stated.

25. Including Toll, &c., from Sheffield Company, and after deducting omnibus charges, &c., and subject to payments to the Grand Junction Company.

26. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

27. The 4,100*l.* 9s. 5d. are the receipts after deducting omnibus charges, and payments to other Companies.

28. The receipts for goods, &c., include, horses, 28*l.* 2s. 0d.; carriages, 26*l.* 8s. 0d.; dogs, 2*l.* 2s. 6d.; parcels, 238*l.* 2s. 8d.; cattle, 38*l.* 18s. 6d.; corn, 5*l.* 0s. 11d.; heavy goods, 409*l.* 0s. 0d.; coal and lime, 176*l.* 4s. 10d. —Total, 923*l.* 19s. 5d.

31. The amount of stock *created* is 3,000,000*l.*, on which *dividends* are payable; and the sum of 850,000*l.* is borrowed money at interest. The 3,000,000*l.*, however, is nominal, inasmuch as the shares were some of them issued at a discount, which reduced the actual amount to 2,589,500*l.*, viz.:—15,000 shares at 100*l.* = 1,500,000*l.*; 15,000 of 50*l.*, issued at 40*l.* = 600,000*l.*; 22,500 of 33*l.* 6s. 8d., issued at 21*l.* 13s. 4d. = 489,500*l.*; total 2,589,500*l.* The details of the receipts are as follows—Passengers, 2,002*l.* 6s. 8d.; carriages and horses, 139*l.* 6s. 9d.; parcels, 162*l.* 8s. 8d.; mails, 50*l.* 5s. 9d.; merchandise, 1,089*l.* 7s. 9d.; minerals, 326*l.* 16s. 7d.; cattle, 24*l.* 18s. 4d. — Total, 3,795*l.* 10s. 6d.; including North Midland proportion of Manchester and Leeds traffic, and amount received for Sheffield and Rotherham Company.

32. The receipts are after deduction of Liverpool and Manchester toll.

33. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 134*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway. The 32¼ miles stated as being open for traffic, include the portion of the Eastern Counties' line passed over by this Company.

34. The capital of 533,000*l.* includes that provided for harbour and works as well as railway. The dividend is for a year (since opening of line).

35. The returns are inclusive of Manchester an Birmingham toll.

37. The length stated includes branches.

39. The traffic stated does not include the Leeds and Selby.

TO CORRESPONDENTS.

Investments in Railways.—We are constantly receiving applications for advice with respect to the sale or purchase of particular shares. We have repeatedly stated, that we are very unwilling to offer any opinion upon such points, and, indeed, our readers have the same data as ourselves whereby to form a judgment. Nevertheless, as they *will* have our opinion, we cannot refuse to give it. We wish them, however, to bear distinctly in mind, that we do not, in any instance, hold ourselves answerable for the event. The course we recommend to our correspondents, is simply what we ourselves would follow, were we buyers or sellers under the circumstances detailed by them respectively. With this caution, which we shall take care to keep before parties who apply to us on such subjects, we proceed to notice the applications of the week. We may just add, that the figures and letters have no reference whatever to our traffic list, or to the initials of any railway. We cannot notice questions where this rule is violated. In order that we may not be subjected to needless questions, we must have the name and address of every inquirer, although the answers may be given under a fictitious designation:—Inquirer *(Boltby). The best is No. 5. After that we would purchase No. 7 and No. 4, The rest we would have nothing to do with.*—J. T. H. *(near Ipswich). At present prices, the dividend from No. 1 is about 5 per cent. per annum; No. 2 will not maintain its dividend; No. 3 is bad; No. 4 pretty fair; No. 5 very good; Nos. 6, 7, and 9, not desirable; No. 8 will pay* ultimately.—The Rev. Mr. T. *We think the shares are almost certain to rise. The investment is desirable.*—Mr. G. S. D. *(Pentonville). No. 1 not desirable; Nos. 2, 4, and 6, will improve; No. 3 is very indifferent. The best of the whole is No. 5.*—L. K. *would probably find the information he wants by applying at the* London *office of the Paris and Rouen Railway Company, No. 4, Austin Friars.*—Mr. W. S. *(Pentonville). The order we would recommend is exactly the order in which you placed them. Nos. 1 and 2 are decidedly the best, but we think the very worst will "in 2 years" pay the dividend specified. We would further invest in No. 5; this will reduce the average cost per share. Do not, however, expect any* immediate *benefit from this step.*—R. R. S. *(Liverpool). Hold on; do not be in the least alarmed by the statements of brokers who, in nineteen cases out of twenty, have private purposes to serve. Of this more anon.*—L. M. N. *We have no great opinion of the line; it is badly managed. We certainly would not buy at present prices; but having the shares, our correspondent would do well to wait.*—E. R. *(Liverpool). Remain in* statu quo, *and await the result of the next six months.*—S. B. *(Leeds). We think both will be lower.*—Mr. S. *(Waterford). There was a mistake in the previous answer, but we do not keep copies of the letters. We should imagine that the* second *phrase applied either to the Eastern Counties' or South-Eastern. As to the lines now mentioned, Nos. 20, 25, and 26, are safe, but at present prices will not give above 5 per cent. per annum. Of the others we would recommend Nos. 16 and 22. No. 21 will not* permanently *maintain a high dividend. The rest we would not* at present *have anything to do with.*—O. M. N. *Wait; you can scarcely be "worse;" we think you will be better.*—G. F. *We think No. 1 will improve; we do not believe that No. 2 will* ever pay *a higher dividend.*

A Subscriber to the Railway Times.—*The line has not yet been opened for a sufficient time to earn a dividend. For several years interest on paid-up calls was allowed—in other words, dividend out of capital—but this has now ceased.*

P. *will find the subject of his letter more fully treated by another correspondent.*

Ship Hotel, Dover.—*To the first question we answer, "we believe so." We do not know the gentleman's address; write to the Secretary. To the other question, "the* Brighton Gazette."

F. H. *will please accept our best thanks.*

We beg to express our acknowledgments to the Editors of the Leeds Mercury *and* Sheffield Iris, *for their courtesy in transmitting to us early copies of their respective papers of to-day.*

If Equity *choose to volunteer a defence, he must write in a very different strain, and allow us to append his name to his letter. Anonymous testimonials to character avail nothing.*

Kent Railway.—*A correspondent states that Mr. Rowand Ronald, one of the Directors of the late Kent Railway, resides at 5, Manchester-square.*

One of the Smiths.—*The original shares of the Company were issued at* par, *that is, at 50l. per share. Subsequently 50l. shares were issued at 25l., that is, at 50 per cent. discount. We believe there was another issue. The* avr., *or* average, *is the aggregate price of a share at the amount of each issue, divided by the number of issues. At whatever price the share may be bought, the dividend will be paid on 50l. only.*

A Proprietor.—*It is one of the most barefaced impositions ever practised.*

A Shareholder in the Brighton Company.—*We cannot notice the tricks of the "obscure journal" referred to. We do not feel at all surprised at such conduct.*

Good Order.—*No attention can be paid to this communication, unless we have the name and address of the writer.*

Northern and Eastern Railway.—An Observer *should not speak in riddles.* Who *are the parties at whom he points? We cannot meddle with the subject unless we have ample and authenticated particulars.*

W. F. M.—*We believe the survey was commenced several years ago, but never completed, in consequence of the want of funds. We would caution our correspondent against having anything to do with the party whom he names. If* W. F. M. *will put us in the way of communicating with him privately, we will give him further information, which it would not be* safe *(such is our beautiful law of "libel") to make public.*

Those correspondents whose communications reached us yesterday, must excuse any seeming neglect. They shall be attended to in our next.

TRAFFIC OMITTED.

Dublin and Kingstown Railway.—*For the week ending November 8.—Receipt from passengers (number of passengers 29,161) 731l. 7s. 10d.*

Grand Junction Railway.—*For the week ending November 5.—Receipt from passengers, parcels, and mails, 5,612l. 16s. 2d.; merchandise and live stock, 1,903l. 2s. 1d.; total, 7,515l. 18s 3d.*

Ulster Railway.—*For the week ending November 6.—Receipt from passengers (number of passengers 7,194) 313l. 11s. 9d.; goods, 113l. 1s. 7d.; total, 426l. 13s. 4d.*

THE RAILWAY JOURNALS.

The Stamp Returns for April, May, and June, just published by Order of the House of Commons, enable us to complete the Returns for the year ending the 30th of June last. The results, as affecting the railway journals, are as follows:—

RAILWAY TIMES	**146,374**
Railway Magazine	68,500
Majority in favour of the RAILWAY TIMES	**77,874**

from which are to be deducted 10,874 Supplement stamps used for double numbers, still leaving the ordinary circulation of the *Railway Times* just about double that of its contemporary.—*September* 17, 1842.

THE RAILWAY TIMES.

SATURDAY, NOVEMBER 19, 1842.

MIDLAND COUNTIES' RAILWAY.

EARLY this afternoon we shall publish a SECOND EDITION, with an original and copious report of the special meeting held yesterday at Derby. From the lateness of the hour at which the proceedings closed, it was impossible to get the report ready for our present publication, as we go to press at an early hour. The meeting did not terminate till past 7 o'clock. The appointment of a Committee of Investigation was carried by a majority of 715.

IN our last number but one we introduced the Railway Clearing-House to the notice of our readers. Since that time we have been at some pains to obtain a more complete acquaintance with the details of the system than we previously possessed. We find that by its means, passengers may be booked through from all intermediate towns of importance, as well as

Digitized by Google

from terminal towns, and that the accounts of any one Company with all the other Companies parties to the arrangement, are settled weekly by the remittance or receipt of one balance, according as the balance is due to or by the Company.

But what we learned with most pleasure is the practicability of extending the system to the internal as well as the through traffic—thus obtaining, as regards this branch of railway management, all the benefits of centralization. At a time when the question of economy is receiving so much and such just attention, the opportunity of effecting safe retrenchment here pointed out should not be overlooked.

No one conversant with railway affairs but must be fully alive to the necessity of their receiving the utmost protection which an efficient system of audit can afford. Instances are daily occurring of deplorable evils resulting from misplaced confidence and lax supervision on the part of public Companies; and we believe Railway Companies to be more than any other exposed, by the nature of their transactions, to losses through negligence and fraud. In fact, so well is this understood, that checking offices of greater or less efficiency have been established by most Companies. Where the line is short, or the means limited, the expense of such an establishment is heavily felt, and to relieve this pressure we suggest that the Railway Clearing-House might be advantageously substituted for the present offices. All Railway Companies would thus have the advantage of the most efficient system of audit to which railway accounts have hitherto been subjected, at one tithe of what it would cost them to arrive at the same results by isolated establishments, and without depriving themselves of the control of their accounts, or of the means of testing the accuracy of any portion of the information they now possess.

We shall, for the present, content ourselves with throwing out this hint, but may return to the subject. We are glad to hear that Mr. RATHBONE, the Chairman of the North Union Company, is exerting himself to get the clearing arrangements introduced upon his own and the adjacent lines. This gentleman, and Mr. CREED, the able Secretary of the London and Birmingham Railway Company, have always taken a warm interest in the advancement of the institution.

FROM a note addressed by Lord LOWTHER, the Postmaster-General, to Mr. PARKER, one of the members for Sheffield, acknowledging the receipt of a memorial from certain parties in that town, his Lordship would apparently desire it to be understood that his recent substitution of horse conveyance for railway conveyance, in the transmission of the mails, has arisen solely from the comparative cheapness of the former mode of carriage.

His Lordship says, "The petition from the Master Cutler, to which you refer, has been forwarded to the surveyor of the district for inquiry; but I fear that the result will be, that the Railway Company will not carry the bags at a price we can pay, considering the reduced state of the Post-office revenue."

Now, admitting for a moment that the transmission of the correspondence of the country is a fit and proper source of augmenting the revenue of the empire, and that the pecuniary loss (to say nothing of the inconvenience) to individuals is counterbalanced by the pecuniary gain to the State, his Lordship ought to show that an offer of remuneration equal to the expense of horse conveyance has been made to the Railway Companies, *and refused*. We have the best authority for stating that, in the case of the Sheffield and Rotherham Railway Company, no proposition of the kind was tendered—for most probably it would have been accepted. We are strongly of opinion that little or no profit is looked for by many of the Companies from the conveyance of the mails. It is but justice to themselves that no actual loss should be incurred.

What is it that Lord LOWTHER wants? He has the privilege of regulating the hours of departure, and if the Companies' terms do not please him, he may refer the question to two arbiters, one of them of his own choosing. Does his Lordship imagine that his representative would enter into a conspiracy with the Companies, to fix a rate which was not equitable, or which, "considering the reduced state of the Post-office revenue," ought not to be paid? Or would his Lordship like to have the mails transmitted at the cost of the Companies, or at the sacrifice of their pecuniary interests? Before his Lordship can reasonably look for any special consideration on the part of the Companies, *quoad* the service of the State, he ought first to induce his colleagues, the official servants of her Majesty the QUEEN, to exhibit some consideration towards the Companies—to repeal or relax those laws and regulations which, in Parliament and out of it, place railway proprietors almost at the mercy of robbers of every class and complexion. And if his Lordship could, at the same time, persuade certain worthy members of his own "order" to disgorge a portion of the "compensation," or hush-money, by reason of which extortion Railway Companies are compelled to increase their charges, he would be rendering an acceptable service to all parties — the noble and right honourable gentlemen themselves *not* excluded.

WITHIN 48 hours of our last publication, accounts reached London of two most disastrous shipwrecks, the one involving the loss of 250, the other of 110 lives, or 360 lives in all! God forbid that we should feel indifferent to—far less exult in—occurrences so truly awful as these, merely because the deprivation of life took place on the sea, and not on the land; but one can easily imagine how stricken with horror the nation would have been had calamities, half as terrible taken place on a railway—how the whole system would have been denounced from one side of the country to the other, and how strongly the effects would have been felt upon other railways, from the alarm which would not unnaturally have taken possession of the public mind in regard to this mode of travelling. Will these disasters at sea deter one person from thus prosecuting his journey? True, it may said, that shipwrecks arise from what may especially be called the "visitation of God," while railway casualties usually originate, so to speak, in the recklessness or negligence of man. That recklessness the most gross—negligence the most criminal—are, however, sometimes associated with wrecks at sea, appears from the statements put forth in the daily press with respect to one of the vessels more particularly alluded to, which it is said was from age so unseaworthy, as in a few minutes, from the time of her striking, to have become "*a mass of rubbish.*" And yet such occurrences as those referred to will, in no sensible degree, affect the popularity of sea-going conveyances. To accidents at sea the public have become habituated, while accidents on railways are novel, and therefore more particularly alarming.

THE practice of inflicting deodands is defensible solely on the ground that criminal negligence, which otherwise might escape untouched, is thus sometimes visited with punishment more or less proportioned to its deserts. It were better, perhaps, that the same desirable end were arrived at by a more direct route than by the continuance of a penalty which, in nine cases out of ten, is openly and not seldom impudently, evaded by offenders of high influence or heavy pockets; but at any rate, while deodands are persisted in, care should be taken that they fall upon the culpable alone. That this is not always the case, seems likely from the following short paragraph, which we copy from the *Manchester Courier* of last Saturday:—

"On Monday afternoon, a man named John Hutchinson met his death in consequence of having been run over by a railway waggon on the Bolton and Preston line. Deceased it appeared was standing upon a stage painting one of the bridges, and upon the train coming up he became alarmed, and in consequence of altering his position, he unfortunately fell upon the rails, and one of the waggons passed over his legs, which occasioned death in a few hours afterwards. *Not the least blame is to be attached to any one save the unfortunate deceased*, FOR HE WOULD HAVE BEEN IN PERFECT SAFETY HAD HE MAINTAINED HIS POSITION. An inquest was held upon the body on Tuesday, when a verdict of "Accidental death" was returned, with a deodand of 5*l.* upon the engine, and also 5*l.* upon the waggon which passed over deceased."

Not the "*least blame is to be attached to any one*," and yet the Railway Company are to be punished by the infliction of a fine amounting to 10*l.*! How is this? There surely must be some mistake. If not, we shall by and bye see Railway Companies fined ten, or ten-hundred pounds (for the principle is in both cases the same), because a drunken fool may choose, without the "least blame" attaching to the Company or their servants, to go to sleep upon the line of rails. We shall be glad to be favoured with some further particulars of this strange verdict. If the circumstances be as represented by our Manchester contemporary, of course the Railway Company will not silently submit to the infliction.

THE recent alteration in the Standing Orders of the House of Commons, with respect to the preliminary notices required for Railway Bills, has had the effect of bringing several new schemes into the field. To some of these we have in previous numbers alluded, and others we shall doubtless have occasion to notice hereafter. Perhaps the movement in more than one instance, may be attributable to the supply of Engineers and Surveyors, Lawyers, and Parliamentary Agents, with their connections and dependants, far exceeding the demand—these gentlemen being well aware that, if a project can be "got up" sufficiently plausible to attract even a limited number of subscribers, *they* will be handsomely recompensed for their labour, even should legislative sanction be withheld.

But putting aside for the present such hollow speculations, we wish briefly to touch upon two embryo projects which appear to be *bona fide* in their origin, and this because a trifling circumstance connected with each seems to point out, as straws indicate the direction of the wind, a change of feeling on the question of railways in quarters where such change was least to be looked for.

Digitized by Google

The Great Western Company have given notice of their intention to apply for powers to form a branch line from Didcot to Oxford and Abingdon. Our readers will recollect that the *main* impediment hitherto in the way of a branch to Oxford has been the determined opposition of the University, on the ground that if railway facilities were brought to their doors, the students might be tempted to desert their books, and indulge in frequent flying trips to the metropolis—just as if an hour or two's further detention on the road would deter those who might feel so inclined from exchanging the seclusion of their College for the bustle and dissipation of London. It may be questioned, indeed, if the temptation lies not all on the other side, seeing that the ambition of "handling the ribbons" which leads to the road many an *alumnus* of the "twin seats of learning," cannot hope to be gratified on the rail. Be this, however, as it may, the objection prevailed, as did for a time a precisely similar objection to the construction of a station at Slough. Ultimately, the heads of the College of Eton (by what arguments convinced, we cannot tell) relented in the one case, and it gives us much pleasure to hear that the heads of the University of Oxford are likely, in the other, to follow so good an example. What is it that has led to this change of feeling in a body generally believed to be somewhat slow in giving up long cherished notions? What, but that daily increasing appreciation of the benefits conferred by railways, to which we have already referred!

The other case in which a similar manifestation is afforded, is that of the proposed branch to the Blisworth station of the London and Birmingham Railway, alluded to in our last publication, and which branch, by the way, is it appears to terminate near the city of Peterborough. It is well known that on few parts of their line, as originally proposed, did the Birmingham Company meet with a more determined opposition than in the vicinity of the town of Northampton, the inhabitants of which actually would not suffer the line to be brought nearer to them than it now stands. Long ago the worthy townsmen saw the folly of their suicidal determination, and have been glad to petition the Directors for the establishment of a first-class station at a particular point, most convenient for the traffic of Northampton; and now, we understand, so far from opposing this branch line, which would to a great extent remedy the original mistake, many of the most influential gentlemen of the town and neighbourhood are most ardent in its support! Hear what is said by the *Northampton Herald*, the organ of the original objectors, and for a considerable period one of the most strenuous and most prejudiced opponents of the railway system generally, and of the London and Birmingham Railway in particular:—

"It will [says our contemporary] be naturally and properly expected of us, that we should give our opinion upon a project so materially affecting our town and county. *Now, could we by the sweep of our pen do away with railways altogether, and for ever prevent their future construction, we should have no hesitation in doing so.* But the question of railways or no railways has been decided, and decided in their favour. We are confident therefore that *no objection to the* PRINCIPLE *of railways will ever again be listened to in Parliament*, or indeed any remonstrance prove successful on the simple ground of individual suffering. That various tradesmen, such as in particular our admirable hotel keepers and posting masters, will be deeply and lastingly injured by the proposed railway, there can be no question whatever, and seriously shall we regret to see the plan proposed and persevered in as far as they and numerous other persons are concerned. But we are greatly afraid that such injury will be no bar to the project, and that the matter will ultimately resolve itself into a question of individual compensation for land and premises affected, and the local convenience of towns in the choice of a line. What then do we advise? We advise in the first place, a meeting at Northampton of our fellow-townsmen without delay, as well as elsewhere of the inhabtiants of Wellingborough, Oundle, Kettering, Thrapston and Peterborough. In the second place, *we advise our neighbours, if there must be a railway, to take care that it is brought as near to this town as possible, aye, and into this town, across Bridge-street.* No greater mistake can be made by towns than that committed by Stony Stratford and other places, where the railway was kept at such a distance from the inhabitants that, whilst they lost all their old advantages, they gained no new ones."

Such testimony, and such recommendations, proceeding from a quarter like this, show that old prejudices are fast disappearing. In denouncing in bygone days all connection with a railway, the *Northampton Herald* gave voice to the feelings of a class; the change in those feelings is now reluctantly admitted, and if love do not attract to the new mode of locomotion, self-interest will. Perhaps it is nothing against the success of embryo railway projects that the stronger, although the less amiable, motive is predominant.

We had occasion last week to advert to the little attention shown by the North Midland and Midland Counties' Railway Companies towards their third-class passengers in respect of "booking through," and to censure the seemingly *intended* annoyances thrown in the way of that portion of the public, as forcibly illustrated in a case supplied by a correspondent. Another correspondent, who signs himself "A Poor Traveller," has in the interim called our attention to similar conduct on the part of another Company, and in the hope which we expressed last week that a prominent exposure of the evil will be sufficient, without any strictures of ours, to lead to a re-consideration of the Company's arrangements, we give the following extract from our correspondent's letter:—

"Five trains a day leave the Euston-square station, by which passengers can get through to Liverpool and Manchester in one day—four mixed, containing carriages for first and second-class passengers, and one first, for first-class passengers only. Now, out of the five corresponding trains of the Grand Junction Company which meet them to go through, the classes of carriages are just the reverse—one mixed and four first-class—so that only by one train in the day, to avail themselves of that mixed one without waiting three or four hours at Birmingham, can passengers get through to the above-named places at second-class fares, and that is by the 11 o'clock morning train from London. Should they wish to go by an earlier or later train, they must either take a first-class ticket from Birmingham onwards, or wait some hours for a second-class train. It is not more than 16 days back (the 1st inst.) that the Grand Junction so altered the starting hour of their third-class train as to meet the third of the Birmingham Company, previous to which, passengers proceeding from London at 7 a.m. by the third-class train, and arriving in Birmingham at half-past 3, were under the necessity of waiting there till 6 o'clock the next morning for the cheap conveyance to Liverpool, &c. Independent of all this, the Grand Junction lately raised their fares most enormously—first-class, 3s., and third, 2s.—10 per cent., and more, not being dividend enough for the shareholders!

"Should any one wish to go to Preston or Lancaster, or meet the packet at Liverpool for Dublin, there is no train by which he can get *through* to those places at second-class fares; he *must* travel half the distance in a first-class carriage, which is the Grand Junction portion of the journey, or make two days of it.

"With regard to the trains first mentioned, ought such a shameful state of things to exist, think you? Really, if the Directors will not make a more accommodating alteration, one would wish for some interference on the part of the Government to compel them to run their trains with a little more regard to the pockets of the poorer class of travellers. Such conduct, I say, is disgraceful in a large Company, and cannot meet with too much condemnation."

It will be seen from a report which appears in another page, that a special meeting of the Sheffield and Manchester Railway Company was held on Wednesday last, with reference to a loan of money from the Exchequer Bill Commissioners. This subject has been several times of late alluded to in our correspondence, and we regret that the opportunity of explaining the bearings of the proposed loan upon other lenders, and upon the shareholders, was not embraced. The recent experience of the Clarence Company rendered this course especially requisite.

The whole matter seems to have been got up in hot haste. *We* knew nothing of the holding of the meeting, nor that such meeting was in contemplation, until, through the courtesy of a provincial contemporary, we received a report of the proceedings. The Chairman admitted that he himself was not aware that a meeting was to be held until two days before it took place. Surely this is not the proper mode of preparing for the discussion of so important a question!

We gather from the report that legal proceedings against the Directors are threatened. We are not acquainted with the particulars, but we would strongly urge upon Mr. H. Parker, and his clients, to try every *other* method of securing their object before having recourse to law.

Circumstances prevent us from doing more to-day than directing attention to the report which appears elsewhere of the proceedings at the North Midland Railway meeting last Wednesday. In our next publication we shall endeavour to do justice to the subject.

It will be noticed that the Report of the Committee of Inquiry has been adopted, with but five dissentients. It is not unlikely that the "Address" put forth by the Committee on the morning of the meeting contributed very essentially to this decision. The "Address" certainly gives a very different complexion to various matters from that set forth by the Directors.

We cannot suppose that, under all the circumstances, the present Board of Directors will remain in office to carry out reductions which they believe to be opposed to the best interests of the Company—and more especially when so little regard has been paid to their recommendations by the proprietors at large. We presume, therefore, that in our next publication we shall have to announce their intended retirement.

It seems that, after all, there was *some* foundation for the rumour of a proposed junction between the Thames Haven Railway, that is-to-be, and the Blackwall, for an advertisement appears in the Essex papers relative to a proposed application to Parliament in the coming session. After the usual

Digitized by Google

verbiage this advertisement sets forth, that "it is intended to take power in the said Bill to make and maintain an extension or deviation of the said railway, with all necessary works and conveniences connected therewith, commencing at or near Orsett Fen, in the parish of Orsett, otherwise Horsett, in the said county of Essex, and terminating at or near a certain street or place called Jubilee-street, in the parish of Stepney, otherwise Stebonheath, in the county of Middlesex, and by a junction with the London and Blackwall Railway, at or near the Stepney station of the said railway, in or near Rose-lane, in the parishes of Limehouse or Stepney, otherwise Stebonheath, or one of them, in the said county of Middlesex; which said extension or deviation is intended to be made, and to pass from, in, through, or into the several parishes, townships, and extra-parochial places following: * * * * which said extension or deviation is to be substituted for that portion of the line of the Thames Haven Railway which was proposed to run from the parish of Orsett aforesaid to join the Eastern Counties' Railway at or near Romford, in the said county of Essex." It is also, it would seem, "intended to take power in the said Bill to make and maintain a branch out of the Thames Haven Railway, with all necessary works and conveniences connected therewith, commencing at the line of the said railway, at or near the Orsett Fen, in the parish of Orsett, otherwise Horsett, aforesaid, and terminating on the north side or bank of the river Thames, at or near the ferry at Tilbury Fort, in the parishes of West Tilbury or Chadwell, or one of them, in the said county of Essex."

We suppose we ought to condole with the Eastern Counties', and congratulate the Blackwall, but are at a loss to know whether tears or smiles should predominate. Perhaps our readers will help us to a decision. Of *course*, the money to pay for the passage of the new Bill through Parliament will be forthcoming.

The precious document from which we have been quoting is subscribed "*Sir* George Stephen, King's Arms Yard, London, Solicitor to the said Bill." Is the learned Knight so vain of his honours that he must prefix his "style and title" to his official signature?

—o—

On Monday a meeting was held at Maidstone on the subject of a railway from that town to Gravesend, in connection with Rochester. It will be time enough to encumber our pages with details when there is the smallest chance of the project going before Parliament. At present the one thing needful for such an appearance appears sadly wanting. Resolutions are, as usual, abundant enough.

Who are the parties behind the scenes? We doubt if the inhabitants are taking the right course to secure a railway to their town. They had better await the completion of the South-Eastern line, and *then* they may possibly have a prospect of succeeding. At present they have none, and no one will profit by such a scheme but the professional parties employed. We doubt if even *they* will reap much benefit.

—o—

The Directors of the Preston and Wyre Railway Company have advertised a special meeting to be held at Birmingham, on Thursday next, for the purpose of receiving the Report of the Committee of Investigation appointed at the late meeting. Why Birmingham of all places should have been fixed upon it puzzles us to conjecture. Can it be in the hope of escaping the supervision of the railway press? We hear that the Committee have not followed the suggestions of the Directors so implicitly as the latter had reason to anticipate, considering the mode in which the members of the Committee were chosen.

—o—

We mentioned in a recent paper that although Messrs. Shuttleworth, the auctioneers, had issued particulars and plans of the Clarence Railway, it was not probable that the concern would be brought to the hammer on the 25th instant—the day fixed. This was correct: Messrs. S. having now announced that the necessity of making a sale has been superseded by arrangements entered into with the Exchequer Commissioners. How soon such necessity may recur we do not venture to predict; but it requires little foresight to discover, that unless a very decided change takes place in the Management, there will be little security for either the new capital or the old. The proprietors should look to the matter in time.

—o—

We have every reason to believe that the South-Eastern Railway will be opened for passenger traffic as far as Ashford, within 24 miles of Dover, on the 1st of December next.

—o—

Railways in France.—We last week copied a paragraph from the *Siecle*, stating that Mr. Locke was one of the contractors for the first portion of the Paris and Rouen Railway. There is such a manifest absurdity in this statement, that we should not have suffered it to appear in our columns had it not escaped our notice; however, we avail ourselves of the first opportunity to give it a flat contradiction.

—o—

Railway Travelling on the Continent.—A correspondent of a Belgian journal, in a private letter, complains much of railway travelling in Germany. After detailing the delays and vexations attending a journey from Augsburgh to Munich, he continues: "Finally, we arrived very late at Munich, and passengers leaving Augsburgh at the same time with ourselves, and travelling in an ordinary diligence, might have arrived at the capital of Bavaria much earlier, and been comfortably snoring in their beds, while we were being dragged on the railway." He then adds, "Of what utility can railways be to these good people? The same sluggishness, the same *nonchalance*, and the same dread of arriving, are to be met with on the lines from Vienna to Bremen."

LONDON AND DOVER (SOUTH-EASTERN) RAILWAY.

Traffic Receipts for the Week ending November 15, 1842—*the Eleventh Week of the Low Fares.*

Date.	First-Class.	Second-Class.	Third-Class.	Total.	Amount.
Nov. 9.. .	214	300	181	695	£143 11 9
,, 10....	214	287	122	623	142 5 11

The following is the return of the numbers who embarked and disembarked at New Cross during the same period:—

Week—9th to 15th November, inclusive.

	1st.	2nd.	3rd.	Total.
Number of passengers booked *at* New Cross station from the 9th to the 15th November, inclusive.....	86	191	229	506
Number of passengers booked *to* New Cross station from the 9th to the 15th November, inclusive.....	117	160	261	538
Total				1,044
Add total to the 8th November, from last Week's *Railway Times*.....				13,669
Total loss to the Greenwich Company in *eleven* weeks by their prohibitive toll.....				14,713

RAILWAY OFFENDERS AND OFFENCES.

At the Marylebone Police Court on Wednesday, Frances Thomley, a girl about 16 years of age, and who appeared to be in a very delicate state of health, was brought before Mr. Rawlinson, charged with having defrauded the London and Birmingham Railway Company by riding further than the distance for which she had paid her fare. The Superintendent of the Company's police addressed the magistrate, setting forth that he had no wish to press the charge against the prisoner, who, on her arrival at the Euston-square terminus on the previous night by the train, had neither luggage nor any money in her possession, and that his principal object in giving her into custody was that she might be properly protected, as she had neither friends nor home to go to; the statement she made to him was, that on account of the ill-usage of her step-father, who was a collier, and lived at Turnstall, Staffordshire, she had run away from him, and on Monday last walked to Coventry, where she paid 1s., the fare from that place to Brandon; she neglected to get out there, and came on to London. Mr. Barker, at the suggestion of the magistrate, promised to take care that the prisoner was safely conveyed back to Turnstall, and that her condition should be made known to the parish authorities there.

—

On Thursday week a man named Thomas Robinson, of Burton, near Loughborough, was charged before the local magistrates by Mr. Russell, Inspector of Police, on behalf of the Midland Counties' Railway Company, with riding in a second-class carriage with a third-class ticket, with intention of defrauding the Company of the extra fare. He was fined 1*l.* and expenses. On the same day, and at the same place, a similar charge was preferred against James Flinn, of Leicester, who was committed to prison for one month in default of paying 1*l.* and expenses.

—

Last week, at the Hemsworth (Derbyshire) Petty Sessions, George Kidger and Thomas Greenwood, labourers employed on the North Midland Railway, each having charge of a horse, were brought before Messrs. Bernal and Bagshaw, magistrates, by Mr. F. M. Faulkner, inspector of the line, for being drunk upon the line and incapable of taking care of themselves. They were fined in the mitigated penalty of 20s. each and costs.

—

We learn from the Essex papers that at the Cheshunt Petty Sessions, on the 7th instant, Cornelius Revis, a gatekeeper on the Northern and Eastern Railway, who had been apprehended on a warrant, but admitted to bail, himself in 100*l.* and two sureties in 50*l.* each, appeared to answer any charge that might be preferred against him, for having on the morning of Sunday, October 30, neglected his duty in not attending to and opening

Digitized by Google

…he gates at his station at the bottom of Cadmore's-…ane, Cheshunt. It appeared that, from this neg-…ect, the first train which arrived at Cheshunt at a *quarter before* six in the morning, ran through and …roke the gates, and injured the whole of the car-*riages*, but fortunately without inflicting any injury …o the passengers. The damage to the gates, &c., …was estimated at 100*l*. Previous to Revis surren-…dering himself, a letter had been received from the Directors of the railway, stating, that in conse-*quence* of the excellent character which he bore, they did not wish to proceed against him further than by discharging him from the situation which he held on the railway. He was consequently dis-missed with a reprimand. We cannot but deem *his leniency* on the part of the Directors of the Company exceedingly ill-advised. Had loss of life ensued would the public have been content with simple dismissal? And yet the "neglect" would have been no greater on the part of the offender. Had Revis any particular friend or patron at the Railway Board? *Who* was it that appointed or recommended him?

CALEDONIAN RAILWAY.

A LARGE and influential meeting of parties inter-ested in securing the extension of the railway system into Scotland by the western route, was held on Tuesday, the 8th October, at the Queen's Hotel, Birmingham. Deputations from six Railway Com-panies attended to support the project, and devise the best means for its execution. It gives us much pleasure to hear that the meeting was unanimous as to the importance of the measure, and the policy of undertaking it. A number of resolutions were passed, and a Committee formed with the view of forwarding the object of the promoters of this most essential line of railway. It was wisely determined to limit the first effort to securing the completion of the southern portion of the Caledonian Railway, viz.: the length from Lancaster to Carlisle. When this is accomplished, the grand trunk from London to the north will have progressed to within about 5 miles of Scotland, and will be about 20 miles in advance of the eastern coast line to Edinburgh, and 50 to Glasgow. There can be no doubt that the grand central line will be the one adopted, and we are gratified to learn that influential parties in the north are already stirring to meet the exertions making in the south, and although it is now too far advanced in the season to hope for anything being undertaken in the northern section next year, there is the best reason to believe that the last remaining links to Edinburgh and Glasgow, which will com-plete the chain of British railways, will receive the sanction of Parliament in 1844.

A new kind of railway is to be opened shortly near Dax, in the department des Landes. It is one formed altogether of wood, constructed over the sandy soil of that part of the country, for the pur-pose of removing the timber of the immense pine forests which exist between Bourdeaux and Bayonne. The line is now nearly finished.—*Sun*.

NEW RAILWAY STATION.—It is now beyond doubt that a South or Stockport railway station will be erected behind the Infirmary for the accom-modation of those passengers who dispute the con-venience and economy of the present station in Heaton Norris. The men at present employed out of a public fund to make the approach at that point from the Wellington-road to the line, are proceed-ing as rapidly in its completion as circumstances will allow, when the Directors of the railway will, as soon as practicable, give immediate instructions for the construction of a Stockport or south sta-tion.—*Manchester Courier*.

THE TOLL QUESTION—CROYDON AND GREENWICH RAILWAYS.

To the Editor of the Railway Times.

SIR,—I am fond of a good table, too much so, perhaps. Be that, however, as it may, I will do as I would be done by, and treat my friends of the Croydon and Greenwich with a good table, recommend-ing them at the same time to digest it well, otherwise, as is too frequently the case with piquant dishes, they may hear of it again—and those reminders are seldom agreeable.

Result from Croydon Traffic.	To Greenwich Company.	To Croydon Company.
If offer made by Croydon Company six months ago had been accepted by Greenwich Company.	£6,000 per annum profit.	Altogether problematical whether profit or loss.
If any one of the offers recently made by Croydon Company had been accepted by Greenwich Company.	£5,000 per annum profit, with a chance of more.	Ditto.
PRESENT.—Croydon Company carriers, and running trains nearly every hour.	About 3,000*l*. per annum profit.	.....
FUTURE.—When Croydon Company cease to be carriers:— *Most improbable* that *all* the present passengers shou d be carried by other Companies.	About 3,000*l*. per annum profit.	About 8,000*l*. per annum profit.
Most probable that a *few* of the present passengers will be carried by other Companies, say one-fifth.	About 600*l*. per annum profit.	About 1,600*l*. per annum profit.
Not very improbable that *none* of the present passengers should be carried by other Companies.	.....	.....

Gentlemen of the Croydon! heads you win, tails you don't lose!
Gentlemen of the Greenwich! heads you don't win, tails you lose!

I am, Sir, your constant admirer, P. Q.

London, November 15, 1842.

RAILWAY "MONOPOLY" AND THE PUBLIC.

To the Editor of the Railway Times.

SIR,—Although I have doubtless wearied your patience as much as I have outraged the "gentle forbearance" of "Justus," I must claim a brief space in your next impression for one or two re-marks upon his somewhat long and unnecessary letter, considering that according to his own account I am a writer "who refutes himself," not with any intention of prolonging the controversy—which must indeed have been worn threadbare when such a veteran as "Justus" proclaims himself to be is driven to the shift of decking out old statements in new dresses, and any answer to which would be but a tedious repetition of what I have before advanced—but in order to vindicate myself from the ungene-rous charges which "Justus" brings against me.

First, let me assure him that my "juvenile ire" has not as yet been at all aroused; he mistakes the rough embrace which I gave at the time, imagining him to be as strong and "juvenile" as myself, for the effects of anger. If my retort were somewhat sharp, it was in return, be it recollected, for not a very civil insinuation, that the subject upon which I was writing, "the policy of high and low fares," was above my comprehension. When I hazarded the conjecture that he was "a simple old man," &c., it was with a view to stop the garrulity of a supposed young one, and not with any idea that I was really dealing with venerable age, for which I have the profoundest respect, notwithstanding my being a "supercilious young man." But hard words break no bones; so for the future his grey hairs, which God forbid that I should impute as a sin or misfortune, shall have all the respect which he claims, and my silence will be a guarantee for his not receiving either pert or flippant replies from my "juvenility." The charge of uncourteousness I must deny. It was with the view of rebuking the want of courtesy in another that I entered the field. I may have written strongly, but I repu-diate any want of courtesy. If a man desires his words to have any effect upon the public, I am old stager enough to know that he must abjure the milk-and-water style. If "Justus" cannot distinguish between *this* and want of courtesy, he ought not to enter an arena where hard knocks are the order of the day, but which ought, I agree with him, and I think my practice has squared with my precepts, to be dealt with all knightly courtesy. But to "Justus's" letter, in the following part of which he appears to me to have himself fallen under the severe condem-nation which he attaches to those making rash as-sertions, and jumping to conclusions. He says, "your correspondent's complaint that he has been misrepresented, is unfounded"—a mere *ipse dixit*, which cannot be allowed to stand against the distinct proof which I thought of misrepresentation in my last letter. He proceeds, "he distinctly charged Railway Companies with breaking their pledges, and adduced in proof the inferior comfort of their conveyances and their higher fares. If this does not mean that the new conveyances were more ex-pensive, and less comfortable than the old, it means nothing. Maintaining, therefore, that he has been misrepresented is equivalent to an admission that he had no meaning, and that his accusation of broken pledges was groundless." A most rare *sequitur*; and arrived at by a logical process equally extraordinary. Because I, having stated that tra-velling by coach was cheaper on some roads than by railway, assert that I have been misrepresented when "N. O. E." charges me with having said tha t travelling by coach was cheaper on *all* roads than, *and superior in point of comfort* to, that by rail-way, *therefore*, I admit that I had no meaning in what I previously stated; *therefore*, the distinct proofs which I adduced of broken pledges on the part of some railways must fall to the ground; *therefore*, I must mean something very different to what I did state, or must mean nothing; and lastly, by this process of ratiocination, my com-plaint of misrepresentation is clearly proved to have been groundless. Can it be necessary for me to say one word in reply to such reasoning? Does it not carry with it its own condemnation and refu-tation? Before parting with "Justus," I will, in all courtesy, recommend him to a re-perusal of his logic—one, at times I dare say very inconvenient, rule of which is not to assume an error before hav-ing given proof of it. If "Justus" had attended to this simple rule, he would have saved a vast ex-penditure on pens, ink, and paper.

I am, Sir, yours, &c., P. Z.

RAILWAY "MONOPOLY" AND THE PUBLIC.

To the Editor of the Railway Times.

SIR,—I take your correspondent "Justus" to be, as his name imports, one desirous to be just, and only unjust from imperfect perception of the whole bearings of the case before him. He thus argues:—

"The right of property is simply the right of a man to his property, and is therefore one of the rights of men. It must have existed from the moment the first man plucked the first fruit, and killed the first animal for food, and it is not easy to conceive what right could have existed earlier."

Quite true! but "Justus" overlooks another

Digitized by Google

important element in this might-created right. When the first man was comfortably seated at dinner with his meat and dessert, a second man had equal right, if of equal might, to try to take it from him, and the physical certainty of succeeding, if possessing superior might. Not pleasant this, with the stronger appropriating the labours of the weaker, and a most insecure tenure of property! And might is right the world over, for Providence designed the strong to rule the weak, and not the weak the strong. "With a strong hand and a stretched-out arm" is a metaphor pregnant with meaning to scriptural expounders.

If property has rights, they can merely be *legal* rights—rights resulting from established customs and written laws, formed by bodies of men banded together to define the *meum* and *tuum* of property, from a conviction of the evils arising from the system of appropriation by the strong hand without rule or order. By banding together, the weak many become stronger than the strong few, and coerce them. But the bond would become a rope of sand the moment the majority found themselves sacrificed to the minority. There can be no legal right without a legal duty. The right of "Justus" to be protected against the natural propensities of Plebs, is based on the understanding that it is the duty of "Justus" to find *work*, *i. e. food*, both *physical* and *mental*, to maintain Plebs in the enjoyment of a sound mind in a sound body, to the full extent of his natural capacity. Failing this, the social bond is broken, and Plebs returns to the condition of a wild biped, to help himself as he best may, according to the original charter of Providence—natural might and not conventional might, becoming his right, or rule of action.

I think "Justus" will not contend for "property" as a *natural* right, but prefer the *legal* tenure, with the obligation to discharge its duties, *i. e.* help his poorer brethren to the greatest amount of comfort—abundant food, and facilities for mental acquirement; to both which cheap railway transit is most essential.

"Justus" is most unfortunate in his illustration of his argument.

"He 'Examiner,' might as well plead the natural right of a man to be fed, in justification of breaking into a baker's or a butcher's shop, as the natural right of a man to travel cheaply, in justication of an injurious interference with railway management."

Surely "Justus" must be aware that the law recognises the right of every man to be fed, and that if by any circumstance he is in danger of being starved for want of food, he is held justified in seizing and devouring it, wherever it can be found. Society has broken its bond, and the starving man is for the time absolved from his duties when his life is in peril by neglect.

If "Justus" will turn to my last letter in No. 254, he will see that I do not argue for any interference with his railways, or the bargain between him and the State. I merely contend that the State is bound to help the suffering many, and if "Justus" understands his own interest, he will do what in him lies to prevent the depreciation of his "property," by doing with his own lines precisely what the State would do with theirs—throw the conveyance of passengers open to competition.

I am, Sir, yours, &c.,

EXAMINER.

MANCHESTER AND LEEDS RAILWAY.

To the Editor of the Railway Times.

Sir,—The silence of the Manchester and Leeds Directors on the subject of my former letters, may, I think, with perfect fairness be assumed as a tacit acknowledgment of the correctness of my calculations, showing that the working of the line since its being opened throughout would only afford a dividend of 4 per cent. per annum.

Let me, therefore, entreat of the Directors to come at once to a 4 per cent. dividend for the current half-year. If I may judge from my own feelings (and I am a holder of Leeds shares), I am convinced that the vast majority of the shareholders, however anxious they may be for a large dividend, would prefer having only such a rate of dividend as the working of the line *will legitimately afford*. We had better at once know the worst; it may cost us a severe pang, but better that than the torture of a gradual and slow, but sure, decline in the rate of dividend and in the price of our shares—and it will be an easy matter to increase the dividend when the traffic will afford it.

So convinced am I of the precarious tenure we hold of a 6 per cent. dividend, that on balancing my books on the 31st of October for the year, I valued my Leeds and Manchester shares at 80*l.* on each 100*l.* paid up, without reference to whole, half, or quarter shares; and in estimating my income from that stock, I take 4 per cent. on the amount paid up as my profits for the year.

In this way, I conceive I take the proper course to ascertain the real value of my stock, and my actual income derived therefrom. Those of my brother shareholders who, like me, hold on investment, will do well to bear in mind that a 6 per cent. *dividend* and a *net revenue* of 6 per cent. are totally different things.

I am, Sir, your obedient servant,

HAUD CAPTUS OCULIS.

November 14, 1842.

MANCHESTER AND LEEDS RAILWAY.

To the Editor of the Railway Times.

Sir,—Your correspondent, "Haud Captus Oculis," again appears in your columns, but his tone is altered. His triumph in the fall of these shares has subsided, and a mere desire to enable the public justly to appreciate these, as well as other shares, is reasonable enough. But whatever may be his present motives, I would defy the most expert casuist to have discovered, from his former letters, that it was then, as now, his object "to protect the *bona fide* holders on investment." Surely *they* were not likely to be misled by an appropriation of former earnings in aid of present dividends, nor by the expedient of debiting part of the expenses of management and interest on loans (employed upon unfinished works) to capital account, nor by the deduction of the entire depreciation fund from the revenue of the latter half of each year—all these measures having been expressly sanctioned by general meetings, with hardly a dissentient voice, and the Reports thereof having been duly circulated to all absent shareholders. I submit that such protection is superfluous, as such triumph was misplaced. As one of the *protected* I beg to say, that I disclaim his care, and protest against the kindness which represents the Extension line as a "mere branch," and the "probable expense" as 300,000*l.*, in defiance of repeated statements of a far different amount. I grant that such estimates are too often far exceeded; but, unless I am much mistaken in my information, the amount now probable is *less* than that originally contemplated. The land is bought; the contracts for the line (though not for the station) are let; and it is said that the Liverpool Company will purchase a part of the land at Hunt's Bank, and will erect their own station there, contributing a part of the joint expenses of approaches, &c. I assume, therefore, 200,000*l.* as the outside probable amount; and conclude that, instead of an additional weekly traffic of 600*l.* being required to pay 5 per cent. on the outlay, as stated by "Haud Captus" (who, by the way, has allowed above 50 per cent. for the working expenses of an additional mile of a line already 50 miles long), about one-half of that sum per week, in addition to the receipts, would be sufficient for that purpose—that is, 300*l.* per week additional would pay the interest at 5 per cent. on 10,000*l.*, and leave 5,600*l.* for working one mile of line by means of a stationary engine.

It should be observed, that all salaries, wages, and expenses of clerks, porters, &c., are already incurred, and will not thereby be increased; so that the working expenses of that mile, *in addition to the present*, will consist of power, maintenance of way, and repairs of station. Our protector may "mean no harm," but the ultimate destination of "good intentions" is proverbial. His assumption of correctness, because he has received no official contradiction, is admirable; and the confusion of a charge against the management of a railway with the mention of a column in the circulars of share-*brokers* (by mistake written share-*holders*) showing high dividends at *present prices*, is hardly worthy of one who is not content with being clear-sighted himself, but must needs undertake to enlighten and protect the public.

I am, Sir, your obedient servant,

A LEEDS SHAREHOLDER.

November 15, 1842.

Bristol and Gloucester Railway.—From the announcement we made last week relative to the completion of this line, and giving notice by this Company to the Cheltenham and Great Western Union Company that it is their intention to do so, we naturally presume, and we shall be glad to find it confirmed, that a friendly and good understanding exists between the Bristol and Gloucester and the Birmingham and Gloucester Railway Companies because we have always conceived that the two lines will be so intimately connected that their interests are in fact inseparable. The same course which will be a advantageous to one, will, in the great majority of instances, be advantageous to the other; for instance, it is a most fortunate occurrence that the gauge of the two lines is similar. This circumstance, as is well known to those who are intimate with the railway system, will facilitate such arrangements as must contribute to the economical working of both lines; a most important feature; as it has long been apparent, that not only to traffic, but to economy, railway proprietors must be indebted for a fair return on their capital. While alluding to the flattering prospects of this railway, in which so many proprietors in Bristol are concerned, we would ask, has not the time now arrived when a division of the forfeited shares originally held by so many speculators in Gloucester should take place, upon the same principle that the forfeited Exeter shares were disposed of? We cannot but think this is due to the number of respectable *bona fide* shareholders who have recently willingly come forward to pay up their calls, and by which this railway, in addition to the economical and excellent manner in which the Directors have made all their contracts, has assumed its present flattering position, and has the prospect of such a speedy completion.—*Bristol Journal.*

—o—

The New Town of Swindon, on the Great Western Railway.—The new town of Swindon, situated in the vicinity of the station of that name on the Great Western Railway, has recently been making rapid progress. Out of the 300 houses intended to be built for the use of the Company's officers and servants at this their central establishment, a considerable number are already tenantable. Accommodation is required for between one thousand and two thousand persons, including guards, policemen, porters, &c., about half of which number will be employed in the engine factory. The whole of the arrangements are similar to those at the central station of the London and Birmingham Railway, at Wolverton.—*Morning Post.*

ANGLO-FRENCH RAILWAYS—SOUTH-EASTERN RAILWAY.

(*Continued from page* 1161.)

The line originally proposed by the French government left Paris at an independent station, and proceeded nearly in a direct line to Creil, a town upon the river Oise, crossing a ridge of hills by means of a tunnel 2,700 metres in length, in the neighbourhood of Marly-la-Ville. This direction has, however, been abandoned, and another by way of Pontoise substituted. The object of this deviation, although it materially increases the length of the line, by a distance say of 18 miles, was to touch the town of Pontoise, a point to which the traffic of a very large district naturally converges on its approach to the metropolis. It also passes through or near St. Denis, Montmorency, and several other minor towns and villages; in fact, almost the entire route of the river Oise is thickly studded with populated spots, which demand the accommodation of a railway communication with Paris.

At the same time therefore that Pontoise, as a focus of traffic, is reached, the wants of a large and wealthy suburban population are in this respect well supplied.

With these views, the proposed railway is designed to leave the city of Paris, in the vicinity of the gate of St. Denis, from a large, open, and eligible plot of ground contiguous to the new church of Vincent, St. Paul, situated in the Place La Fayette. It proceeds nearly directly to, and passes through a portion of, the town of St. Denis, thence following generally the course of the "Route Royale" to Pontoise, where it reaches the river Oise, and afterwards turns nearly at right angles to its former direction, to pursue the course of the fertile valley watered by that river.

The section from Paris to Pontoise presents no feature of great importance; the works are all of moderate magnitude; the material throughout the entire distance well ascertained to be of a character most favourable for the execution both of cuttings and embankments. The greatest embankment which here presents itself is opposite St. Denis, crossing the canal communicating with the Seine and this town. It contains about 140,000 cubic metres, the height nowhere exceeding 13 metres, and the average not being more than 4 metres.

The gradients are very favourable, not exceeding 3 in 1,000, except on the departure from the station in Paris, where the fall of the ground, in connection with several public roads and some unimportant streets at the foot of the eastern side of Montmartre, renders it expedient to adopt the gradient of 4 in 1,000 for a short distance.

The position of the station and the direction of the line here described deserve especial notice; for I was informed that the positive determination on the part of Government to have a distinct entrance and station on this side of Paris for the line towards Belgium, was the immediate cause of the failure of the negociation between the Messrs. Rothschild and the Government.

The large interest which it is understood these gentlemen have in the St. Germain and Versailles Railway, led them to make it a *sine qua non* that the Belgian line should join the Versailles Railway, and run into Paris at the same station.

The authorities of the town are said to have urged the strongest remonstrances upon the Minister against the adoption of such an arrangement. To these representations the Government have apparently conceded, not so much to appease the excitement which very generally existed throughout Paris, but from a sincere conviction on their own minds that the concentration of so much traffic at one point could not fail to produce great public inconvenience.

The route proposed was to adopt the station of the St. Germain and Versailles Railway, proceed by that line to the point of junction with the Paris and Rouen line, thence continue along the latter railway to a point in the forest of St. Germain, at which it would diverge towards Pontoise. The advantages of this route, with reference to expense, must be apparent, even on a very cursory glance at the map of the country in the immediate vicinity of Paris; in fact, its eligibility in this respect is so distinctly marked, that it becomes a subject of material importance in the consideration of the comparative merits of this and the Government route. On the other hand, it should be well considered, whether a railway like that from Paris to Belgium, possessing a traffic, throughout the distance from Paris to Pontoise, probably equal to that of either of the two lines just alluded to, should be placed in a position to have its arrangements subservient to theirs.

Such a concentration of traffic would unquestionably involve the necessity of the most systematic management, and the best possible working regulations; nor could it even then be carried out to the public satisfaction, without the existence of the most complete unity of feeling amongst the parties.

This practical difficulty, for such it certainly would be, in the working of the traffic, I conceive strongly to militate against the adoption of this course and the use of the joint station; and, in addition to this consideration, there is the very weighty one in favour of the independent terminus, that the suburban populations of St. Denis and of the neighbourhood of Montmorency, which are estimated as nearly equal to that of St. Germain itself, would, by the adoption of the other course, be deprived of that accommodation which they now evidently require, and which, by conducting the railway in their immediate vicinity, it is the object of the separate terminus to supply; the extent of this traffic, and the fact of its connection chiefly subsisting with that portion of Paris immediately adjacent to the Place La Fayette, are unquestionably strong arguments in favour of an independent station; while, as I have observed, the very important diminution of expense, and the greater rapidity of execution, are the main inducements for the selection of the other route.

Now, with Companies constituted as in England, the expense generally incurred in approaching a city like Paris, and the enormous cost to be defrayed in the purchase of lands and in building an extensive station, are frequently decisive in the consideration of such a question as the present; but here, be it remembered, it assumes another shape, for these particular expenses are proposed to be undertaken by the Government, thus making the choice of estimate a matter of little moment to the Company, whilst the public accommodation, which would justify the French Government in incurring these expenses, would, as involving a greater amount of traffic, at the same time hold out an inducement to the Company for the construction of the railway to the independent terminus.

Having thus brought the question comparatively before you, I might at once proceed with my description of the line beyond Pontoise; but before dismissing this portion of my subject, I may briefly point out the possibility of supplying a railway communication to the inhabitants of St. Denis, Montmorency, and their vicinity, and at the same time adopting the use of an existing terminus; this would be practicable by curving the line off at a point between St. Ouen and the Route Royale, midway between St. Denis and the gate of the same name in Paris; and that tracing the line by Clichy and Les Batignolles to the station of the St. Germain Railway. This course was pointed out to me by M. Hurel, the Government Engineer, who surveyed this part of the line subsequently to M. Vallee; but, since it appears a matter more for the ultimate consideration of the French Government, a bare allusion to it here will be sufficient.

The line on leaving Pontoise adopts the course of the Valley of the Oise, crossing the river at the Isle de Vaux, near the village of Anvers, at an elevation about 13 metres above the bed of the river; it then descends to within two or three feet of the surface of the ground, and continues of this extremely favourable character past Champagne, Beaumont, and Boran, along the entire distance to Creil, requiring, in fact, only to be raised by the excavation of the side ditches a few feet, in order to be placed beyond the reach of the floods, which sometimes partially inundate the valley during the winter, or at the seasons of continued heavy falls of rain.

In this district from Pontoise to Creil, a distance of 23 miles, the valley is thickly populated, and the many important towns and hamlets situated on either bank of the river close to the proposed line could not fail to prove the source of considerable traffic. Nor can anything exceed the facilities which exist throughout this portion of the section for the cheap and expeditious construction of a railway. It very much resembles the character of the works of that section of the Northern and Eastern Railway between Stratford and Bishop Stortford; upon the whole, perhaps, rather more favourable, and cannot cost so much, the material for forming the embankments being almost without selection fit for ballast; the gradients, as may readily be anticipated, are excellent.

The population of the various towns passed in this valley, as also of those throughout the section, will be mentioned when the subject of the traffic is entered upon.

Near Creil the valley of the Oise turns suddenly to the east, and extends in a direction no longer suitable for the line, which now, by an acute bend, enters the valley of La Breche. This, being a tributary to the Oise, is smaller, and confined to a narrow valley with bolder sides and less of flat plane surface adjoining the channel of the stream, consequently affording less scope for obtaining so favourable a section as that just described between Pontoise and Creil.

Up to this point, a distance of 40 miles from Paris, I concur almost entirely with the line and levels as laid down by M. Hurel. I certainly would recommend several cuttings and embankments between Paris and Pontoise to be slightly reduced by the introduction of curves of large radius, and which cannot in practice be distinguished from straight lines, but it is not necessary in these remarks to open questions of secondary importance; I therefore express my almost entire concurrence in the design of the line up to Creil, but beyond this its course is gradually introduced into a more difficult country, the valleys become more sinuous, the sides more abrupt and serrated, and the rate of ascent more rapid. Here it is that the injurious influence of the restrictions I have already explained begins to operate. Here the line is frequently driven into deep cuttings or high embankments, in order to avoid moderate curves, or to obviate the loss of a level, which it becomes of vital importance to incur where the railway approaches the more elevated districts of the valleys; for where the natural gradients exceed the maximum which is considered admissible, it becomes absolutely necessary to leave the surface, and to seek upon the rough sides of the valleys the required levels.

This has evidently been the case in carrying the line up La Breche to its confluence with another small stream, called the Are, near to Clermont, where heavy works, both in the shape of cuttings and embankments, are, in my opinion, unnecessarily incurred. They are, it may be urged, much inferior in magnitude to many that have already been executed on other railways, and are not likely to be attended with much contingency. This, however, is not the question; it is simply whether under all the circumstances, it is not better to avoid such works. Those I am now speaking of in particular extend themselves over a distance of 7 or 8 miles, and contain upwards of a million cubic metres of earthwork; here I should recommend a more careful management of the line; the low levels of the valleys, so long as they present themselves, ought to be adhered to, and eventually the difficulty of the summit be met by one steep incline of, say, 1 in 150.

By the adoption of such a course, I am satisfied the vast character of the present section might be obviated, the execution of this portion much accelerated, and the ultimate efficient working of the line in no way impeded

The same observations are applicable generally to the works up the valley last mentioned, to St. Just. As far as this town, the valley, I am confident, presents the practicability of procuring an extremely easy section, and this too without sacrificing much by the introduction of curves of small radii, nor making use of gradients exceeding 3-1000.

At St. Just we have reached that portion of the ridge which rises abruptly assuming the character of our chalk downs, and separates the streams that discharge themselves into the Seine, from those of the Somme.

It is here that I propose the adoption of a steep decline, but in any case some heavy work must be incurred on this immediate spot.

The works, in fact, as at present proposed from St. Just to La Herelle, are very similar in magnitude to those near Tring on the London and Birmingham Railway. They would consequently be exceedingly expensive, and require, as those works did, much time for their execution.

Up to this point I have had the advantage of referring to the detailed plans and sections prepared for this distance from Paris by M. Hurel, who, as I have stated, succeeded M. Vallee on his leaving to take the superintendance of another district, Provence. I have therefore had every opportunity of examining the circumstances which have influenced the minds of the Engineers in carrying out the views of the French Government. From this situation the preliminary sections by M. Vallee are the only ones existing; they are, however, clearly traceable throughout the entire line, and enable me to form distinct notions of the nature of the works he contemplated in the districts through which the railway passes.

From this summit, which is named the Col de Gannes, the line descends and follows the course of the Valley of the Aire, to near Amiens, a distance of 24 miles. It was proposed to connect this city with the main line, by means of a branch, nearly 5,000 metres in length.

The importance of this town, which contains upwards of 60,000 inhabitants, has induced the Government to decide that the main line shalll pass close to it.

In this determination there are, I think, good grounds for aequiescence; for this is by far the largest mass of population on one spot between Paris and Belgium, and from its distance from Paris will, in the practical working of any other railway in this direction, become an intermediate terminus, similar to Birmingham between London and Liverpool.

The position of the line in approaching and departing from this place, will also give to the ingress and egress from Amiens, a strong similarity to those at Birmingham, at least such seems to me the most practicable mode of reaching the immediate precincts of the town.

The line now leaves Amiens, and its course is directed towards the important town of Arras, situate on the river Scarpe.

Between Amiens, which lies upon the river Somme and the Scarpe, a distance of 40 miles, an uninterrupted difficult country is encountered, the most elevated ridge and district of broken country in the north of France lies between these two towns, dividing the steams which flow to the sea through the Somme, from those which discharge themselves into the river Scheldt,

Both Amiens and Arras are upon a low level, but the summit of the intervening country rarely falls short of an elevation of 500 feet above the sea.

On the Amiens side of the ridge, the route proposed by M. Vallée ascends the valley of the Somme, to near the town of Corbie, and thence turning into a lateral valley to the Somme, meets the elevated country nearly at right angles, passing near to Albert Miraumont, Ablainzeville, Ficheux, to Arras, &c., it reaches the summit near Becquoy, of which the lowest pass is at least 140 metres in height.

Throughout the entire distance from Amiens to near this summit, the two valleys just named offer extremely favourable gradients, by following the low ground adjoining the channel of the streams flowing through them; but the object designed by the proposed line was evidently to attain the high level necessary for crossing the summit by the most uniform gradient, always keeping it within 8 in 1,000.

This is accomplished by leaving the low and favourable levels of the streams, and by climbing gradually up the slopes; but such a course, as I have before observed in speaking of the passage across the Col de Gannes, involves a series of unnecessarily heavy cuttings and embankments, and without, too, reducing the works at the summit within moderate bounds.

This valley, in fact, presents a most striking instance of the prejudicial effects of fixing the gradients without reference to the natural surface of the country, for here, while the bottoms of the valleys offer remarkable facilities for the construction of the railway, the section selected for M. Vallée, for the obvious purpose of avoiding the steeper gradients, wading its uniform passage up the sides of the hills, seems charged at every step with heavy and important works, and presents to English railway experience a contrast of the strongest character. This summit, as at the Col de Gannes, I should surmount by means of an incline or tunnel, and thus confidently calculate on effecting a vast reduction.

From the summit at Becquoy the line at once descends to Arras, still encountering on its route very considerable and expensive works, although, from the material being chalk, they are not likely to prove difficult of execution. In making this descent no leading valley presents itself—the precise line therefore is not well defined, as it would require some careful study before the best could be decided upon.

That, however, shown by the existing sections is certainly unfavourable over a distance of 11 miles.

It has already been stated that Arras was not touched in M. Vallée's original plan, his design being to cross the Scarpe nearly midway between Arras and Douai.

With this last route I need not detain you, as I quite concur in the propriety of the line being made to vary its course in the way required by Government.

At Arras we have now reached a plane offering the utmost facility for the construction of railways.

This district, from its favourable levels, has for a long time been intersected by canals, uniting Calais, Dunkirk, St. Omer, Aire, Bethune, Lille, Douai, and Valenciennes, all places of considerable population and trade, especially Lille and Valenciennes—the latter yielding very large quantities of coal, which, together with that from the neighbourhood of Mons, may be regarded as supplying the intervening country in both directions, towards Belgium and Paris.

The line between Arras and Douai will follow nearly the course of the river Scarpe, and, without encountering any difficulty, approach the latter close to the fortifications on the northern side of the town.

At Douai it is necessary to call particular attention to the location of the proposed lines. One is taken direct from Douai to Lille, and another to Calais. From the latter one near Aire a third line is also formed, to establish the most direct communication between Lille and Calais and Dunkirk. This arrangement of lines, it will be perceived on reference to the map, presents a triangle, with the towns of Aire, Lille, and Douai at the angles—each communicating directly with the other two.

The line from Douai to Calais passes in a very straight course near Henin-Lietard and Bethune, where it falls into the valley leading to Aire and St. Omer, and adopts generally a course nearly parallel with the various canals which unite the whole of the manufacturing disiricts of Lille, Douai, Valenciennes and Mons, with the ports of Calais and Dunkirk.

This line for the most part is extremely favourable, the surface being almost an uniform plane after reaching the valley near Bethune; but between Douai and Bethune, a distance of 20 miles, an unfavourable section is adopted for the sake of securing a slight saving in the distance. The line from Douai to Lille is also designed nearly straight, for the same purpose, with scarcely any regard being paid to the undulations of the surface of the country.

Thie projected arrangement of lines, which I have just described, is, in my opinion, extremely injudicious. Although the surface of the country is already traversed by canals, with a very small amount of lockage, no attempt whatever has been made to take advantage of these levels, everything is apparently sacrificed for the sole purpose of saving distance and giving direct and independent communications between towns which do not seem to require them, or, at all events, do not require them so urgently as to justify the adoption of such a lavish system as that at present recommended.

The railways, which have been mentioned as forming a triangle, with Douai, Aire and Lille occupying the angles, should, in my opinion be entirely abandoned, and a point somewhat near the centre of the triangle, in the vicinity of the town of Carvin, should be selected, to which the lines from the above named towns might converge. This is precisely the arrangement, which the physical features of the country already indicate as the most eligible, and is, in fact, identical with that followed by the existing canals.

The expensive works between Douai, Henin-Lietard and Bethune, would thus be entirely avoided, and much better gradients secured.

This remark equally applies to the line between Douai and Lille.

The traffic from each place would, it is true, by such a plan, have to travel an extra distance; but a glance at the map will show, to any one conversant with these matters, that this slight disadvantage is far more than compensated by the concentration of traffic to one route as much as practicable.

The simplification and economy thus produced in the working of the traffic are a most important consideration, and would alone influence me much in the discussion of this or any similar question; but when to this I add the circumstance, that the alteration of the route of the railway in this district is exactly that which is indicated by the features of the country, and that a saving of the construction of upwards of 35 miles of railway may be effected in the first instance, I cannot hesitate strongly to recommend the reconsideration of this part of the project.

The economy in the original construction, it must be remembered, will not be confined simply to the saving of a length of 35 miles, but it will further be increased by the substitution of an easy, for a comparatively difficult country, over a considerable distance.

Had there been important intermediate towns situated on the sides of the triangle, the case, *no doubt*, *might* have been altered entirely; but such is not the case in this instance; there is, consequently, no impediment to looking at this question in the way I have already done.

The arrangement which I propose may, by way of illustration, be regarded as analogous to the case in Belgium, where the system of lines is made to converge at Malines; thus accommodating Ghent, Antwerp, Brussels, and Liege, not with direct lines of railway, it is true, but certainly more comprehensively, and at the same time more economically, both in the first cost of construction, and in the ultimate working of the traffic, than by any other plan that could have been devised.

The relative positions of the various towns in the district of France which I have last described, distinctly point out the propriety of adopting a similar arrangement to that in Belgium, in order that the greatest quantity of benefit may be attained with the least expenditure of money.

The line having thus been designed to Aire, will be found to be of easy execution, by following the course of the canal to its immediate approach to St. Omer, where, as is already evinced by the existence of the canal locks, a cutting of some extent must inevitably be encountered. The railway thence proceeds, with extraordinary facilities, by Watten, and so westward to Calais, where a commodious terminus may be established contiguous to the New Dock.

From this branch, at a point near Watten, I propose that the communication with Dunkirk should strike off; it is, as may be observed on reference to the map, the shortest branch that can be designed, and traverses throughout its length of about 26 kilometres a country adapted in the highest degree for its easy and speedy execution.

The only remaining line comprehended in the system I have examined, to which I think it necessary to direct your attention, is that branching off from the main line at Douai and extending to Valenciennes.

It will be recollected that between Valenciennes and Mons a railway is already in the course of construction, and will in a few months be opened; it is apparent, therefore, that this Branch from Douai to Valenciennes is necessary to complete the connection between the manufacturing and mineral districts, not merely with the main line from Paris to Lille, but also, through the medium of the branches to Calais and Dunkirk with the coast, and, consequently, with England.

Without it the system would be broken, and the final development of the traffic seriously interfered with. I am, therefore, disposed to consider it a most important adjunct to the main line, and indeed, from its position, there is abundant evidence that in productiveness it will prove equal to any other portion of the lines already described.

The length of this branch is about 21 miles, and the location, as selected by the Government Engineers, favourable.

The entire neighbourhood between Douai and Valenciennes is completely chequered with coal-pits and small mining towns and villages. Amongst these, two routes have been proposed, each claiming the advantage of affording the greatest accommodation to the surrounding population and interests; but as in this respect they seem to me of nearly equal merit, and as neither of them present any important engineering difficulty, I need not detain you by any detailed remarks. I may, perhaps, briefly allude to the facility which the country affords for forming the junction of this branch with the Belgian Railway at Valenciennes, as this is a point often involving much trouble in its arrangement, and sometimes of expensive and difficult execution.

A reference to the map will show that a very considerable portion of the traffic upon the trunk line from Paris, Amiens, and Arras, must find its way by this link not only to the capital of Belgium and Antwerp, but also to Cologne and the whole of the Rhine; it is also more than probable that this route will be adopted by a large proportion of the traffic from England to Brussels and the Upper Rhine.

I have now described, as briefly as the nature of the subject would admit, that system of railways designed by the French Government, which appears to me, after mature consideration, to bear more immediately and essentially upon the interest of that line now under your direction between London and Dover.

I have also, I trust, rendered my views and reasons intelligible where my proposed plan has differed from that pursued by the French Engineers in locating the line. In this particular it will readily be perceived that, throughout my examination, I have endeavoured to suggest such modifications as decidedly tend most materially to lessen the cost of the original construction. My opinions in this respect, I am confident, are capable of being carried out even beyond the extent I have ventured to state in these remarks, and this, too, without in the smallest degree affecting the ultimate efficiency of the undertaking. From the commencement of my examination I have held it to be of the utmost consequence to consider economy in the original construction as absolutely essential to render the formation of these lines successful in a commercial point of view. I have esteemed it also nationally a matter of importance. It may be said, and I have heard it more than once urged, that if Government undertake the execution of these lines, as has been recommended, the original cost is not of much consequence; nothing, surely, can be more fal-

Digitized by Google

lacious than this, for to what end can a national lavish expenditure on the main lines tend but to limit the sphere of assistance which they are disposed to give or capable of rendering, and by the tardy execution of heavy works to withhold even that accommodation which public interest has so urgently demanded.

The traffic will, I believe, be found abundantly ample to satisfy a larger expenditure than that I may have calculated upon, yet notwithstanding this, after maturely weighing every circumstanee that has presented itself to me in the investigation, I am the more confirmed in my conviction of the importance of those alterations in detail, which I have pointed out in the project as designed by the Government Engineers.

With these observations I would gladly have concluded this division of my Report, and thus have avoided the consideration of a question which has given rise to such warm controversy; I allude to the rival claims of Calais and Boulogne to become the coast terminus of the line. They each maintain that they are in the best route between Paris and London, and, like most of the kind, the dispute has been continued until it has become perplexed with considerations either entirely, or in a degree, apart from a broad and comprehensive view of the simple question as it originally stood, viz.—

Which is the most desirable mode of connecting the main line between Paris and Belgium with the north coast of France? Whether shall it be by a branch from Amiens, through Abbeville and Etaples to Boulogne, or by a branch from Douai through Aire and St. Omer to Calais?

Both these routes were considered and recommended by M. Vallee in his Report, but since the French Government have resolved upon carrying forward the main line only from Paris to Lille, the route to the coast, and consequently the course of the traffic to England, is left undefined.

This is one of the leading points of your instructions; it has therefore had my most dispassionate consideration. I have made myself acquainted with, I believe, all the arguments and statements put forward by the Chambers of Commerce at Calais and Boulogne.

With many of these you are doubtless familiar, since they have been circulated by both parties in the form of pamphlets. In these publications the relative merits of the two ports in a marine point of view—the comparative number of days throughout the year in which their safety or accessibility as harbours is affected—their distances from the English coast—the amount of population which would be benefited by the formation of either line—the importance of each place as a commercial port, and every other species of comparison, are set forth with all the ingenuity, which local partisanship can devise; the interests of the respective towns being obviously in the estimation of each party paramount to every other consideration.

Boulogne is admitted on all hands at present to be the most frequented route from England to the French capital, and if the branch line, as proposed by M. Vallee, from the main line at Amiens were completed, it would doubtless still continue to be so,

The distance from Paris to Boulogne would be shorter by 48 miles than to Calais, whilst against this advantage in the communication with England we have only to place in favour of the Calais route about an hour saving in the passage across the Channel.

As the English route therefore to Paris, we may fairly state the saving of time by Boulogne over Calais at 2 hours.

This is the result of considering the question with reference to England and Paris alone; but let us for a moment look at the extent of accommodation afforded by the two lines to the manufacturing districts of France, comprising Arras, Douai, Lille, Valenciennes, Mons, and several others of minor importance; not one of these large and populous places could by any possibility avail itself of the branch from Amiens to Boulogne, which would therefore have to be maintained solely for the through traffic from England to Amiens and Paris; its isolation for this purpose is at once apparent on the map.

Were the preference given to the construction of this branch, the manufacturing towns to which I have alluded, not scattered and desultory, but forming a rich and important series, only requiring a rapid and free intercommunication amongst themselves and with their various markets for their ample and more prosperous development, would necessarily be left to find their way to the coast by the present tardy and inefficient means; while, on the other hand, should the natural and commercial wealth of the country be developed by the adoption of the route from the Belgian frontier to the coast at Calais, and the best national welfare be thus advanced, while the local trading interest were extended, the sole prejudicial result would be the loss of some two hours, that might otherwise have been saved, in the transit between the French and English capital, and the abandonment of some few individual interests, a necessary concomitant with the establishment of any important and decided improvement. Sufficient energy, it is true, might be excited to effect the construction of a competing line; France would then possess her more rapid communication with England, while the merit and importance of the other route would still be valid, but should the western course remain unaltered, she would in the Calais line possess a speedy communication with England, and at the same sime have endowed her manufactures with valuable and remunerative aid.

That the direction from Douai to Calais comprises one of the most important commercial channels in France, I need only refer you to the traffic tables at the sequel; it must therefore be amongst the first which will demand the improved mode of transit.

It has here been urged, that as the wealth of this part of the country would be capable of meeting its demand for improved communications, the Government should therefore render its assistan ce where the local means are less effectual; but in refutation of such a plea I have only to point out the incorrectness of this view of the case; it is to the urgency and importance of the demand for a railway that the Government would look in the first place, and not to the private means of effecting its construction; and, if the immediate resources of Government were so limited and its powers of assistance claimed at once in so many directions, that it came to the determination of going hand in hand with private enterprise on the march of improvement, I confidently maintain, that where a large traffic case existed, whether the prospective results of the construction of that line of railway be regarded as profit to the co-operating Company, or as an extensive accommodation in the transit of goods and passengers, its demands upon the individual and the Government are alike imperative; and on this point I cannot forego the allusion to that portion of M. Vallée's Report in which he has suffered himself so emphatically to denounce private co-operation in these matters as nationally injurious; if the resources of the French Government be infinite, let railways be established all over France, wherever the smallest cluster of individuals may require accommodation, but if a limit exist, they, in order to render their assistance of the highest public value, must bestow it where the smallest outlay will produce the maximum accommodation, and this can alone be effected by selecting, as private parties would do, the cheapest route in the most populous and commercial districts.

In the preceding remarks upon the comparative merits of the two routes, I feel sensible of having shown much tendency towards the question of their beneficial influence in France. Yet, when I recal to your mind the terms upon which a concession is proposed by Government to be granted to the negociating parties, and the close important interest that, under such treaty, any party would necessarily entertain upon every point bearing on the future prospects of the railway, I feel, Gentlemen, that you will acquit me of having uselessly occupied your attention.

No private capitalists could entertain the investment of money in this undertaking under such terms, without being much influenced by the estimated amount of existing local traffic, as well as of that between England and France.

It is upon the consideration of the former, almost entirely irrespectively of the amount of traffic between London and Paris, that I would venture to express my opinion of the preference of the Calais branch to Douai, yet, in weighing the various bearings on the ultimate value of this project, it must be kept constantly in view that no inconsiderable portion of the traffic from this country to France is not in the direction of the French capital, but rather in an easterly course towards Belgium and the whole of Germany and Switzerland; in short, it is quite evident from a careful study of the map, that any line leaving the French coast, at either Dunkirk or Calais, must become one of the high roads between England and many of the countries of Europe.

It has been urged by some, that this tract of country is traversed by excellent canals, consequently no railways are required, while the line of country between Boulogne and Amiens is destitute of any rival mode of communication, and therefore stands in need of increased facilities. This argument, if it may be so called, I regard as a tacit admission of the commercial claims of the manufacturing districts for a rapid and improved mode of transit.

Such are a few of the reflections which have led me to regard the case as standing thus:

The line from Boulogne, considered simply as a route to Paris, is better than that from Calais by upwards of two hours, which is achieved by the construction of seventy miles of branch railway from Amiens, passing through a country of little commercial importance, and consequently depending chiefly upon the through traffic to Amiens and Paris.

The branch from Calais and Dunkirk, although the more circuitous to Paris, is the more direct to a thickly populated manufacturing district, yielding an extensive and profitable traffic, and lies in o direction which must become beyond all doubt one of the high roads to a large portion of Europe.

I cannot refrain from drawing the conclusion, that it is the interest not only of the South-Eastern Railway Company, but of France herself, to sanction, in the first instance, the formation of those branches which are proposed to leave the main line at Douai, and extend to Dunkirk and Calais.

The extent of these branches will scarcely exceed that from Boulogne to Amiens, but they are of a far more comprehensive character; and what is a still further recommendation for their adoption, the greatest facilities present themselves for the construction of these lines, whereas the railway from Boulogne to Amiens, is characterised by M. Vallee as by no means free from engineering obstacles, which, though not very formidable, are yet of such a nature as to involve many contingencies.

Having completed the description of the main line with the several branches which you deputed me to examine, I shall now proceed with the estimate of cost of construction.

I do not enter upon this part of my Report without perceiving the difficulties with which it is beset.

Past experience having fully proved the erroneous nature of the basis upon which railway estimates are invariably founded, I have directed my attention to the means of avoiding fallacious results in the present instance; and I am not without hope that the plan adopted is calculated to remove to a very great extent those causes of discrepancy between the calculated and actual results which have been found to exist without a single exception in every railway of magnitude that has yet been executed.

In an engineering estimate of a railway is generally comprised the cost of construction, that is, the excavations, embankments, bridges, stations, culverts, roads, and such other works as can be clearly defined or specified upon the plans and sections of the country over which it is proposed to pass, with an addition of a per centage upon the calculated cost, to cover those contingencies which always arise in the course of execution, and against which no human foresight can guard.

An estimate so framed, when applied to works of moderate magnitude, will generally (supposing the calculations to have been made with judgment) approximate tolerably near to the actual cost, but when applied to works of extraordinary extent or of a novel character, the usual allowance for contingencies is always too small, and consequently the real exceeds the estimated cost.

This excess, however, for which the engineering department is doubtless responsible, is swelled out to an inordinate extent by the addition of other items in no way contingent upon the Engineer's calculations, and others, again, which have been designedly omitted in the original estimates as not pertaining to the construction of a railway, but dependent on the natu e of its operation—the extent and character of its traffic; I allude to the carrying establishment; neither this nor many items, finding a place in the capital account of Railway Companies, are attributable to any individual department, but can only be regarded as contingent upon the general undertaking.

On reviewing the causes of the excesses in the] cost of railways, we must not omit to place in a prominent position the extortionate demands of the proprietors of land, not merely for the ground required for the railway, but, as they urge, compensation for the injury both to their feelings and property incidental upon the introduction of an improved mode of locomotion to their neighbourhood.

These observations, by inviting to an impartial examination of past experience as recorded in railway accounts, are not made solely with the view of defending engineers against the obloquy which is now so indiscriminately cast upon the profession by those whose study of such matters has been but cursory or prejudiced, but also for the purpose of showing that the excess of the actual over the calculated cost does not arise so much from errors in estimate, properly so called, as from the entire omission of items which

Digitized by Google

either do not come within the scope of precise calculation, or are regarded as foreign to a simple estimate of construction; and, by obviating this, to establish the claim of my present plan to greater accuracy.

It is sufficient for this purpose to point out the causes of discrepancy, without imputing blame to any one; and I will now proceed, therefore, to explain how I have endeavoured in the following estimate to bring the sources of error within the smallest limit.

As a general rule, the cost of construction of a railway may be regarded as approximately proportionate to the quantity of excavation and embankment; for as these increase in contents, the character and magnitude of the bridges, culverts, &c., become more and more expensive.

Some few of the items of expense, of course, remain constant; but the most important vary nearly in the proportion I have named.

To form an opinion, therefore, of the cost of the line, upon which I have received your instructions to report, I have carefully studied the nature and probable extent of the earthwork throughout the successive districts, and I have endeavoured to select in this country parallel cases upon which I have been professionally engaged.

The total actual expenses, incurred in these parallel cases, I have with the greatest care analysed and collated, and the annexed table exhibits the results derived from three of them.

Analysis of the Cost of Railways in England.

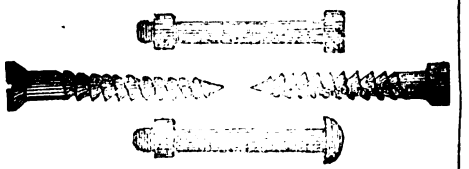
The form in which railway accounts are usually published, presents several difficulties to the apportionment of the expenses, with absolute precision, under the different heads of expenditure. I have, therefore, included in the Table the analysis only of such as I was enabled to verify by access to professional documents in my own, or in the Company's possession; but I have further corroborated these by the dissection of the accounts of other lines, in order to trace any inconsistency which might have crept into the cases I have tabulated.

The columns of the Table are arranged in three separate divisions, for the purpose of clearly distinguishing those portions of the cost, which, under the present proposal of the French Government, are to be borne by the Railway Company, from those which the State are to incur.

Supposing now that I am correct in selecting these lines, as closely representing parallel cases, it is clear that, by applying the results, we arrive at conclusions respecting the cost of the work with much greater certainty than by a detailed calculation of the individual works, which, after all, as is made apparent in this table, forms but a minor portion of the total cost. For instance, let me refer you to the Northern and Eastern Railway, where, by abstracting the cost of the works, permanent way and stations, we find it to be in proportion to the aggregate mileage expenditure, as 13,300*l.* to 28,750*l.*, of which the cost of land and compensation alone amount to 7,450*l.*, while the incidental expenses appear to be as much as 3,850*l.* per mile.



The case, however, is in this respect peculiar; a large proportion of the original line having been abandoned, and the incidental expenses which would have been divided over a greater distance, are now charged only upon a fourth of the original line. This peculiarity I did not deem of sufficient importance to destroy its value in the comparison I was desirous of instituting, especially as it is placed in conjunction with two other lines, where the incidental charges are remarkably low.

(To be continued).

LONDON AND DOVER (SOUTH-EASTERN) RAILWAY.

At the Harbour Sessions on Friday much important business was transacted. The terminus of the South-Eastern Railway was definitively settled and agreed for. It will occupy the site between Archcliff Fort and Townsend Battery, approaching nearly to the wet and dry docks, and certainly no better situation could have been found for it. The Commissioners also decided on some great improvements connected with the proposed Harbour of Refuge in the bay. They have ordered the whole of the north side of Union-street to be taken down, and gates and a bridge to be constructed between the York Hotel and the premises of Messrs. Latham and Co., to enable vessels to pass direct from the outer harbour to the Pent, which will, in case of war, form a very fine and commodious station for steam-boats. The outer harbour is to be greatly improved and increased by the removal of the square now occupied by the Ordnance Storekeeper, Dover Castle Inn, and various warehouses; and Amherst Battery and the range of buildings now occupying the line of ground between the north pier and the York Hotel are also to be removed. It is generally expected that such very extensive and costly arrangements would never have been decided on, had not the Government determined to proceed with the great national work in the bay, which is rendered so much the more necessary from the vast improvements now making in several of the opposite ports of France. —*Daily Papers.*

New Railway Bills for Essex.—Three applications are to be made to Parliament next session for Bills for railways connected with this county. The first is the line from the Eastern Counties' at Kelvedon, by way of Coggeshall and Halsted, to Sudbury, and from thence to Bury. This line has been carefully surveyed at the expense of the Eastern Counties' Company, to which it cannot fail to bring immense traffic, while it must ultimately lead to the extension from Bury of the advantages of railway communication through other parts of Suffolk to the capital of Norfolk. The next is for a line from Colchester by way of Wivenhoe and Mistley, to Harwich, and terminating with a pier at the harbour. The advantages of such a work as this both to the Eastern Counties' Company and the town of Harwich need hardly be pointed out. A commodious pier, and speedy access by railway to London, would bring all the marine advantages of the borough into notice, and we should again see its streets alive with foreign traffic, as in its palmy days. Everything which in this way benefited Harwich must, of course, benefit the Eastern Counties' Railway, by the accession of traffic which it would bring; and, thus fed by its branches, the parent Company could not fail to prosper. The third Bill relates to the scheme which we last week noticed for a junction of the Thames Haven undertaking with the London and Blackwall Railway. By this new plan it is proposed, instead of joining the Eastern Counties' at Romford, to run the railway from the dock through Orsett (with a branch to Tilbury Fort), then to the Ockendons, and so on through Barking and East and West Ham, till it joins the Blackwall at Stepney.—*Essex Herald.*

I. AND D. GLASGOW, Trafford St. Knott Mill, Manchester, Manufacturers, by Improved Machinery, of Wood Screws, Screw Bolts, Spikes, &c., for Railways; also Boiler Rivets, &c.

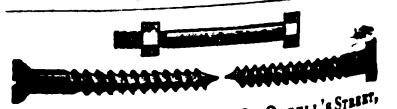
EDINBURGH AND GLASGOW RAILWAY —NEW QUARTER SHARES.—Notice, Shareholders who have not yet paid the Calls on their New Quarter Shares, are reminded, that as the time specified for the payment of the Second Call has expired, the Directors, in terms of the Resolutions passed at the Special General Meeting of Shareholders on 17th May last, are authorised to dispose of the Shares for behoof of the Company.

It is therefore requested that immediate payment be made of the said Calls, with Interest, from the dates when the same fell due.

The Receipt for the Second Call must be given up for *Scrip*, which may be obtained on forwarding to this office the Banker's receipt for the payment of the First Call.

By order of the Directors.
H. G. WRIGHT, Secretary.

Edinburgh and Glasgow Railway Office,
Glasgow, November 9, 1842.



PRESTON AND WYRE RAILWAY, HARBOUR AND DOCK COMPANY.—Notice is hereby given, That a Special General Meeting of the Proprietors of the aforesaid Company, will be held at the Queen's Hotel, Birmingham, on Thursday, the 24th instant, at Two o'Clock precisely, to receive the Report of the Committee of shareholders to decide upon the measures to be adopted in consequence of that Report, to fill up vacancies in the Directory, and for other business of the Company.

By order of the Board of Directors,
H. BAZETT JONES, Secretary.

Fleetwood, November 11, 1842.

THE *HINDOSTAN* STEAM-SHIP and H. M. FRIGATE *PENELOPE*.—The two above named grand Steam-Ships are entirely fitted with ANDREW SMITH'S PATENT WIRE ROPE for their Standing Rigging; thus demonstrating that practical experience is daily and progressively establishing its superiority over all other Standing Rigging. For all Mining and other purposes it is already proved to be the best and most serviceable description of Rope, superseding Hemp and Chain.

For further particulars, address Mr. Andrew Smith, 4, White-Lion court, Cornhill, London.

T. H. RYLAND AND CO., Ozell's Street, Broad Street, Birmingham, Patentees and Manufacturers of Wood Screws, Screw Bolts, Spikes, &c., for Railway and other purposes, also Boiler Rivets, &c.

SHEFFIELD, ASHTON-UNDER-LYNE, and MANCHESTER RAILWAY.— MAINTENANCE OF WAY.—The Directors hereby give Notice, That they are prepared to receive TENDERS for the Maintenance of the *Way between* the Ardwick Junction and Godley Station, on the above line of Railway, for the term of Three Years. The draft of the Contract, containing a full Specification of the Works required to be done, may be seen on application *at the* Company's Offices, No. 15, Piccadilly, Manchester.

Tenders, addressed to the Secretary, and endorsed "Tenders for Maintenance of Way," to be sent in on or before *Tuesday*, the 22nd instant.

The Directors do not bind themselves to accept the lowest Tender.

By order of the Directors,
JOHN PLATFORD, Secretary.

15, Piccadilly, Manchester, Nov. 7, 1842.

Actuary and Secretary—Mr. W. L. NEWMAN, York.
London Agent for the Life Department—Mr. EDWARD HENWOOD, 46, Watling-street.

The attention of the public is requested to the terms of this Company for LIFE INSURANCES, and especially for FEMALE LIVES.

FIRE INSURANCES are also effected by this Company, on the most moderate terms.

FARMING STOCK Insured without the Average Clause.

Prospectuses, with the Rates of Premium, and every information, may be had at the Head Office in York, or of any of the Agents.

NEW EDITIONS of the following useful Works are just published at the *Railway Times* Office, 122, Fleet-street:

I.

TUCK'S MAP OF THE RAILWAYS for 1842 throughout ENGLAND and WALES to the Capital of Scotland, beautifully coloured, distinguishing the Lines open from those in progress, and showing the nearest route by Railway to the Continent, the north and south of Ireland, and the Lakes of Westmoreland and Cumberland. The cheapest Map ever published.

Bound in cloth, 1s. 6d.; in paper covers, 1s.; mounted on canvass, in cloth case, 2s. 6d.; on rollers, 3s. 6d.

II.

ROBINSON'S RAILWAY TIME AND FARE TABLES, containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources, with Map, and an official List of Coach and Cab Fares to all the Metropolitan Railways. Corrected to August. Price 1s., in cloth.

III.

ROBINSON'S RAILWAY DIRECTORY FOR 1842, containing the Names of the Directors and principal Officers of the Railways in Great Britain, derived from authentic sources, price 1s.

IV.

TABLES OF HACKNEY CARRIAGE FARES from the BIRMINGHAM RAILWAY to all parts of the METROPOLIS, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand with a Map of London. Price 6d.

V.

TABLES OF HACKNEY CARRIAGE FARES from the GREAT WESTERN RAILWAY to all parts of the Metropolis, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.

BOLTON AND PRESTON RAILWAY COMPANY—TENDERS FOR LOANS ON MORTGAGE.—The Directors of this Company are prepared under the powers of their Acts of Parliament, to receive Tenders for the Loan of Money, in sums of not less than £200, and for terms of 3, 5, 7, or 10 years, and to grant Mortgages of the said undertaking, and of the Rates, Tolls, or monies arising therefrom, as securities for such Loans, bearing interest at the rate of £5 per cent. per annum.

Interest Warrants, for the whole term for which the Loan shall be made, will be delivered to the Lenders along with the Mortgages, and be made payable half-yearly, at the Company's Bankers in London or Bolton, as may be preferred.

The Tenders are to express the sums, and the term of years for which the same are proposed to be lent, and to be addressed to the Secretary, at the Company's Office, Bolton.

By order of the Board of Directors,
PETER SINCLAIR, Secretary.

Bolton, 24th May, 1842.

PATRONISED by all the principal Architects and Builders in this Country and Abroad.—SEYSSEL ASPHALTE.—In consequence of the daily attempts made to imitate this valuable mineral production, and of the name of "Asphalte" being given to most of the spurious and "cheap" materials, the Directors of this Company particularly recommend Architects, Builders, and others (for the purpose of securing the use of the genuine article), to insert in their Specifications "The Seyssel Asphalte, Claridge's Patent," and not merely "Asphalte," or "Bitumen," as, in many cases where these terms have been used, gas-tar and other worthless and offensive compositions have been introduced. For the information of those residing at a distance from London, and of those who, having employed the spurious composition, may, from its failure, have become prejudiced against the use of Asphalte, the following are mentioned as some of the distinguishing qualities of the genuine material. The Asphalte of Seyssel is of a light colour, closely resembling Yorkshire stone, has a smooth surface (without being slippery), and joints almost imperceptible; it is also free from smell, is not acted upon by change of temperature, and is at all times dry and warm, and remarkably pleasant to walk upon, and, from its elasticity, never cracks. The fictitious material, on the contrary, has a dark and dirty looking appearance, presents a rough and coarse surface, and from its brittleness, is liable to crack, particularly in frosty weather. In consequence of the above qualities, the genuine material (being perfectly impervious to wet) has been used with great advantage for roofing; it can be laid down to any extent, presenting one uniform surface, and is far superior to lead, as it is not liable to expansion or contraction in consequence of any change in the temperature. For covering of arches (to prevent the percolation of wet) it is invaluable; the Greenwich Railway Company alone having covered upwards of 400,000 superficial feet. It has also been used on the Great Western, Birmingham, Midland Counties', South-Western, Brighton, Blackwall, and other Railways; at the joint Stations, London Bridge, and at the South Metropolitan, Highgate, and Nunhead Cemeteries. As proof of the great durability of the genuine Asphalte, it need only be mentioned that the first work executed in this country with this material (amounting to 3,952 feet), was at Whitehall, opposite the Horse Guards, in the month of April, 1838, and which, although only half an inch in thickness, has remained up to this time (a period of four years and eight months) in the most perfect condition. Books of Testimonials, with Scale of Prices, may be obtained on application to

J. FARRELL, Secretary.

Seyssel Asphalte Company's Depot, Stangate, London.

Note.—Neither the pavement in Parliament street, London, nor the works at the Model Prison, at the Abney-park Cemetery (which, from its failure, has since been removed), or at the Hotel at the Slough Station of the Great Western Railway, were executed by this Company.

OFFICE FOR PATENTS OF INVENTIONS AND REGISTRATION OF DESIGNS, No. 14, Lincoln's Inn Fields, where all business relating to the securing and disposing of British and Foreign Patents, Preparation of Specifications and Drawings of Inventions, is expeditiously and economically effected.

Also, Registrations under the New Consolidated Copyright Designs Act, 5 & 6 Vict., cap. 100.

A Prospectus, containing much useful information, may be obtained, and references to an Alphabetical List of Patents and Registrations made, on application to Mr. Alexander Prince, 14, Lincoln's Inn Fields.

Just Published, No. 2, to be continued Monthly. price 1s. 6d.

THE RECORD OF PATENT INVENTIONS; containing an Abstract of all Specifications, in the order in which they are enrolled in September; List of New Patents in England, Ireland, and Scotland, for October; Expired Patents; and the continuation of the Report of that important Case "The Queen *v.* Bynner," for the repeal of the Patent known as the "Solar Lamp Patent." By Mr. Alexander Prince, of the Office for Patents of Inventions, No. 14, Lincoln's Inn Fields, where orders for the "Record" may be forwarded; also to the publishers, W. Lake, 170, Fleet-street; Sherwood, Gilbert, and Piper, Paternoster-row; Weale, High Holborn; Hebert, Cheapside; or through any bookseller in the United Kingdom.

THE BRIGHTON NEWSPAPERS—LATEST OFFICIAL RETURN.

Extract from a Return of the Stamps paid by Newspapers in April, May, and June, 1842, ordered by the House of Commons July 12th, and laid on the table August 10th, 1842.

Secretary—F. Edgell, Esq.
Solicitors—Messrs. Palmer, France, and Palmer.

All the advantages peculiar to Mutual Life Assurance, arising from a division amongst the assured of the whole of the mutual profits, and that security and freedom from responsibility which proprietary Companies can alone afford, are combined by the constitution of this, the only guaranteed Mutual Society. For the non participating, and for assurances for temporary purposes, or debtor and creditor transactions, tables have been prepared, by which a *less immediate payment is required than by any other plan.*

By a half premium credit system one-half of the premiums may be retained for the first 7 years, and repaid at the convenience of the assured; and by the ascending scale a diminished rate of premium is required for the first 12 years, combining the advantages of an assurance for the whole duration of life with the economy of a temporary policy.

Specimen of Ascending Table.

Age.	First Three Years.	Second Three Years.	Third Three Years.	Fourth Three Years.	Remainder of Life.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
20	0 19 1	1 5 6	1 11 11	1 18 4	2 4 9

60	4 8 11	5 17 4	7 5 9	8 14 2	10 2 7

By the Deed of Constitution of the Company all Policies issued by them are declared to be indefeasible and indisputable, unless obtained by fraudulent misrepresentation.

Prospectuses, schedules, and every information requisite to enable parties to effect assurances, will be forwarded, free of expense, by the Agents or Manager.

ALEX. ROBERTSON, Manager.

NOTICE OF REMOVAL.—THE OFFICE FOR PATENTS AND REGISTRATION OF DESIGNS IS REMOVED from No. 12 to No. 7, Staple-Inn, Holborn, where all business relating to British or Foreign Patents and the Registration of Designs is conducted with accuracy and dispatch by Mr. L. HEBERT, author of "The Engineers' and Mechanics' Cyclopædia," and other works relating to patented Inventions; and where may be consulted a List of all Patents ever granted, classified under 400 different heads, whereby inventors may see at one view all the Patents which have been granted for any particular object, an advantage obtainable at no other office. Machinery designed and arranged, and finished and working drawings prepared.

LOAN OF HIS IMPERIAL AND ROYAL MAJESTY, THE EMPEROR OF AUSTRIA, of the year 1839.—Capital, Thirty Millions of Florins, Convention Money, to be reimbursed with 74,250,500 florins. The next distribution will take place on the 1st of December, 1842, consisting of the following considerable sums:—One prize of 250,000 florins, one of 50,000 florins, one of 15,000 florins, one of 10,000 florins, one of 8,000 florins, one of 6,000 florins, two of 4,000 florins; two of 2,000 florins, three of 1,500 florins, five of 1,200 florins, five of 1,100 florins, six of 900 florins, ten of 800 florins, twenty of 700 florins, forty three of 600 florins, and five hundred and ninety three of 500 florins, together 700 premiums, amounting to 721,700 florins Convention Money. One bond 3*l.*; six bonds 15*l.*; one-fifth 12*s.* An official bulletin of the result will be sent to the shareholders.

For Prospectus, and to obtain Bonds, apply to A. J. Straus, Banker, Frankfort on-the-Maine; or to John Schultz, Foreign Agent, 32, Villiers-street, Strand, London.

SOUTH-EASTERN (LONDON AND DOVER) RAILWAY COMPANY.—NOTICE is hereby given, That the TRANSFER BOOKS of this Company will be Closed on Saturday, the 19th day of November next, and will remain Closed until after Friday, the 2nd day of December next.

By order of the Directors,
JOHN WHITEHEAD, Secretary.

Railway Office, No. 10, Coleman-street, London,
October 18, 1842.

SOUTH-EASTERN (LONDON AND DOVER) RAILWAY COMPANY.—The Half-yearly General Meeting of the Proprietors will be held at the London Tavern, Bishopsgate-street, in the City of London, on Friday, the 2nd day of December next, at One o'Clock in the afternoon precisely, on the general business of the Company, at which meeting certain Resolutions passed by the Board of Directors on the 30th day of August last, declaring forfeited certain Shares then in arrear by non-payment of the Calls due thereon, except in so far as such Resolutions relate to Shares the forfeiture of which is or shall have been then redeemed by payment of the Calls due and interest thereon, will be submitted for confirmation.

JOSEPH BAXENDALE,
Chairman of the Board of Directors.
JOHN WHITEHEAD, Secretary.

Railway Office, No. 10, Coleman-street, London,
October 18, 1842.

BIRMINGHAM AND GLOUCESTER RAILWAY.—WINTER TRAINS.—Conveyance between London and Worcester, Cheltenham and Gloucester, by the same Carriage throughout.

The only Alterations proposed to be made during the Winter Months are in the Goods' Trains which convey Passengers. These Alterations will take place on the 14th instant, when the Time of Departure of the several Trains will be as follows:—

FROM BIRMINGHAM.

12h.	44m.	Night (Mail).
8	10	Morning (Mail).
5	15	Morning (Goods, with Passengers).
8	45	Morning.
12	15	Noon.
2	45	Afternoon.
3	45	Ditto, (Goods, with Passengers).
7	15	Evening.

FROM GLOUCESTER.

5	15	Morning (Goods, with Passengers).
8	15	Morning.
11	15	Ditto.
1	0	Afternoon.
4	0	Ditto.
4	15	Ditto, (Goods, with Passengers).
7	15	Evening (Mail).
9	0	Ditto (Mail).

The Company cannot ensure the Goods' Trains so keeping time as to secure Passengers being forwarded by the Trains of the Companies.

SHORT TRAINS BETWEEN CHELTENHAM AND GLOUCESTER.

FROM CHELTENHAM.

10	15	Morning.
6	15	Evening.

FROM GLOUCESTER.

9	45	Morning.
5	45	Evening.

First and Second-class Carriages with all the Trains; Third-class Carriages with the Goods Trains only.

For the accommodation of Passengers between London and Worcester, Cheltenham and Gloucester. First-class Carriages of this Company will be attached to the London and Birmingham Company's Mail Trains leaving Euston Station at a quarter to Ten Morning, and the Four o'Clock Afternoon Train from Birmingham, both these Trains call only at First-class Stations.

From London, quarter to 10 in the morning, arriving at
Worcester ¼ past 4
Cheltenham 5
Gloucester ¼ past 5

From Gloucester at 1 in the Afternoon; Cheltenham 20 minutes past 1; Worcester 20 minutes to 2; arriving in London at 9 in the Evening.

By order
GEORGE KING, Secretary.

Birmingham, November 8, 1842.

HORSE CLOTHS.—HORSE CLOTHS made WATERPROOF by the celebrated Burmese Japan Process of Newbery & Co. This excellent protection for that good and useful animal, the Horse, is fast superseding every other cloth or covering It is totally impervious to rain, does not shrink, shrivel, or crack, and is very strong and lasting. The prices are moderate.

Improved Horse Cloths.—Horses, like ourselves, are benefited by a clothing, which, while waterproof, will not impede the free escape of perspiration. Newbery's Lycopodium, or ventilating process of waterproofing, is admirably adapted, and may be safely applied, for saturating the clothing of gentlemen's horses.

When very hard wear is required, and for common use, their Burmese Japan Canvass will be found all that can be desired, for it is at once the most impervious, tough, flexible, and durable composition ever offered to the public.

7, Cripplegate-buildings, Fore-street, City; 30, Pall-mall; 34, King William street; or, by post, at the Manufactory, Church street, Deptford, Kent.

SOUTH-WESTERN, GREAT-WESTERN, CIRENCESTER, BRISTOL and BRIDGEWATER, and BRIGHTON RAILWAYS.—In connexion with the above lines of Railway, places can be secured by Mails and Coaches to

Falmouth	Farnham

HORNE & CHAPLIN, Proprietors and Agents.

SMOKEY CHIMNEYS CURED AT ONCE.—The Advertisers have discovered the cause of Weak Draughts, Downward Currents, &c., and they undertake in a few hours to perfect the Draughts of the most faulty chimneys. The cure is effected by a simple and permanent process, at a stated moderate charge when perfect.

W. H. Phillips and Co., Patentees, 41, Bloomsbury-square. References in all parts of London.

N.B. Contracts made to warm Conservatories and Greenhouses in a genial manner, at one-fourth the common cost.

CAUTION.—This is to Caution the Public against employing William Forster, who has been lately at work on the Paris and Rouen Railway, near Pont de L'arche, 12 miles from Rouen, as a brickmaker, and who has absconded, leaving his workmen and other creditors unpaid, although 3,000 francs (about £120) was given him for these purposes. He has besides left debts owing to various tradesmen to the amount of about 16,000 francs (£640).

The said William Forster is about 35 years of age, of dark complexion, and about 5 feet 8 inches high, and belongs to Portsmouth. He was last employed in England on the Gosport branch of the Southampton Railway, and resided near Fareham.

Previous to absconding, he had been in the habit of remitting the greater part of the money he received for his work to his brother in England, and it is reported he is now at work on the South-Eastern line of Railroad.

MACKENZIE AND BRASSEY,
Contractors on the Paris and Rouen Railway.
6, Petite Rue Verte, Paris,
28th October, 1842.

SIR W. BURNETT'S PATENT PRESERVATIVE FOR TIMBER, CANVASS, CORDAGE, WOOLLEN, &c.—This process is a very cheap one. It effectually protects even the commonest domestic or Colonial Timber and Deals from Dry-rot, and other causes of premature decay; and it renders them equal to the best Timber from the Baltic. No doubt can exist of its efficacy in the preservation of all the above-named articles, as the Official Reports from the heads of various Government Departments, which may be seen, together with the specimens, at the Company's Office, No. 4, Castle-court, Birchin-lane, Cornhill, London.

THE ELEVENTH THOUSAND.

Just published, *in a Sealed Envelope*, price 3s., and sent free, on receipt of a Post-office Order, for 3s. 6d.,

MANHOOD: the Causes of its Premature Decline, with plain Directions for its Perfect Restoration; addressed to those suffering from the destructive effects of excessive indulgence, solitary habits, or infection; followed by observations on the treatment of Syphilis, Gonorrhœa, Gleet, &c., illustrated with cases, &c.

By J. L. CURTIS and Co., Consulting Surgeons, London.

TENTH EDITION—Published by the Authors, and sold by Burgess, Medical Bookseller, 28, Coventry-street, Hay Market; Mann, 39, Cornhill; Strange, 21, Paternoster-row, London; Guest, 51, Bull-street, Birmingham; T. Sowler, No. 4, St. Ann's-square, Manchester; G. Philip, South Castle-street, Liverpool; Fannin and Co., 41, Grafton street, Dublin; Drummond, 114, High-street, Edinburgh; and sold in a *sealed envelope*, by all Booksellers.

OPINIONS OF THE PRESS.

"This work, *a tenth edition* of which is now presented to the public, *ten thousand copies having been exhausted since its first appearance*, has been very much improved and enlarged by the addition of a more extended and clear detail of general principles, as also by the insertion of several new highly interesting cases. We feel no hesitation in saying that there is no member of society by whom the book will not be found useful, whether such person hold the relation of a *parent*, a *preceptor*, or a *clergyman*."—Sun evening paper.

"This is a work that we fear there exists too much need for to cause us to hesitate to recommend it for general perusal. Every branch of those frightful maladies, whether the result of immoral habits or secret vices, is here succinctly treated, and divested of all medical technicality, plain and easy directions are given for the best mode to be pursued in all cases, however complicated or apparently hopeless. To the married, as well as the unmarried, this little work alike affords consolation and cure in peculiar cases, and we are doing a service to society in recommending it to general notice."—*Essex and Herts Mercury*.

"Messrs Curtis's work, entitled MANHOOD, is one of the few books now coming before the public on such a subject which can lay claim to the character of being strictly professional, at the same time that it is fully intelligible to all who read it. The moral and medical precepts given in it, render it invaluable."—*Magnet*.

Messrs. Curtis and Company are to be consulted daily at their residence, No. 7, Frith-street, Soho-square, London.

Country Patients are requested to be as minute as possible in the detail of their cases. The communication must be accompanied by the usual consultation fee of £1, and in all cases the most inviolable secrecy may be relied on.

CRANES, ROPE BLOCKS, AND SCREW JACKS, manufactured by ELLIS AND NOTON, Stockford, Manchester.—Fixed and Travelling Cranes, for Railways, Wharfs, and Warehouses, to lift from 5 cwt. to 30 tons and upwards, either by hand or steam power; Patent Signal Switches for Railways; Travelling and Fixed Cranes for builders, and Hoisting Tackle of every description, on the most improved principle.

Drawings of the above may be seen, and particulars obtained, at the works in Manchester, and at the office of C. F. Cheffins, 9, Southampton Buildings, Holborn, London.

LONDON: Printed by JOHN THOMAS NORRIS, 137 and 138, Aldersgate-street, in the Parish of St. Botolph Without, Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet-street, (facing Saint Bride's Church), in the Parish of Saint Bride, Fleet-street, Middlesex.—Saturday, November 19, 1842.

The Railway Times.

"Lord Bacon saith truly, there are three things which make a nation great and prosperous,—a fertile soil, busy workshops, and easy conveyance for men and commodities from one place to another; to which, let me add knowledge and freedom."—Bishop Hall.

No. 256. Vol. V.—No. 48.] SATURDAY, NOVEMBER 26, 1842. [Price 6d.

BRISTOL AND GLOUCESTER RAILWAY.—Notice is hereby given, That the Directors of this Company are ready to receive Tenders of LOANS of MONEY, in sums of not less than £200, and for terms of not less than Three, nor more than Seven Years, on security of Loan Notes, under the Corporate Seal of the Company, with Interest Warrants attached, bearing Interest at the rate of 5 per cent. per annum, payable half-yearly in London.

Tenders, expressing the sum, the term of years, and the residence of the Lender, to be addressed to the Secretary.

By order of the Board of Directors,
ROBERT FLETCHER, Secretary.

Bristol Office, Exchange-Buildings,
November 7, 1842.

BRISTOL AND EXETER RAILWAY.—Notice is hereby given, That in pursuance of a Resolution of the last General Meeting of Proprietors, the Directors of this Company are ready to receive Tenders of Loans of Money, in sums of not less than £200, and for terms of not less than three, nor more than seven years, on security of Loan Notes under the corporate seal of the Company, bearing Interest at the rate of 5 per cent. per annum, payable Half-yearly.

Tenders expressing the sum, the term of years, and the residence of the lender, to be addressed to the Secretary.

By order of the Board of Directors,
J. B. BADHAM, Secretary.

Bristol, Office, 30, Broad street, 14th Oct., 1842.

Interest Warrants will accompany the Loan Notes.

MANCHESTER, BOLTON, AND BURY CANAL NAVIGATION AND RAILWAY.—LOANS.—The Committee of Management are prepared to receive Tenders for the Loan of a limited amount of Money, in sums of not less than £1,000 each, to be secured by the Bonds of the Company, bearing interest at 4 per cent. per annum, payable half-yearly. Period of the Loans to be either for three, five, or seven years, the term preferred to be mentioned in the Tenders, which must be addressed to the undersigned.

By order,
JOHN HAWKSHAW, Clerk of the Company.

Canal and Railway Office, Salford, Sept. 22, 1842.

FORTY VERY SUPERIOR CART HORSES.—To be Sold by AUCTION, by Mr. DIXON, at his Repository, Barbican, on Friday, December 2, 1842, at One o'Clock, Forty remarkably fine-shaped, fresh, young, powerful, Cart Horses, the genuine property of Messrs. B. and H. Sherwood, being the second portion of the much admired and truly valuable stock, that have been employed by them on the Chelmsford Contract of the Eastern Counties' Railway, sold in consequence of it being nearly completed.

Colours—Bays, Blacks, Browns, and Greys.

☞ The above lot of young valuable seasoned Cart Horses are worthy the attention of Brewers, Distillers, Wharfingers, Wholesale Warehousemen, Corn and Coal Merchants, Contractors, and all persons wanting them for immediate work, having been purchased at great expense for the above Contract, and are now in remarkable fine condition.

On view, and catalogues may be had two days previous.

A great variety of new and second-hand Carriages, of every description, always on Private Sale at this Establishment, remarkably cheap.

THE *HINDOSTAN* STEAM-SHIP and H. M. FRIGATE *PENELOPE*.—The two above named grand Steam-Ships are entirely fitted with ANDREW SMITH'S PATENT WIRE ROPE for their Standing Rigging; thus demonstrating that practical experience is daily and progressively establishing its superiority over all other Standing Rigging. For all Mining and other purposes it is already proved to be the best and most serviceable description of Rope, superseding Hemp and Chain.

For further particulars, address Mr. Andrew Smith, 2, White-Lion court, Cornhill, London.

In Royal Octavo, 3s. 6d., cloth, lettered, with four Engravings.

TELEGRAPHIC RAILWAYS; OR, THE SINGLE WAY, recommended by Safety, Economy, and Efficiency, under the safeguard and control of the Electric Telegraph; with particular reference to Railway Communication with Scotland, and to Irish Railways. By WILLIAM FOTHERGILL COOKE, Esq.

Contents: Objects of the Treatise—Distinguishing Characteristics of present Railways—Evidence before Select Committee—Advantages of Telegraphic Communication—Mode of working the Blackwall Railway, by the Electric Telegraph—Description of the Electric Telegraph—Plan for a "Telegraphic" Railway—Course of an Express Train—Ballast Waggons—Permanent Obstruction—Crossing of Two Trains—Description of Signals—Concluding Remarks on Single Way—Mixed Lines—Scottish Junction Line—Irish Railways—Advantages common to Single, Mixed, and Double Lines—Public Confidence—Reduction of Stock—Income from Telegraph—Alertness—Adaptation to Wants of Country—Conclusion.

London, Simpkin, Marshall, and Co.; Liverpool, Wareing Webb, Castle street; Manchester, Simms and Dirham; Birmingham, Wrightson and Webb; Leeds, Slocombe and Simms.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secresy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For farther Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

Will be published on the 1st December,

TUCK'S ROLLER CALENDAR FOR 1843.—This is a mode of affixing the Calendar for the whole year on two revolving cylinders, within an elegant case, so as to exhibit each day's information in a bold and novel manner, presenting Daily Memoranda indispensable to every housekeeper and man of business. It possesses the advantage of a Date Box and Almanac, and is adapted for the Library, Board Room, Counting-house, Warehouse, or Parlour; and is the best application of the Calendar ever yet devised. In Mahogany Box, price 5s. 6d.; in Ornamented Box, 6s. 6d. In addition to much useful information relating to business, &c., the Calendar contains the times of High Water at London, Liverpool, Dublin, Glasgow, Leith, Bristol, and Hull, for every day in the year.

Railway Times Office, Fleet-street; Letts, Cornhill; and Ackerman, Strand.

THE PARISIAN BITUMEN COMPANY take leave to inform their numerous friends and the public that offices are established at 4, Great Winchester-street, Broad street, for the City, and at 8, Denbigh-street, Belgrave-road, for the West-End and its vicinity, where every information will be promptly given.

SCOTTISH (WIDOWS') LIFE ASSURANCE. Founded A. D. 1815.—Constituted by Act of Parliament.

Capital Accumulated and Invested—Upwards of One Million Two Hundred Thousand Pounds.

Annual Revenue, nearly Two Hundred Thousand Pounds.

At 31st December, 1838, the Society's third periodical Investigation, the Bonus Additions then declared amounted to Two per Cent. per Annum, not only on the original sum assured, but likewise on the Bonus Additions previously declared.

The fourth periodical Investigation takes place at 31st December, 1845.

Assurances effected through the Head Office, No. 5, St. Andrew's Square, Edinburgh, or Agencies before the books are shut for the current year, will have the advantage of a Full Year's Standing over those Assurances which may be delayed beyond that period.

Copies of the Prospectus, Forms of Proposals, and every necessary information, may be obtained at the London Office, No. 7, Pall Mall.

HUGH M'KEAN, Agent.

November, 1842.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

TO GENTLEMEN CONNECTED WITH RAILWAYS, PUBLIC COMPANIES, &c.—A Douceur of adequate amount will be presented for the appointment to a permanent Situation as Clerk, of £80 to £150 per annum, for a Young Man of Twenty-two Years of Age. The strictest honour and Secresy may be relied on. Unexceptionable references and security can be given. Address, prepaid, to O. R., Mr. Edwards's, No. 7, Spread Eagle Court, Threadneedle-street.

SIR W. BURNETT'S PATENT PRESERVATIVE FOR TIMBER, CANVASS, CORDAGE, WOOLLEN, &c.—This process is a very cheap one. It effectually protects even the commonest domestic or Colonial Timber and Deals from Dry-rot, and other causes of premature decay; and it renders them equal to the best Timber from the Baltic. No doubt can exist of its efficacy in the preservation of all the above-named articles, after the Official Reports from the heads of various Government Departments, which may be seen, together with the specimens, at the Company's Office, No. 4, Castle-court, Birchin-lane, Cornhill, London.

OFFICE FOR PATENTS OF INVENTIONS AND REGISTRATION OF DESIGNS, No. 14, Lincoln's Inn Fields, where all business relating to the securing and disposing of British and Foreign Patents, Preparation of Specifications and Drawings of Inventions, is expeditiously and economically effected.

Also, Registrations under the New Consolidated Copyright Designs Act, 5 & 6 Vict., cap. 100.

A Prospectus, containing much useful information, may be obtained, and references to an Alphabetical List of Patents and Registrations made, on application to Mr. Alexander Prince, 14, Lincoln's Inn Fields.

RAILWAY ADJUDICATIONS.

GORDON, M.P., v. THE CHELTENHAM AND GREAT WESTERN RAILWAY COMPANY.

Court of Chancery, Nov. 22.—This case came before the Court upon appeal from the decision of the Master of the Rolls, overruling a demurrer put in by the defendants, the proprietors of the Cheltenham and Great Western Railway Company, to the bill filed by the plaintiff. It appeared that the plaintiff had certain property in the neighbourhood of the railway, near Cirencester, and near that railway, on their own land, were defendants erecting certain engine houses, workshops, and other places which the plaintiff contended were in direct opposition to the Act of Parliament constituting the railway. Under these circumstances the plaintiff filed his bill, and obtained an injunction restraining the defendants from proceeding with these works. To that bill the defendants demurred, and upon that demurrer coming on for argument before the Master of the Rolls, his Lordship overruled the demurrer, and gave the defendants six months to appeal to this Court. From that decision the present appeal was brought.

The Solicitor General, Mr. Turner, and Mr. Wood, appeared for the appellants; and Mr. Sutton Sharpe and Mr. Loftus Wigram were heard in support of the judgment below.

The LORD CHANCELLOR, in the course of the arguments, stated it to be his clear opinion that the question ought to be decided at law. It was ultimately arranged that the case should stand over to Saturday week, in order to afford an opportunity to the parties to come to some arrangement, or agree upon a case for the opinion of a court of law.

IN RE THE LONDON AND CROYDON AND LONDON AND GREENWICH RAILWAYS.

Vice-Chancellor of England's Court, Nov. 21.—This was a petition presented for the purpose of obtaining payment out of Court of two sums of money invested in stock, the residue of the purchase money of property taken by the two Companies of a person named Freen. This property was devised by Mr. Richard Freen to his son, with leave to dispose of it by will only; both the London and Greenwich and London and Croydon Railway Companies considered this as equivalent to a life interest in the property, and accordingly purchased it. By an order of the Court the money was invested in another portion of real property, which was devised by John Freen on his demise to his five children, according to the terms of his father's will. There was a residue of the purchase money still remaining invested in stock, and the object of the present petition was to obtain the payment of those two sums.—Order taken as prayed.

GOOCH AND OTHERS v. BANKS.

Vice-Chancellor's Court, Thursday, Nov. 24.—This was an application for an injunction to restrain the defendant from the further use of his patent mode of *steeling the tires of railway wheels.*

The plaintiffs went on the ground that their patent previously obtained, gave them the exclusive use of steel for that purpose; but the facts of the case, as stated by the plaintiffs' counsel, were not such as would warrant his Honour to grant an injunction. Application therefore refused.

THE QUEEN v. BINGHAM, IN RE THE EASTERN COUNTIES' RAILWAY.

Court of Queen's Bench, Nov. 23.—In this case a rule *nisi* had been obtained, calling on P. Bingham, Esq., one of the magistrates for the county of Middlesex, to show cause why a mandamus should not go, ordering him to issue a fresh summons against the Directors of the Eastern Counties' Railway, and to assess the amount of compensation due from the Railway Company to one Samuel Elsley, for the occupation by the Company of certain lands belonging to Elsley from the month of February, 1839, to the November following. It appeared that the Company, in the progress of their works, had found it necessary to occupy this land belonging to Elsley for a temporary purpose, and, according to the provisions of the amended Act of the Company, whenever the Company should temporarily occupy any land, two magistrates were empowered to assess the amount of compensation due for such occupation, provided such claim should have been made within reasonable time from the time of the occupation. In the old Act of the Company, in which a jury was empowered to assess compensation, ten days' notice was necessary to be given to the Company of the intention to assemble the jury to assess compensation. In the month of July, 1841, Mr. Elsley applied to the defendant, who issued his summons against the Company. On the hearing of the summons, Mr. Bingham called upon Elsley to prove his notice of claim, and on his failing to prove his notice, the magistrate told him he came too late, and dismissed the summons. In the month of October following, Elsley applied to Mr. Bingham to issue a fresh summons, and stated that since the last hearing a notice of claim which had been served on the Company in December, 1839, within the time required by the Act, had been discovered. The magistrate refused to issue a fresh summons, and thereupon application was made to this Court for a mandamus, calling on Mr. Bingham to re-hear the case, on the ground—first, that no notice was requisite, according to the provisions ot the Act of Parliament; and secondly, that if such notice was requisite, fresh evidence on that point had been discovered. The case turned entirely on the construction of the various clauses of the Acts of the Company.

The COURT, having heard the Solicitor-General and Mr. James against the rule, and the Attorney-General in support of it, ordered the rule to be made absolute, on the ground that the first summons had been improperly dismissed, inasmuch as by the provision of the Act no notice to the Company of the intention to apply for a summons was required.—Rule for a mandamus absolute.

THE QUEEN v. THE BRISTOL AND EXETER RAILWAY COMPANY.

Bail Court, Nov. 21.—Mr. KINGLAKE, in this case, moved for a rule to show cause why a mandamus should not issue to the Bristol and Exeter Railway Company, commanding them to restore a certain turnpike-road, and to do certain other things required by the Act of Parliament. It appeared from the affidavits in the case, that the Company, finding it necessary to sink the Taunton and Kingston turnpike, which they were empowered to do, did not re-make it of the same width which it had before it was interfered with. It was also stated that a certain bridge under the road was not arched, but horizontal, and not of the required height; and that certain bridges, made over the road, were not sufficiently fenced, which was the cause of much inconvenience and danger to those who were in the habit of using the turnpike-road. — Rule *nisi* granted.

THE QUEEN v. THE GREAT WESTERN RAILWAY COMPANY,

Bail Court, Nov. 24.—Mr. RICHARDS, in this case, applied to the Court, on behalf of Lord Sidmouth and a person of the name of Shackle, his tenant, for a mandamus commanding the Great Western Railway Company to give directions to the Sheriff of Berkshire to summon a jury for the purpose of assessing the compensation due to them for the damage done to their property. The affidavits on which the application was made, stated that several acres of land required by the Company for their works were rendered almost useless, and that applications were made to the Company to assess compensation, which were not attended to.—Application granted.

GREAT NORTH OF ENGLAND RAILWAY —COMPENSATION CASES.

THE first of the Great North of England Railway jury cases, that with Mr. Walters of Darlington, came on before the Under-Sheriff of Durham (W. E. Wooler, Esq.), and a special jury, at the King's Head Inn, Darlington, on Tuesday, the 15th inst. Mr. Granger appeared for Mr. Walters, and Mr. Temple for the Great North of England Railway Company. The subject for the jury was a quantity of land, containing about 726 square yards, to enable the Company to cut down the turnpike-road, leading from Darlington to Neasham and Yarm, below the railway, which it at present runs on a level just at the entrance to the town.

The case for Mr. Walters was opened by Mr. GRAINGER, and he commenced by objecting to the present tribunal, as not being the proper one for deciding the present dispute; the Company being only empowered to take land, for the purposes of the railway, within 100 yards of the railway, he left it to the Under-sheriff to decide the point.

Mr. TEMPLE replied, and defended the course adopted, and the Under-Sheriff decided that the matter in dispute should be settled before him.

The jury then proceeded to view the land, and on their return the case was proceeded with. Two witnesses for Mr. Walters were examined, and by their valuation they claimed the sum of 2,218*l.* for land, clay, severance, and injury to the property.

Mr. TEMPLE replied, and only called four witnesses.

Mr. WOOLER briefly stated to the jury their duty; when they retired to consider their verdict, and after four hours' deliberation returned the following:—

For land purchased	£30
For land for private road (for Mr. Walters)	18
For slopes	2
For general injury done to Mr. Walters's property	573
Total	£624

For the sum of money to be paid by the Railway Company to Mr. Walters, for the purchase of the piece of ground containing 726 square yards, and also for the cottage and southern end of the shed, that is 361*l.* 2*s.* 8*d.*

Making of the road has reference to the sum of money to be paid by way of compensation, on account of the road to be made in lieu of the present turnpike road; the quantity of land required for the purpose, being 732 square yards, 18*l.*

The sum of money to be paid as compensation for the slopes intended to be made by the Company on the ground, containing 425 square yards, 2*l.* 13*s.*

General Damage.—The sum of money to be paid by the Company to Mr. Walters, as a compensation for the damage to be sustained by the exercise of the Company of the several powers under the provisions of their Railway Acts, 573*l.* 13*s.* 4*d.*

The case occupied the whole of Tuesday and Wednesday, and the jury delivered their verdict at 10 minutes past 10 on Wednesday evening.

On Thursday a jury was sworn to try the case of Mr. John Woodhouse for a house belonging to him, and which was required by the Company; but as witnesses were called, a compromise having been effected—500*l.* for the house, and 100*l.* for the injury. This closed the cases.

ACCIDENT ON THE NORTH MIDLAND RAILWAY.—On Wednesday last, as the second passenger train was travelling between Wingfield Park tunnel and Bull Bridge, one of the axles of the engine broke, but fortunately there being six wheels to the engine, no accident occurred. The train was delayed some time.—*Derby Reporter, Nov.* 28.

GLASGOW, Nov. 23.—Owing to a fall of snow the London mail was this morning nearly four hours behind its fixed time of arrival.

PRESTON AND WYRE RAILWAY COMPANY—SPECIAL MEETING.

A special general meeting of the Preston and Wyre Railway Harbour and Dock Company was held at Birmingham on Thursday last, for the purpose of receiving the Report of the Committee of shareholders, which Committee was appointed at the general meeting of the 31st October last, to investigate the present position and future prospects of this undertaking. Birmingham had been fixed upon by the Committee as half way for the Lancashire and London shareholders. Sir Hesketh Fleetwood, Bart., was called to the chair.

The Committee in their Report expressed their conviction of the soundness of the undertaking, but that, although they gave the London Directors credit for great attention to the affairs of the Company, and making every personal sacrifice, yet they considered it impossible that such undertakings could be properly managed except by local Directors. The Committee consequently recommended that the London Board should retire, and that the London office should be given up, and the future management be placed in the hands of local Directors.

After the reading of the Report,

The Chairman, in the name of himself and the other London Directors, tendered their resignations, and moved the adoption of the Report, which was seconded by J. Abel Smith, Esq., M.P., and carried.

A local Board, consisting of some of the most influential of the Company's shareholders, was immediately appointed. Their names will be found in our advertising columns. We shall give further particulars of the meeting in our next.

Manchester and Bolton Railway—Immense Consumption of Cast-Iron.—In consequence of the intended junction of the Liverpool and Manchester with the Leeds and Manchester Railway, at Hunt's Bank, about 200 or 250 yards will have to be executed by the Bolton Railway Company. It will be formed entirely of cast iron, and will be elevated some 18 feet above the level of the street; to effect which 51 immense cast metal beams will be required, each weighing about 7 tons, and a regular number of pillars, each weighing 5 tons. Besides this, the entire length and breadth of the road will have a complete cast metal flooring. The estimated weight of the whole is 1,030 tons, exclusive of the wrought-iron and the rails. The railway will be formed in the centre of the street, leaving a carriage road on each side. The design is beautiful, and the work, judging from appearances, will be of the most substantial description.—*Manchester Courier.*

Wurtemberg Railways.—We read as follows in a letter from Stuttgardt, dated the 16th inst.:—"The railway commission has finished its labours. The road from Stuttgardt to Ulm and Friederichafen is considered to be independent of those which are connected with foreign roads, and which will be formed at the charge of the State. Embranchments are to be committed to individuals or Companies. An interest of 3½ per cent. will be guaranteed, but the guarantee will be withdrawn whenever the roads shall have produced 4 per cent. for ten years successively. The State reserves to itself the privilege of taking the roads into its own hands, reimbursing the capital at the end of 25 years, or before that period, on giving a bonus of 15 per cent. The money for executing the Government roads is to be raised by loan, with a sinking fund, and the reserved right of reimbursements."—*Morning Post.*

MIDLAND COUNTIES' RAILWAY COMPANY—SPECIAL MEETING.

[The following Report appeared in a Second Edition of our last number, but we repeat it for the benefit of our regular subscribers]:—

A special general meeting of the proprietors of the Midland Counties' Railway Company was held on Friday, Nov. 18th, at Derby; Thomas Dicey, Esq., in the chair.

The meeting was intended to be held at the station, but, on taking the chair, the Chairman announced that it had been deemed desirable, from want of space, to adjourn the proceedings to a larger room. It was necessary, however, in compliance with the Act of Parliament, that a commencement should be made at the place advertised. He would, therefore, call upon the Secretary to read the requisition in consequence of which the meeting had been convened. The Secretary (Mr. Bell) accordingly read the requisition of Mr. James Heyworth and others, which has already appeared in our columns.

It was then moved by Mr. James Heyworth, and seconded by Mr. Robert Mather, that the meeting do immediately adjourn to the Athenæum—a very spacious building in the town. This was unanimously agreed to, and shortly afterwards the large room of the Athenæum was nearly filled.

The Chairman having recapitulated the previous proceedings (and the requisition having been again read) went on to say that the meeting had not originated with the Directors, but with Mr. James Heyworth and his friends. He would therefore call upon that gentleman to bring forward his case.

Mr. James Heyworth thereupon rose. He said he had, in the first place, to thank the Chairman for his courtesy, not only on the present occasion, but on the occasion of an interview which the honourable gentleman had sought with him on the previous evening. From what the Chairman then said, he (Mr. Heyworth) was satisfied that the Chairman was disposed to do everything which could contribute to the convenience of the proprietors. The Chairman had stated explicitly that in his opinion the room at the station where they had met on the 13th of August—a day which he (Mr. Heyworth) deemed a memorable one in the history of the Company—would be too small, and that the meeting ought to be adjourned. He (Mr. Heyworth) was glad to see so large and so respectable a number of shareholders present on this occasion, and he was sincerely anxious, as every honest-minded man must be, that in their proceedings that day they should not be swayed by passion, or prejudice, or self-interest. (Hear, hear, hear.) They had but one common object—namely, to improve the finances of the Company—(applause)—and he had reason to believe that in this respect the resources of their property had not yet been fully developed. (Applause.) It was not his intention to bring forward charges against the Directors, nor to indulge in recriminations on them; although they had thrown imputations upon him in a circular which he should notice hereafter. They had said that by the course he was adopting he was bringing a charge against the Directors that they were not worthy of confidence. Where was the charge made? Let them look at his circular, and say whether it contained one charge against the Directors. Why should the Directors object to an inquiry being instituted by the proprietors? (Hear, hear, hear). The proprietors were joint partners with the Directors. The proprietors were many, and the Directors few; and ought not the sense of the many, therefore, to be the standard by which the few should be governed? (Applause). He was partial to popular representation. He himself was a humble member of a Direction, the Grand Junction, and he held that all such bodies should be fully amenable to their constituents. (Renewed applause). Throughout the whole history of railways—brief as that history was—there had been on the part of Directors generally a strong disposition to regard inquiry by the shareholders as an infringement upon the rights of the Board. (Hear, hear, hear.) The sooner this doctrine were repudiated, and the practice abolished, the better. (Hear, hear, hear.) By and by, should the doctrine of non-interference be sanctioned, it would lead to this, that a mercantile man, on going into his counting-house, and wishing to inspect his ledger or his cash-book, would be told by some fastidious and upstart clerk, that he had no right to interfere with his department; that the books were his, and any investigation of them showed want of confidence. (Applause and laughter). They were all aware that two circulars had been put forth, the one signed by Messrs. Cropper and Rathbone, the other by Mr. Bell, the Secretary. The latter was clearly official: he thought the other was so also; and if it were, the Directors would not shrink from owning it. The second circular bore the mark of one particular member of the Board; but the distinguishing characteristic of both circulars was the determined and continued resistance offered to inquiry. (Hear, hear, hear.) He had a right to complain of this on the score of justice, and he might add on the score of humanity, when he saw the property of the widow and the orphan so much deteriorated. (Hear, hear, hear.) To some of the Directors it might be of as little consequence as to himself whether the shares were at £60 in the market, or at £100; but to others it was far different—and even if it were not, it was a duty they owed to themselves to carry out all practicable improvements. (Hear, hear, hear.) Much might be said of various parts of the circulars, but their drift was not to be mistaken: it was to prevent investigation by a Committee of shareholders. He had not the slightest objection to the inquiries already instituted—inquiries that had been commenced since the 13th August, which he might call the day of the regeneration of the railway. Even of these inquiries he would not allow the Directors to take the credit. (Hear, hear.) They had given their most determined resistance to inquiry, and it was not till the appearance of Mr. Rathbone's circular, seven or eight weeks after the August meeting, that the proprietors had even known that such inquiries were in progress. He had no objection, he would repeat, to investigation by the Directors. Let them root out as many abuses as they could, and give the utmost possible impetus to the traffic of the line; but why not let the two inquiries proceed together side by side, and when both were completed, let a special meeting of the shareholders be called to determine which Report—that of the Committee of Directors, or that of the Committee of proprietors—ought to be adopted? (Great applause.) He should be sorry to say anything hurtful to Mr. Rathbone's feelings, but that gentleman had in his circular laid some considerable stress upon the fact that he (Mr. Heyworth) had at the last meeting read a written speech. It was not that he might not perhaps be able to express himself extempore, but he was anxious that there should be no ambiguity in what he stated, and also that time should be saved, and, therefore, with the permission of the meeting, he would again trespass upon their attention by reading some notes which he had prepared. The honourable gentleman then read as follows, interspersing running commentaries. He was in various passages very loudly cheered:—

After the few preliminary remarks I have made, the first duty I have now to perform, in addressing the shareholders assembled in this room, is to express my unfeigned regret that a large and respectable

Digitized by Google

body of proprietors in the Midland Counties' Railway have been placed in circumstances which rendered it imperatively necessary to convene this special meeting. A proper and justifiable regard for their depreciated and sinking property has convinced them that an effort to raise its value should be made, and this conviction has derived an additional impulse from the recollection of what occurred at the general meeting in August last. It will be remembered by those gentlemen who were present on that occasion, that an appeal was made to the Chairman and the Board of Direction to give a pledge, a distinct promise, that a system of retrenchment and rigid economy should be forthwith instituted, and it was suggested that these objects could be attained by a reduction in the number and the salaries of the Directors; by reducing the number of the police; contracting the undue expenditure on the maintenance of the road; removing supernumerary servants; and reducing the salaries of such as were paid above the qualifications they possessed, or the duties they had to perform. It was also added that a trifling increase in the rate of fares might improve the revenue. Now, let me ask those who were present when these statements were made, in what terms they were responded to by the Board? Were any of the means pointed out for the improvement of the revenue assented to? No. Were any assurances given that a more rigid system of economy for the future would be forthwith instituted? No. It might be natural for absent shareholders, and the railway public in general, to ask what did the Directors say in reference to these questions; they surely did not treat with contempt and silence matters of such weighty import? I will now state the reception that was given to the suggestions which had been recommended. The Chairman expressed himself to the following effect:—"We have always paid the strictest regard to economy in past times, and it is our determination to pursue the same course in future. We admit that we may have made mistakes, but as regards economy, it has always been practised." And in alluding to what I had said of large savings that might be realised, he added, that notwithstanding the large amount which Mr. Heyworth had named as being available for the increase of the revenue, he had failed to name a single item from which such amount of saving could be derived. Now let me ask this meeting, what construction could be fairly put upon the Chairman's remark, but this, namely,—We have carried economy to its utmost limit; all has been done that can be effected in that respect. Having arrived at this fair conclusion of the meaning of the Chairman's remarks, the Board were told that however much a collision betwixt the proprietors and Directors was to be deprecated, unless an early and satisfactory communication were made to the shareholders, a special meeting would be convened. That communication not having been made, has led me and numerous others participating in my views, to call the meeting now assembled. I have thought it right to recapitulate as briefly as I could the history of past proceedings, which has led to our meeting here this day, not by way of apology, for I have none to make in behalf of myself, or those who co-operate with me. We are quite willing to take all the responsibility upon ourselves, supported as we have been by 110 shareholders, who signed the requisition, and who hold in the aggregate 2,055 shares, and by 288 proprietors, holding 4,011 shares, who have given their proxies in favour of a Committee of Inquiry. I may add further that I have received 100 letters from shareholders residing in every part of the United Kingdom, approving of our views and encouraging us to proceed in our career of duty to improve the finances of the Company. In conclusion, let me make one or two remarks. Truth has compelled me to make some statements which may inflict pain; should this be the case, I can only regret that the situation in which I am placed has unavoidably produced it. I disclaim all angry feeling, or any intention to give offence to any one. I hope where none is intended, that no one will take offence. Gentlemen, you need not be reminded that on the 27th of September last, I addressed a circular to the shareholders, announcing that I and my friends intended to convene a special meeting of the proprietors; the object of which was to appoint a Committee from the body of shareholders, for certain valuable purposes which I enumerated. My circular was immediately succeeded by another, dated the 6th of October, signed Edward Cropper and Theodore W. Rathbone, two of the Directors more immediately connected with the Lancashire shareholders. This latter circular is not dated from any particular place, but the one I received bore the Rugby post-mark. Its immediate object manifestly appears to have been to counteract that which I had circulated, and to prevent the appointment of a Committee, such as I had recommended. Gentlemen, this circular is addressed to the Lancashire proprietors; but for some reason, not explained, it was sent to all the shareholders. It bears, as I have already stated, the names of only two of the Directors, and does not, therefore, *primâ facie*, appear to be an official document from the Board, although I am informed, on such authority as I can rely on, that it was under the consideration of the Board, adopted by the Board, and, in consequence, became altogether, and to all intents and purposes, an official document from the Board. I think you will not consider that I am straining this point, and imputing, by a forced construction, an act to the board for which it is not responsible; but to remove any doubt on this question, if any can exist, allow me to state another fact, which I believe to rest on equally good authority, namely, that another circular emanating from Mr. Cropper was read and considered by the Board, in conjunction, and in comparison, with that which was circulated, and that the latter was preferred, as most likely to subserve the object for which it was written. If the circumstances to which I have alluded do not identify the Board with the circular, and make it responsible for the motives, matter, and object for which it was written, then it would be equally reasonable to disclaim every resolution passed by the Board, and recorded in the minute-book of its proceedings. Now, gentlemen, having, as I hope to your entire satisfaction, connected the Board indisputably and indissolubly with the document under consideration, the reflection that would naturally suggest itself to the mind of a thinking man, provided he was reasoning *a priori*, would be—This document, after so much deliberation and comparison, exercised by a Board of twenty-four Directors (perhaps all were not present)—this document would prove fair and accurate in all its statements—sound and judicious in all its details. Had these features characterised it, the Board would not have been doomed to the unavailing regret which, I more than suspect, they have been made to feel since the unhappy day of its circulation. I feel that I am trespassing on the time of the meeting, and am most reluctant in extending my observations; but I shall feel obliged if gentlemen present will permit me, as briefly as I can, to offer a few comments on the manifesto which, under the sanction of the Board, bears the signatures of Edward Cropper, and Theodore W. Rathbone. My motive for wishing this permission to make a few further remarks is partly in self vindication, but mainly and essentially to promote our common interests, to raise the value of our property, and improve our dividends—objects which can neither be considered unfair nor mischievous in their consequences; although these hard epithets of mischievous and unfair have been applied to the propositions which I and my friends have entertained, and recommended our brother shareholders to assist us in carrying into effect. Now, let me ask, what mischievous consequences and unfairness are involved in the proposition to which I have invited the attention of the shareholders? My circular recommends to such proprietors as are unable to attend a special meeting about to be convened for the purpose of appointing a Committee of proprietors from the body of shareholders, that their proxies should be given to such person as they have confidence in, and the business of the Committee so to be appointed is strictly defined in the following terms:—"To investigate into the affairs of the Company, in order to obtain that information which will furnish the means of establishing a more strict system of economy, correct abuses if they exist, and to take such other steps as will conduce to the development of the resources and improved prosperity of the railroad which has so much disappointed the reasonable expectations of the shareholders." All that I have recommended is sanctioned by Act of Parliament, and imperatively called for by the very unsatisfactory state of the Company's affairs; therefore, if mischief and unfairness are to be attributed to any one, it is not to me, but to those who framed the Bill, and the legislature who sanctioned it. Let me ask what mischief (I like to appeal to facts) has resulted from a similar investigation having been made into the affairs of a neighbouring railway? Now, unless you consider a saving by a reduction in the expenditure on the North Midland Railway of 11,000*l.* after a previous reduction of expenditure of 11,000*l.* can be considered an evil. Supposing an astringent inquiry into the affairs of the Bank of Manchester, at an early period of its history, had been instituted, would the consequence have been mischievous? Let the total loss of considerably more than the entire capital of the concern, amounting to more than 800,000*l.*, answer the question. You will not fail to have observed that this wholesale and reckless destruction of property took place notwithstanding there were Directors in the Bank of great intelligence, respectability, and wealth, many of whom suffered most severely in the common calamity which fell on the shareholders; and all this was the result of a want of inquiry; the mischief was not in inquiry, but in the neglect of it. I can now, after taking up so much of your time, only glance at a few remarks made in Messrs. Cropper and Co.'s circular. They say they should be glad to retire. In what consists the moral or physical hindrance to the accomplishment of that wish? If the wish had been sincere it might easily have been effected, and might have saved the trouble of inclosing blank proxies which, if filled up according to the wish of the parties, had a direct tendency to keep them in office. In perusing the 1,000 proxies, which the circular states the Lancashire Directors held at the meeting at Derby in August last, not a word is said as to what date they bore, or on what particular occasion they were given. They then go on to state that "not a single individual was ever asked, *by either of us*, for a proxy, and we had not even received the proxies of some of our own nearest connections, while the opposite party had long been busily engaged in canvassing the proprietors for all the proxy votes they could obtain." The only comment I have to make on this passage is, that one of the nearest connections of one of the parties gave his proxy to me; and that so far from what is called the opposite party having been long busily engaged in canvassing the proprietors, the refutation of such an untrue statement will at once appear when I tell you that the first-dated proxy is the 1st of August, and the last is dated the 6th of August. I might go on to amplify my remarks on the letter of Messrs. Rathbone and Cropper's circular, and on another circular issued by the Board, dated the 6th of November, signed by the Secretary of the Company; but I forbear—I will not waste the time of a meeting on such a subject. In conclusion, should a Committee of Inquiry be appointed, which I trust will be the case, my anxious desire is, to use the language of the *Railway Times*, which I will quote, "that it will not be allowed to degenerate into a scramble for office, or be rendered subservient to the promotion of personal interests or dislikes." My own feelings heartily respond to the sentiments I have quoted. I trust whoever is appointed will join in that request. And I may further add, that if I thought a Committee for such valuable objects would be diverted from its legitimate duties, and fall into such contemptible degeneracy as is alluded to by the Editor of the *Railway Times*, I, for one, could no longer advocate its claims.

In the course of his extempore remarks the honourable gentleman said, he should be sorry if he had made any misstatement, for if there was

Digitized by Google

lid not rest on a sound basis it ought not to pre-
ail. Inquiries like these acted like an electric
hain, affecting all railway proprietaries.

Three or four times, when reference was made to
Mr. Rathbone's circular as being the circular of
he Board,

The CHAIRMAN said, it was not the production
f the Board; only one or two members of the
oard had seen it.

Mr. J. HEYWORTH still persisted, and said it
as at least approved of by members of the Board.

The CHAIRMAN hoped the meeting would believe
im when he stated on his honour that the Board
ad never approved of the circular, for they had
ot seen it till it was printed.

Mr. J. HEYWORTH said, at least the Board had
discountenanced it.

The CHAIRMAN said, there had not been a
oard meeting since. He hoped he was not sunk
low in their estimation, as that they would not
elieve what he solemnly stated to be true. (Much
plause.)

Again Mr. HEYWORTH alluded to what he
alled "the manifesto" of the Board.

The CHAIRMAN said, in no sense had the
oard anything to do with the circular. He would
not descend to a subterfuge as to a formal Board,
but he would repeat that only two or three mem-
ers of the Board had seen it. (Hear, hear, hear.)
as it fair therefore that Mr. Heyworth should
gain and again assert what he *knew* was not cor-
ect? ("Hear, hear, hear," and confusion.)

Mr. BIRLEY thought it would be better that the
irectors should allow Mr. Heyworth to go on in
s own way, without interruption.

Mr. J. HEYWORTH then proceeded, and ridiculed
idea of Mr. Rathbone not being able to retire
om the Direction, if, as he professed, he was
xious to do so. Was there any physical impos-
bility? (Laughter.) He then referred to the
roxies produced at the last meeting, and said it
as very common that proxies obtained for one
urpose were retained, and applied to another.
e did not say that it was so in this instance. He
d no wish to be egotistical, but he would tell
em what he himself did when, in 1841, he ob-
ined proxies for a meeting of the London and
irmingham Company. As soon as these proxies
d answered their purpose he returned them to
e parties, along with a printed circular. (Much
plause.) After some further remarks, the ho-
urable proprietor thanked the meeting for the
tience with which they had heard him, and, amid
heers, concluded by proposing the following mo-
on:—

"That a Committee of shareholders, not being
irectors of this Company, be now appointed, to
ake full inquiry and examination, and forthwith
report their judgment and opinion to the share-
olders at large, with reference not only to the
ot, present, and probable future expenditure of
e funds of the Company (both on capital and in-
me account), but also with reference to the rates
fares and freights charged, and proper to be
arged, by the Company for the carriage of pas-
ngers and goods; and to their other sources of
come (whether at present available to their full
tent or not), and to the general management of
e Company's affairs."

Mr. ORMEROD seconded the motion.

The CHAIRMAN (after reading the motion) said,
would perhaps be convenient that he should at
ce state the course which the Directors proposed
pursue. In the first place, it was their inten-
on to offer a decided opposition to Mr. Hey-
rth's proposition. In his own opinion, nothing
uld be more inexpedient than this motion; it
ther went too far, or not far enough. If the Di-
ctors were fit to be trusted at all with the ma-
gement of the Company's affairs, they were the
rties best able to inquire into the expenditure,
d whether it was prudent to make certain reduc-
ns—for, r all, it was a question of prudence.
Suppose that they were not deemed fit for this—suppose that the proprietors had not sufficient confidence in them to allow them to decide upon the engagement of this policeman, or whether the wages of that engine-fitter should be 4s. 6d. or 5s. per day—then they were not fit for anything. If they were not to be trusted in the less, they ought not to be trusted in the greater; and Mr. Heyworth should at once have moved that they retire. ("Hear, hear," and cries of "No, no.") On general grounds, therefore, he thought Mr. Heyworth's proposition inexpedient; but, even admitting that there might sometimes be general grounds for the appointment of such a Committee, what special grounds existed for it at this moment? Were the Directors evincing any disposition not to economize? Why then should so extraordinary a step be taken? They were all aware that at the last meeting many of the proprietors had desired that Mr. Ellis, of Leicester, should be elected a Director—

A PROPRIETOR (interrupting) said the Directors had elected Mr. Ellis, for Mr. Rathbone proposed him.

The CHAIRMAN said it was so, undoubtedly, but it was at the request of the Leicester proprietors. Mr. Ellis had declined to serve, unless Mr. Waters were elected at the same time; and to make room for these two gentlemen, Mr. Evans, M. P. for North Derbyshire, and Mr. Garnett, of Manchester, had retired. Did it show any disposition on the part of the Directors to evade economy when they consented to the resignation of two of their colleagues, whom they esteemed so much, and who were so valuable? At the last meeting it had been asked whether the Directors proposed to "muzzle" their new colleagues. They had no such intention; and if they had attempted it, Mr. Ellis was not a man to be so treated. ("Hear, hear," and a laugh). The Directors, immediately after these two gentlemen were chosen, had unanimously appointed a Sub-Committee of five:—namely, Messrs. Ellis, and Waters, and three other Directors, who were not inferior in ability to any gentlemen in the room. (Hear, hear.) The Sub-Committee had been invested with full powers to inquire into every matter connected with the affairs of the Company, and they had proceeded to do so immediately. They had determined not to act, except when they were all present. They had visited all the stations, and inspected the whole establishment. They had gone over every item, from the Directors' allowance to the wages of the servants, and they had reported on every item. All their recommendations the Directors had adopted—unanimously adopted—the reductions amounting to £4,500. (Hear, hear, hear.) Most of these reductions were already in operation. The Committee had not quite concluded their labours, but Mr. Ellis would explain the details. Did the appointment of this Committee, and the carrying out of the Committee's recommendations, exhibit any indifference to economy; and, under these circumstances, would it not be well to wait till the Committee had completed their labours? [Mr. J. HEYWORTH—We have waited too long already.] Mr. Lawrence Heyworth was one of the Directors, and he had appeared perfectly satisfied with what the Committee had effected. He did not wish to identify Mr. James Heyworth with his brother's opinions—

Mr. J. HEYWORTH—Certainly not. (Hear, hear.) To-day his brother was attending a meeting of the Anti-Corn Law League. He (Mr. J. H.) must not be identified with that, nor with his brother's tee-totalism. ("Hear, hear," and laughter.) His brother must be very inconsistent, to feel satisfied with the Committee's labours, and yet to give him his proxies for further examination. (Renewed laughter.)

The CHAIRMAN quite agreed that Mr. Lawrence Heyworth was inconsistent on this point—disreputably inconsistent. (Hear, hear, hear.)

A PROPRIETOR said, Mr. Lawrence Heyworth was not present, and it was not fair to attack him in his absence. (Hear, hear.)

Mr. J. HEYWORTH had no doubt that his brother could defend his consistency. He might be satisfied with the investigation of the Committee so far as it went, and yet feel desirous of further investigation. He would add that, although he differed from some of the political opinions of his brother, there was no man in the kingdom of greater consistency, probity, and conscientiousness, than Mr. Lawrence Heyworth. (Hear, hear, hear.)

Mr. ORMEROD HEYWORTH thought this matter had better be dropped.

The CHAIRMAN said he had no desire to go further into it. He merely wished to suggest, whether, at all events, they would not do well to wait till the present investigation was concluded before going into another. Perhaps they would allow him to say one word respecting himself. Mr. James Heyworth had quoted words said to have been used from the Chair at the last meeting. Here he contended with Mr. Heyworth on unequal terms, as he was not in the habit of writing out his speeches, and could now only speak from recollection, after the lapse of three months. Mr. J. Heyworth was very likely to be mistaken as to what he (the Chairman) had said in August last, since it seemed he had forgotten what he said himself. Mr. Heyworth now said that he only thought that the fares *might* be raised, but at the last meeting, according to his (the Chairman's) recollection, he said they *ought* to be raised. [Mr. J. HEYWORTH: Certainly not—certainly not.] It certainly was so. He thought it rather hard that at this time he should be pinned to words. He might have said something like that attributed to him by Mr. Heyworth; but assuredly he had no intention and no wish to throw discredit on economy. He had said that the Directors would practise economy whenever they could; but when Mr. Heyworth proposed certain plans, he (the Chairman) had expressed an opinion that they were not expedient. He would not eat his words. He said honestly and openly that he did not at that time believe that the reductions which had since been effected could be carried out. He did not then think, and he did not believe now, that 8,000*l.* a year could, as Mr. Heyworth supposed, be saved.

Mr. J. HEYWORTH—Not when you said, *nothing* could be saved.

The CHAIRMAN had not said so; but Mr. Heyworth had not pointed out any saving which in his (the Chairman's) opinion was feasible.

Mr. HEYWORTH said, one of the reductions he had proposed was the reduction of the Directors' allowance, from 1,200*l.* to 600*l.* a year. What did the Chairman say as to the feasibility of *that*?

The CHAIRMAN did not think that such reduction would be politic or prudent. The Directors did not believe that reduction could be carried to the extent advocated by Mr. Heyworth, but they had said that every feasible reduction should be effected, and they had done so whenever it had been pointed out. There were several other topics on which he should like to touch, only he thought it desirable not to draw attention from the main question. He had stated, that in his opinion, and in the opinion of the Board, it would be inexpedient, and more especially at this time, to carry out Mr. Heyworth's proposition, and he would repeat, that the Directors meant to oppose it. But let not the meeting, therefore, go away with an impression that the Directors were anxious to cling to office. He would assure them that there was no great pleasure in being Chairman of a Railway Company whose line was paying not a large dividend. ("Hear, hear," from the Directors.) To show, however, that they did not cling to office, he would read a resolution which had been unanimously agreed to by the Board.

"That the Directors have determined to take the sense of the meeting upon the question now proposed.

"That the Directors have also determined, that whatever may be the result of the present question, they will at the general half-yearly meeting of the Company to be held in or about Feburary next, place in the hands of the proprietors the free choice of a new Board, and that they will immediately after make such arrangements as will at once trans-

Digitized by Google

fer the Direction from their own hands into those of the persons so chosen by the proprietors."

Loud applause followed this announcement, Mr. JAMES HEYWORTH exclaiming "Very good." The Chairman then resumed his seat.

Some dispute ensued as to whether Mr. Ormerod, who had seconded Mr. Heyworth's proposition, was now entitled to make a speech, as he ought to have addressed the meeting on seconding the motion. At length it was agreed that he should speak.

Mr. ORMEROD said, the meeting had heard the Chairman's statement, and could decide for themselves whether or not it was satisfactory. To him it was not satisfactory. (Hear, hear, hear.) He had heard nothing to induce him to alter his views as to the necessity of appointing a Committee of proprietors. He must remind the Chairman that at the last meeting, he had stated that the Board were not prepared to make any reduction, and then the Chairman asked Mr. Heyworth if he could lay his hand upon any item that could be saved. He (Mr. Ormerod) had immediately said that the items of salary to the Secretary and to Mr. Kearsley, the superintendent of the locomotive department, might be reduced.

The CHAIRMAN said, he had never pledged the Board that no reduction could be effected; he had merely stated his own opinion.

A PROPRIETOR—What is the amount of the Secretary's salary?

The CHAIRMAN—600*l.*

PROPRIETOR—What *was* it?

The CHAIRMAN—800*l.*

Mr. ORMEROD continued—After that declaration of the Chairman the proprietors went away, without expecting that any reduction would be made. They knew that two Directors had been appointed, but they did not hope that they could do much good. He was glad that they had done so much. (Hear, hear, hear.) But what objection could there be to the appointment of another Committee going in the same track? (Hear, hear, hear.) Perhaps the second Committee might discover that something further could be saved; at all events no "mischief" could come of it, as had been predicted. (Hear, hear, hear.) The Chairman had been distinctly told that, unless the Directors gave, within six weeks after the last meeting, a pledge or intimation that they would effect reduction, a special meeting would be convened. No such intimation had been given, and the present meeting was the consequence—as it was believed that little or nothing had been, or would be, done by the Board. As to confidence in the Directors, he, as a plain man, speaking his real feelings, was bound to say that he had not confidence in the Directors. (Applause.) If they looked back to the accounts presented from half year to half year, they would see that there was no cause for confidence. (Hear, hear, hear.) When it had been stated by the Chairman, that he could not put his finger upon any item that would bear reduction—[CHAIRMAN—"No, no."]—there was, he thought, every ground for want of confidence. The Directors had been obliged to yield somewhat to the pressure from without. (Applause.) So far as the Committee's reductions went they were very well, although manifestly only acceded to by the Directors when they were driven to it. (Hear, hear, hear.) But reductions could be carried much further. His friend Mr. Heyworth had so ably explained the case, that he would not enter further into various parts of it. As to the circular of Messrs. Cropper and Rathbone, however, he must say that it was not honest nor straightforward—it was characterised by great mystification and great sophistry, and, in a word, was not what he had been accustomed to look for from straightforward men. (Renewed applause.) They had been told that mischief would result from an investigation. No such thing. Then, as to the cry of confidence—the cuckoo-cry, he might call it—*that* was now nearly at an end. Mr. Heyworth had alluded to the Bank of Manchester. Now, what was the fact with regard to that scheme? Why, that in 1841, when it was proposed to institute an inquiry into its affairs, the Managing Directors had said that it would imply want of confidence, and that if determined upon they would resign. (Hear, hear, hear.) It was a pity they did not. (Hear, hear, hear.) He hoped that in what he had said he had not given offence to the Board, which was composed of respectable gentlemen, some of whom had a large stake in the undertaking. (Hear, hear, hear.) As yet no reason had been adduced why an inquiry should not take place. It had been suggested that this obstinate resistance on the part of the Directors might have deeper grounds. ("Hear, hear," and laughter.) At any rate, if the proprietors were deterred, by any feelings of delicacy towards the Board, from looking into their own affairs, he for one had done with railways, for he would not trust the management of his property to any 24 gentlemen in the kingdom unless he had proper control over them. (Much applause.) One word as to the new Act of Parliament. Instructions had been given to Mr. Macaulay, the Company's Solicitor, to prepare a clause to reduce the number of Directors; but Mr. Macaulay now made out that such reduction was only to take effect on resignation or death. (Hear, hear, hear). That one act showed that no confidence ought to be placed in the present Management. The intention of the meeting had been clearly expressed, and as no one could doubt Mr. Macaulay's competency, it must be attributed to inadvertency or inattention to the wishes of the proprietors that the clause in the Act was framed as it now stood. (Hear, hear, hear). Then, as to the coke ovens; he understood that they had cost 6,000*l.*, and all the rent the Company were getting for them was 150*l.*, or about 2½ per cent., instead of 10 per cent., as was usual with the outlay on buildings. Whether there was any understanding, that on account of the lowness of the rent they were to have the coke at a cheaper rate from the tenant, he did not know.

Mr. JAMES HEYWORTH said, his friend Mr. Ormerod would be out of order in alluding to these matters, were it not that he adduced them as grounds for want of confidence.

The CHAIRMAN begged the honourable proprietor to proceed. The Directors had no wish to close the door upon any discussion, nor to stand upon points of form.

Mr. ORMEROD would say nothing more than this, "Look to your pockets!" (A laugh.) If they were deterred by the cry of want of confidence they would repent it. They must not stand upon ceremony, but look rigidly into their affairs, and this could only be done by a Committee of proprietors. He had great confidence in Mr. Ellis and Mr. Waters. (Loud applause.) He was glad to see they had done so much, but he thought their feeling as Directors, and their connection with the Board, would, in some measure, paralize their efforts—or at all events, that they would not be so free and unshackled as a Committee of proprietors. (Hear, hear.) If they wished the Midland Counties' Railway to be a moderately paying line, they must go on with this inquiry. They might have a better Report at the next half-yearly meeting, and at the next, but ultimately their property would be entirely ruined. (Applause.)

Mr. JOHN ELLIS, of Leicester (a Director), said, he was now placed in a very peculiar position. At the last meeting he had been one of the dissentients; but certainly he would never have taken a seat at the Board, had he not been chosen by the unanimous voice of the proprietors. He had quite enough to do with his own affairs, and whatever "A Glasgow Citizen" might think, as to the effect of 50*l.* a year, the money, even if he should get it, which he did not think he ever should, would be no object. He was a hasty man, but on the present occasion he could afford to be good tempered, for he had done his duty. He did not come there as the apologist of the past conduct of the Directors, although something might be said for *that*; all that he wished to deal with was the transactions of the Directors since August last. Immediately after the August meeting, the Committee had met, as already explained by the Chairman, and he was bound to say that no three men could have acted more honestly or more fairly than the three who had been associated in the Committee with John Waters and himself—(hear, hear); they had never been thwarted by those gentlemen in anything. (Applause.) The Committee met as soon they could, and they had since worked a day or two every week. They had not taken things in the lump; everything had been placed on its own bottom. At the next meeting of the Board the Committee made a Report, and (although he did not wish to make James Heyworth responsible for his brother) Lawrence Heyworth was present, and assented to what was stated on the recommendation of the Committee, and that perhaps was one of the reasons why he (Mr. Ellis) had not sooner communicated to the proprietors what had been done.

Mr. J. HEYWORTH said, he had not had two minutes' conversation with his brother since the one referred to.

Mr. ELLIS resumed—The Board unanimously, and without hesitation, sanctioned everything that the Committee recommended. (Applause.) He must do them the justice to say that they had never thwarted the Committee. Some of the servants of the Company had salaries which it required three months' notice to discontinue. Notice had been given on the 1st of October, and the reduction would therefore take effect on the 1st of January next. The wages of the weekly servants had been reduced already. With respect to the circular so often referred to, it had never been submitted to the Board. He himself had neither seen it nor heard of it till it appeared in print. He believed it had been seen by only two or three Directors—

Mr. J. HEYWORTH said, *that* was enough for him.

Mr. ELLIS said, it was not enough for him, for he had told Theodore Rathbone that if he had seen the circular before it was issued, he should have objected to a portion of it.

Mr. J. HEYWORTH—Why did not the Board repudiate it?

Mr. ELLIS—They could not. It never came before them.

Mr. SEDDON said, the circular had been sent in Midland Counties' envelopes. (Hear, hear.)

Mr. ORMEROD had no doubt the expense would come out of the pockets of the proprietors. (Considerable disturbance.)

Mr. ELLIS would now tell them what reductions had been made. From the last accounts it would appear, that the expenditure for the half-year had been in round numbers 51,000*l.* He begged they would mark that all his figures had reference, not to a year, but to a half-year. He was surprised to find how small the sum was upon which the Committee could operate—how large an amount was fixed, and incapable for the present of being diminished. The first item was about 4,000*l.* for maintenance of way. This was let by contract for a term of years, [in answer to a question, it was stated that the contract was for three years,] so that the Committee could meddle with only 500*l.* connected with this item, namely, the wages of the inspector and some men, and this they had done. Then came the coal and coke, the contract for which expired in September or October, so that the Committee could not interfere with that. He had been over to the coke ovens with James Oakes, and other members of the Board, and if the Directors were to be in office at the expiration of the contract, they would recommend that the supplying of fuel should be thrown open to public competition—

Mr. J. HEYWORTH said, this ought to have been done long ago.

Mr. ELLIS thought something might be said on the other side of the question. [The honourable gentleman here created some merriment, by remarking that no doubt some of them considered him a changed man since his appearance at the last meeting; he felt, however, that he was still the same.] It appeared that no fixed arrangement had heretofore been made with James Oakes, relative to the rent of these coke ovens. (Hear, hear, hear.) James Oakes said, he would leave it all to him (Mr. Ellis) but he had declined the responsibility of a bargain, except in connection with other members of the Board. There were 70 ovens, embracing

Digitized by Google

lit, on one part of James Oakes's property, cover-
about 2 acres of land, and the Company had now
a lease of the land for 21 years, at a rent of
a year, with power to remove the buildings
nenever they pleased, and without being bound to
e their coke of James Oakes. There were about
more ovens near the property of James Oakes,
ich he was not willing to give a 21 years' lease
but they had agreed to pay a rent of 10*l.* a year,
6 months notice to quit. If there was any im-
vidence in such a bargain, he was willing to
all the blame on himself. (Hear, hear.)

Mr. J. HEYWORTH wished to know what they had to do with the ovens, as they could purchase what had been in | cheaper.

Mr. ELLIS said, even at the worst they could e the buildings away, and when the rent was so ull they thought it best to be secure. He then e to the item of repairs of engines, about 86*l.* for the half-year. Of this amount 2,633*l.* for materials, which he believed had been pur- ased at a fair market price, so that the Com- tee had not much scope for reduction in *that*

Mr. JESSOP inquired if the repairs of engines at chester were included in that item.

Mr. ELLIS believed not. Then they came to the of engine-drivers and firemen, 1,405*l.* The men's wages they had reduced from 24s. to 21s. eek, which was 3s. below the standard of the th Midland Committee—not of the Directors, of the Committee. He thought engine-drivers e generally overpaid, but he would not take n himself the responsibility of recommending a iction in the wages of 18 or 20 men, when so h both of life and property was entrusted to n. He thought engine-drivers ought not to so high wages; but the reduction, to be of must be made simultaneously on all railways. ar, hear.) Then came the coke-fillers and ners, whose wages for the half-year had amount- o 1,703*l.* That item they had reduced. Next the item of oil, cotton, waste, &c., 640*l.* The mittee had no control over that. [Mr. J. WORTH wished to know what the "waste" unted to separately.—The SECRETARY said, d not the details of that item at hand, but could be supplied.] Then followed superin- ents, clerks, and foremen, 520*l.* Of that ant 250*l.* was fixed (being the half-year's salary r. Kearsley) for a term of years. [Mr. J. HEY- TH—It ought not to have been fixed.] On the of the item the Committee had operated. The was an item of 98*l.* for gas. *That* they could ouch. [Mr. J. HEYWORTH—Why not?] Sun- stores, 76*l.* Next stood police charges, 2,064*l.* Committee had dispensed with eight policemen, thus effected a saving of 416*l.* (Hear, hear, .) Then in the coaching charges they had ted a reduction in the item of 423*l.*, charged laries to booking clerks. The salaries to the ds and porters, and clothing, amounted to 1189*l.*, as regarded the porters and the clothing some- had been saved. The guards they had not med- with at present, these men holding a very re- ible office; in fact, the engine-drivers and guards the only classes not interfered with, and for ame reason. The next item of stores the Com- could not interfere with, if the stores were hased at fair prices. [Mr. J. HEYWORTH—*If.*] Of the amount of 1,152*l.* charged for rs of carriages, 734*l.* was for wages, and *that* been reduced.

r. J. HEYWORTH inquired how the carriages built.

e SECRETARY said, some were built in Derby, he greater part in Lancashire.

r. J. HEYWORTH wished to know if they were ared for.

e SECRETARY said they were contracted for, o tender had been advertised.

e CHAIRMAN said several makers had been ed to.

r. ELLIS continued—The next item of sta- y and tickets, amounting to 162*l.*, they had ouched, nor the compensation account, which of course would vary according to the number of sheep killed on the line. [A VOICE—And to keep that low, you are reducing the number of police!] The next was a very large item, namely, 3,300*l.* for the Derby and Rugby stations. It was for their proportion of the expense of these very magnificent stations—[Mr. J. HEYWORTH—And the magnificent station at Leicester—a mere road-side station. (Hear.) Then came law proceedings—a very small item that half year, being only 8*l.* This the Committee had not touched, nor the item of 114*l.* for advertising. Next came the item of 600*l.* for the half-year for Direction. The Committee took that in hand first of all. The allowance originally was 1,200*l.* a year, out of which the Directors paid 100*l.* to an Auditor. The Committee proposed that it should be reduced to 800*l.* a year if the Directors paid the Auditor, or 700*l.* if they did not. The matter of the Auditorship had not yet been settled. The item of sundries and travelling expenses was not a subject for the Committee, nor the rates and taxes, nor the Government duty, which last, however, would be reduced by the recent alteration in the mode of levying it. The interest to loan creditors was 12,619*l.*, which could not now be reduced, but would be so as the loans fell in.

In answer to questions by Mr. J. Heyworth, the Secretary and Directors stated, that some of the loans would fall in, in January next. The last money they wanted they had been obliged to borrow at 5 per cent. Ultimately the Directors hoped to get money at 4 per cent. Mr.—Heyworth remarking that he had no doubt whatever of it.

In answer to further questions by the same gentleman, it was stated that Mr. Cripps, one of the Directors, was the Auditor. Mr. Cripps did not serve on any Committee, and beyond the 100*l.* for auditing, had no portion of the Directors' allowance.

The CHAIRMAN said, power had been given by the last Act to the proprietors to choose Auditors at a general meeting, but from the confusion which prevailed towards the close of the proceedings at the August meeting, they had not exercised that power. The Directors had therefore continued the services of Mr. Cripps.

Mr. ELLIS said, the result of the Committee's labours was this: that of the 51,042*l.* which constituted the half-year's expenditure, they could do little or nothing with 38,262*l.*, leaving therefore only 12,790*l.* with which the Committee could interfere. He was disappointed that the field was so confined; but they had effected reductions to the extent of 2254*l.* for the half-year, or 4508*l.* for the year. (Hear, hear, hear.) These reductions the Committee proposed, and the Directors at once sanctioned. The Committee had a little more to do, but he could not hold out hope of any further material reduction at present. (Hear, hear, hear.) The Committee were not prepared with a Report, because they were not in possession of full information as to the liabilities of the Company. He believed they would have that information in the course of a month, and then they would be able to state precisely how they stood. (Hear, hear, hear.) He himself knew very little of engines, but Edward Bury was present, and would no doubt give any information. He (Mr. Ellis) had been over the sheds, and the engines appeared to him to be in a very creditable state. Out of the number of forty-six, there were twenty-seven in a perfect state of repair; others were in the course of repair, and others laid aside. Seven or eight would require new fire-boxes, and when that was done they could reduce the number of men employed, and also their wages, still lower than the Committee had done. He believed the Committee were the first who could have reduced the wages of these men. It could not have been effected two years ago, from the great demand for such workmen, but he thought it might have been done twelve months ago. Did Edward Bury think so?

Mr. BURY did not think the wages could have been reduced twelve months ago. (Hear, hear.)

Mr. JESSOP said he had written to the Chairman, stating that men to whom his (Mr. Jessop's) firm were paying 25s. a week, the Railway Company were taking away from them and paying 36s. a week. The Chairman had acknowledged the receipt of the letter, but that was all the notice taken of it.

Mr. ELLIS—As to the stores, the system seemed very perfect—

Mr. J. HEYWORTH inquired who purchased the stores.

The SECRETARY replied—a Stores' Committee, and mentioned the names of two of the Directors, one of whom was Mr. Youle.

Mr. J. HEYWORTH inquired if he was connected with the house of Youle and Co., and if he supplied any stores to the Company?

Mr. YOULE said he had supplied timber to a small extent. It was no object to him.

Mr. J. HEYWORTH said, the practice ought to be put down. The principle was bad, however small the amount of dealings might be. (Hear, hear, hear.)

Mr. ELLIS deprecated the principle as much as any one. He might state, however, that his friend James Waters being in the timber trade himself, had always narrowly scrutinized the bills of Messrs. Youle, and they had been found to be fair and reasonable. As to what had been said about his (Mr. Ellis's) not being able to act impartially, from his connection with the Board, it was incorrect. The Directors could not muzzle, and had not attempted to muzzle him. (Hear, hear, hear.) He had the satisfaction of knowing that he had acted like an honest man, but so much trouble had been entailed upon him through his appointment, that he should not feel sorry to be relieved from it. ("Hear, hear, hear," from the Directors.)

Mr. J. HEYWORTH was quite willing to admit that Mr. Ellis had given much attention to the subject, but he had not shown that reduction might not be carried further. If Mr. Ellis thought reduction had been carried as far as was practicable, and the Committee now proposed should, on investigation, think the same, the Directors would come off with flying colours. (Hear, hear, hear.) It was evident from what had been said, that the Company were tied up by previous improvident bargains. ("Hear, hear, hear," and cries of "No, no," from the Directors.) Mr. Ellis, to his honour, disapproved of certain of the acts of the Directors—such, for example, as entering into contracts with members of the Board. (Hear, hear, hear.) As Mr. Kearsley's name had been mentioned, he wished to say a few words relative to his appointment. At the last meeting the Chairman stated that Mr. Kearsley had been engaged for a term of five years at an increased salary, because an offer had been made to him by the Grand Junction Company. Not being quite certain of the facts, although as a member of the Grand Junction Board he had no recollection of such an offer, he had not made any observation at the time, but thinking that it would have been unhandsome on the part of the Grand Junction Board to interfere with the affairs of another Company, he had spoken to Mr. Moss, the Chairman, on the subject; and his reply was, that no such offer had been made to Mr. Kearsley, who was but one of five candidates for a situation vacant by the resignation of Mr. Buddicome, and that previous to the day of election Mr. Kearsley had withdrawn his name. This was very different from having an offer made to him. (Hear, hear, hear.)

Mr. KEARSLEY said, that hearing that a vacancy had occurred from the retirement of Mr. Buddicome, and being of course anxious to get a better appointment, he had gone down to Liverpool, where he saw Mr. Moss, and showed that gentleman his testimonials. Mr. Moss told him that the situation was not to be advertised. He (Mr. Kearsley) had told Mr. Rathbone what transpired, and that gentleman advised him to proceed no further in the matter till he (Mr. Rathbone) had written to the Chairman of the Midland Counties' Company.

Mr J. HEYWORTH—Did the Grand Junction Board make Mr Kearsley an offer?

Mr. KEARSLEY—No. (Hear, hear, hear.)

The CHAIRMAN—Had Mr. Kearsley any doubt that he might have got the appointment?

Mr. KEARSLEY—Not any doubt.

Mr. J. HEYWORTH said, Mr. Moss had not the power of filling up the vacancy.

Mr. RATHBONE said, Mr. Kearsley had made a statement to him which led him to think that Mr. K. could get the appointment, whereupon he (Mr. Rathbone) wrote to the Chairman, and Mr. Kearsley was

Digitized by Google

engaged on the Midland Counties' line in the way referred to. He thought the Company fortunate in having secured Mr. Kearsley's services. If the Grand Junction Company had been as fortunate, perhaps their locomotive expenses would have been reduced as low as those of the Midland Counties'.

Mr. J. HEYWORTH—What salary had Mr. Kearsley then?

Mr. KEARSLEY—350*l*.

After a good deal of discussion on this point,

The CHAIRMAN stated that the term of years had been at first objected to by Mr. Kearsley. He thought Mr. Kearsley's services well worth the remuneration.

Mr. J. HEYWORTH said, he had nothing to remark as to the merits or demerits of Mr. Kearsley. He might be worth 500*l*. or more, or not worth half so much, but he complained that a statement should have been made at their last meeting that Mr. Kearsley had been offered an engagement by the Grand Junction Company, the alleged offer having been used to get an increase of salary.

The CHAIRMAN said, it must have been quite evident to every one that no formal offer had been spoken of. They all knew that practically Mr. John Moss was the Grand Junction Board—(a laugh)—and Mr. Rathbone was satisfied that Mr. Kearsley could have got the appointment had he followed it up. (Hear, hear.)

Mr. RATHBONE said the grounds upon which he had come to this conclusion were not only what Mr. Kearsley had stated, but Mr. Moss had made inquires of him as to Mr. Kearsley's qualifications. He could not but reply that Mr. Kearsley was very eligible. He thought Mr. Kearsley was well worth the 500*l*. a year. (Hear, hear.)

Mr. JESSOP said, his firm had 60 or 70 steam-engines at work, and therefore he was practically acquainted with the question. If the Company had engaged a foreman at 3*l*. a week to look after the workmen, they would have got a better man than Mr. Kearsley. (Hear, hear.) They ought to have a man who would go about with a dirty apron and a blackened face. (Hear, hear, hear.) Their (Messrs. Jessop's) foreman had only 30*s*. a week. (Hear, hear, hear.)

The CHAIRMAN hoped that whoever might be the successors of the present Board, they would not engage for a department so responsible as that of Mr. Kearsley, persons in the class of life just described. ("Hear, hear," and murmurs.)

After some further desultory conversation, and not a little disturbance,

Mr. RATHBONE said, as reference had so repeatedly been made to the circular issued by Mr. Cropper and himself, he must deliberately put it on record—[the honourable gentleman here read]—"That the circular was not submitted even to individual Directors for approval or otherwise; it was only shown to one or two as a matter of courtesy, the writers distinctly saying, that they wished to address the Lancashire proprietors, whom they considered to be their constituents."

Mr. J. HEYWORTH—Did not Mr. Cropper write a circular?

Mr. RATHBONE—He did.

Mr. J. HEYWORTH—And was *that* also submitted?

Mr. RATHBONE—Not for approval. The circular issued was compounded of the two. The honourable gentleman proceeded to say that he did not complain of Mr. Heyworth's remarks on the circular, which were courteous enough, but he certainly was surprised, from what he knew of Mr. Ormerod, that that gentleman should have spoken of it as he had done. There really was nothing of mystification about it. As to the remark of Mr. Ellis, that he would have objected to one part of it, there must have been some mistake. He had not intended to impute improper motives to all who voted at the last meeting against Mr. Horsfall—certainly not to Mr. Ellis—but when he remembered that Mr. Cropper and himself had offered to resign and make way for Mr. Ellis, whom he had long wished to see in the Direction, he could not help thinking that the opposition to Mr. Horsfall, and to Mr. Fox who was the only Director resident at Derby, was on the part of the majority, factious. (Hear, hear.) Mr. Heyworth had asked if there were any physical obstacle in the way of his retirement? There was not, any more than it was physically impossible to cut his own throat or Mr. Heyworth's, but there *were* obstacles nevertheless. Mr. Cropper and himself had been anxious to withdraw, and having apparently lost the confidence of a large portion of the proprietors, had determined to do so at once; but Mr. Ellis, whom, as he had already said, he had six years ago wished to see at the Board, had threatened that in that case he also would retire, and others had said the same, and under the circumstances they (Mr. Cropper and himself) could not do otherwise than continue for a little longer, namely, until February next, unless they wished the undertaking to be thrown into inexperienced hands. (Hear, hear.) On the general question, he would not detain the meeting, as it had already been so fully discussed. If the meeting thought that the Directors could go on under the supervision of an irresponsible body of proprietors, they might say so; but he for one would not consent to hold office upon such terms. He must, however, assure them that there was no desire on the part of the Directors to stop inquiry. On the contrary, they were anxious to afford every facility for investigation, but it must be carried on by parties who were responsible. The proprietors appeared anxious now to supersede Mr. Ellis, whom they had been so desirous at the last meeting of appointing. They now wished to turn him out. [Mr. J. HEYWORTH—No, no.]—The proposition of Mr. Heyworth would certainly have that effect. ("No, no," and "Hear, hear")

Mr. R. MATHER said, it had been intended to bring the question of Auditors before the last meeting. Some persons were of opinion that the duty of an Auditor was simply to check accounts and examine vouchers; others thought that an Auditor ought to examine the votes and acts of the Directors. These two interpretations were widely different, and the Act of this Company seemed to incline to the former, as it fixed the time for the labours of the Auditors for within a fortnight of each meeting. As the last meeting was thinly attended when this matter was to be brought forward, it was deemed desirable to defer it, especially as Mr. Cripps was very efficient. Mr. Heyworth appeared to object to a Director acting as Auditor, whereas on the Grand Junction line, the most successful of all, and of which Mr. Heyworth himself was a Director, the accounts were always audited by two members of the Board. (Hear, hear.) He would now put a question or two to Mr. Ellis. Was Mr. Ellis of opinion that the Committee's retrenchments could have been carried out as early as six months ago, or earlier, or was it not greatly owing to the state of the times and of wages that the Committee had been able to effect so much?

Mr. ELLIS thought all the reductions might have been made six months ago—(hear, hear)—but if they were to go much further back, many of them could not have been effected.

Mr. MATHER then entered into the question of fares.

Mr. J. HEYWORTH objected to this. It was out of order.

The CHAIRMAN said, the subject of fares was brought forward, not only in Mr. Heyworth's requisition but in his resolution. Mr. Mather was therefore perfectly in order.

Mr. J. HEYWORTH said, the subject of fares was only mentioned in the requisition and resolution as a subject for the Committee to investigate—not that they might be discussed that day.

Mr. MATHER resumed and said, he deemed it highly impolitic that the subject of fares should at present be investigated by a Committee, as it would expose all the negociations going on with other Companies. (Hear, hear.) He felt as much interest as any one in the prosperity of the railway, for his stake in it was to him very considerable, being in fact larger than his stake in any other line; but he must deprecate strongly any present interference with the fares.

Mr. J. HEYWORTH said, Mr. Rathbone had paid himself a very pretty compliment in stating the lamentable catastrophe that would ensue were he and Mr. Cropper to retire—

The honourable proprietor was here interrupted by loud cries of "Order," "Question," "He has spoken twenty times," &c. A scene of great confusion followed, and Mr. Heyworth sat down. When order had been somewhat restored,

Mr. GOSSETT said, he wished to ask a question, as upon the answer the vote of himself and of several of his friends would depend. Was Mr. Heyworth's Committee to act in conjunction with the Committee of Directors, or separately?

Mr. ELLIS would say, for one, that he had gone over the ground once, and had had a vast deal of trouble, and he would not go over it again. (Hear, hear, hear.)

Mr. COOKE, of Leicester, inquired if any reduction had been made in the salary of Mr. Bell, the Secretary.

The CHAIRMAN said it had been reduced to 600*l*. It had been 800*l*., but Mr. Bell had voluntarily resigned 200*l*.

Mr. COOKE wished to know why the mail to Nottingham had been taken off the railway?

Mr. ELLIS said, he had been engaged on the part of the Company in negociating, with Lieut. Harness on the part of the Post-office. Lieut. Harness had accepted the terms which he (Mr. Ellis) proposed, stating at the same time that he should represent to the authorities in St. Martin's-le-Grand that the terms were too high, and recommend them again to go on the road.

The SECRETARY said, the Company had offered to convey the mails for one-half the sum agreed to by Lieut. Harness, but the only answer was, Col. Maberley's compliments, and that the services of the Company were not required.

Mr. COOKE wished to know why they had lost the goods' traffic to Manchester?

The SECRETARY said, it was from the lowness of the rates charged by the Manchester and Birmingham Company.

The CHAIRMAN said, it was from no lack of zeal on the part of the Directors or officers of the Company.

Mr. WOODHAM, as coming from that neighbourhood, was sure that the Manchester and Birmingham Company were carrying on the goods' traffic at a loss. While on his legs, he would state that, although originally he signed the requisition, he felt so satisfied with the explanations given, that he should vote against the appointment of a Committee. (Hear, hear, hear.)

Mr. I. C. WRIGHT (a Director), complained of some remarks which had been made upon the conduct of Sir William Heygate and himself, by a correspondent of the *Railway Times*. After denouncing anonymous writing as malicious and cowardly, he said that perhaps the shortest answer he could give would be by reading a letter which he had addressed to the Editor of the *Railway Times*. The honourable gentleman then read as follows:—*

"*To the Editor of the Railway Times.*

"SIR,—Allow me to correct an insinuation made by 'A Suffering Shareholder,' in your paper of the 5th instant, which I have only just seen. He there supposes that I and other Directors are in the receipt of 50*l*. a year for our services. I beg to inform you that the sum I received last year amounted to 3*l*. 6*s*. 4*d*.; and to a trifle more for the year previous.

"This anonymous sufferer, moreover, is at a loss to know what I have done to merit remuneration. It certainly does not become one, whose time having been otherwise occupied, has avowedly with reluctance continued a Director, and who latterly had been called upon to attend only at Board meetings, two or three times a year, to boast of his services, or of his knowledge of the affairs of the Company, however zealous he may have been when opportunities occurred; but it so happens that Sir Wm. Heygate and myself (the only two Directors named in the letter alluded to) were mainly instrumental some time since in preventing a dividend being declared out of anticipated profits, according to the practice of the Grand Junction Co.—a measure which was pronounced to be 'a most righteous' one by the brother of the gentleman who has originated the meeting to be held at Derby to-morrow, but which was characterised by me as not only unbusiness-like, but as calculated to deceive both the shareholders and the public. This statement will, it is hoped, show that Directors who do not form part of the Managing Committee, and who are only called upon to attend on important occasions, are not so utterly useless as they are supposed to be; and also that they are only paid in proportion to their attendance, upon a principle which compels every Director, in justice to others, to accept the sum awarded to him, however trifling it may be.

"With regard to the object of the meeting to-morrow, from which your correspondent augurs so much good, it can scarcely be supposed he is aware that at the last general meeting, by the desire of the shareholders, and with the full concurrence of the Directors, two new ones were appointed for the express purpose of examining into the affairs of the Company, and curtailing expenses as far as possible. This object it is known they are rigidly carrying out; and as a Report from them is shortly expected, the appointment of a Committee of Inquiry (the object of the requisitionists) certainly appears uncalled for, and most uncourteous, if not insulting, to the two gentlemen appointed to investigate the concerns of the Company at the last general meeting.

"The charge which has been directed against me is, I have no doubt, a specimen of those which are about to be made against my brother Directors generally; and certainly nothing can be more unjust than the blind method of voting by proxy, and condemning parties beforehand, without giving them a hearing.

"I am, Sir, your obedient servant,

"I. C. WRIGHT.

"Bramcote, November 17, 1842."

Mr. C. C. MACAULAY trusted, that as he had been personally alluded to, he should be permitted to say a very few words. He had succeeded in finding his original notes of instructions, and also the draft copy of the Bill, as read at the meeting pending its progress through Parliament. He begged to say that the clause as originally submitted was *verbatim* the same as the clause in other amended Acts—for in amended

* We beg to state, that this is the first we have heard of the letter.—ED. R. T.

Digitized by Google

Acts alone did such clause appear. He had two of these Acts now before him, namely, the Birmingham and Derby and Bristol and Exeter, but there were several others. Prints of the Bill had been circulated among the proprietors, and a meeting had been convened to consider its clauses. From some interlineations which he had then made in another part of the Bill, he was satisfied that the copy now before him was that which had been read to the meeting. As the clause then stood, it empowered the proprietors to reduce the number of Directors, but there was no provision for again raising the number, should it be considered advisable. It had been deemed right that such proviso should be inserted, and it was so inserted, drawn up from the memoranda which he took at the time, and which were now before him. Mr. Ormerod, no doubt, had an impression that the instructions given were of a different character, but he (Mr. Macaulay) had acted up to what he believed to be his instructions. (Hear, hear.) Whatever might be thought of his want of competency—(No, no,)—he could not be charged with want of zeal in the Company's behalf. (Hear, hear, hear.) With his memoranda now before him, he should be ready to depose in a court of justice to what he had stated.

Mr. ORMEROD explained that he had been far from doubting Mr. Macaulay's competency, with which indeed they were all familiar. He would, however, read a passage from a Report put forth by the Directors prior to this application, in which Report they stated that it was their intention to reduce the number of Directors. [The passage was here read.] He would leave the Directors and the Solicitor to settle the matter between them. (Hear, hear, hear.)

Mr. MACAULAY said, they *had* taken power to reduce the number.

The CHAIRMAN thought Mr. Macaulay had fully vindicated himself. There certainly was a misapprehension on the part of many of the shareholders, and the Directors finding this, and knowing that they could not violate an Act of Parliament, had devised means of meeting the difficulty. They had come to a resolution on the subject, which he had not produced before, because the resignation of the whole Board in February would render it superfluous. The honourable gentleman here read the resolution which was to the effect that the members of the Board periodically retiring by rotation should resign previous to each meeting, so as to give the proprietors an opportunity of re-electing them or of reducing the number. (Hear, hear, hear.)

Mr. MATHER, amid loud cries of "Question," "Time," "Divide," &c., said he had done injustice to the Solicitor of the Company in questioning, on a former occasion, his skill, or a higher attribute. He (Mr. Mather) had originated the proposition of taking power again to raise the number of Directors if deemed desirable, and in looking to *that*, Mr. Macaulay had perhaps lost sight of the declared wish of the meeting to reduce the number.

Mr. PAGET spoke in favour of the appointment of a Committee.

Mr. CROPPER (a Director) said, after the expressions of want of confidence which had been given, he could not think of retaining his seat at the Board. He had accepted it solely at the urgent solicitation of others, and should be glad to vacate it. He should not reply to the personal remarks to which he had been exposed; such things were best treated with contempt. (Hear, hear.) He had hoped that a very different tone would have distinguished the proceedings of the day. (Cheers.)

There were again loud cries for a division; when

The CHAIRMAN asked Mr. Heyworth if he wished to reply.

Mr. J. HEYWORTH said, if they were to go on talking till midnight, they could not have the matter more fully before them. It was now time to come to a decision, especially as so many digressions from the matter in hand had been indulged in. (Applause.)

Mr. MATHER, amid the most awful hootings, whistlings, and all kinds of discordant noises, said, Mr. Heyworth himself had been the principal digressor.

Quiet being restored, the Chairman put Mr. Heyworth's resolution. The hands held up for and against were about 3 to 1.

The CHAIRMAN said, the show of hands was in favour of the motion.

This announcement was received with tumultuous cheering, during which Mr. Mather demanded a poll.

After some delay, preparations were made for taking the votes.

Mr. J. HEYWORTH inquired if the Directors would allow the other resolutions to pass, supposing the votes to be in favour of the motion.

The CHAIRMAN would assure the honourable proprietor that the Directors would offer no factious opposition.

It was ultimately arranged that the following resolutions should be carried, contingent upon the passing of the motion for the appointment of the Committee.

Moved by Mr. James Heyworth, and seconded by Mr. O. Heyworth, "That the following gentlemen be, and they are now appointed, such Committee, namely: Mr. James Heyworth, Mr. John Waddington, Mr. Joseph Glynn, Mr. John Ormerod, Mr. W. C. Birley, Mr. W. Morley, and Mr. George Byng Paget."

Moved by Mr. J. Heyworth, and seconded by Mr. O. Heyworth, "That the Directors, officers, and servants of the Company, do afford to such Committee all the information and assistance in their power, with reference to the subject-matters of inquiry, both by the production of all books, papers, and documents, and by explanations, and otherwise, as need may be."

Moved by Mr. James Heyworth, and seconded by Mr. O. Heyworth, "That as soon as the Committee shall have agreed upon their Report, and have transmitted the same to the Chairman or Secretary, the Directors do forthwith call another special general meeting of the proprietors, to be held at this place, at which such Report shall be taken into consideration, and such resolutions be adopted with reference thereto as may then be thought proper."

A vote of thanks to the Chairman was moved by the same gentlemen, and carried.

It was nearly 7 o'clock before the poll-books were cast up, when the numbers stood thus:—

For the Motion	4,024 votes.
Against the Motion	3,307
Majority in favour of the Motion	715

No formal announcement of the numbers was made, most of the proprietors having already taken their departure by the different trains.

Thus ended one of the most memorable of railway meetings. Some portions of the speeches we have necessarily been compelled to curtail (and indeed there was a vast deal of repetition); but we have endeavoured to give a fair and impartial exposition of the facts and arguments adduced on both sides.

There must have been from 250 to 300 persons present, almost all of whom remained till the vote was taken.

MIDLAND COUNTIES' RAILWAY.

To the Editor of the Railway Times.

SIR,—You have always urged on railway proprietors the necessity that constantly exists of looking into their own affairs, and throwing off the apathy which is generally shown by this numerous body of capitalists. The North Midland and Midland Counties' Railway proprietors have at last roused themselves, and I am persuaded it will be attended with the happiest results.

The North Midland Directors have attended (though with an ill grace) to the wishes of their proprietary, but the Midland Counties' Directors resign their offices because the shareholders wish to appoint a Committee to examine into their own affairs. This gives me a bad opinion of their conduct. If they have conducted themselves well they need not be afraid of any examination; but I fear that it will be found they have neglected their duty, and trusted the funds of the railway to the merciless hands of engineers, clerks, attorneys, contractors, &c.

Have not the shareholders good reason for their proceedings? Have not the Directors deceived them? I think they have. For instance, at one half-yearly meeting they informed the proprietors that 110,000*l.* would complete the expenditure. Would not any one suppose that 24 gentlemen, with a moderate quantity of brains, assisted by clerks in abundance, after the railway was in full operation, were equal to collect the account of the outstanding debts and liabilities, and did not the above particular sum appear as if an *especial* calculation *had* been made? Any shareholder must say the mention of the odd 10,000*l.* showed a very exact summing up; indeed, they placed that confidence in the Board which they now complain of their not giving them. What was the result? At a subsequent meeting, the same Directors unblushingly tell the proprietary that they shall require 250,000*l.* more to finish the concern! If this one fact be not enough to destroy all confidence in the Board, I know not what is.

What transpired at the meeting was every way calculated to damage this ill-fated concern. Should the London and Birmingham Directors, as is expected, buy or lease the line of the Derby and Birmingham, and run the northern traffic through it, I see nothing but ruin for the Midland Counties' line. Nevertheless, hoping for the best,

I am, Sir, yours, &c.,

W.

SHEFFIELD AND MANCHESTER RAILWAY.

To the Editor of the Railway Times.

SIR,—In your publication of Saturday last, in allusion to the special general meeting of shareholders in this undertaking, held on the 16th instant, you remark that the whole matter seemed to have been got up in "hot haste," the Chairman himself not being aware of the meeting, until a day or two previously to its being held. It is very true that the meeting was convened on as short a notice as the Act of Parliament relating to this railway permits; and it is equally true that I was not, from accidental causes, apprised of it until Monday, only two days before it took place.

I think it right, however, to endeavour to shield the Directors from a charge being entertained against them of undue precipitancy. The haste with which the meeting was got up may be easily, and I think satisfactorily, explained. The Directors had obtained the authority of the half-yearly meeting, in February last, to borrow on the credit of the railway works, and the tolls thereof, the sum which the Act of Parliament empowered the Company so to raise; and at the subsequent meeting in August, they had submitted to the consideration of the shareholders the negociation for a loan then pending with the "Public Works Loan Commissioners," and had received the full sanction and approval of the meeting to that measure.

The Directors naturally enough persuaded themselves that the authority so obtained, to borrow both generally and particularly, would be regarded as perfectly satisfactory, but in this they were disappointed, the Commissioners requiring the Directors to procure, at a special general meeting to be convened for that express purpose, the sanction of the shareholders to the borrowing of 50,000*l.*, the specific amount of the loan proposed to be granted. The money being wanted, and this being the only impediment to it being advanced, it was deemed advisable to have the meeting for the above-mentioned object as soon as it could legally be held. This explanation will, I trust, not only sufficiently account for the apparent haste with which the shareholders were assembled, but also satisfactorily show that, so far as the matter submitted to the meeting is concerned, there had been nothing like precipitancy, the question having been brought under the attention of the proprietary full three months ago.

I am, Sir, yours, &c.

MICH. ELLISON.

Sheffield, November 22, 1842.

SHEFFIELD AND MANCHESTER RAILWAY.

To the Editor of the Railway Times.

SIR,—It is now some time since a letter appeared in your journal, purporting to be an answer to mine, and signed "A Director." This gentleman was too much ashamed of his communication to let his name appear as the author of it, and his caution is not to be wondered at, looking at the roundabout laboured statements of which his communication was composed, instead of its being a plain, simple, and truthful denial of the charges made by me. The truth of those charges was fully esta-

Digitized by Google

blished in my mind on the appearance of "a Director's" letter, and I did not intend to honour it by any further notice. As a general meeting of the Company was to be held here last Wednesday, I made up my mind to attend and oppose granting any further powers to the Directors, until the Board had been purged of those members who had not acted as all right-minded men should act. I named my intention to several shareholders, and our mutual impression was, that the time of the meeting was the usual one, 12 o'clock. I was, however, very much surprised to find the meeting over on my arrival, the time being 10 and not 12 o'clock. It appears from the reports of the meeting, that it was a thin one, and some of the speakers rightly attributed it to the very little publicity given to the meeting.

It is the first time the Directors have been too economical in the way of advertisements, doubtless for very good reasons.

I have learnt since the meeting that some of the obnoxious members of the Board have resigned, to what extent I am not yet aware, so that the agitation has been of service.

Let me offer a word or two of advice to my brother shareholders, some of whom I see are dissatisfied with the present Management. We have the example of the North Midland Railway before our eyes; let us take care we do not get in the same situation as its proprietary. We are paying the enormous sum of 1,600*l.* a year for Direction, and the consequence is that our business is very badly managed, to say the least of it. One proof of this is the fact, that the Chairman of the general meeting held last Wednesday, in whom I have more confidence than the whole of the Board, said that he did not know of the meeting until the Monday previous. This must go on no longer. We are about to apply for a new Act, and we must take care that the number of Directors is reduced to five, or at all events not more than seven, and we must reduce the salaries of these to 50*l.* a year, enough to pay their expenses, until we are in a position to afford them more. If we neglect to do this, our railway, like many others, will be worked for the benefit of Directors and other officials alone.

I am, Sir, yours, &c.

ISAAC IRONSIDE.

Sheffield, November 23, 1842.

SHEFFIELD AND MANCHESTER RAILWAY.

To the Editor of the Railway Times.

SIR,—Can you inform me, through your valuable pages, how it is that the Sheffield and Manchester Railway Company are now spending so much money in erecting sheds, &c., at Newton, 7 miles from this town? I think, that as the Company had so much land of their own in Ardwick, it would have been much better to have had a suitable place built nearer the town, as every article consumed in the carriage and locomotive department has to be taken up the line to Newton. Is there any one connected with the Company who will find his property in that neighbourhood considerably enhanced in value? I should like to know this.

I am, Sir, yours, respectfully,

A SHAREHOLDER.

Manchester, November 17, 1842.

RAILWAY MANAGEMENT.

To the Editor of the Railway Times.

SIR,—Thanks to the energy and determination of the North Midland shareholders, a blow is at length struck at that system of lazy favouritism and supercilious extravagance under which the property of credulous individuals, like myself, has been reduced below half its original value. It is, indeed, high time we began to move. There are many individuals whose loss infinitely outweighs mine, though perhaps not in proportion to their means; and in order that we may compare notes to our mutual advantage, I will just give a specimen of the golden fruits which I have succeeded in reaping in the field of RAILWAY INVESTMENT, for I am no speculator, and never intended being so:—

Table of Railway Profits and Losses.

No. of shares	Name of railway.	Average cost per share, including premium.	Selling price.	Loss.
80	London & Greenwich	£17 10 0	£5	£1000
50	London & Croydon..	15 0 0	10	25
50	London & Brighton	54 0 0	35	954
50	* Eastern Counties..	24 0 0	9	75
12	North Midland	74 0 0	60	16
				£312
To this amount of 3,127*l.* must be added the cost of purchase and of sale, transfers, registration fees, &c., at least				100
Loss of interest totally or partially, I find by accurate examination, exceeds the sum of....				9: 1
Total loss on investment in five lines .				£4,21.

Being at the rate of 66*l.* per cent. upon the sum embarked, and mine is no solitary instance. If it were any alleviation to have brethren in misfortune, I need not deny myself the comfort. Can you then wonder, Sir, that so many railway schemes fall stillborn? Engineering abominations are working their own cure, and we who with difficulty have saved the wreck of our past ventures, are in no hurry to repeat the experiment.

I am, Sir, yours, &c.,

A BONA FIDE VICTIM.

November 19, 1842.

ECONOMY IN THE WORKING OF RAILWAYS—YORK AND NORTH MIDLAND RAILWAY.

To the Editor of the Railway Times.

SIR,—As the attention of railway proprietors is occupied with the subject in question, a few *practical facts*, of a very important character, may go a considerable way to prove the extent to which economy may be carried, and with such satisfactory results as to remove the scruples of the most timid, and convince the most obtuse of their practicability. But let us come to facts at once.

In your supplement for February 12, 1842, page 170, and in No. 240, August 6th, 1842, page 817, we have the working of the Leeds and Selby line for 12 months, under the very able management of the York and North Midland Directors, viz.:—

	Dec. 31, 1841.	June 30, 1842.
Rent (six months) at 17,000*l.* per annum	£8,500 0 0	£8,500 0 0
Maintenance of way	734 6 0	680 12 3
Office establishment.....	200 0 0	200 0 0
Merchandise expenses.....	472 1 0	303 3 11
Coach disbursements	131 4 0	110 8 9
Rates and taxes.....	565 5 8	412 12 11
Duty on passengers	290 7 5	163 11 9
Police and stationmen.....	288 7 4	152 19 8
Compensation.....	256 18 1	19 0 4
Stationery	44 5 0	24 8 6
Leeds disbursements	86 5 8	*Nil.*
Selby ditto.....	106 11 3	*Nil.*
Sundry ditto	104 5 8	134 0 5
Direction ditto.....	250 0 0	250 0 0
Hire of waggons.....	37 4 3	*Nil.*
Balance carried down	1,024 11 8	127 11 4
Total.....	£13,047 12 6	£11,078 9 10

Moreover, in the accounts of the York and North Midland and Leeds and Selby Railways, for the same periods, we find, with reference to the latter, most important savings:—

	York and North Midland.	Leeds and Selby.
For wages and repairs of engines and carriages, about.....	£6,000 0 0	*Nil.*
Coke.....	5,300 0 0	*Nil.*

Hence the advantage of one line leasing another where there are Directors who will stick at *nothing* to make their measures answer their predictions. For instance, where the Leeds and Selby receipts are 13,047*l.* 12s. 6d. for the half-year ending December 31, 1841, by economy they make ends meet, and have a balance of 1,024*l.* 11s. 2d.; for the following half-year, where their revenue is only about 11,078*l.*, they manage, by striking out different items of expenditure, and reducing others, to have a balance of 127*l.*; and I have no doubt, if hard pressed, they could manage to strike out the maintenance of way, and several other large items. For instance, in the former half-year, the receipts for passengers were about 5,044*l.*, and the Government duty about 296*l.* Now, when they had only about 4,011*l.* for passengers, instead of paying the proportionate amount of duty, or about 236*l.*, they contrive to get off with 163*l.* Are not these the sort of men we want for Railway Managements—*men who will stand upon no ceremony?*

There are those who doubt the accuracy of the York and North Midland accounts, and suspect that there are a *few thousands* in expenses now laid on the shelf, to be taken down *when* prosperity will enable them, if not previously handed over to the *capital* account. But, if true, what does it amount to? Politicians differ as to the advantages or disadvantages of a national debt; and if it serves to cement and bind together a nation, why should it not be a benefit to Railway Companies? What reason have we to doubt of the possibility of working the Great North of England, the North Midland, and the Hull and Selby, *without such expensive items* as we have alluded to, when the York and North Midland Directory have demonstrated the fact by their management of the Leeds and Selby? In fact, I have no doubt they would save the London and Birmingham about 100,000*l.* per annum in locomotive power and carriages alone.

The York and North Midland proprietary are the most tractable and good-tempered men that the railway world can boast of, and so long as they are headed by an able body of Directors, we have no doubt of the success of any enterprise into *which they may be led.*

The annual revenues of different railways are at present ranging from about 7*l.* to 21*l.* per cent. on the amount of capital expended. The receipts of the North Midland and of the York and North Midland, are both about 53*l.* per mile per week at present; however, with the same economy in working, *the results must be very different*, because of the cost of the latter being about 22,500*l.* per mile, while the North Midland has cost double that amount. Therefore, although every proper attention to economy is desirable, it should never be forgotten that the improvement of the revenue is indispensable to the prosperity of that magnificent railway.

I am, Sir, your obedient servant,

BRUTUS.

Leeds, November 21, 1842.

NORTH MIDLAND RAILWAY.

To the Editor of the Railway Times.

SIR,—Nothing has thrown more discredit on railway property than the disappointment of the false hopes so frequently held out to shareholders, and this has been pre-eminently the case with the North Midland. While I highly approve of the late searching investigation made into the expenditure of this line, and feel desirous of seeing economy introduced into every department, I cannot help thinking that the expectation to be derived from these are somewhat exaggerated. The present sweeping changes proposed by the Committee of proprietors, and even those of the Directors, may be pushed too far, and great caution is required in carrying them into effect. It is evident that every supernumerary servant ought to be dismissed, but on looking over the salaries and wages paid at present by the Company, it will be seen that these are already *moderate;* and it is extremely questionable how far taking 20*l.* from the salary of a superintendent or head of a department, where activity and vigilance are requisite—bringing down the annual allowance of an efficient clerk from 105*l.* to 90*l.*, or of another from 108*l.* to 52*l.*, or reducing the wages of good workmen 2s. a week, be not likely to be the means of losing the best servants of the Company, and creating a feeling of discontent, which will end in supineness and carelessness. The recollection of railway accidents is

* I did not take up my proportion of debentures and discount shares—"A burnt child dreads the fire."

Digitized by Google

yet recent in the public mind, and were the reductions proposed in the locomotive and coaching departments by the Committee to be adopted, in the face of the Directors' statement that it cannot be done without the public safety being impaired, it might be the means of diverting much of the traffic to other lines. The want of traffic, the enormous outlay, coupled with the heavy discount at which the half and third shares were issued, are the difficulties with which this line has now to contend.

The *whole* increase of traffic which has taken place in the 18 weeks since 30th June, as compared with the same period last year, amounts to 168*l.*, and as the receipts for the last three weeks have been lower than for the corresponding weeks of last year, it is evident that the half-year's traffic ending December next will not be more (whatever less it may be) than for the same period last year, when a dividend of 30s. per share was declared. As the additional calls have been paid on the third shares since last year, a much larger sum is required now than at that period, to pay 30s. per share. The proportion of dividend then paid on these thirds, in consequence of only a part of the money being called, was 5s. a share, or 5,625*l.* The dividend now required on them, supposing 30s. to be declared on the old shares, is 11,250*l.*, or 5,625*l.* *more* than last year. Whence, then, is this sum to be procured? The dividend for the first half of this year was 20s., and unless 5,625*l.* additional be secured, which seems impossible for the present six months, a dividend of 30s. *cannot* be paid. The approaching dividend will most likely be 25s., thus making 45s. per share for the year, or 2¼ per cent. on the original sum of 100*l.* without providing for a depreciation fund, which is now indispensable. The saving of 11,000*l.* now proposed, if it can be done with safety, will be most acceptable; but as the Directors state that a saving of 6,000*l.* will only make a difference of 2s. per share on the half-yearly dividend, and 5,000*l.* per annum at least would require to be set aside for a depreciation fund, it is evident that, with the present revenue, the whole advantage from such savings can only be to enable the Directors to support an annual dividend of about 50s. a share.

It is to be hoped, therefore, that they will direct their attention to the best mode of increasing the revenue, which is even now threatened to be *diminished* by the withdrawal to the Manchester and Birmingham line of the goods traffic from Manchester to London, at present passing along the Manchester and Leeds and North Midland Railways.

I am, Sir, your obedient servant,
A SUFFERER.

November 15, 1842.

NORTH MIDLAND RAILWAY.

To the Editor of the Railway Times.

SIR,—It is no wonder that the North Midland is doing so little for its proprietors, while it has such an army as something like six hundred men, and an equally disproportioned "staff," to provide for. What occasion, in the name of absurdity, can there be for two Engineers over the locomotive department, unless one is meant for the "sailing," and the other for the "fighting" Engineer, or some equally cogent reason,—accompanied too by a draughtsman! three foremen! two timekeepers! and two storekeepers? And what a head for complexity must that have been which contrived such a system of accounts as requires no fewer than *six clerks* to keep them, and that too for the mere *repairs* of a few engines and carriages! From reading such statements, one might be led to suppose that the chief object which the Directors have in view, in these hard times, is the very charitable one of giving employment, or pretended employment, to a number of individuals whom they *must* keep, whether they employ them or not: perhaps it is so.

I am much surprised at the enormous outlay of 20,000*l.* annually in the locomotive department, inasmuch as I do not perceive amongst the whole one individual who is overpaid, but rather to the contrary, the highest paid officer not receiving more than 225*l.* a year, which it must be admitted is certainly little enough for a "brain box" with anything in it. It is, however, acknowledged that there are some very clever men employed in this and other departments of the North Midland Railway, who richly deserve what they receive, although as regards cleverness, they cannot of course be compared with the officers of an adjoining line, inasmuch as the Directors of the latter are in possession of a "gem" of an Engineer worth (judging from the salaries given) any *two* of those on the North Midland. In the selection of a Manager, too, their rivals have been exceedingly fortunate, for they have found a most magnificent one who (judged by the same test) is equivalent to any *four* of the "best men and true" of the North Midland—a real Othello, of whom we, of less fortunate lines, are apt to exclaim, "Would that Heaven had made *us* such a man!"

I am, Sir, your very obedient servant,
AN ENGINEER, AND RAILWAY MANAGER.

WEST LONDON RAILWAY.

To the Editor of the Railway Times.

SIR,—Is it true that Sir John Scott Lillie is *still* a Director?

Is it true that he *never* comes near the boardroom, and *is not in this country?*

Is it true that he has not subscribed for a *single new share?*

Is it true that he refuses to forego his allowance for past *services?*

Is it true that he goes out of office *by rotation* in February, 1844?

Is it *likely* he will be re-elected?

I am, Sir, yours, &c.,
INQUIRER.

London, November 26, 1842.

WEST LONDON RAILWAY.

To the Editor of the Railway Times.

SIR,—The inquiries of your correspondent "S. T——n" are quite fair; he wishes to know if the 32,000*l.* estimated by Mr. Stephenson as the cost of completing the railway will include engines, carriages, &c. Having made the same inquiry, I am informed that the amount named will be sufficient to complete the line in the manner proposed, and to provide engines, and all the "multitudinous apparatus" requisite to bring the railway into operation, and that the sums calculated upon in the Report of the Directors will in no instance be exceeded. This is satisfactory, as it was at first thought the locomotive engines, &c., would be an additional charge upon the 32,000*l.*

Before subscribing for the new shares, I took the precaution to walk over the line, and I would advise your correspondent, if he has any interest in the undertaking, to do the same, as he would then, like myself, be convinced not only that the 32,000*l.* is sufficient for all the purposes stated, but that the preference dividend of 10 per cent. upon the new shares, instead of being "dimly shadowed," is an absolute reality, and may with certainty be calculated upon.

For myself, having some knowledge of the cost of railway works, I cannot understand how so large a sum even as 25,000*l.* will have to be expended in the completion of this line. Two bridges have to be built under the roads, the ballasting completed, the permanent way laid, and the junction with the Paddington Canal effected. This, with the exception of a little additional earthwork is really all that remains to be done, and I should have supposed that from 15,000*l.* to 20,000*l.* would be sufficient for the purpose.

I am, Sir, your obedient servant,
A HOLDER OF PREFERRED SHARES.

LONDON AND SOUTH-WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—I quite agree with the remarks of "A South-Western Shareholder," that the expenses of this line far exceed what they should do, and I trust that the subject will be taken up with firmness at the next meeting, should the same ratio of the expenditure to the receipts then appear. I have carefully noticed this line for some time, and cannot allow myself to think that, with an increase of income which I estimate at 28,000*l.* at least beyond that of the last half year, the same amount of dividend *can* be declared. On the contrary, I subjoin a statement, by which it appears that 3s. per share more may well be paid, still leaving a sufficient surplus, and allowing 10,000*l.* more for expenses (including 2,000*l.* for income tax) than the last half year.

Gross revenue		£170,000
Expenses (for the last half year £65,230)		75,000
		£95,000
Interest on loans at 5 per cent.	£15,600	
Required to pay former dividend of 30s. per share on 45,912 shares	68,868	84,468
		£10,032
For increased dividend of 3s. 4d. per cent. per annum, or 3s. per share		6,900
Surplus		3,132

I have not taken credit for any saving by the passenger-tax, or by reduced rates of interest on loans, but these ought to be together 2,000*l.*, at least.

My own conviction is, that this dividend may be increased at successive half-yearly meetings, and that our shares will very shortly reach *and maintain* the value of 70*l.* The increase of revenue is unexampled and steady, and I trust the Directors do not deceive themselves by supposing that the shareholders will be content until this very promising line be worked with the same economy as the York and North Midland and the Manchester and Leeds.

I am, Sir, yours, faithfully,
WATCH.

London, November 19, 1842.

LONDON AND SOUTH-WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—I think with your last week's correspondent, that it is time the shareholders of the South-Western took the field. The cry is general in the north—"How is it that the South-Western, with so good a *passenger* traffic, pays only 30s.?" Your correspondent compares it with the Leeds line, but he should have stated also, if *they* can work at 40 per cent. with 50 per cent. in *goods*, how comes it that the South-Western, with 75 per cent. of passengers, cannot bring their expenses under 46 per cent.! Again, the goods traffic has never yet come up to the estimate of 1837, and I am informed the increase by the Portsmouth trade is very small. Does the Secretary look after these matters? Or is it left to some one else to see that some other party does it? They should never rest until the whole of the goods' traffic is transferred from the road to the rail. But, it is of no use our complaining, unless we attend the half-yearly meetings, and insist upon the acounts being published more in detail. Let the shareholders boldly take the matter up, and I have no fear of soon getting a 40s. dividend. Depend upon it we have a good concern, which only wants sharply looking after.

I do not think the Directors are overpaid with 1,000*l.* per annum, but I do think they should either look better after the concern, or make way for others who would do so. I am an advocate for every one being well paid, and also well worked. A new light has come over railway proprietors—the watchword now is, "All workers, and no drones."

I am, Sir, yours, &c.,
A SOUTH-WESTER.

NOTES TO THE TRAFFIC TALBE
(on the opposite page.)

3. Main line, 53 miles; Tewkesbury branch, 2. — Total length, 55 miles.

4. The total length of line and branches is 25 miles:—15 miles of passenger and general traffic, and 10 miles of coal traffic alone. The Company are now before Parliament for power to raise the capital to 500,000*l.*

5. The total amount of stock on which dividends are payable is 750,000*l.*

8. Receipts include the Northern and Eastern toll, &c.

12. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the Liverpool and Manchester and Chester and Crewe lines, as also the toll from the Manchester and Birmingham Company. The divisor employed to ascertain the daily receipts per mile is 121 (85+15+21.) The Company do not now carry goods to Manchester.

14. The receipts include those derived from the Cheltenham and Exeter lines; the former opened for 18 miles, and the latter for 44¼. The divisor employed to ascertain the daily receipts per mile is therefore 180¾ (118¼+18+44½.) The *rent* of the branch lines is together about 1,163*l.* per week. There is likewise a *toll* payable to the Exeter Company of a farthing per passenger and per ton of goods per mile travelled.

15. The dividends have been hitherto (up to 31st December, 1841) appropriated to completing the line and works.

18. Ten per cent. is the maximum dividend allowed by the Company's Act.

19. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. The dividend is *nominally* at the rate of 10*l.* per cent., but to the original shareholders it is equal to upwards of 11*l.* per cent., as the dividend on the original shares is paid upon 100*l.*, although only 90*l.* has been called for. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.

20. At the last meeting no dividend was declared, the disposable balance from the previous six months' working being only 1,472*l.* 10s. 9d.

21. The length stated includes the Shoreham branch. The Croydon and Greenwich tolls are not deducted from the amount stated in the Table. The traffic of the six months produced 63,326*l.*, and there was a balance from the previous half-year of 12,479*l.* Out of these two amounts combined, the dividend (after making certain deductions) was paid.

22. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company.

23. Capital of 993,300*l* includes new capital for widening the line, &c. The dividend of 7s. 6d. per cent. does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table includes the receipts from the footpath, but is exclusive of the Brighton, Croydon, and Dover toll.

24. Capital includes that provided for the Gosport branch. The dividend is calculated on the money actually paid up, a portion of the shares having been issued at 50 per cent. discount. The Gosport branch is included in the length stated.

25. Including Toll, &c., from Sheffield Company, and after deducting omnibus charges, &c., and subject to payments to the Grand Junction Company.

26. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

27. The 4,102*l.* 9s. 11d. are the receipts after deducting omnibus charges, and payments to other Companies.

28. The receipts for goods, &c., include, horses, 34*l.* 19s. 6d.; carriages, 33*l.* 3s. 6d.; dogs, 1*l.* 7s. 0d.; parcels, 212*l.* 2s. 6¼d.; cattle, 17*l.* 0s. 0d.; corn, 8*l.* 18s. 9d; heavy goods, 435*l.* 0s. 6d.; coal and lime, 169*l.* 9s. 11d. —Total, 912*l.* 1s. 8¾d.

31. The amount of stock *created* is 3,000,000*l.*, on which dividends are payable; and the sum of 850,000*l.* is borrowed money at interest. The 3,000,000*l.*, however, is nominal, inasmuch as the shares were some of them issued at a discount, which reduced the actual amount to 2,589,500*l.*, viz.:—15,000 shares at 100*l.* = 1,500,000*l.*; 15,000 of 50*l.*, issued at 40*l.* = 600,000*l.*; 22,500 of 33*l.* 6s. 8d., issued at 21*l.* 13s. 4d. = 489,500*l.*; total 2,589,500*l.* The details of the receipts are as follows—Passengers, 1,824*l.* 1s. 8d.; carriages and horses, 226*l.* 1s. 2d.; parcels, 185*l.* 15s. 11d.; mails, 50*l.* 5s. 9d.; merchandise, 1,037*l.* 1s. 5d.; minerals, 297*l.* 15s. 11d.; cattle, 14*l.* 9s. 5d. — Total, 3,635*l.* 11s. 3d.; including North Midland proportion of Manchester and Leeds traffic, and amount received for Sheffield and Rotherham Company.

32. The receipts are after deduction of Liverpool and Manchester toll.

33. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 134*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway. The 32¼ miles stated as being open for traffic, include the portion of the Eastern Counties' line passed over by this Company.

34. The capital of 533,000*l.* includes that provided for harbour and works as well as railway. The dividend is for a year (since opening of line).

35. The returns are inclusive of Manchester an Birmingham toll.

37. The length stated includes branches.

39. The traffic stated does not include the Leeds and Selby.

TO CORRESPONDENTS.

Investments in Railways.—We are constantly receiving applications for advice with respect to the sale or purchase of particular shares. We have repeatedly stated, that we are very unwilling to offer any opinion upon such points, and, indeed, our readers have the same data as ourselves whereby to form a judgment. Nevertheless, as they *will* have our opinion, we cannot refuse to give it. We wish them, however, to bear distinctly in mind, that we do not, in any instance, hold ourselves answerable for the event. The course we recommend to our correspondents, is simply what we ourselves would follow, were we buyers or sellers under the circumstances detailed by them respectively. With this caution, which we shall take care to keep before parties who apply to us on such subjects, we proceed to notice the applications of the week. We may just add, that the figures and letters have no reference whatever to our traffic list, or to the initials of any railway. We cannot notice questions where this rule is violated. In order that we may not be subjected to needless questions, we must have the name and address of every inquirer, although the answers may be given under a fictitious designation:—Inquirer *(Boltby). No. 5 is much to be preferred, because it has the elements of traffic in far greater abundance. The number of scrip shares was* 28,000. *We are not in the confidence of the Directors, and therefore cannot say what they purpose to do, but, doubtless, explanations will be given at the next half-yearly meeting. We have a high opinion of the line, but cannot say anything as to the precise amount of dividend in the next five years. Our correspondent must use his own judgment as to the time of purchase. We cannot answer letters privately* —C. W. *(Sowerby) taxes us rather too far in requiring answers to* 20 *questions. With No.* 15 *we have nothing to do, the others we shall endeavour to classify. The desirable railways we would place thus:—Nos.* 2, 18, 19, 20. *Next to these Nos.* 17, 1, 12, 13, 6, 14, 11, 8, 16. *With the others we would not meddle, more especially with No.* 5.—W. S. *(Manchester). The best is No.* 3; *then No.* 2. *We would rather avoid No.* 1.—Cantuar. *Sell No.* 3. *There can be no doubt as to that point. The order we should place the lines in would be* 1, 4, 5, 2, 6, 7, 3.—G. H. X. *We would purchase further. We do not think they will go much, if at all, lower. We feel obliged for our correspondent's attention in the former part of his letter.*—A. O. C. *(Oldham). No.* 1 *is but indifferent, even at present prices; No.* 2 *very good.*—W. R. Y. *good; Z. tolerable.*—T. F. *(Ipswich). No.* 1 *will improve; Nos* 2 *and* 3, *very good; No.* 4, *we would not recommend; No.* 5 *will eventually be profitable; Nos.* 6, 7, *and* 8 *will, at present prices, pay about* 5 *per cent. dividend in the course of twelve months; No.* 8, *rather more; No.* 9, *do not purchase. Depressed as the shares now are, they are above their real value.*—J. E. *If any must be sold, we would sell Nos.* 1, 2, *and* 6. *The only Nos. we would buy would be* 5 *and* 8.—S. *Nos.* 7, 6, 8, 4, 2, 3, 5, 1, 9.—Omega *will find an answer to one of his inquiries below. As to the others, we cannot depart from our usual practice of not answering questions without the name and address of the questioner.*—Abbey. *We certainly would not recommend further investment. We do not think the dividend will be maintained.*—Q. E. D. *(Deal). We certainly have no great opinion of No.* 1. *We would not hold on No.* 2 *we would keep. Nos.* 3 *and* 4, *yes. If we sold No.* 1, *we should purchase No.* 4.—E. A. *(Islington). Nos.* 1, 3, 4, *and* 6, *very fair at present prices; No.* 9, *very good. The others we would not recommend. Above all, avoid No.* 8.—J. D. P. *We have no doubt that* 5 *per cent. will be paid. We would invest further. It matters not which shares.—Several letters are unanswered, from inattention to the terms upon which alone advice can be given.*

Old-street Road.—*The Eastern Counties' Railway was opened to Brentwood on the* 1*st of July,* 1840.

A Friend in Secret *is too incorrect for publication; and besides, as matters now stand, we do not see that his letter would do any good.*

O. S. *(Leicester) has our best thanks.*

An Admirer *is thanked for his good opinion. The extract which he sends from a contemporary journal is very applicable. For example:*—"We hear from all quarters high eulogiums on freedom and independence in the conduct of the public press. We hear all men expressing their seemingly devout wish that they who manage the journals of the day would hold themselves untrammelled by party predilections; and we have ever found that in holding on our way, obedient only to the pole-star of conscience, *all men have been ready to approve our boldness, until we happen to run athwart their own favourite opinions.* Instantly, then, their language of commendation has been exchanged for abuse; and we have learned this lesson—that a journalist who intends to be faithful in all positions, and honestly to speak out his mind on all occasions, must lay to his account to possess a very scanty few of sincere friends."

The Mechanics of Wolverton.—*In Hoblyn's "Manual of the Steam Engine,"* (1842) *at page* 143, *it is said—"The earliest experiment of a high-pressure locomotive engine was made in* 1804, *on a tram road at Merthyr Tydvil, in Wales." In Brees' "Glossary of Civil Engineering,"* (1841) *at page* 150, *we find that "the first public railway worked by locomotives was the Stockton and Darlington, by Mr. G. Stephenson, which was opened in* 1825." *We need scarcely remind our correspondents that to the Liverpool and Manchester Company is due the merit of having brought locomotives for passenger trains into general use.*

Mr. Edward Burrell's letter on the prevention of railway collisions was in type, but as we find that he has sent a copy to another journal (the Standard), *we decline publishing it We have quite enough of original correspondence to fill our columns.*

In part of our last week's impression, in the second column, page 1198, *Paris and* Rouen *Railway was by mistake printed for Paris and* Belgian *Railway.*

An Old Subscriber.—*There could be little difficulty in showing that there is no inconsistency in the matters alluded to; but it would be a waste of space.*

A Manchester Shareholder *is, we have reason to believe, no shareholder at all.*

Loan Notes and Debentures.—*A. B. C.—Loan notes are issued under the common seal of the Company, and are similar to "notes of hand," only that the security is that of a Company instead of an individual. A debenture, on the contrary, is an actual mortgage of the property of the Company. Of course the latter is the more secure.*

J. Woodland.—*We shall be glad to see our correspondent at the office in Fleet-street on Tuesday next, at* 12 *o'clock, noon precisely.*

D. E.—*Shall we forward the note to the gentleman referred to?*

G. K. A.—*We do not think the Directors were acting illiberally in refusing the inspection. It is not usual.*

North Midland and Midland Counties' Railways.—*We have received a vast number of letters with reference to these lines, but at present their appearance would not do good. We shall not lose sight of the suggestions which some of them contain. As to the Midland Counties' Railway, the parties should put themselves in communication with Mr. Heyworth's Committee.*

It would have been quite as well if the Derby Mercury, Derby Reporter, *and other journals who have copied from our Second Edition the report of the Midland Counties' meeting, had made some acknowledgment of the source whence they derived it.*

Mr. B. *(London).—There will be no interference between the new line and the old.*

"The Post Magaz ne Almanack," *for* 1843.—*A very comprehensive and useful production in pamphlet form. It is published by Mr. Pateman of Wine Office-court, Fleet-street.*

THE RAILWAY JOURNALS.

The Stamp Returns for April, May, and June, just published by Order of the House of Commons, enable us to complete the Returns for the year ending the 30th of June last. The results, as affecting the railway journals, are as follows:—

RAILWAY TIMES	**146,374**
Railway Magazine	68,500
Majority in favour of the RAILWAY TIMES	**77,874**

from which are to be deducted 10,874 Supplement stamps used for double numbers, still leaving the ordinary circulation of the *Railway Times* just about double that of its contemporary.—*September* 17, 1842.

THE RAILWAY TIMES.

SATURDAY, NOVEMBER 26, 1842.

We have more than once expressed our approval of the new-born energy displayed by railway shareholders; but we confess that we have some misgivings as to the direction it may take. It invariably happens in human

Digitized by Google

opinions and actions, that extremes beget extremes. The converted Radical becomes the most violent Tory—the reformed libertine the gloomiest fanatic; and we have some dread that the railway body will be no exception to the rule. From a lifeless apathy, they seem ready to start on a career of reckless energy, and to fly from the quiet toleration of abuses to a spirit of wild and perilous innovation.

Had they, in the earlier stages of their undertakings, watched the first indications of mismanagement, it had been well for their interests. They assuredly had premonitory warnings sufficient to have roused the suspicions of any class of men but one degree less confiding. No innocent maiden, in the first blush of youthful love, ever listened to the false vows of an insidious lover with more unsuspecting simplicity, than did the grave manufacturers of Lancashire to the pledges of their Engineers. It was of no avail that these pledges were never kept. It was of no avail that at meeting after meeting revised estimates were produced, their originally slim proportions swelling by regular gradations, first into a portly bulk and then into bloated obesity. At each meeting there was still enacted the same farce. The oft-broken promise was repeated with the wonted solemnity and exemplary gravity, and received with an infatuated credulity. A sturdy growler would now and then get up, and tell bold truths in plain language, but he was certain in the end to be hooted down by the assembled innocents, whose reverential gaze was fixed on the prodigy of talent, science, skill, and IMMEASURABLE ASSURANCE, as he stood before them self-convicted by his own Reports, and yet growing louder in his demand for confidence the more he disappointed their hopes and exhausted their means. Whatever may have been the nature of the narcotic influence with which Engineers lulled to sleep the vigilance of men usually much alive to their own interests, it was very powerful and very successful. It will hardly be believed in future times that one of the largest Companies in the kingdom departed from all the existing practices of railway construction, on the mere *ipse dixit* of an officer in their own service, and had been too far compromised to retrace their steps before they bethought themselves of submitting the innovation to the opinion of disinterested and competent judges! Equally incredible will it appear that another Company should have expended twice the estimated cost of formation, without being able to assign a valid reason for so large an excess, or to exhibit satisfactory accounts of the funds so lavishly disbursed. The future historian of British Railways, when recording these startling facts, may add as an appropriate comment, that the period when investigating Committees would have done more good than ever they could do again, had been allowed to pass away unimproved, and that, lapped in golden dreams of future dividends, the shareholders had permitted call after call to be paid, million after million to disappear, until at last they awoke to the discovery that the phantoms of a dream were scarcely less substantial than were the hopes in which they had indulged.

In adverting to these topics *now* our motives cannot be mistaken. We have been the consistent advocates of economical management, but we have at the same time steadily maintained, that in relation to safety economy should hold the second place. While highly approving the spirit displayed by the proprietors of the North Midland and Midland Counties' Railways, at the meetings the proceedings of which we have noticed in separate articles, we are not without fears that the new Boards may, in the warmth of their zeal and the rashness of inexperience, apply the pruning-knife, if not too freely, at least too hastily to their establishments.

PERHAPS no other railway meeting within the last twelve months, or, indeed, in the whole history of the system, has possessed anything like the *general* interest which has been excited, and is likely to be extended, by that of the Midland Counties' Railway Company, fully noticed in another part of our present publication. The results as affecting that particular undertaking may prove momentous enough, but they sink into insignificance when viewed in connection with the effects which the decision of the Derby meeting is almost certain to exert upon other Companies.

The spirit of investigation is now fairly aroused, and it will not be long ere it insinuates itself into other Companies. We, of all others, have reason to rejoice, and most sincerely do we rejoice, that *at last* railway proprietors appear determined to shake off their apathy, and that, spite of the blandishments on the one hand, or the bullying on the other, which Railway Executives know so well how to call into play, they are resolved to see with their own eyes, and hear with their own ears, that which it is of so much importance to them they should distinctly understand, whether as regards their present position or their future prospects. Pity that their vigilance was not sooner elicited; pity that they suffered themselves to be hoodwinked, till mischief has been done that is now irreparable! One tithe of the energy at present exhibited would have checked a great deal of the extravagance and waste in original construction, which was the primary, as it is the principal, source of the disappointment under which they now so bitterly lament.

It requires no great degree of foresight to discover that the Committee of Investigation *forced* upon the Directors of the Midland Counties' Railway, will be forced upon other Boards at no distant day. The case of the Midland Counties' Company differs very considerably from that of its neighbour, the North Midland, inasmuch as the Managers of the latter originally encouraged the call for inquiry by the proprietors, and subsequently admitted, by the reductions which they themselves proposed, that the past conduct of the Company's affairs had been most glaringly inefficient; whereas, in the Midland Counties', the Board from the first contended that no material saving could be effected, and that even were it otherwise, the Directors were the parties to carry it into effect. In both cases inquiry has been resorted to, but in neither has time yet been given to determine whether the result will be beneficial or injurious.

It may, perhaps, not be out of place again to hint to railway proprietors (although in the preceding article we have touched upon the same subject) that this, their praiseworthy zeal for the appointment of Committees, may be pushed too far. It would probably be no very difficult matter to discover weak points in the management of our best conducted and most successful railways; but in correcting one evil, care must be taken that a greater evil is not created. If gentlemen of ability, integrity, and influence are to be subjected to the imputations which certain Railway Reformers seem disposed to cast upon every Board of Management alike, the chances are that the control of affairs will speedily fall into very different hands. The effect of place and power in corrupting, or at least in rendering content with things as they are, the most zealous denouncers of abuse, is proverbial, but something—perhaps a great deal more than is usually granted—is due to the further and fuller acquaintance with practical difficulties which a peep behind the curtain affords; and it by no means follows that because a railway appears to be extravagantly and inefficiently worked, it is so in reality. Our readers will do us the justice to believe, that we have not the most distant wish to check inquiry with a view to the removal of abuse; but we fear lest an endeavour should now be made to atone for past negligence by the exhibition of a more than prudent scrutiny and suspicion. *Festina lente* is, in this as in other reforms, an excellent motto, and we trust the caution which it conveys will not be overlooked.

As respects the Midland Counties' Railway, we are far from objecting to the appointment of a Committee. If the Directors have done their duty, they have nothing to dread from the most minute scrutiny that can be instituted; if they have *not* done their duty, the sooner they are exposed and ousted the better. Nevertheless, we could have greatly wished to see a Committee appointed, not so closely connected with Mr. JAMES HEYWORTH, the prime mover in the affair. In fact, the whole proceedings bear a great deal too much of the "HEYWORTH" mark about them. Mr. HEYWORTH'S attempts to trench upon the depreciation fund of the London and Birmingham Railway Company by no means prepossessed us in his favour; and if the present movement should turn out to have reference rather to the present marketable value of Midland Counties' stock than to the permanent prosperity of Mr. HEYWORTH'S fellow-sufferers, the discovery would not in the least astonish us. We greatly fear, too, that, notwithstanding all the protestations of Mr. JAMES HEYWORTH, the forthcoming inquiry *will* "degenerate into a scramble for office."

Of the parties more immediately concerned in the late discussion it is not necessary that we should say much. It is due, however, to the Directors, that we should unequivocally bear our testimony on a subject respecting which the proceedings at the previous meeting gave rise to considerable controversy in our columns. The Directors were charged with arrogant bearing towards their constituents. Now, although we disapprove of very many parts of their proceedings—although we deprecate in an especial manner the tone of their last circular—we do but an act of justice to them when we say, that in forbearance and conciliation nothing could surpass the behaviour of the Chairman and Directors at the late meeting. We are the more particular in referring to this fact, because of the misapprehension which seemed to prevail on the occasion of the previous meeting. The Directors were greatly to blame that they did not at an earlier period promulgate their intentions as to the resignation of office. Had they done so, we have little doubt that the proprietors present would have voted in their favour, whatever might have been the case with the holders of proxies. For ourselves we have more than once proclaimed our hostility to proxy-voting, except under particular circumstances; and certainly the experience of the Midland Counties' meeting has not increased our predeliction in its favour. We think it more than probable, that had the explanations

Digitized by Google

of the Directors been given previous to the meeting, the proxies of very many parties would have been withdrawn from Mr. JAMES HEYWORTH. Be this as it may, no one who witnessed, as we did, the conduct of the Board—and more especially of their excellent Chairman—during the trying proceedings of yesterday week, can for a moment doubt that, however much the Management may be mistaken in their views as to the best means of promoting the prosperity of the railway, they are open and upright in their proceedings. We are the more particular in this avowal, because having heard so much of the contemptuous manner of the Board, we were anxious to judge for ourselves, and the impression is as we have stated. We again desire to notice in an especial manner the admirable demeanour of the Chairman, under circumstances which would have tried the temper of the most patient.

While we commend the bearing of the Directors, we cannot but condemn that of the parties who conducted the opposition. Our feelings go with them as to the necessity of inquiry, but we repudiate in the strongest terms the mode of proceeding adopted by Mr. JAS. HEYWORTH and his friends in carrying their scheme. The interruptions were most indecorous, and so far as Mr. JAS. HEYWORTH was concerned, most unjustifiable. Had not the proprietors come prepared to support Mr. HEYWORTH's motion (right or wrong), he would not have been tolerated; and indeed we at one time were inclined to doubt the success of a very salutary proposition, from the manner in which it was advocated and enforced. Mr. JAS. HEYWORTH has yet to learn that the *suaviter in modo* may be joined with the *fortiter in re*, and that to carry a point against such men as now manage the affairs of the Midland Counties' Railway, it is not necessary to suspect them of being, or by implication to denounce them as being, tricksters or something worse. We, at this early date, warn the proprietors against implicitly committing Directoral power to the members of the HEYWORTH Committee.

What may be the result of the Committee's labours we pretend not to conjecture. We question, however, whether after the investigation by the Sub-Committee of Directors (with Mr. Ellis at their head) any very material savings are immediately to be looked for. The main hope for the Midland Counties' proprietors is the leasing of their line to the London and Birmingham Company, as suggested by us several weeks ago. This appears to be the more necessary, if, as is rumoured, the London and Birmingham Company are at present in treaty with the Birmingham and Derby Directors. The diversion of the London traffic *via* the Birmingham and Derby line would of course occasion great loss to the Midland Counties' Company. We would suggest to the recently appointed Committee, to turn their attention to this subject. If they be, as they would have it believed, disinterestedly anxious for the welfare of the proprietors, they will leave no means untried to connect themselves with the London and Birmingham Company.

WE had purposed offering some further remarks on the circumstances connected with the late meeting of the North Midland Railway Company and its results, but really, on again reading the report of the proceedings published in our last number, and after a careful re-examination of the various documents put forth by the Committe and the Directors, we feel ourselves to be without sufficient information to enable us to form an opinion which shall be satisfactory to ourselves, upon SEVERAL of the questions that have been, and continue to be, in dispute. Upon one or two points, however, we may say a few words.

We have already expressed ourselves in favour of the union of the offices of the Secretary and Superintendent, but all will depend on the manner in which the responsible office thus created is filled. If a man of respectable character, good address, of ability and practical knowledge, be appointed, we feel convinced that economy will prove to be the least recommendation of such an arrangement. The combination of the duties of Accountant and Auditor we hold to be unsound in principle, and most unsafe in practice—a fact which the Companies who venture upon the rash experiment may yet discover to their cost. We cannot of course be judges of the extent to which the locomotive departments may be reduced with safety, but all must admit that no measure could be more unwise, however it may be viewed, than impairing the complete efficiency of these departments.

There is, however, one proposed change on which we find ourselves called upon to give a decided opinion—we mean the intended employment of boys at points or switches. Some of the most serious accidents which have occurred have been owing to neglect of duty on the part of switchmen, and we can look upon the appointment of boys to such a duty in no other light than as trifling with the lives of passengers. We trust, therefore, that this recommendation may be re-considered, for we must again remind railway shareholders that the public will treat them with little leniency, if disasters should result from rash and ill-advised retrenchment, and that the condemnation with which they are sure to be visited, should such sad events occur, will be infinitely the more severe if it be suspected that, biassed by a short-sighted selfishness, their measures were dictated by a desire to give a temporary and fictitious value to their share-property.

As to the condition of the permanent way, the Directors and the Committee are widely at variance. From what has come to our knowledge from other quarters, we are inclined to the Committee's opinion, that the road is *not* in that state of efficiency which ought to characterise a line of so much importance, and this is the more inexcusable, seeing that the undertaking is still burdened with the heavy salary of a "gentleman Engineer." By the way, the explanations of the Chairman, relative to the non-settlement of the several contracts, were anything but satisfactory. The Directors should have explained how it happened that there existed any grounds for dispute, to the enormous amount of 100,000*l.*, between the Company and the contractors. Was the business of the engineering department conducted with so much looseness that *years* have proved insufficient to elicit what is fairly and equitably due to those who constructed the railway? The Chairman seems to think it extremely liberal on the part of Mr. SWANWICK, the Engineer, that he should give up 200*l.* out of 1,200*l.* of his yearly salary, pending the adjustment of these disputes with the contractors. We should be glad to know what Mr. SWANWICK, or any other man in *any* department of the Company's affairs, has done, or could possibly do, that would entitle him to 1,200*l.* or 1,000*l.* a year, even were his whole time and attention devoted to a discharge of his official duties! There is no man in England worth 1,000*l.* a year to the North Midland Railway Company. But really, when we hear of 1,200*l.* a year being paid to an Engineer, apparently for doing little beyond waiting till the contractors shall be wearied, or forced by a Chancery suit, into a settlement, we are amazed that the vaunted resignation of 200*l.* was not received at the meeting with an expression of feeling very different from the "laughter" with which it would seem the announcement was greeted—and this the rather that with due attention during the progress of the works, all real cause for litigation might have been avoided. We trust that whoever may be the future Directors of the Company, they will find some means of dispensing, at a very early date, with services so extremely costly as those of Mr. SWANWICK; and that they will not place any *other* party in a position where the amount and duration of his salary shall depend upon the settlement of disputes which ought never to have existed.

Of course, as we said last week, the present Board of Directors cannot think of carrying out the recommendations of the Committee, which have now received the sanction of the proprietors. Even had there been no kind of personal collision between the bodies, such as the "Reply" of the Committee sets forth, it were preposterous to expect that any Board of Directors, with whom office was not the sole object, should attempt alterations which they profess to believe will be injurious to the common property. Indeed we feel no small surprise that a single member of the Board who was present at the meeting of last week, should have remained in office one hour after the unequivocal display of feeling exhibited on that occasion. That they did not immediately resign their seats evinces a tenacious clinging to office, which by no means raises them in our estimation. They should *at once* have thrown the responsibility on the Committee, leaving to that body to reap whatever merit may result from success, or to bear the brunt of public censure, should their reductions be (as we fear they have been, and will be) carried beyond legitimate limits.

IN another column will be found a short notice of a "compensation" case in which the Great North of England Railway Company were concerned. As usual the award did not reach one-half the amount claimed; the former being but 941*l.* and the latter 2,210*l.*!

The purpose to which the property which was the subject of the trial is to be applied, must be allowed to be very important. At present the railway crosses on a level the turnpike road near Darlington, and it is proposed to carry the road underneath. The danger of these level crossings has become so manifest as to render it very improbable that in future Acts they will be authorised, more especially where, as in the Darlington case, the common road traffic is very considerable.

SEVERAL of our correspondents are very desirous that we should urge upon the leading proprietors of the London and Brighton Railway the necessity of taking measures, previous to the next half-yearly meeting, for the appointment of a Committee of Investigation—a Committee which shall fully and minutely inquire into the past outlay of the Company, and into the probable expenditure for the future. What can we say on the subject that we have not said long ago—what argument adduce that has not already been adduced? The apathy of the shareholders is truly astonishing. We are aware that "every-

Digitized by Google

body's business is nobody's business," but it requires only a beginning to organise a power which shall carry this point very triumphantly. We trust, therefore, that no time will be lost in forming the nucleus of a determined and united opposition. Without concert, nothing can be done effectually. As an encouragement to those who may take the lead in rescuing a really valuable property from ruin, we may mention, on the authority of a gentleman whose respectability is beyond question, that in his immediate neighbourhood *there are parties holding upwards of* 1,200 *shares, every one of whom is anxious to hand over his proxy to carry the appointment of a Committee of Inquiry*. To this fact we pledge ourselves, and shall have much pleasure in being the means of bringing such influence to bear.

Let not the shareholders imagine that the day for inquiry has gone by—that the mischief has already been accomplished, and that no good can arise from raking up the *mistakes* (we suppose we must call them so) of the past. Gentlemen, be not deceived. We speak upon no light grounds when we affirm, that yet —*even yet*—vigorous measures may suffice to prevent an expenditure of nearly a quarter of a million of money, which, should you remain apathetic as heretofore, will most assuredly melt away in surveys, on Parliamentary contests, and in modes still more objectionable. So far from seeing reason to modify our previously-expressed opinion, that the London and Brighton Railway will not be finally completed under THREE MILLIONS sterling, we shall be agreeably surprised to find that the work is accomplished for that sum. For the present, we shall content ourselves with these few words, but shall hereafter enter further into detail. Meanwhile, however, we say again to the proprietors, that if they wish TO KNOW THEIR EXACT POSITION, they have not a moment to lose.

A PUBLIC meeting, most numerously attended by influential gentlemen of all parties, was held last week in Dublin, the Lord Mayor in the chair, on the subject of expediting the intercourse between England and Ireland.

This matter has been so repeatedly before the public, and so fully discussed by Select Committees of the House of Commons, and in the journals of both countries, that it is not necessary now to go into detail. Suffice it to say, that the meeting appointed a Committee of noblemen and gentlemen to wait upon his Excellency, the Lord Lieutenant, "for the purpose of submitting to his Excellency the earnest request of the meeting that the Government would, during the present recess of Parliament, be pleased to take the necessary steps for procuring that further information which, in the opinion of the Committee of the House of Commons, is necessary in order to a satisfactory decision as to the harbour on the opposite coast the most eligible for a packet station, to be obtained either by the appointment of civil engineers, at once perfectly impartial and thoroughly competent, and not pledged or committed by any previous opinion on the subject, to inquire carefully into the question, and to report fully upon it, or by such other means as to his Excellency and the Government may appear best adapted to the accomplishment of this object." We sincerely trust, and indeed have strong hopes, that the present Administration will act in this matter more vigorously than did their predecessors in office. The question is one of great importance, to Ireland in particular, and is one of the very few which parties of every political and religious profession in that country may consistently unite in carrying forward.

We allude to the meeting, however, principally to express our surprise and regret that certain gentlemen, who some time since were so laudibly active in bringing out the proposed Great Holyhead Railway, should now have become apparently completely apathetic. Has Grand Junction influence affected any of them? We would fain hope *not*, and that in their present seeming indifference they are but concentrating their efforts, with a view to speedy and successful action.

A CORRESPONDENT whose note appears in another page, repeats a suggestion which we have more than once pressed upon the attention of Railway Companies, namely, as to a uniform system of accounts. Every one who has attempted to institute a comparison between the items of expenditure on different railways, must have been fully convinced how desirable would be some such arrangement as that which our correspondent contends for. We have occasionally been inclined to think that this diversity of account-keeping (or rather, we should say, of account-*publishing*) is not at all times accidental. Payments the most incongruous are mixed up, apparently for the express purpose of setting calculation and classification at defiance.

We see no remedy for this state of things so easy as the preparation by the Board of Trade of a pattern scheme of accounts, which no doubt would be adopted by most of the Companies. We shall have great pleasure in making room for any hints on the subject. To be of service, details must be gone into at some considerable length.

There need be no interference with the different modes in which the several Companies *keep* their books of account. If the particular system adopted be worth anything, there could be no difficulty in drawing out after any prescribed form the periodical statements which all the Acts of Incorporation render it necessary should be submitted to the proprietors.

Two letters on the late meeting of the Sheffield and Manchester Railway Company will be found in another page—the one from Mr. ELLISON, the Chairman of the meeting, and the other from Mr. ISAAC IRONSIDE, whose name has frequently been before the public in connection with this undertaking. A perusal of these two communications will, we think, fully bear out what we hinted last week as to the "hot haste" with which the meeting seemed to have been got up, although *that* was not the principal object of our remarks, but rather to express our regret that the influence of the Government loan upon the other creditors of the Company and upon the shareholders, was not fully explained. We still hope that this information will not be withheld.

IT will be remembered that so fierce was the opposition offered by certain parties to the running of Sunday trains on the Edinburgh and Glasgow Railway, that they pledged themselves never to avail themselves of the line until the abomination of such trains was put down. The following short paragraph from the *Scotch Reformers' Gazette* of last week will show how this pledge has been kept by the anti-desecrators:—

"So-ho!—We find that the Rev. Dr. Smyth, of St. George's, who protested so vehemently against the Edinburgh and Glasgow Railway—who joined the Agnewites in all their crusades against it—quietly took his seat in the train from Glasgow to Edinburgh last Wednesday, to join the Convocation, and others of the Agnewites imitated his example. We predicted six months ago that it would come to this at last. We hope the Rev. Doctor has found that the railway, after all, is better than Mr. John Bain's old mail-coaches."

We trust our Glasgow contemporary will continue to keep an eye on the proceedings of these gentry. The exposure of their inconsistencies cannot fail of doing good.

FROM a brief account of the Preston and Wyre Railway meeting which we give elsewhere, it will be seen that our suggestion for the abolition of the London offices has been adopted. This is a good omen, and we shall be glad to find that the new Board are equally successful in carrying out other very necessary reforms. We shall probably notice the subject in our next.

THE *Kentish Observer*, a paper published in Canterbury, says:—"We understand that several of the coaches which run between this city and the metropolis, will be taken off the road next week; but it is the intention of some parties to put on an extra omnibus or two, chiefly for the conveyance of passengers to and from Gravesend, whence passage by steam to London may be obtained at a cheap rate."

—o—

THE works on the Leamington branch line have been commenced. They are, it will be recollected, under the sole management and control of the London and Birmingham Railway Company, and we understand that economy the most rigid is the order of the day.

—o—

ANOTHER projected railway to Oxford is announced, to form a continuation of the Aylesbury line.

—o—

A MEETING was held at Northampton, last week, on the subject of the proposed railway to Blisworth *via* that town. Mr. Stephenson, the Engineer of the London and Birmingham Company, Mr. Creed the Secretary, and Mr. Burke, the Parliamentary Agent, were present. The principal object on the part of the inhabitants of the town, was to get the line brought through the town. Mr. Stephenson objected to this, on account of the expense. He said:—

"The position pointed out for the station was one of the worst that could be conceived, because as it would consist entirely of made ground, it would be necessary that every turnplate should be supported upon a cylinder of brickwork 28 feet in height. The Birmingham station was made under precisely similar circumstances, and the underworks—that portion of which nothing whatever was visible—cost the Company 30,000*l*. That station resembled the one proposed in every respect except extent, and he should therefore object most positively to such a situation. He was quite sure that 10,000*l*. must be sunk under ground. * * * He laid the purchase of property and compensation at 15,000*l*.; making a total of 43,250*l*. That was a close estimate. Engineers were always in the habit of adding 10 per cent. for contingencies; in this case he thought he ought rather to add 20, but he would be content with 10. That addition would swell the total to 47,000*l*.; and this did not include a single appurtenance to the station, which appurtenances, however, would cost the Company 10,000*l*. more. * * * Generally speaking, the cost of such a station under ground was equal to its cost above ground, and he believed that the esti-

ost would in reality be nearer 60,000*l.* His Report to his employers, however, would certainly fix at 50,000*l.*"

t was stated, that any serious opposition on the art of the owners of property would lead to the bandonment of the scheme. We cannot believe hat such opposition will arise.

—o—

THE Directors of the London and Brighton Railway have put forth an advertisement stating, that the Postmaster-General having countermanded he instructions for conveying the night mail from ondon to Brighton by a train at 8 30 p.m., the aid train will be discontinued on and after the 1st f December, and the previous train arrangements rill be resumed, by running the 3 o'clock down-rain daily from London, and the last up-train rom Brighton at 6, p.m., instead of half-past 6." he Postmaster-General will, we trust, have yet to nswer to the legislature for this and similar proeedings. The Directors of the Railway Company ve believe to be wholly blameless in this matter.

We should like to know what Colonel Maberley nd Lieut. Harness have to say to the statements nade at the Midland Counties' meeting by Mr. Ellis and Mr. Bell.

In the *Globe* of Thursday we find the following paragraph:—

"RAILWAY LIBERALITY.—The London and Greenwich Railway Company having hitherto conveyed the Post-office letter bags between London nd Deptford and Greenwich for two deliveries a lay, were lately applied to by the Post-office authorities for the terms upon which they would convey he bags for a third delivery. To which the Board nade answer, that for an additional payment of nly 30*l.* per annum they would be ready to carry s many bags, to and fro daily, at the several times f the running of the trains, as might be desired. his liberal offer was at once accepted; and Greenvich and Deptford will, in consequence, on and fter Saturday next, have the benefit of four instead f two daily deliveries of letters."

—o—

CONSIDERABLE stir has been occasioned at Colchester, in consequence of the proposed construction of a road from the terminus of the Eastern Counties' Railway through the property of Earl De Grey, Lord Lieutenant of Ireland, to join the pswich road. This new road will, it seems, prove very great convenience to the public coming to he railway from Ipswich, Harwich, and other parts; but then it will turn aside from the town of Colchester a good deal of the traffic. Alarmed at his, "the innkeepers and tradesmen" of Colchester, have through their Parliamentary representative, Sir J. H. Smyth, applied to Earl De Grey, entreating his Lordship not to sanction the scheme. His Lordship's reply, as printed in the *Ipswich Express*, s excellent. We extract a portion of it:—

"I can understand that some few persons in Colchester may be affected by it, but not, I should consider, in sufficient numbers, or upon sufficient grounds, to warrant me in depriving the public of the benefit, if it should turn out to be such. If it does not benefit the public to any considerable extent, the new line will not be traversed, and the contemplated injury to the Colchester innkeeper and tradesman will not take place.

"I am quite willing to waive any presumed benefit to myself in considering the question: but looking upon it as a real and substantial advantage to the public, I do not feel that I am justified in forcing persons to go a greater distance, up and down hill, merely for the benefit of some of the inhabitants. Those whose business would naturally take them into the town, or those who, to await the trains, find better accommodation in the town, will still naturally go there: and if the rest of the community find an advantage in taking the shorter course, I do not feel justified in preventing them."

We cordially concur in the concluding observations of our contemporary:—

"We believe the Directors have done and are doing their duty: the inhabitants of Colchester have not done theirs. They must take the consequences. Had the formation of the line depended upon any great efforts of theirs, the present generation would never have witnessed the construction of the road. A body of enterprising men have brought the railway to the town, and now grumbling is the order of the day because they will not stop their gigantic undertaking, where the caprice or the petty interests of a few drowsy obstructives, whose views seldom extend beyond their own counters, or their patriotism beyond their own pockets, would dictate."

—o—

AMONG the premiums awarded by the Council of the Institution of Civil Engineers for the past year, are the following, as bearing upon railways:—

"A Walker premium of books, suitably bound and inscribed, to Charles Nixon, Assoc. Inst. C. E., for his 'Description and Drawings of part of the Tunnels on the Great Western Railway.'

"A Walker premium of books, suitably bound and inscribed, to Alexander James Adie, for his 'Description and Drawings of the Bridges on the Bolton and Preston Railway.'

"A Walker premium of books, suitably bound and inscribed, to George Ellis, Grad. Inst. C. E., for the drawings illustrating the 'Description, Specification, and Estimates of the Calder Viaduct, on the Wishaw and Coltness Railway; with the Series of Experiments on the deflection of Trussed Timber Beams for that work, by John Macneill, M. Inst. C. E.'"

Among the subjects on which the Council invite communications for the premiums of next year, are the following:—

"The original cost, annual expense, and durability of Timber Bridges, compared with similar structures in Stone, Brick, or Iron.

"The various kinds of Limes and Cements employed in Engineering Works.

"Deductions from direct experiment of the degree of Condensation which is most favourable for the working of Steam Engines, as regards the production of mechanical power, stating the inconveniences resulting from the use of Steam at a high pressure, and showing how such inconveniences may be remedied; with simple rules for indicating the proper temperature of the discharged water.

"The various modes adopted for moving Earth in Railway Tunnels, Cuttings, or Embankments, with the cost thereof.

"On Stone Blocks and Timber Sleepers or Sills, with or without continuous Bearings, for railways.

"The results of experience as regards the consumption of Power for a given effect, on Railways having different widths of Gauge; with the advantages or disadvantages attributable to any established width of Gauge.

"On the forging of Solid Axles for Locomotive Engines and Railway Carriages, which are subjected to great strain, noticing particularly whether the Iron used be of a cold-short or red-short quality, the relative strength of the two qualities, and whether the size of the Crystals appears to influence the cohesive strength of the metal.

"The advantages of large and small hollow Wrought-Iron Shafts for Machinery, Axles for Carriages, &c., the best mode of manufacturing them, and the formulæ for computing the strength.

"Memoirs, and Accounts of the Works and Inventions of any of the following Engineers:—Sir Hugh Middleton, Arthur Woolf, Jonathan Hornblower, Richard Trevithick, and William Murdoch (of Soho)."

It is added, that—

"The communications must be forwarded, on or before the 31st of May, 1843, to the house of the Institution, No. 25, Great George-street, Westminster, where any further information may be obtained."

LONDON AND DOVER (SOUTH-EASTERN) RAILWAY.

Traffic Receipts for the Week ending November 22, 1842—the Twelfth Week of the Low Fares.

Date.	First-Class.	Second-Class.	Third-Class.	Total.	Amount.

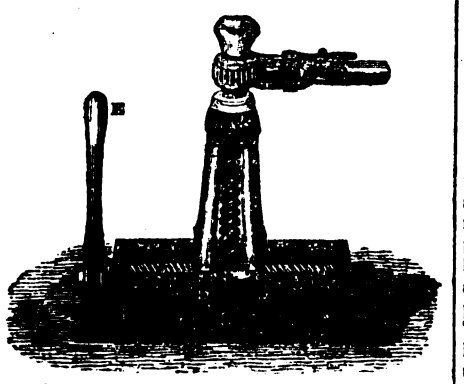
Add total to the 15th November, from last week's *Railway Times*..... 14,713

Total loss to the Greenwich Company in *twelve* weeks by their prohibitive toll..... 15,722

NEWCASTLE AND DARLINGTON JUNCTION RAILWAY.—On Thursday last, the Directors of this Company met at the railway station, in this city, to let contracts for the formation of a portion of this line, extending from Rainton and Shincliffe, with the branch to Durham, including the construction of three timber viaducts over the Shincliffe, Cassop, and Sherburn Becks. The distance of this part of the line is nearly nine miles, and as it includes the heaviest portion of the works, considerable interest was felt as to the result. The letting was divided into four contracts, and the following parties are the contractors:—Messrs. Rush and Lawton, of York, for the Rainton contract, commencing at the Durham Junction Railway, and terminating at the boundary of the parish of Houghton-le-Spring, being about 3 miles and 3 furlongs in length. Messrs. Rush and Lawton are also the contractors for the branch line to the city of Durham, a distance of about two miles. Messrs. Hattersley and Mould, of Chorley, contract for the formation of the line from Houghton-le-Spring to the parish of St. Oswald, a distance of four miles, including a far greater quantity of earthwork than any other part of the line. Mr. R. Cail, of Newcastle, is the contractor for the construction of the Cassop, Shincliffe, and Sherburn viaducts. The whole amount of these contracts is 65,600*l.*, being considerably within the Engineer's estimate.—*Yorkshire Gazette*, Nov. 19.



RAILWAYS *v.* CANALS.—As an instance of the extraordinary effects which railways have had in causing a depreciation of canal property, particularly in the Yorkshire and Lancashire canals, a correspondent mentions, that about two years ago the shares in the Rochdale Canal were worth about 150*l.* each, but that since the opening of the Manchester and Leeds Railway, owing to the necessary reduction of the tolls arising from the competition, the dividends have been so much reduced that the shares now fetch barely 40*l.* each. Some two or three years ago, the shares of the Calder and Hebble Canal navigation sold at the rate of five hundred guineas each, but from the same causes they are freely offered at 180*l.*, being in each case a reduction of about 70 per cent.—*Liverpool Standard*.

THE SCREW HELP.

In a recent number, we inserted a paragraph relative to a machine described in a Belgian railway journal under this title, as being particularly useful for replacing a train accidentally thrown off the rails. We have since ascertained that the machine emanated from this country, and that it has been for some time in successful operation upon several of our principal railways.

The machine is called "G. England and Co.'s TRAVERSING SCREW JACK," and the following sketch and brief description, which we copy from a paper put forth by the patentees, will explain its nature:—

"The above is a perspective view of the Traversing Screw Jack; A representing the common lifting jack, with the addition of the double ratchet for working the vertical screw in confined situations, placed on a strong wrought-iron frame, B, with the screw, C, the whole length of the frame, working in bearings at each end, and through the double nutt, DD, attached to the base of the jack, A, the screw, C, being worked by the ratchet lever, E, will cause the jack to traverse the length of the frame, carrying with it any body that may have been lifted by it."

We hope Messrs. England and Co. will favour us with a full description of this machine, which, we are informed by the Manager of a railway where it has been for some time in use, is extremely simple in construction, as well as light and compact.

The advantages to be derived by the Companies, as well as by the public, from the adoption of an efficient apparatus of this description, are too obvious to require enumeration. In cases of accidental stoppage by an engine or carriage running off the rails, a saving, however trifling, in the time requisite to replace it, is of the utmost importance, not only to obviate the danger of collision by following trains, but to allay the alarm of the passengers, naturally aggravated by delay.

IMPORTANT TO RAILWAY TRAVELLERS.—A very respectable man, Mr. Bletcher, of Sheffield, was last week summoned before the magistrates at Darlington for withholding his fare after travelling on the Great North of England Railway. Mr. Bletcher contended that he paid his fare, but in the hurry and bustle of getting off he had left his ticket behind. The servants of the Company, on the other hand, contended the ticket was given and his fare was deficient; the ticket might have fallen into other hands. He was ordered to pay the claim of the Company on being found in their carriages without a ticket. Mr. Bletcher protested against the decision of the magistrates.—*Yorkshire Gazette.* [What else could the servants of the Company have done?—ED. R. T.].

MANCHESTER AND LEEDS RAILWAY.

To the Editor of the Railway Times.

SIR,—Your correspondent "A Leeds Shareholder" seems disposed to convert into a personal altercation what ought to be a discussion respecting the merits of the Leeds line. Not content with impugning my motives, he misrepresents my meaning. Why does he not grapple with the facts of the case? What does it matter what my motives are?

I did not say that my object was to protect *the present shareholders*, but *intending* purchasers for investment; and I did not triumph in the fall of the price of the Leeds shares.

Your correspondent is evidently one of that class of railway shareholders (referred to in your admirable leading article of July 16th) "who dread the laying bare of the naked truth, lest it should operate injuriously on the price of shares," and he seems very indignant that I should remind the present holders in the Leeds line of some rather unpleasant facts already known to them. But, Sir, we are all too ready to forget unpleasant facts, and as the wish is often father to the thought, the very favourable statements made half-yearly in the Reports of Railway Directors, are apt to engender hopes by no means justified by the actual state of affairs. This remark applies, in my opinion, with peculiar force to the holders in the Leeds line. The Directors of that line are, several of them at least, large holders, and in common with many of their constituents have long entertained the most ridiculous notions of the rare merits of their line for investment. Their half-yearly Reports I have long regarded as sort of *periodical puffs*. In their last Report, for instance, it is stated that "the opening of the Oldham branch had brought an accession of traffic which would be greatly increased when a junction was effected with the Liverpool line at Hunt's Bank." Now, Sir, who would suppose that the plain English of all this is that the Oldham branch traffic has proved a miserable failure, and that half the coaches are still running on the turnpike road? Yet such I believe to be the case, caused no doubt by the branch line terminus being too far from the town of Oldham. Our Directors stopped short of Oldham and Mumps to save expense, and then boasted of having finished the Oldham branch for 40,000*l.* Hence, no doubt, the failure of the traffic which was to add 400*l.* per week to our receipts! Yet we draw less money now than we did a year ago, previous to the opening of the Oldham branch. Last week our gross receipts were 4,100*l.*, for the corresponding week of the previous year they amounted to 4,149*l.*

In my first letter on the subject of the Leeds line I asserted that the 70*l.* shares were worth only 50*l.* as the traffic since opening throughout would only afford a dividend of 4 per cent. To this position I still adhere, and I defy either the Directors or your correspondent, "A Leeds Shareholder," to refute it. London and Birmingham shares can now be had at a price to yield a purchaser upwards of 5½ per cent. The dividend made is 10*l.* on each 100*l.* share (90*l.* paid), the market price of which is 182*l.* and 5½ per cent. on that amount, is 10*l.* nearly. Now, Sir, as the Leeds line is only netting 4 per cent. per annum, the dividend ought to be 4 per cent., or 56s. on the 70*l.* shares, which are worth only 50*l.*, as 56s. is just 5½ per cent. on 50*l.*

He must know little of the matter who would assert that the prospects of the Leeds line for the future are brighter than those of the London and Birmingham, for the Halifax branch is avowedly a bad if not ruinous concern, and although the Hunt's Bank line should pay a fair return on its enormous cost, and bring in even something more, yet it cannot avert the *tremendous blow* that the Sheffield line, when finished, will inflict on the prosperity of the Manchester and Leeds Railway.

I am, Sir, your obedient servant,

HAUD CAPTUS OCULIS.

November 21, 1842.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

SIR,—A paper like the *Railway Times* must have, of necessity, so many correspondents, that it is desirable that all should confine themselves within the narrowest possible limits; I will *endeavour* to do so. Your last number contained two letters on the London and Brighton Railway, and each of these recommending a preliminary meeting of the shareholders in and about the metropolis; and communications from various sources have at different times appeared in your journal, advocating the same measure. Will you allow me to join in urging this desirable and most necessary step? If some such course of proceeding be not determined upon, the shareholders will (in large numbers) go to the next half-yearly meeting, as heretofore they have done, almost unanimously dissatisfied; there will be much sparring, an abundance of angry words, and the upshot will be, that the blandness of our Chairman will win over some, the weariseomeness of a prolonged discussion, without any apparent definite object, will cause others to retire, and the Directors will thus be left masters of the field the proprietary remaining in *statu quo*. Thus do the great majority of meetings terminate; they scarcely verify the old adage, "*Parturiunt montes, nascitur ridiculus mus.*" I pray you and them to look at what has lately been done on various of the railway lines throughout the kingdom, and observe what may be effected by a determination on the part of the shareholders to have a thorough and searching investigation into their affairs, and insisting upon and compelling a *rigid* economy. On the Brighton line, like many others, the great and unredeemable mischief has been brought about by the extraordinary expenditure during construction. How can it be possible that the number of Directors are required on so short a line, and how can they have *the assurance* to take for their services 2,100*l.* per annum? The allowance to the Directors of the Grand Junction is, I think, 800*l.*, the Midland Counties' 700*l.*, and many other railways even less in proportion. I ask, then, what are the peculiar circumstances of the Brighton line to require such a large sum to be placed at the disposal of the Directors? But the allowance to these gentlemen is but one item in the account. Brother shareholders, if you really desire to protect your property, adopt such measures as may conduce to that end. It often happens, I fear, that the larger shareholders, being generally men of property, do not greatly trouble themselves in these matters; but I beg such to recollect, that many of the smaller shareholders have embarked, some their all, and others nearly the whole, of the little property they possess. Act therefore for them, if indifferent concerning yourselves. I will not tell you what to do, but *I do say*, go prepared at the next meeting to do *something*, and go so organized and prepared that you may be invincible; I sincerely believe it is in your power so to do. As to you, Mr. Editor, you have often fought our battle boldly and ably; I pray you, do not desert us now.

I am, Sir, yours, &c., G.

November 22, 1842.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

SIR,—I perceive by the table of railway earnings, which you publish weekly, that the revenue of the London and Brighton line is always a week behind time. Allow me, Sir, to ask whether this non-publication of the returns for a whole week is to favour the speculations of certain parties, who thus have a "pull" against the public generally? Fairness requires that the announcement should be made known *immediately* the week's earnings are ascertained, and I hope that some steps will be taken by the dealers in the stock or share market to bring the parties already referred to more upon a level with themselves, and with the rest of the community, in this respect.

I am, Sir, yours, &c. A. B. C.

BRIGHTON AND DOVER RAILWAYS—THE REIGATE STATIONS.

To the Editor of the Railway Times.

Sir,—Although you must necessarily have a bias in favour of railways, I trust you will allow the public to be heard when there is real cause for complaint in their management.

We have in our immediate neighbourhood so palpable an instance of mismanagement, that it is a matter of wonder to all who merely look on and suffer inconvenience, but are not behind the scenes to enable them to understand the cause. We have here three railway stations within about two miles of each other, one for the Brighton Company, one for the Dover, and a third lying between Redhill and Merstham. So long as the Brighton line only was open, there was nothing particularly remarkable, except that the station intended for Merstham was curiously placed nearly a mile from that village, and somewhat too near the Redhill station; but every one in the country supposed that when the Dover line opened, the spot at which that line branches off from the Brighton line in our parish would be made the common stopping-place for the two; but no such thing—there were two stations already too near together for the public convenience, and to mend the matter, a third is placed about midway between them. The Dover trains cannot go to the Brighton station, because it is half a mile beyond the point where they turn off. The Brighton trains *will not* stop at the Dover station, for reasons which we poor country people cannot understand. Now all this is monstrously absurd; the practical inconvenience too is very great, because a man coming from Brighton, and going into Kent, must get out at the Brighton station, and walk across in the best way he can to the Dover station, having, as he tramps through the mud, the high satisfaction of seeing the train which he has just left, passing by the very spot to which he is going. You probably are not acquainted with the district, but you cannot conceive how childish all this appears to those who are. It goes to establish in our minds the meanest opinion of the business habits of men who can permit such a system to continue. Nobody in the country doubts that the Dover station, where the two lines meet, is the proper place for a station for both. It is considerably nearer to Reigate than the other, with a straight and level road, instead of a crooked and hilly one; and why *should* we be sent over a bad hill for no purpose? It is equally well known in this country that the Dover Company have begged and entreated the Brighton to give up their Redhill station, and join in a station at the point of meeting of the lines; but the Brighton Company will not, and so these most inconvenient absurdities continue—greatly, I am sure, to the detriment of the trade on both lines, and to the serious annoyance of everybody who has to pass from one to the other. We know well enough here that both the Redhill and the Merstham stations, on the Brighton line, were wrongly placed; the former was put where it is to conciliate Lord Somers, and the latter to please Lord Monson; but surely these considerations ought not to prevail for a moment, when such constant public discomfort is the consequence. The proprietors in the two concerns are, I am sure, losing hundreds by it, and a character for incapacity attaches to those who can permit such things to be.

I am, Sir, yours, &c.

ARMIGER.

Reigate, November 23, 1842.

LONDON AND DOVER (SOUTH-EASTERN) RAILWAY.

To the Editor of the Railway Times.

Sir,—I have read with surprise two letters in your last number, one as to the receipts on, the other as to the cost of, this line.

Your Leeds correspondent finds fault with the present fares, and doubts whether the receipts are paying expenses. I certainly do not take so despondding a view of matters as he does; and to prove that the receipts are not so despicable, I will compare them with the receipts on three lines of about the same length, and on two shorter ones (excluding *goods* traffic, which has barely commenced on the Dover line). The receipts are taken from your last week's table, and are as follows:—

	Miles.	Receipts.	Per mile.
Edinburgh and Glasgow.....	46 ..	£1,207 ..	£26 5 0
Midland Counties'	57 ..	1,303 ..	23 0 0
Great North of England	45 ..	754 ..	16 15 0
Hull and Selby.....	31 ..	420 ..	13 0 0
North Union.....	22 ..	638 ..	29 0 0

On the Dover line, after allowing for Croydon toll, the corresponding receipts would be about 1,000*l.* for 47 miles, or 21*l.* per mile. The first of these lines has paid a dividend of 5 per cent., the last several of nearly 7 per cent., and the others 3 per cent. All five are open throughout. The Dover line is only open 47 out of 87 miles, and when it is considered that the Dover fares are much lower than any of them, the comparison to my mind is anything but unfavourable to the Dover line, and I see no ground whatever for your correspondent's fears. As to the effect of water competition to a small extent, it may tell against this line; but when it is considered that nine-tenths of the passengers to Dover, and to the continent, are a class of persons to whom a saving of time, easy land-travelling, and a short sea passage, are of infinitely more consequence than a small saving of money, and that Dover must inevitably continue, as it has always been, the favourite port to embark from and to, in consequence of the shortness of the passage over, I see as little cause to despair about the prospective, as I do about the existing, traffic.

With regard to your other correspondent, who talks of a rumour abroad of another half million being wanted to complete the works, it looks to me more like a hoax played upon him than anything else. Considering the confident tone in which the subject of cost was treated at the last meeting by both Directors and Engineer, and that too upon the eve of another meeting, when the same *important* subject is tolerably certain of being again thoroughly canvassed, I think your correspondent might have curbed his impatience a little, and waited the result of that meeting, as I am persuaded his fears are perfectly groundless.

I am, Sir, your obedient servant,

X. Y. Z.

November 23, 1842.

THE TOLL QUESTION—CROYDON AND GREENWICH RAILWAYS.

To the Editor of the Railway Times.

Sir,—There are two facts in your journal of last week which appear to me so important, and which bear so closely on the above agitating questions, that I am induced to draw your attention, and that of the railway public, to the same. I allude to the result of the working of the high fares recently adopted by the Greenwich Company. It appears from your traffic-table that the receipts on that line last week with *high* fares amounted only to 603*l.*, while the corresponding week of last year with *low* fares amounted to 769*l.*, being a loss to the Company by adopting high fares of 166*l.* I believe I am also correct in saying that the receipts on the line last week were the smallest in amount that have been received in any week for the last four years. So much for the policy of high fares! The same unfortunate result appears also to attend the working of high tolls. For instance, the Dover Company having determined to reduce their fares about 50 per cent., were desirous that the Greenwich Company should in some degree modify their toll. This was refused, and it will now be seen what has been the result of the unwise decision. The Dover Company have been induced to conduct as much of their traffic as possible to the New Cross station; the consequence has been a gradual increase of business there, as the following facts will show:—The first week the low fares of the Dover Company came into operation *one-seventh* of the passengers used that station, the second week the number was *one-sixth*, and last week the return shows that it is approaching *one-fourth*. To those who see further than their noses it is quite clear how this will end. The Dover Company having familiarised the public to the New Cross station, *and having a pecuniary interest in doing so*, will in all probability eventually make it their London terminus, and give up using the Greenwich line altogether! I will only allude to the high toll expected by the Greenwich Company as payable to them by the Croydon Company, by observing that, from letters I have recently seen in your paper, it appears likely they will lose the *whole* of the toll payable to them by that Company. So much for the policy of high tolls! These results recal to my recollection some just observations made by a writer in the daily *Times* a few weeks* since on the present Management of the Greenwich Railway. After some severe remarks on the general management of the line, the writer observes, that "the Directors appear sedulously bent upon working their own downfal." If these gentlemen were the only sufferers by such proceedings there would not be much cause for regret; but when it is considered the amount of private misery that would follow upon the ruin of the Greenwich Railway, which is inevitable should the present suicidal course be persevered in, it appears to me desirable that the proprietors should be made aware of the destruction that threatens their property.

I am, Sir, yours, &c.,

A. A. A.

Something to follow

THE TOLL QUESTION—CROYDON AND GREENWICH RAILWAYS.

We have been favoured with an official copy (and extracts from the minutes of the Croydon and Greenwich Boards) of the following correspondence, which we think cannot fail to convince our readers which of the parties engaged in the struggle which has so long been maintained on this toll question, is in the right. For the present, we leave the correspondence to speak for itself. We shall probably revert to it at an early date:—

To the Directors of the Croydon Railway.

London, Nov. 3, 1842.

The undersigned shareholders in the Greenwich Railway having met to confer upon the existing difference of opinion between the Boards of Directors of the Greenwich and Croydon Railway Companies, upon the subject of the toll payable by the latter,

Beg to submit, for the consideration of both Boards of Directors, the propriety of referring their difference of opinion to a Committee of *disinterested* gentlemen, selected from the Directors of other Railway Companies, with a view to an amicable settlement of the present difficulty.

(Signed by)

J. S. Wells, 75, Old Broad-street.
Edw. Hill, Somerset House.
William Hichens, Threadneedle street.
John Jones, Stock Exchange.
Jonathan Barrett, Croydon.
L. Levy, Tavistock-square.
Richard Barrett, Wadden.
J. A. T. Smythe, Mark-lane.
Richard Sterry, Borough.
F. Mercier, Stock Exchange.

Who are requested to wait upon, and present a copy hereof to, the said Boards of Directors.

(COPY.)

London and Croydon Railway Company,
205, Tooley-street, Nov. 8, 1842.

Gentlemen,—The Croydon Directors beg to acknowledge the receipt of an address from certain shareholders of the Greenwich Company, on the subject of the existing difference of opinion between the two Companies, and to assure the Greenwich shareholders that they are quite prepared to

* *Times* City article, October 24.

adopt the course suggested, or any other course likely to lead to so desirable a result as an amicable settlement of the present difficulty.

I am, Gentlemen, your most obedient servant,

(Signed) R. S. YOUNG, Secretary.

J. S. Wells, Esq., Edwin Hill, Esq.,
And other proprietors of the Greenwich Railway.

(COPY.)

London and Greenwich Railway Office,
London Terminus, Nov. 16, 1842.

A letter to this Board signed by 13 of the shareholders, and dated the 3rd November, 1842, having been read, suggesting to this Board the propriety of a reference on the toll-question to a Committee of gentlemen, selected from the Directors of other Railway Companies, with a view to an amicable settlement of the present difficulty—

Resolved,—That after mature consideration of the suggestions therein contained, this Board are unanimously of opinion, that a reference on a subject of such vital importance to the prosperity of the Company would be a dereliction of their duty, and that for the reasons assigned in their letter to the Croydon Company of the 28th September last, they feel themselves bound to adhere to their former decision, in concurrence with the views of nearly the whole of their proprietors.

Extracted, J. Y. AKERMAN, Secretary.

(COPY.)

London and Croydon Railway Company,
205, Tooley-street, Nov. 18, 1842.

Sir,—The Directors of this Company, after the various propositions made by them to the Directors of your Company during the last three years, in all of which they have had but one object, that is, the advantage and prosperity of both Companies, and having foreseen, and predicted, from the commencement of those propositions, the evil consequences which would result to both Companies from the pertinacious adherence of your Directors to the exaction of a toll of 4½d. per passenger, they have at length felt themselves impelled to the necessity of resorting to the measure contained in the resolution transmitted herewith.

The resolution referred to is to the effect—that the Board of Directors will recommend to the proprietors to sanction them in taking immediate steps for relinquishing the traffic; but the Board being aware of the very great inconvenience the public will sustain, and the serious loss which will be entailed upon the Greenwich Company by this measure, instruct their Secretary, before a meeting of the proprietors is convened, to transmit a copy of the resolution to the Directors of the Greenwich Company.

In taking this step the Directors foresee as clearly as they did, the consequences of the imposition of the 4½d. toll as reiterated in their correspondence with your Directors, that the traffic between Croydon and London will not, and cannot, be carried on by the Brighton or South-Eastern Company to anything approaching the extent to which it was once carried on by this Company, or to which it might now be carried on under an arrangement greatly beneficial to both Companies. If the contrary had been their opinion, they would long since have recommended their proprietors to pursue the course which has now, from the defalcation of the traffic, become inevitable, being aware that its disastrous effects must fall wholly upon the Greenwich Company, who alone have derived any profit from the traffic for some time past.

I am, Sir, your very obedient servant,

(Signed) R. S. YOUNG, Secretary.

J. Y. Akerman, Esq., Secretary,
London and Greenwich Company.

(COPY.)

London and Greenwich Railway,
November 23, 1842.

Sir,—The Board of Directors have instructed me to acknowledge the receipt of your communication of the 18th instant, accompanying an extract from the minutes of the Croydon Board.

I have the honour to be, Sir, your most obedient servant,

(Signed) J. Y. ACKERMAN, Secretary.

R. S. Young, Esq., Secretary,
Croydon Railway Company.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—A statement having recently been put forth under the signature of "V.," evidently in reply to my letter, I simply state, again and again, that the cost of the Great Western Railway, including outstanding liabilities and works in progress, is *very near seven millions!* and as yet neither permanent station, nor, I should hope, permanent terminus, in London has been provided.

Holders for investment will do well to inquire whether the line can go on without new rails, without a new terminus, or a new station; and having satisfied themselves on these points, they will do well to ask whether any one of these vast outlays will bring one passenger the more to their line, at present retrograding, or one farthing more to their treasury.

I again repeat the startling fact, that the receipts on the Great Western, when the toll and rent paid to the branches, and the interest of capital per mile beyond the Birmingham, are deducted, are less than two-fifths of the receipts on the Birmingham—being less than $\frac{40}{100}$; whilst the Birmingham expenses are about 33 per cent., so the Great Western, unless much more economical, would have little more than interest in hand, if their accounts were kept in the same manner.

I am, Sir, yours, &c.,

ALPHA.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—"Alpha" has not given me the information I asked for. I wanted to know when his "strictures" on the Great Western, the Leeds and Manchester, and the North Midland, were published, in order to test his past prophecies by present experience. He states in reply only that they "appeared under a different signature;" but he omits to say *what* that signature was, and *when* the "strictures" appeared.

Will he be so good as to give me this information in your next number?

Perhaps, too, he will do me the honour to reply to my letter which appeared in the *Railway Times* of November 5, and which he has altogether forgotten to notice.

As I am not one of the Directors, I cannot answer the questions "Alpha" puts to that body; but when he has given me a clue to find the prophecies, "facts," and arguments which he may have published, I will examine them closely, and canvass them fairly.

Until then, I defer all further remarks upon the last, as well as the first, letter of "Alpha."

I am, Sir, your very obedient servant,

L.

November 21, 1842.

LONDON AND BLACKWALL RAILWAY.

To the Editor of the Railway Times.

SIR,—I beg leave, through the medium of your paper, to draw the attention of the shareholders in the London and Blackwall Railway to the proceedings of the Midland Counties' and North Midland Railways, and to suggest whether it would not be highly expedient to follow their example, and call a special meeting of the proprietary, to take into consideration the appointment of a Committee of Inquiry into the state of the Blackwall Company's affairs, and to "report with reference to the past, present, and future expenditure, the rates of fares and freights, the carriage of passengers and goods, and generally with reference to the Management."

Such a Committee of Inquiry, conducted by men of business, experience, and energy, could not fail of producing beneficial results to the interests of the shareholders; it would stimulate the declining traffic, develop the yet dormant resources of this commercial railway, restore public confidence, and perchance afford the prospect of a *bona fide* dividend to the now desponding proprietors. In short, it is by prompt and vigorous measures alone that the present disastrous state of the Blackwall Railway Company's affairs can ever be retrieved, and when all the facilities and importance of this line are considered, it is only surprising that in a great mercantile city like London, no effort has hitherto been made to place it in a more prosperous condition.

I remain, Sir, your obedient servant,

A SHAREHOLDER.

November 22, 1842.

EDINBURGH AND GLASGOW AND BIRMINGHAM AND GLOUCESTER RAILWAYS.

To the Editor of the Railway Times.

SIR,—Your correspondent, "T. W.," seems to think there is a great anomaly in the present prices of the Edinburgh and Glasgow and Birmingham and Gloucester Railways; with your permission, I will endeavour to set him right.

1st. I consider a railway share to be worth as many pounds as it produces shillings per annum, and allowing for future prospects of increase or decrease of revenue.

The disposable balance of the Birmingham and Gloucester for the half-year ending Dec. 30, 1841, was 8,601*l.*, from which, with 8,182*l.*, the profits derived from previous openings, they paid the dividend. The earnings of the first 20 weeks of this half-year are 310*l.* more than the corresponding 20 weeks last year, so we may take the probable earnings to be the same for the ensuing half-year.

The charge for interest will be nearly the same; the working expenses probably something less; the old and new shares are, together, equal to 12,000 100*l.* shares; allowing the working expenses to be less, suppose, with the 1,615*l.* last half-yearly balance, we allow there will be 12,000*l.* applicable next 31st December for dividend, or 20*s.* per share for 1842—value of share, 20*l.* Probable improvement I must leave to you.

The Edinburgh and Glasgow, the first four months opening, realized enough to pay 5 per cent. After debiting 100*l.* per mile per annum for maintenance of way, not usual on first openings, the expenses were 33 per cent. Allowing this half-year to be the same, and 9,500*l.* for interest, they must take 51,000*l.* to pay 5 per cent. on its shares, and 7,500*l.* for every additional 1 per cent.

They have already taken	£49,853
Interest, mails, rents, &c.	500
Six weeks to come, say 1,800*l.* per week	10,800
Total	£61,153

As about 58,000*l.* will secure a dividend of 6 per cent., there will be a surplus, and above 1,000*l.* left last June, towards a depreciation fund, if they choose to establish one. I allow that about 7,000*l.* was taken extra, on account of the Queen's visit, but from the railway being so recently opened, we may expect a considerable increase next year, and its future prospects are exceedingly good. The present value, by allowing the shares to be worth pounds for shillings dividend, or 5 per cent., is, as my calculation—

Edinburgh and Glasgow	£50
Share (present value)	60
Probable improvement at least	40
Ultimate value per share	£100

I remain, Sir, yours, &c.,

W. T.

London, November 21, 1842.

P. S. The Birmingham and Gloucester paid no dividend last half-year, ending June 30, 1842.

Digitized by Google

EDINBURGH AND GLASGOW AND BIRMINGHAM AND GLOUCESTER RAILWAYS.

To the Editor of the Railway Times.

SIR,—A correspondent of yours, in your paper of the 19th instant, wishes to know the reason of the great disparity in price between the Birmingham and Gloucester and Edinburgh and Glasgow Railway shares, the receipts, as he says, being greater on the Gloucester than on the Edinburgh and Glasgow. I think if "T.W." will but be kind enough to read the last Reports of both these lines he will at once see the reason of this apparent anomaly; for he will find that, while the Birmingham and Gloucester Company are paying *almost* all their assets to maintain the traffic on their line, the Edinburgh and Glasgow leave a sufficient surplus to pay a dividend of 16s. 8d. per share. I subjoin a brief condensation of the two Reports, by the perusal of which I hope your correspondent will be enlightened :—

The receipts on the Birmingham and Gloucester for six months up to June 30, 1842		£41,967 4 7
Expenses of maintaining the traffic	£28,298 5 1	
Interest on loans	12,053 11 10	
		40,351 16 11
Left to pay dividend		£1,615 7 8
The receipts on the Edinburgh and Glasgow for 17 weeks, ending June 25, are		33,716 6 3
Expenses of maintaining the traffic	11,034 14 7	
Interest on loans	6,232 17 6	
		17,267 12 1
		16,448 14 2
Dividend on 18,000 old shares at 16s. 8d.		15,000 0 0
To reserved fund		£1,448 14 2

By the foregoing your correspondent will see that the Birmingham and Gloucester only leave a surplus of 1,615*l.* to *pay dividend* on 9,300 shares, while the Edinburgh and Glasgow pay a dividend and all expenses, and leave a reserve fund of 1,440*l.* This is not a very cheering prospect for the Gloucester shareholders, but until they reduce their extravagant expenses they will not have any likelihood of improving their fortunes. Of course in the item of interest in the Birmingham and Gloucester expenses the interest guaranteed on the new shares is included.

Yours, very respectfully,

DELTA.

Liverpool, November 23, 1842.

HULL AND SELBY RAILWAY.

To the Editor of the Railway Times.

SIR,—I rejoice to observe, that at length a distant proprietor has brought before the public, through your journal, the above railway. Without attempting at present (as I may again occupy a portion of your columns) to enter into the causes producing results hitherto the most unsatisfactory to *original shareholders*, who have not the means to avail themselves of low prices to reduce their average—considering the said line, if judiciously and economically managed, one likely to yield profitable dividends, the traffic (which has scarcely yet developed itself) exceeding the expectations of all concerned,—I would just urge upon your correspondent, and other shareholders, the necessity of attending the meetings, so that the next, unlike the past (a *small* meeting of *small* proprietors), may show to the Directors that the shareholders generally are interested in the undertaking, and are neither to be *frightened out of their shares*, nor disposed to tolerate extravagant expenditure.

I am, Sir, yours, &c.

A SMALL PROPRIETOR.

Hull, November 15, 1842.

RAILWAY ACCOUNTS.

To the Editor of the Railway Times.

SIR,—I read your leading article every week with the greatest pleasure, and generally find some good remarks, tending to promote the interest of railway shareholders in one Company or other. Being myself heavily interested in several lines, I am anxious to promote the general good, and I think a great improvement would ensue if the accounts of all the railways were kept in the same manner and form, as near as possible, and at all events that the account of the expenditure and receipts should be given to the shareholders after the same form, and then the calculation of the expenses of working, keeping in repair, and receipt, might be understood by all; as it is now, there are scarcely any two alike.

I would submit whether it is not your opinion that a great improvement would ensue if a clause to that effect, and some others equally necessary, were introduced in the next Act for regulating railways, and the Government would have a better and more equitable method of adjusting the income from their tax, as well as that the shareholders would know more what they are about. If this suggestion should meet your approbation, I shall be glad if you give it a place in your next number, with any remarks on the subject your ready mind may suggest.

I am, Sir, yours, respectfully,

J. EDWARDS.

Chester, November 18, 1842.

RAILWAY LABOURERS.

To the Editor of the Railway Times.

SIR,—I am desirous of drawing your attention, and also that of every philanthropist, to the situation of the poor men who construct those magnificent undertakings, railways. I really think this class of persons are more neglected than any other in the British dominions. No doubt you are aware of, and the public also should know, the plan adopted when a contract is advertised. Various tenders are sent in for a given distance, and when this contract is sealed, the Directors appear to have completed their task; and so long as the contractors keep to the agreement, and this is reported to them by the Engineer, they are satisfied; but having taken the contract, the contractor gives out that he is in want of men. It will be easily supposed at these times applications are indeed plentiful, and the work is soon commenced in right earnest, and one has only to watch these poor fellows, to see how richly they deserve the pay for which they work so hard both by night and by day. I am sorry, however, to say, here begins the hardship. At the end of a week, or sometimes two, they are collected together at some *public-house* to receive their wages; and after waiting frequently for hours, and ample deduction being made for the drinking-score, about which no poor fellow must dispute on pain of losing employment, about 9, 10, 11, or even 12 o'clock of a Saturday night, they are dismissed. But, Mr. Editor, I want it to be generally known that the contractors (I believe there are honourable exceptions) receive a profit out of the beer supplied to these poor creatures. Now, what it the consequence? Why, that moderate and sober men soon become sots, and the more they drink, if they only keep to their work, the better they are liked; and this accounts for their frequently destitute appearance. In truth, they have very little money to call their own; hence their improvidence—their Sunday-trading—their loose habits—and their habitual non-attendance at any place of worship. They move along the country like a pestilence. I have heard it remarked, that it would take many years for the poorer class of inhabitants to regain the habits of morality which they previously possessed. This is not all. I have the strongest reason to believe that the public have no conception of the waste of life in these undertakings. Mr. Editor, it is truly frightful; and I regret to add, that many, if not most of these, are occasioned by inebriation. Now, if "one soul is of more value than a thousand worlds," what have not these contractors, these Engineers and Directors, to answer for? I do hope the attention of those who have power to help the helpless, this useful, this noble race of men, may be drawn to these facts, and especially that Lord Ashley may be made acquainted with them, and that his noble father, Lord Shaftesbury, may be enabled in every Railway Bill, for the future, to insert clauses for their protection.

I am, Sir, yours, &c.

A CITIZEN.

LONG TUNNELS NOT NEW.

To the Editor of the Railway Times.

SIR,—I send you an extract from an article entitled "Eight Days in the Abruzzi," which appeared in *Blackwood's Magazine* for 1835, and which may perhaps interest your readers :—

"Close at the foot of this rock (a rock near the village of Capistrello), in a deep dark dell, through which the river leaps in rapids, the remarkable subterranean canal, from the great lake of Celano, or Fucine Lake, discharges itself into the Liris. The hills in front conceal the lake from us, and the canal commencing as its edge, pierces *for three miles* through the bowels of the mountain and of the plain on which we stand. The purpose of it was to carry off the overflowing waters of the lake: it was executed by the Emperor Claudius, and repaired by Adrian; was long lost sight of, and has been lately cleared out by the Neapolitan Government. When I visited it, the work had gone on for ten years; and with the labour of the 100 men then employed, it was expected that a few months more would finish it. In the original execution of the works 30,000 Roman slaves laboured for 11 years; and to allow this vast number to work at once, the level was first taken, and pits sunk from the surface of the ground to the necessary depths, the detachment at each shaft thence proceeding to cut horizontally till it met the next. The depth at which the tunnel runs under ground is very great, some of the perpendicular shafts in the plain being nearly 400 English feet in depth. Other shafts lead down into the canal from the sides of the mountain; and most of these shafts, and the greater part of the main water-course, had been cleared when I saw them. The author went into the tunnel, and found the height of the great gallery not to be anywhere less than 20 feet, and the width sufficient to allow two cars to pass. The arch was not faced with masonry where it went through the solid rock."

I am, Sir, yours, &c.

J. W.

Nov. 21, 1842.

BRISTOL AND GLOUCESTER RAILWAY—"WHAT IS TO BE ITS GAUGE?"

To the Editor of the Railway Times.

SIR,—There is no proprietor in this railway who is not deeply interested in the decision of the above question; but there are many, I fear, who are but little alive to its importance. The Directors have given notice of their intention (as yet unsanctioned by the proprietors) to apply to Parliament for powers to construct a branch line, of about half a mile in length, through one of the suburbs of Bristol, to join the Great Western Railway at a short distance from its terminus. What the cost of this branch may be has not been stated; but as it must gain a height of about 20 feet above the ground, and pass over some valuable property, it cannot, with the *et ceteras* required at the junction, &c., be taken *safely* at less than 18,000*l.*—or rather, adding Parliamentary expenses, 20,000*l.* to 22,000*l.* *For what* do the Directors contemplate the outlay of this money? They have not told us; and it is but fair, therefore, to conclude that some new light has suddenly broken in upon them, to lead them to make an addition to the railway which was not contemplated at the last half-yearly meeting. Have they not enough on their hands already, first to complete their proper line to Stonehouse, and then to construct the additional seven miles to Gloucester, which the Cheltenham Union *cannot* do, and for which the Bristol and Gloucester Company have not yet raised any share capital? Will they allow themselves to be made a *cat's-paw* by the Great Western Directors and their Engineer, for the sake

of the few hot chesnuts which (they may depend on it) will be *their* only share of the spoil? It is very well known, Sir, that the Great Western Company would rejoice to make the Bristol and Gloucester line a tributary, in the same way that they have succeeded (at the poor shareholders' cost) in obtaining a branch to Cirencester, as they could thereby cripple the power of the Birmingham and Gloucester line to compete with them for the Cheltenham traffic, and would obtain, at the cost of the Bristol and Gloucester Company, a wide-gauge railway for the South Wales traffic from Gloucester. I do not blame the Great Western Company for getting all they can out of squeezable materials, wherever they can find them; but if the Directors of the Bristol and Gloucester line can so stultify themselves, and break faith with their proprietary, as to lay the wide gauge on their line, I trust the shareholders will quickly call them to account. You have written much, Sir, and with great weight, on the necessity of *combining* continuous lines under one Management, if they are to be rendered profitable to the shareholders. In no other way, certainly, can short lines of moderate traffic be made to pay, and the kingdom does not present a single instance where the union of two lines is more called for by the nature of the traffic and the interests of the proprietors, than in the case of the Birmingham and Gloucester and Bristol and Gloucester Railways. If the shareholders of the latter line once consent to give up the *possibility* of uniting with the Birmingham and Gloucester, as they would do by the adoption of the wide gauge, their line will be rendered nearly worthless, and their shares, already at a heavy discount, become unsaleable at almost any price. Fancy, Sir, the line from Birmingham to Bristol, expecting a large proportion of its revenue from *goods* now carried down a navigable river (the Severn), *cut into two parts* at the intermediate station of Gloucester by a difference of gauge! Open your eyes, brother shareholders, in time! Your Directors are honourable men; your Engineer is an honourable man; all, *all* honourable men; but do not forget that at least *three* of your Directors are likewise Directors of the Great Western, or Exeter Railways, and that your Engineer is the Engineer of both those Companies, and also of the *Cheltenham Union*.

I am, Sir, yours, &c.,

B. G.

November 24, 1842.

A statement of the prospects of the Great Western Railway Company, for the half-year ending December 31st next, has been drawn up, in anticipation of the actual Report to be submitted to the shareholders for that period, which appears to be highly favourable; and although the items of income and expenditure have for the unexpired term yet to be completed, the account is probably not far from the truth. The receipts to July 31st were 71,400*l.*; to August 28th, 59,270*l.*; to September 25th, 57,251*l.*; to October 30th, 69,401*l.* For November to the 27th, they are estimated at 46,000*l.*; and for December down to the 31st, at 60,000*l.* These sums, including a surplus of 2,605*l.*, carried over from the June account, make a total of 365,927*l.* The expense of working the line and its branches is taken at 125,000*l.*, being about 3,000*l.* less than was paid last half-year; the rent of the Cheltenham line at 8,500*l.*, rent and toll of the Exeter line at 24,000*l.*, the interest on capital borrowed, being 3,472,409*l.*, at 5 per cent. per annum, at 86,810*l.*, but from which is rebated, for interest on money in hand, 6,810*l.*; the dividend on shares, namely, 3,015,013*l.*, at 8 per cent. per annum, at 120,600*l.* The total of expenditure is therefore assumed to be 358,100*l.*. which leaves a balance to be carried to the next account of 7,827*l.* There has been an attempt to decry this admirable undertaking, no doubt from a mercenary object, but the present exhibition of receipts, and the improving prospects of the Company, its superior accommodation, ease, speed, and solidity, form, it is justly remarked, a sufficient reply to the parties who have assailed it.—*Morning Post*, City article.

NORTH MIDLAND RAILWAY.

To the Editor of the Railway Times.

SIR,—Permit me, through the medium of your useful journal, to express my unmitigated surprise at the cool declaration made by the Chairman of the North Midland Directors at the meeting of shareholders held the other day at Leeds, such declaration, namely, "that he was happy to tell the shareholders that the traffic in the goods' department was increasing," being the very reverse of the actual facts of the case, as the following statement, taken from the *Railway Times*, will very clearly show:—

The receipts for the week ending—		
August 26, 1841, were		£1,339
September 2	,, ...	1,459
,, 9	,, ...	1,873
,, 16	,, ...	1,371
,, 23	,, ...	1,414
,, 30	,, ...	1,422
October 7	,, ...	1,390
,, 14	,, ...	1,820
,, 21	,, ...	1,432
,, 28	,, ...	1,503
November 4	,, ...	1,550
,, 11	,, ...	1,268
Total.....		£17,841
The Receipts for the week ending—		
August 27, 1842 were.....		£1,270
September 3	,, ...	1,384
,, 10	,, ...	1,400
,, 17	,, ...	1,456
,, 24	,, ...	1,572
October 1	,, ...	1,727
,, 8	,, ...	1,742
,, 15	,, ...	1,532
,, 22	,, ...	1,467
,, 29	,, ...	1,439
November 5	,, ...	1,431
,, 12	,, ...	1,441
Total		£17,861

Here we have an increase of 20*l.* in twelve weeks as compared with the previous year, made a matter for congratulation to the vexed and disappointed shareholders; and on which they are impudently told an increase of expenditure must shortly be incurred. Really, Mr. Editor, a body of shareholders who submit to such treatment as this, deserve to be fleeced of their last farthing,

In common with all the other distant shareholders in this line of railway, I can only express my sincere thanks to the Committee of Investigation for the service they have done us in exhibiting the utter worthlessness of the Directors as managers of the line, and I hope the example will not be lost on some other Companies, whose affairs are in an equally deplorable condition.

I am, Sir, your constant reader,

H. H.

Mid Lothian, Nov. 21, 1842.

MAILS STOPPED BY SNOW.—Late on Monday night last, and all the day on Tuesday, the counties of Lancaster, Westmoreland, and Cumberland, were visited with a most dreadful snow-storm, accompanied with a strong tempestuous south-east wind, which was so furious that the snow drifted up the railway, between Preston and Lancaster, which delayed the mail train for nearly three hours. However, every possible exertion having been made to clear the rails, ultimately with much difficulty the mail reached Lancaster, and thence to Kendal, meeting with little or no obstruction; but, on approaching Shap Fells, that dreary and mountainous district, commonly called the "Westmoreland Alps," the snow was so drifted and the storm so boisterous, that the coach was, after upwards of an hour's loss of time, with difficulty got over that wild region, and arrived at Penrith about four o'clock in the afternoon, being near four hours behind its usual time. The weather since has been somewhat more favourable in the north.

The mail from Worcester to Ludlow, ... ning for half a century, made its last ... Tuesday, thus leaving the public ... official conveyance for letters between ... and Tenbury.

LONDON AND BIRMINGHAM ... WAY.—Final Call of £10 on the £100 Shares ... Directors of the London and Birmingham Railway ... pany having resolved that a Thirteenth or Final ... of £10 per share, payable on or before the 10th ... 1843, should be called for on the £100 shares of ... pany, the Proprietors of such shares are hereby ... to Pay, on or before the appointed day, to any ... undermentioned Bankers, the sum of £10 on ... respective shares, viz.:—

By Order
JOHN BIGG, Secretary.

ber 18, 1842.

PRESTON AND WYRE RAILWAY.—At a Special General Meeting of the Shareholders of the Preston and Wyre Railway, Harbour, and Dock Company, held at the Queen's Hotel, Birmingham, on Thursday, the 24th November, 1842.

Sir P. HESKETH FLEETWOOD, Bart., M.P., in the Chair—

The following Resolutions were unanimously passed:—

1. Resolved—That the Report of the Committee be adopted, and that a copy be sent to each of the Shareholders, calling upon them individually to assist in carrying out the measures contained therein.

2. Resolved—That application be forthwith made to the holders of the shares lately issued under the name of Preference Shares to assent that the shares now to be issued, to the amount of about £33,600, shall have preference over the shares they hold; and that upon such assent being obtained a circular be addressed to such Shareholders, offering them a rateable proportion of the new preference shares.

3. Resolved—That circulars be addressed to such Shareholders requesting their co-operation to the proposed Steam Navigation Company, and requiring that they become and induce others to become Shareholders, as it will be of the most essential service to their property in the Railway.

4. That the London Board having resigned, the following gentlemen be the Directors until the October meeting of 1843:—

Clement Royd, Esq., Falinge,
James Bourne, Esq., Liverpool,
Thomas Downward, Esq., Liverpool,
William Taylor, Esq., Preston,
John Dewhurst, Esq., Preston,
Frederic Kemp, Esq., Respham,
William Wailes, Esq., Leeds, and
Daniel Elletson, Esq., Parrox Hall, near Fleetwood;

And that they have power to fill up the four vacancies in the Board.

5. That the Directors have power, without calling the Shareholders together, to enter into any agreement or arrangements with any Steam Navigation Company, or parties which they may deem expedient for introducing steam vessels into that port with as little delay as possible.

6. That the cordial thanks of the meeting be given to the Directors and the Committee, for the very able and comprehensive manner in which they have entered into the spirit of the Resolutions of the meeting in London on the 31st of October; and particularly to the Directors, for the straightforward and honourable way in which they have met the views of the Committee.

P. HESKETH FLEETWOOD, Chairman.

PATRONISED by all the principal Architects and Builders in this Country and Abroad.—SEYSSEL ASPHALTE.—In consequence of the daily attempts made to imitate this valuable mineral production, and of the name of "Asphalte" being given to most of the spurious and "cheap" materials, the Directors of this Company particularly recommend Architects, Builders, and others (for the purpose of securing the use of the genuine article), to insert in their Specifications "The Seyssel Asphalte, Claridge's Patent," and not merely "Asphalte," or "Bitumen," as, in many cases where these terms have been used, gas-tar and other worthless and offensive compositions have been introduced. For the information of those residing at a distance from London, and of those who, having employed the spurious composition, may, from its failure, have become prejudiced against the use of Asphalte, the following are mentioned as some of the distinguishing qualities of the genuine material. The Asphalte of Seyssel is of a light colour, closely resembling Yorkshire stone, has a smooth surface (without being slippery), and joints almost imperceptible; it is also free from smell, is not acted upon by change of temperature, and is at all times dry and warm, and remarkably pleasant to walk upon, and, from its elasticity, never cracks. The factitious material, on the contrary, has a dark and dirty looking appearance, presents a rough and coarse surface, and from its brittleness, is liable to crack, particularly in frosty weather. In consequence of the above qualities, the genuine material (being perfectly impervious to wet) has been used with great advantage for roofing; it can be laid down to any extent, presenting one uniform surface, and is far superior to lead, as it is not liable to expansion or contraction in consequence of any change in the temperature. For covering of arches (to prevent the percolation of wet) it is invaluable; the Greenwich Railway Company alone having covered upwards of 400 000 superficial feet. It has also been used on the Great Western, Birmingham, Midland Counties', South-Western, Brighton, Blackwall, and other Railways; at the joint Stations, London Bridge, and at the South Metropolitan, Highgate, and Nunhead Cemeteries. As proof of the great durability of the genuine Asphalte, it need only be mentioned that the first work executed in this country with this material (amounting to 3,952 feet), was at Whitehall, opposite the Horse Guards, in the month of April, 1838, and which, although only half an inch in thickness, has remained up to this time (a period of four years and eight months) in the most perfect condition. Books of Testimonials, with Scale of Prices, may be obtained on application to

J. FARRELL, Secretary.

Seyssel Asphalte Company's Depot, Stangate, London.

Note.—Neither the pavement in Parliament street, London, nor the works at the Model Prison, at the Abney-park Cemetery (which, from its failure, has since been removed), or at the Hotel at the Slough Station of the Great Western Railway, were executed by this Company.

CAUTION.—This is to Caution the Public against employing William Forster, who has been lately at work on the Paris and Rouen Railway, near Pont de L'arche, 12 miles from Rouen, as a brickmaker, and who has absconded, leaving his workmen and other creditors unpaid, although 3,000 francs (about £120) was given him for these purposes. He has besides left debts owing to various tradesmen to the amount of about 16,000 francs (£640).

The said William Forster is about 35 years of age, of dark complexion, and about 5 feet 8 inches high, and belongs to Portsmouth. He was last employed in England on the Gosport branch of the Southampton Railway, and resided near Fareham.

Previous to absconding, he had been in the habit of remitting the greater part of the money he received for his work to his brother in England, and it is reported he is now at work on the South-Eastern line of Railroad.

MACKENZIE AND BRASSEY,
Contractors on the Paris and Rouen Railway.

6, Petite Rue Verte, Paris,
28th October, 1842.

TO ENGINEERS, RAILWAY PROPRIETORS, AND OTHERS.—An Apparatus, consisting of a powerful Lamp and Reflector, which is calculated to throw a strong light upwards of 300 yards in advance of an Engine on a Railway, has lately been constructed, and the value of its application proved by a considerable number of trials, lately made. By its effect, any material obstacle on the line being easily seen, the Engineer would have time either to stop the Engine, or so to decrease the speed as in great measure to prevent the accidents which otherwise might occur.

For further particulars apply to
THE SOHO PLATE COMPANY,
Soho, near Birmingham; or 16, Salisbury-square, London.

THE TWELFTH THOUSAND.

Just published, *in a Sealed Envelope*, price 3s., and sent free, on receipt of a Post-office Order, for 3s. 6d.,

MANHOOD: the Causes of its Premature Decline, with plain Directions for its Perfect Restoration; addressed to those suffering from the destructive effects of excessive indulgence, solitary habits, or infection; followed by observations on the treatment of Syphilis, Gonorrhœa, Gleet, &c., illustrated with cases, &c.
By J. L. CURTIS and Co., Consulting Surgeons, London.

TENTH EDITION—Published by the Authors, and sold by Burgess, Medical Bookseller, 28, Coventry-street, Hay Market; Mann, 39, Cornhill; Strange, 21, Paternoster-row, London; Guest, 51, Bull-street, Birmingham; T. Sowler, No. 4, St. Ann's-square, Manchester; G. Philips, South Castle-street, Liverpool; Fannin and Co., 41, Grafton street, Dublin; Drummond, 114, High street, Edinburgh; and sold in a *sealed envelope*, by all Booksellers.

OPINIONS OF THE PRESS.

"This work, *a tenth edition* of which is now presented to the public, *ten thousand copies having been exhausted since its first appearance*, has been very much improved and enlarged by the addition of a more extended and clear detail of general principles, as also by the insertion of several new highly interesting cases. We feel no hesitation in saying that there is no member of society by whom the book will not be found useful, whether such person hold the relation of a *parent*, a *preceptor*, or a *clergyman*."—*Sun*, evening paper.

"This is a work that we fear there exists too much need for to cause us to hesitate to recommend it for general perusal. Every branch of those frightful maladies, whether the result of immoral habits or secret vices, is here succinctly treated, and divested of all medical technicality, plain and easy directions are given for the best mode to be pursued in all cases, however complicated or apparently hopeless. To the married, as well as the unmarried, this little work alike affords consolation and cure in peculiar cases, and we are doing a service to society in recommending it to general notice."—*Essex and Herts Mercury*.

"Messrs Curtis's work, entitled MANHOOD, is one of the few books now coming before the public on such a subject which can lay claim to the character of being strictly professional, at the same time that it is fully intelligible to all who read it. The moral and medical precepts given in it, render it invaluable."—*Magnet*.

Messrs. Curtis and Company are to be consulted daily at their residence, No. 7, Frith-street, Soho-square, London.

Country Patients are requested to be as minute as possible in the detail of their cases. The communication must be accompanied by the usual consultation fee of £1, and in all cases the most inviolable secrecy may be relied on.

TELEGRAPHIC RAILWAYS; OR, THE SINGLE WAY, recommended by Safety, Economy, and Efficiency, under the safeguard and control of the Electric Telegraph; with particular reference to Railway Communication with Scotland, and to Irish Railways. By WILLIAM FOTHERGILL COOKE, Esq.

Contents: Objects of the Treatise—Distinguishing Characteristics of present Railways—Evidence before Select Committee—Advantages of Telegraphic Communication—Mode of working the Blackwall Railway, by the Electric Telegraph—Description of the Electric Telegraph—Plan for a "Telegraphic" Railway—Course of an Express Train—Ballast Waggons—Permanent Obstruction—Crossing of Two Trains—Description of Signals—Concluding Remarks on Single Way—Mixed Lines—Scottish Junction Line—Irish Railways—Advantages common to Single, Mixed, and Double Lines—Public Confidence—Reduction of Stock—Income from Telegraph—Alertness—Adaptation to Wants of Country—Conclusion.

London, Simpkin, Marshall, and Co.; Liverpool, Wareing Webb, Castle street; Manchester, Simms and Dirham; Birmingham, Wrightson and Webb; Leeds, Slocombe and Simms.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secrecy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

Just published,

TUCK'S ROLLER CALENDAR FOR 1843.—This is a mode of affixing the Calendar for the whole year on two revolving cylinders, within an elegant case, so as to exhibit each day's information in a bold and novel manner, presenting Daily Memoranda indispensable to every housekeeper and man of business. It possesses the advantage of a Date Box and Almanac, and is adapted for the Library, Board Room, Counting house, Warehouse, or Parlour; and is the best application of the Calendar ever yet devised. In Mahogany Box, price 5s. 6d.; in Ornamented Box, 6s. 6d. In addition to much useful information relating to business, &c., the Calendar contains the times of High Water at London, Liverpool, Dublin, Glasgow, Leith, Bristol, and Hull, for every day in the year.

Railway Times Office, Fleet-street; Letts, Cornhill; and Ackerman, Strand.

THE PARISIAN BITUMEN COMPANY take leave to inform their numerous friends and the public that offices are established at 4, Great Winchester-street, Broad street, for the City, and at 8, Denbigh-street, Belgrave-road, for the West-End and its vicinity, where every information will be promptly given.

LIVERPOOL DOCKS — TO CONTRACTORS.—The Committee of Dock Works will be ready on Saturday, the 17th day of December next, to receive Tenders for excavating and removing by Waggons, &c., the Materials from the site of the Albert Dock and Half-tide Basin, (west of the Salthouse Dock), containing about 400,000 cubic yards, more or less.

The Specification, with Plans and Sections of the Ground, may be seen at the Dock Surveyor's Office, south side of the Coburg Dock, from the 24th instant to the 15th December inclusive, betwixt 9 a.m. and 5 p.m. each day.

The Committee do not bind themselves to accept the lowest Tender.

The Tenders, sealed, must be addressed to "the Chairman of the Dock Committee," endorsed "Tender for excavating Albert Dock," and sent in to this office, under cover, to the Secretary, not later than 10 o'Clock, a.m., on Saturday, the 17th day of December next.

By Order,
DANIEL MASON, Secretary.

Dock Office, Liverpool, November 21, 1842.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

SIR W. BURNETT'S PATENT PRESERVATIVE FOR TIMBER, CANVASS, CORDAGE WOOLLEN, &c.—This process is a very cheap one. It effectually protects even the commonest domestic or Colonial Timber and Deals from Dry-rot, and other causes of premature decay; and it renders them equal to the best Timber from the Baltic. No doubt can exist of its efficacy in the preservation of all the above-named articles, after the Official Reports from the heads of various Government Departments, which may be seen, together with the specimens, at the Company's Office, No. 4, Castle-court, Birchin-lane, Cornhill, London.

OFFICE FOR PATENTS OF INVENTIONS AND REGISTRATION OF DESIGNS, No. 14, Lincoln's Inn Fields, where all business relating to the securing and disposing of British and Foreign Patents, Preparation of Specifications and Drawings of Inventions, is expeditiously and economically effected.

Also, Registrations under the New Consolidated Copyright Designs Act, 5 & 6 Vict., cap. 100.

A Prospectus, containing much useful information, may be obtained, and references to an Alphabetical List of Patents and Registrations made, on application to Mr. Alexander Prince, 14, Lincoln's Inn Fields.

CRANES, ROPE BLOCKS, AND SCREW JACKS, manufactured by ELLIS AND NOTON, Salford, Manchester.—Fixed and Travelling Cranes, for Railways, Wharfs, and Warehouses, to lift from 5 cwt. to 20 tons and upwards, either by hand or steam power; Patent Signal Switches for Railways; Travelling and Fixed Crabs for builders, and Hoisting Tackle of every description, on the most improved principle.

Drawings of the above may be seen, and particulars obtained, at the works in Manchester, and at the office of C. F. Cheffins, 9, Southampton Buildings, Holborn, London.

NORTH MIDLAND RAILWAY.

Second Address of the Directors to the Shareholders of the North Midland Railway.

THE Report presented by the Committee of Inquiry to the special general meeting held on the 16th inst., having been adopted by a large majority of the shareholders then present, accompanied by an expression of want of confidence in the Board of Directors, they feel called upon to resign the trust which is placed in their hands.

The Committee circulated an Address to the shareholders at the very moment the meeting was assembling, copies of which were put into the hands of the Directors as they entered the room. The Directors think that they have just grounds to complain of a want of courtesy on the part of the Committee, in not having previously communicated their intentions in this respect, as it was quite impossible to rebut on the instant the incorrectness of various statements which were calculated to produce an unfavourable impression on the meeting.

The Committee state their opinion, that their Report ought not to have been withheld from the shareholders until the Board had prepared their reply. Had this been considered as a contest of parties striving for power, perhaps there might be some ground for the assertion; but as it was expressly declared at the last half-yearly meeting, that the inquiries of the Committee were to aid the Directors in their endeavours to improve the position of the Company's affairs, and not to be considered as undertaken in opposition to them, it was surely not improper in the Directors maturely to weigh the Report of the Committee, in order to assent to or dissent from, to adopt or to modify, the proposed reductions. The real interest of the Company could only be benefited by such a proceeding.

That inaccuracies exist in the published details the Directors frankly acknowledge, and they have reason to complain of the carelessness of their servants in this respect. They regret these errors as much as the Committee, but no candid person can suppose they were intentional.

In the difficult position in which they were placed, the Directors not only felt justified, but driven to the necessity of inquiring what evidence their officers had given to the Committee. The answers to these inquiries are in writing, and fall far short of the recommendations of the Committee. In stating this the Directors did not mean to impugn the veracity of the Committee; the contradictions and discrepancies were those of the servants, who were all present at the meeting, and who, without reference to the evidence which they may have given either to the Committee or the Board, might have been asked whether or not they admitted the practicability of the Committee's proposed reductions in the locomotive department.

The Directors disclaim any intention of reproaching the Committee; but as they had mentioned in their Report that some of the reductions included in their recommendations had been adopted, the amount of which they were unable to state, the Directors thought it right to specify the reductions effected or intended in this department.

With respect to the contracts for the construction of the line, it must be evident that even the most decided course cannot always force a settlement of such disputes. The Directors, being upon the defensive, must wait until they were attacked; or, in the conciliatory spirit by which they were actuated, offer, as they have uniformly done, to submit the disputed points to arbitration; or, as the only remaining alternative, involve the Company in eight Chancery suits.

In the disputed accounts with other Companies, they will not say whether a more decided course might have been resorted to with advantage; but, knowing by experience the difficulties attending such settlements, they scarcely expected a reproach on this subject.

On the conflicting testimony of the officers and enginemen of the Company, respecting the state of the permanent way, the Directors abstain from all remark, but they have the authority of Mr. Robert Stephenson to assert, that at the time of the investigation it was in a satisfactory condition, and that some portions were in a better state than when taken possession of by the contractors. Mr. R. Stephenson stands high as a man of science and of honour, and his testimony will not be lightly thought of by a candid and dispassionate public.

In the coaching department, the difference in the lists of the Directors and of the Committee consists of 42 persons. The question, however, is not whether the dismissal of 42 persons will affect the welfare of the establishment, but whether, after the dismissals recommended by the Directors, 42 additional servants can be safely dispensed with. It is not a question of a pointsman more or a porter less, as stated in the last paragraph of the Committee's Address, but whether the staff would be efficient if all these additional 42 servants were dismissed. The Directors can but repeat the assertion, that the principal officers of the Company deny the practicability of such a reduction.

As regards the scale of wages proposed by the Committee in the locomotive department, the Directors regret exceedingly, that, with a view to condensing the list, the wages of workmen of different degrees of skill should have been averaged without their authority; but the same process having been applied to the Directors' list, no intention could exist of placing the Committee's proposal in unfavourable comparison.

The paragraph relating to the salary of the Secretary, and the Head of the goods' department, is quite incorrect, the facts being as follows:—Formerly there were two Secretaries—one at a salary of 700*l*., and the other at 300*l*., per annum; together 1,000*l*. per annum. There is now only one at a salary of 600*l*., at which sum it was originally fixed, the salary never having been 500*l*. The salary of the Goods' Manager is 250*l*. His predecessor was raised from an inferior post upon trial, at a salary of 200*l*., to replace the Head of this department, who had received a salary of 300*l*.—so that the present Manager receives a lower sum than was originally considered due to the importance of his office.

The Committee allege that they did not choose to take the responsibility of proposing changes in fares for passengers and rates for goods, which were "to be carried out by a reluctant Directory." The Directors are at a loss to understand why the Committee should propose reductions in the staff to a "reluctant Directory," and yet could not make known to them their views relating to the traffic. At the general meeting which appointed the Committee, a motion was made requiring an important branch of the traffic (that of minerals) to be especially investigated, and it was only abandoned on the ground that, as the Committee had received power to inquire into the position of all the affairs of the Company, it would be superfluous to specify particulars. It might, therefore, have been fairly expected that the Committee would have entered more fully into the examination of this subject. But as regards the charge of reluctance, the Directors have shown that in the course of 18 months, leaving out the goods' department (in which an increase took place owing to additional traffic), a decrease was effected in the staff-list of the half-year of 4,250*l*.—making for the year 8,500*l*. The reductions carried out since the 30th of June, and those in contemplation, in one department alone, amount to 4,850*l*.; and moreover, admitting as many of the Committee's recommendations as they believe may be fairly practicable, and setting aside their own views and the considerations by which they had been previously actuated, they have approached (after receiving the proportions from other Companies), within the sum of 5,840*l*. 5*s*. of the staff proposed by the Committee. Surely all charge of reluctance must vanish before such a statement.

The Directors have failed in the duty they owed to themselves, by not bringing the reductions in the staff more prominently before the shareholders; hoping they enjoyed the confidence of the proprietors, they have relied too much upon the integrity of their intentions. They were also aware that their staff would bear a favourable comparison with that of other railways similarly situated, to which fact the two Auditors, Messrs. Brancker and Alston, members of the Committee of Inquiry, bore unequivocal testimony in their Report to the half-yearly general meeting in August last, from which the following is an extract:—

> "Having received lists of the general staff in April and August, we are happy to notice a reduction in number during that time to the extent of 63, chiefly employed on capital account, the number being 715 in April, and 650 in August; and in comparing the lists of staff now kept by the Manchester and Leeds, North Midland, South Western, Grand Junction, Great Western, and Midland Counties' lines, we are glad to find the number of people on this road, the expense of working &c., bearing a satisfactory comparison on the point of economy and efficiency with other leading railways."

It must certainly be allowed, that partaking with proprietors and the public generally in illusive hopes of a large traffic, the establishment was at first formed upon too extensive a scale. These hopes were not dissipated so speedily as experience has since shown might have been warranted, because the traffic on oth railways had gone on rapidly developing itself, and because no human foresight cou severe crisis which has befallen the c rectors have, moreover, had many d tend against, which are incidental to takings, and especially to one which ous and complicated engagements panies. They have, therefore, stron tification for not having sooner redu ture to the limits which may suffice traffic.

Having made this appeal to the shareholders, the Directors have only the course which they have decided their intention to resign their trust; t diate retirement of all the Directors management in the hands of a Boa with the complicated details of the Co six gentlemen will retire in the first in intention that the whole of the acting Investigating Committee shall be forth supply their places. The names of t Directors are as follows:—

Mr. Brancker, Mr. Alston, Mr. Ha son, Mr. Waddingham, and Mr. Mar

The remaining six Directors will co until the half-yearly meeting in Fe they also will resign, leaving the c successors to the shareholders assem meeting.

W. LEAPER NEWTON

Derby, November 23, 1842.

PRESTON AND WYRE RAILW BOUR AND DOCK COMPANY MEETING.

A SPECIAL general meeting of the pro Company was held on Thursday, the 24 at the Queen's Hotel, Birmingham, to port of the Committee appointed at t general meeting held at the Company's don on the 31st October last, for the pur ing the Report of the Committee of the deciding upon the measures to be adop quence of that Report, filling up vacan rectory, and for other business of the Co gave a short notice of this meeting in eve

Sir P. HESKETH FLEETWOOD, Bart., man of the Board of Directors, presided.

The advertisement convening the me been read, the Chairman observed, that meeting was called at the request of ce and the object of the meeting was to re port of that Committee and consider the he would, in the first instance, merely Chairman of the Committee to read the

Mr. W. WAILES, of Leeds, then read Report, and afterwards commented up raised in it:—

The Committee appointed at the ge yearly meeting of the shareholders o ton and Wyre Railway, Harbour, Company, held in London, on the 31 ber, 1842, submit the following

REPORT.

That in compliance with their duties they Fleetwood, to obtain the necessary informa communicate with the Board of Directors and on the 10th instant.

Your Committee have had an interview wi Exchange Company, respecting their claim against the Company, due last August, and of attention to make arrangements for its liquida have raised, through your own shareholders, loan to meet that demand.

They have examined into the present state railway and harbour, and are prepared to lay shareholders the situation of their property, views of its future prospects, trusting that by may be enabled to form a correct judgment as interest to sustain the undertaking through difficulties, or submit to the mortifying result abandoned.

Your Committee consider that the harbour pa pabilities for steam-vessels, and merchant ve that a considerable trade may be carried on in state.

The Committee regret to observe that the ol steam-vessels were attributed from an over-estim and the management of them was most unfortu entailing a loss to the Company, where a profit been obtained, consequently to the great disappointment to [illegible] as disappointment to the [illegible] tion to the north of

under an economical system, the present aspect of
npany would not assume so alarming an appearance,
larly as to the ultimate result of the undertaking.
fast steamer gave the most encouraging proof of the
ce of a large traffic.
Victoria commenced with only 25*l.* freight, and with-
months it had gradually increased to 100*l.* a trip.
large additional cost in the construction of the rail-
ove the original calculation, requiring a considerable
e of capital at a period when it could only be ob
with much difficulty, thus absorbing the resources of
npany, and rendering it impossible to carry out the
tion of the harbour works, through which alone the
elopment of the undertaking can be fairly tested, is
the causes of the present position of the Company:
ch may be added the general depression of trade
e period of the opening of the railway, affecting every
tion of property, particularly railways in the manu-
g districts: and the error of not maintaining the
gitimate and valuable branch of trade, that offered
n-vessels (one essentially necessary to every railway
its terminus at the sea), and through which your
traffic reached 800*l.*, now reduced to 130*l.*; while
arbour dues, which during the same period, from
September, 1841, produced 300*l.*, have, by the ac
of the 1st six months, only brought in 31*l.* The
principally to be attributed to the increased charge
carriage of goods by the railway, which has driven
coasting vessels from the Wyre to the Ribble. The
ave been lately again reduced, but the effect of the
advance will affect the returns for the next six

Committee examined minutely into the maintenance
ailway, and it has been satisfactorily proved to them,
on the reduced scale pays the Company a profit; and
e of opinion, that had the concern been managed by
Board, such unfavourable results as above alluded to
nd would have been avoided.
present year's receipts will be about 13,000*l.*; which
placed to the credit of the town and neighbourhood
ring-places; and, if to that are added the advantages
n navigation, and a trading port, the Committee are
l to believe that will at once raise the income to

y considerable reduction has been made in the work-
penditure of the railway, which has been brought
0 000*l.*; and further reductions can yet be effected,
will place it amongst the cheapest—probably the very
l—worked railway in the country.
Committee being impressed with the value of these
e of opinion, that notwithstanding the unfortunate
tances and errors here alluded to, (and others which
necessary to refer to,) there is still sufficient to ure-
warrant the shareholders to sustain the undertaking.
been completed with judgment and economy, there
ertainty that it would have ranked amongst the
ofitable speculations of the time: and, even as it is,
pears sufficient vitality and natural advantages to
t remunerative.
d the shareholders be of a similar opinion, the Com-
recommend that immediate steps be taken to consti-
local Board of Directors: as, notwithstanding the
erest and attention evinced by the gentlemen form-
London Board, in their zeal and valuable personal
, it has been proved in this, as well as in every other
nce, that railway concerns cannot be managed to ad
, except by a local Board, whose personal attention,
nowledge, influence, and intimate acquaintance
e people of the district, may enable them to carry out
easures as will be beneficial to the Company, without
nnoying or unpopular to the public generally.
Committee are so impressed with the importance of
ning a steam communication with the north of Ire
l Scotland, that they earnestly recommend the share-
to join in the proposed Fleetwood Navigation Com-
nd also to empower their Directors to enter into such
ent with that Company as will secure steam-vessels
port with as little delay as possible.
mperfect state of the mail communication with the
f Ireland, holds out a prospect that the port of Fleet
may become a packet station, and the proposed erec-
large barracks in Preston add to the necessity of the
tion of the Harbour of Fleetwood, which will then
itable packet station, accessible at all times of tide:
safety harbour, a work of great national importance:
Committee think the foregoing will form a strong
of appeal to the Government for assistance to

xtent of the manufacturing districts of Lancashire
kshire which will be opened by the completion of
ton Railway, next April, will justify the Company
ating upon a considerable increase in the imports
eland, through this port, in consequence of its econ-
nd convenience: and your Directors will do well to
ultaneously with the opening of that railway, the
modation of good steam-vessels to Ireland and Scot-

Committee cannot omit to notice the important fact,
l can now be shipped at Fleetwood at 8*s.* per ton—
s nearly as low as from any port on the west coast
land; and the opening of the Bolton Railway will
ther facilities, and bring forward some of the best
the country.
Committee find that the Company have power, under
ets, to make a further issue of shares to the amount
f 38 600*l.*; and they strongly recommend and hope
H. Fleetwood, and the other holders of preference
ready issued, and which are in few hands, may con-
t the amount now about being issued shall be the
preference shares over all others and being secured
irst charge upon Sir H. Fleetwood's rents at Fleet
that such shares should be taken up by the present
lders, or issued to new parties. And the Committee
feel bound to add the expression of their confident belief,
that the shares so secured will, under any circumstances
be a fair and reasonable security for the money advanced.

The debts of the Company amount to about 10 000*l.*, exclusive of the mortgage to the Royal Exchange, and some other sums secured to the parties by the late issue of shares. There are some disputed claims, which should be put into a position for arrangement. In the sum of 10,000*l.* is included the interest that will be due in February next; and although the returns of the line during the interim, when there is no traffic from shipping, will be inconsiderable, yet your Committee anticipate, that should your Company consent to carry out the foregoing recommendations, the next ensuing half-year after February will prove to be fully sufficient to meet every charge, and also leave a surplus.

E. F. DAYRELL,
WM. WAILES,
HENRY SMITH,
F. KEMP,
} Acting Members of the Committee.

THOMAS PHILPOTTS,
ALEX. CALDER,
DANIEL ELLETSON,
} Members of the Committee approving of the Report, but who were not able to attend the meeting.

The CHAIRMAN said they had now heard the Report of the Committee, and he considered he could not too readily show his approval of the same, and he therefore begged to move its adoption. (Hear, hear.) The Board of Directors in London had received a copy of such Report two days previous to this meeting, and he was happy to say that it was the feeling of one and all of such gentlemen to yield at once to the wish there expressed, that the future management of this undertaking should be vested in local Directors—(hear, hear)—and he begged then respectfully to tender the resignations of the London Board, viz.:—Mr. Levi Ames, Mr. Henry Pilchers Boyce, Mr. John Brightman, himself (Sir Hesketh Fleetwood), Mr Langford Lovel Hodge, Mr. George Mackintosh, and Mr. John Abel Smith—that in tendering their resignations, the Directors begged him to assure the proprietors that they quite agreed with the Committee in their suggestions, and had no doubt that if an efficient local Board could be formed, such a change would be highly salutary to the undertaking. He (the Chairman) having seen the names of the gentlemen intended to be proposed, felt convinced that they were well suited to the office, both from their high standing and local and commercial knowledge and influence. (Hear, hear.) The Directors at once admitted that much expense might probably have been saved, had there been a local board originally; but as from the erroneous estimates there was a constant demand for more capital, which from the pressure and unfavourable state of the times could only be met by great personal sacrifices on the part of two or three of the Directors, they had borne the burden rather than shift it to other shoulders. (Hear.) That although the Company had suffered from a falling off of their traffic (which was fairly accounted for in the Committee's Report), and there were differences to be provided against for the future, yet from the debts of the Company being for the most part settled, their successors would, he contended, have an easy task, whilst from the favourable change in the prospects of trade, the opening of the Bolton and Preston line, and the proposed steam navigation, he had no doubt the new Board of Directors would, from their local and commercial influence, put the undertaking in the position that its intrinsic and natural merits deserved. (Hear, hear, hear.) His former colleagues still entertained the same good opinion of the undertaking as they ever did, and would be always found equally ready as before to assist and promote its success. He therefore begged to move the adoption of the Report. (Applause.)

Mr. J. ABEL SMITH, in seconding this resolution, stated he did so with the greatest pleasure, as he had long felt the importance of securing a local Board. From the continued difficulties of the Company, the late Directors had been prevented pressing it forward, not wishing their local Board to be hampered with pecuniary embarrassments; and although the Company were at present not free from difficulties, every one must feel that they were such as, with a little energy, might be overcome. (Hear.) He begged to assure the meeting, that in resigning his seat in the Directory, he did so under the full conviction that he was thereby best consulting the interests of the shareholders, and consequently his own; but that although no longer a Director, the Company might rely upon his co-operation in carrying out the suggestions of the Committee—(hear, hear)—for as he had before publicly stated, and as he now repeated, his opinion of the ultimate success of the undertaking, if carried out, was the same as when he originally entered into the Company. (Cheers.)

A short discussion then arose upon the position of certain shareholders with respect to preference shares, which having been satisfactorily explained,

Mr. FRANCIS RUFFORD, of Bellbroughton, said that in proposing the resolution which he held in his hand, and which he would read, viz.. "That application be forthwith made to the holders of the shares lately issued under the name of 'Preference Shares,' to assent that the shares now to be issued to the amount of about 38 600*l.* shall have preference over the shares they hold, and that, upon such assent being obtained, a circular be addressed to each shareholder, offering him a valuable proportion of the new preference shares," he anticipated no opposition, as it had been recommended by the Committee in their Report, and that he was satisfied they would not recommend its adoption without having first ascertained that such a mode of proceeding would be sanctioned by at least a majority of the parties holding the preference shares. Before sitting down he would take the opportunity, with the permission of the Chairman, to put two or three questions. He had heard, amongst a variety of reports prejudicial to the undertaking, one that was told him in a railway carriage, as a matter of fact, that a bar of sand had formed at the mouth of the harbour, which had presented obstacles which could not be removed; for as soon as it was dredged away another bar was formed by the action of the tides. Was it correct? (Hear).

The CHAIRMAN immediately rose and answered the question. He was obliged by it being put: there was not the slightest truth in such statement. (Hear, hear, hear.) He regretted deeply that persons should be found wicked or foolish enough to make such misrepresentations in the face of the surveys and Reports of our most eminent nautical and civil engineers, which showed, that not only was the harbour naturally good, but that a comparatively small sum will make it accessible at all hours of the tide, and consequently a harbour of refuge. (Hear, hear, hear.) Captain Denham's recent soundings showed not only that the channel, where dredged, had retained its depth, but that the harbour and channel had deepened by the natural scouring force of the ebb tide. (Cheers.)

Several other gentlemen rose to confirm the Chairman's statement

Mr. RUFFORD—The reply to the question he put was what he expected—perfectly satisfactory to him, and he trusted the hon. Chairman and the meeting would not regret that he had put it. (Hear, hear, hear.) He would only trouble the Chairman with one other question, and he had no doubt the answer would be as satisfactory as to the first question. He (Mr. Rufford) observed a large debt, in addition to the 100,000*l.* due to the Royal Exchange Assurance Office, viz. "77,184 2*s.* 6*d.*, sundries on deposit of shares guaranteed by Deed of Trust." Could the holders of these shares demand their money at a specified notice, or did any permanent agreement exist as regarded this loan, subject, of course, to conditions to be faithfully fulfilled?

Mr. J. ABEL SMITH said he would answer the question. the money would remain an advance as long as the Directors might wish—(hear, hear)—and it was fully understood to be a permanent loan until the Company were in a position to pay it off; subject, of course, to the payment of interest in the meantime. (Applause.)

Mr. RUFFORD expressed the satisfaction that such an assurance would give the shareholders; and the resolution having been duly seconded was passed unanimously.

Mr. JAMES BOURNE, of Liverpool, then rose and proposed the following resolution:—"That circulars be addressed to every shareholder, requesting co-operation for the proposed Steam Navigation Company, and requiring that they become, and induce others to become, shareholders, as it will be of more essential service to their property in the railway." He apprehended that this resolution, emanating as it did from the suggestions of the Committee, and their Report having been unanimously approved, would be unopposed. As regarded the recommendation it contained he fully approved of it, as likely, if carried out, not only to be beneficial to those who embarked in the speculation, but productive of great good to the Company. (Hear, hear.)

Mr. CLEMENT ROYDS, of Rochdale, seconded the resolution, stating, his full concurrence in the mover's observations, and his conviction of the great importance of securing steam boats at Fleetwood for Ireland and Scotland. (Hear, hear. hear.)

Mr. ELLETSON, of Parrox Hall, stated, that although there appeared no voice in opposition to the resolution, yet he could not refrain speaking on the subject as one born and bred on the spot. (Hear, hear.) He had sailed in and out of the harbour often as a boy; he had done so as a man, and he would speak boldly in its favour, as he was quite sure that the harbour was in its present state equal to any, and

Digitized by Google

easily be made superior to any other on the Lancashire coast. (Hear, hear, hear.) He also quite agreed in the course pursued by Captain Denham in the harbour works, and the correctness of the Chairman's answers as to the present state and depth of water of the harbour, and he spoke so confidently, as Captain Belcher, with whom he had some years ago frequent conversations on the capabilities of the river Wyre, had, before Captain Denham, surveyed it, and reported to the Admiralty highly in its favour. (hear. hear); indeed all nautical men with whom he had conversed confirmed his opinion of its capabilities and peculiar advantages. He alluded also to the mischievous mis-representations which had gone abroad to the disparagement of the undertaking, all of which he believed had originated in entire ignorance of the place. (Hear, hear, hear.) He also spoke of the advantage in heavy weather, of the fine Lee Harbour of Piel,(directly 9 miles north of Wyre) rendering it safe for vessels at all times to approach the mouth of the Wyre—the short and straight channel of the latter, so easy of navigation—the nearness of deep sea-water to the port, and other peculiar nautical features, all which were advantages possessed by no other harbour on the coast. (Hear, hear, hear.) He had himself built extensively at Fleetwood, and he felt no fear as to the result, and that the town would still rise to eminence. Other towns had had more difficulties in their early stages, yet were now leading ports--(hear)—and from what he had seen and heard respecting the traffic, when steamers were before running, he had no doubt that were a Steam Navigation Company formed, as proposed, it would not only succeed in itself, but would be of the greatest advantage to the railway and town. (Hear, hear.)

Mr. J. ABEL SMITH proposed the next resolution, which was,—"That the London Board having resigned, the following gentlemen should be the Directors, with power to fill up four vacancies in their Board, viz.—Clement Royds, Esq., James Bourne, Esq., Thomas Downward, Esq., William Taylor, Esq., John Dewhurst, Esq., Frederic Kemp, Esq., William Wailes, Esq., and Daniel Elletson, Esq." He had much pleasure in proposing this resolution, which he repeated met with his full approval. He was sure they were gentlemen who would not only from their local position and experience give confidence, but would also give their best attention and exertions in putting this undertaking in its proper position, both as an investment and also as a great national work. (Hear, hear, hear.)

Mr. L. LOVEL HODGE in a short speech seconded the resolution, which was carried unanimously and with acclamation.

Mr. HENRY SMITH, in moving the resolution, "That the Directors should use every exertion to procure the advantage of steam vessels with as little delay as possible," said, that as one of the Committee, he would take this opportunity of alluding to some points in their Report, and some encouraging prospects that presented themselves during the progress of the Committee in the neighbourhood of the railway. In July last he visited Fleetwood in compliance with the wishes of the Board, to devise measures most likely to improve the concern; and he was then convinced that the most important object for the benefit of all interests was, to establish a communication with the north of Ireland and Scotland by steam vessels—all railways terminating at the sea, having proved unproductive without a further extension by steamers. (Hear, hear, hear.) In some instances steam vessels had been placed on stations for the benefit of railways, where the passengers or trade would hardly warrant a return sufficient for their maintenance; but on this line, it had been satisfactorily proved that there existed all the capabilities of carrying on an extensive and lucrative trade with the north of Ireland, and a moderate one with Glasgow, if good steam vessels were supplied. (Hear.) At that time a misunderstanding existed between some local authorities and the Railway Company, apprehended that the Preston mer- support Fleetwood steamers; but to say, that doubt was removed, vinced for the proposed Steam Na- and many of the leading firms of d for shares, or advanced money ar, hear.) Similar encourage- Bolton, Manchester, and other shire; and one of the neighbouring ies felt so impressed with the value would gain, that, as an inducement, devote 15 to 20 per cent of the receipts on the goods and passengers travelling their line to or from the steam vessels, for the Steam Navigation Company. (Applause.) The formation of this most desirable object now mainly depended upon the support given to it by the shareholders of the Preston and Wyre Railway. (Hear.) If distant Companies considered it worthy of a premium, to the Preston and Wyre it was of the most vital importance. (Hear, hear, hear.) Each shareholder in the railway ought to take shares, or advance on loan sums in proportion to their investment; and when it appeared by the list laid before the Chairmain that the lessees and small holders of property in the town and neighbourhood of Fleetwood had met and subscribed for upwards of 50 shares—(hear, hear, hear)—the large proprietors should know that upon the establishing of steamers entirely depended the value of their property in the railway. (Hear.) In alluding to that part of the Report recommending the formation of a local Board, he only spoke the sentiments of every member of the Committee when he said, that the conduct of the late Board of Directors, all through their course of management, entitled them to the respect of every shareholder—(hear)—and the handsome manner in which they responded to the suggestions of the Committee, through their Chairman, this day, one and all tendering their resignation, was duly appreciated by the members of that Committee. (Hear, hear.) If the concern had not been remunerative under their charge, it was neither for want of zeal or attention. Indeed circumstances came before the Committee of personal risks, responsibilities, and cash advances that the Directors undertook, perhaps to a greater extent than the Board of any other Company. (Hear, hear.) That their efforts were not successful was their misfortune, not their fault: and when it was known that the Chairman's (Sir Hesketh Fleetwood) interest in the Company amounted to 150,000*l*., that another Director represented upwards of 100,000*l*., and other Directors very large amounts, it must be evident that every thing they could do to make it answer was done. (Hear, hear, hear.) The Report gives the Committee's opinion of the causes of the Directors' efforts failing. They wanted local knowledge, local influence, and local management—(hear)—and now that a local Board was named, the Directors (notwithstanding the large stake they held) at once assented to place the affairs of the Company in the hands of local gentlemen—(hear, hear)—and if to this change were added the advantage of steamers, with the present improvement in the manufacturing districts, and the cheapness of the maintenance of the railway, there was every reason to calculate that the shareholders would shortly obtain a return on their investments.

Mr. ROBERT LAWE, of Preston, stated that he had great pleasure in seconding the resolution, in which he entirely coincided. (Hear.) He knew himself that there were many circumstances that promised well to the undertaking, from the manufacturing districts in the neighbourhood of Preston lying so conveniently for taking advantage of steam-boats for their goods from Fleetwood, and who were now principally supplied with Irish provisions. (Hear, hear.) He mentioned that a railway from Preston through Blackburne, which had been contemplated, but, on account of the depression of the manufacturing districts dropped, would be very likely to be entertained again with the prosperity of trade; and this, besides going through the populous districts of Blackburne, Haslingdon, over Darwen, Accrington, Colne, and Clitheroe, would give a direct and short cut into the Yorkshire districts. (Hear, hear, hear.)

The CHAIRMAN then stated that he believed the business of the day was completed, and he congratulated the shareholders on the result and the unanimity that had prevailed.

Mr. RUFFORD stated that he could not allow the meeting to separate without moving a vote of thanks to the Chairman and Directors, and the Committee, for the very able and comprehensive manner in which they had entered into the spirit of the resolutions of the meeting in London, on the 31st of October, and particularly to the Directors, for the straightforward and honourable way in which they had met the views of the Committee. (Hear, hear, hear.) He was ready to admit that he was one of those who had thought the undertaking a failure; he now thought quite differently, and he fully believed that under a local management, such as now formed, the whole concern would assume a better aspect, and that in time they would reap the harvest originally expected. (Hear, hear, hear.)

Mr. GEORGE STANTON seconded the motion, which was carried unanimously, and the meeting was declared dissolved.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—Having seen several statements recently put forth *foretelling* the probable amount of dividend likely to be declared by the Great Western Company at their next half-yearly meeting, and thinking that any exaggerated estimate, of which we have already had too many on railway matters, is only calculated to mislead the unwary and to create disappointment, I beg to hand you the following figures for publication; the result as here shown being, I think, about the real state of the case, as far as the public have any means of ascertaining, independently of the numerous prophets who, at the approach of the half-yearly meetings, favour the world with their insights into futurity. One of these, under the signature of "V.," has recently printed and circulated his predictions for 1842, in which he promises us a dividend at the rate of 8 per cent. I sincerely hope he will prove a true prophet.

The figures relating to the receipts are taken from the account weekly published in the *Times*. The amount of debentures and loan notes on which interest will be payable, is from the last Report of the Great Western Company; and the rent and toll on the two leased is in the same ratio on the Exeter extension to Taunton as last half-year.

Actual receipts from July 1 to Nov. 20		£292,784
Estimated receipts for next six weeks		62,000
		£354,784
Expenses, at 37 per cent.		131,307
		£223,477
Half-year's interest on debentures and loan notes, 3,472,400*l*.	£86,810	
Rent and toll	34,741	
Depreciation	10,000	
		131,551
		£91,926
Half-year's interest, at 6 per cent., on share capital of 3,015,013*l*		90,450
Balance		£1,476

towards paying the amount withheld from the Exeter Company.

I am, Sir, yours, &c.,

ARGUS.

RAILWAY WHEELS.

To the Editor of the Railway Times.

GOOCH v. BANKS.

SIR,—We have just read in your paper of the 25th instant the account of an application made by Mr. Gooch and others for an injunction to restrain the defendant, Mr. Banks, from the further use of his patent mode of steeling the tires of railway wheels, in which it is stated *that the application was refused*, which statement is incorrect.

The order made by Mr. Vice-Chancellor Wigram was, as you will observe by reference to the *Times* and *Morning Herald* of the 25th instant, "that the motion should stand over until after the trial of an action which the plaintiff was directed to bring in order to ascertain the validity of the plaintiffs' claim to the exclusive use of steel in the tires of railway wheels."

We trust you will insert this letter in your next publication, as the statement in your paper of the 26th is calculated to produce an erroneous impression.

We are, Sir, your obedient servants,
WAGSTAFF, SON, & MARSLY.
Solicitors for the Plaintiffs.

Warrington, November 29, 1842.

THE ACCIDENT ON THE VERSAILLES RAILWAY.—The inquiry into the causes of the fearful accident on the Versailles Railway, on the 8th of May last, commenced last week before the Correctional police; the act of accusation accuses six persons belonging to the Company of "homicide by imprudence," and then proceeds to state the causes and results of the accident, which is attributed to a faulty state of the ironwork of the machine in some measure. It appears that there were 155 persons in the train, besides 9 servants of the Company.

LONDON AND DOVER (SOUTH-EASTERN) RAILWAY COMPANY—GENERAL MEETING.

THE half-yearly general meeting of the proprietors of the South-Eastern (London and Dover) Railway was held yesterday at the London Tavern, Bishopsgate-street; JOSEPH BAXENDALE, Esq., in the chair.

The attendance was very numerous.

The advertisement convening the meeting having been read,

Mr. R. TYRRELL went into a long dissertation as to the period of holding the meetings. The Act of Parliament fixed the times for the 15th May and 15th November, or within 20 days from these dates; but it was desirable that the meetings should be held in the middle of the two months named, so that the proprietors might know when they were likely to receive their dividends. He took occasion to pay a high compliment to the Secretary and the Accountant. He complained that the transfer books had been shut for 14 days instead of 10, as required by the Act.

The SECRETARY (John Whitehead, Esq.) explained that the books had been shut for only 10 days, Sunday being a *dies non*.

A PROPRIETOR thought the feeling of the meeting was, that the business of the day should proceed. (Applause.)

The CHAIRMAN said he was entirely in the hands of the meeting. The Directors had nothing to conceal, and perhaps it would be sufficient to say, in answer to the honourable proprietor, that the holding of the meeting had been postponed as long as possible, in order that the Board might be able to show an actual result, rather than merely give a pledge as to the opening to Ashford; and this the proprietors were aware had been effected a few days ago. (Applause.)

Mr. R. TYRRELL reiterated his question as to the transfer books, but the meeting showed unequivocally that they would not tolerate further delay.

It was therefore moved, and unanimously carried, that the common seal of the Company be affixed to the register of shares, which was done accordingly, in presence of the meeting.

The CHAIRMAN then called upon the Secretary to read the Report of the Directors, a copy of which had, he said, been in the hands of the proprietors for a day or two.

The SECRETARY accordingly read as follows:—

REPORT.

Since the last general meeting the line has been further opened—to Headcorn in the month of August, and within the present week to Ashford. The opening to Headcorn—the mileage over which the Company's receipts were taken being of course increased, while at the same time that the payment of toll to the Brighton Company had ceased, that to the Croydon had been modified under the arrangement referred to below, and the tax payable to Government had been placed on a different footing—appeared to the Directors a proper opportunity for introducing lower fares and an additional class of passengers. So far as a limited experience has enabled the Directors to arrive at a conclusion on the subject, it warrants a belief that the experiment has increased the general usefulness of the railway, and the net profit to the Company. By the opening to Ashford it is expected that the existing traffic from London to Dover and Canterbury will be diverted into its new channel, and that many of the difficulties with which the Company has had to contend, in respect to the conveyance of passengers and parcels beyond the line of the railway to their ulterior destination, will be removed. The full development of the traffic to which the line is entitled, and the entire freedom from dependence upon arrangements not properly falling within the province of a Railway Company, cannot of course be looked for until the full advantages of the new system have been offered to the public by the opening throughout to Dover.

The Directors have reason to know that a considerable traffic in goods would have passed over the line during the summer months, had their arrangements been sufficiently advanced to justify their undertaking this branch of business. A considerable increase of receipts may be expected from this source.

In carrying out the wishes expressed by the proprietors at the last meeting on the subject of Sunday trains, the Directors have adopted the principle established, after much consideration, by the proprietors of the London and Birmingham Company, and have been guided chiefly by a reference to the requirements of public necessity.

The proprietors will have observed with satisfaction, that no accident to any individual has yet occurred upon the line. Persons trespassing upon the railway, and improperly exposing themselves to risk, have been proceeded against by the officers of the Company according to law.

In the earlier periods of the undertaking, the want of funds created delays in the important works between Ashford and Dover, but these delays have for some time past been removed, with the cause itself; and the progress made within the last six months has been as rapid and satisfactory as that which in their recent Reports the Directors have been able to announce. The last contract, that for the Saltwood tunnel, has been disposed of to Messrs. Betts and Grissell and Peto, on favourable terms, and the proprietors have every reason to anticipate that the hopes held out to them by their Engineer will be as fully realised, with respect to the time of the final opening, as they have already been in the successive openings to Tunbridge, Headcorn, and Ashford. They may expect to reach Folkestone in July, and Dover before the end of the year.

By investing in the funds in the manner prescribed by the Act of Parliament the gross sum (326,137*l.* 2s. 3d.) claimed by the Brighton Company, this Company has secured the possession and control of six miles of railway between Stoat's Nest and Redstone Hill, which now form a continuous portion of the South-Eastern line. The amount of purchase money which this Company will ultimately have to pay on this account has not yet been ascertained. The Directors exceedingly regret the delay which has taken place in the settlement of these accounts. This delay has been occasioned by the imperfect manner in which they have been rendered, and the non-production of the necessary vouchers. The examination, so far as it has gone, has already disclosed questions affecting large portions of the money claimed. It is, however, satisfactory to know that these questions turn upon the principle of the supposed liability, and involve no matters of feeling or disputed facts. The Act and agreement by which the relations between the two Companies are regulated, contain ample provisions for referring all these subjects to arbitration; and the Directors see no reason to apprehend that the discussion will be conducted otherwise than in a fair and friendly spirit.

An arrangement likely to be productive of mutual benefit has been concluded with the Croydon Company for the joint working of the locomotive power, and for a modification of toll, by which this Company is enabled to regulate its fares, and to convey to the station at New Cross a class of passengers who would otherwise be excluded from both lines. The Greenwich Company have declined to participate in this arrangement, which cannot therefore be carried out nearer to London than New Cross until the completion of the West-end branch.

The proposed extension, from the point where the Croydon diverges from the Greenwich line to the Grange-road, has occupied the careful attention of the Directors. In pursuance of the resolution passed at the last meeting, they have contracted to purchase, for about 35,000*l.*, so much of the land required as was necessary in order to secure to the Company the power of prosecuting the design. Further negociations have put them in a position to recommend to the proprietors the continuation of the line to a point near the Bricklayers' Arms, still nearer to London than that which was considered at the last meeting. The advantages of a West-end terminus, close to the already accustomed point of convergence on the southern side of the bridges, are great and obvious; but these do not constitute the only inducement by which your Directors have been influenced. The terminus at London Bridge, which will shortly be completed, is very valuable for the purposes it was designed to serve, but does not afford sufficient space for carrying out in a safe, creditable, and efficient manner, the amount and various kinds of traffic in passengers, goods, and cattle, which may reasonably be expected at the London terminus of the line. Twenty-three acres of commodious station room will be made available if the present suggestion be adopted; and the Directors are advised by their Engineer that the increased convenience thus afforded to the Company is a consideration to which they cannot easily attach too great importance. The Brighton Company have declined to unite in the proposed extension, and as the participation of the Croydon Company is uncertain, the proprietors of this Company, if they sanction the project, must be prepared to invest the Directors with full powers for carrying it into effect on the sole responsibility of the South-Eastern Company. The total cost of this branch, with the extension now proposed, including the cost of application to Parliament, and of the line and station, will probably be not far short of 200,000*l.* Against this expenditure, besides the advantages above referred to, must be set the annual amount to be saved in tolls, and the confluence of traffic likely to be attracted to this branch; and considering its importance, and the advanced and promising state of the undertaking generally, the Directors do not hesitate to recommend its adoption to the meeting.

Since the abandonment, in 1837, of the higher line, by which it was originally intended to enter Dover, the question of a terminus at that place has necessarily been regarded by your Directors as one of much importance. The basis of an arrangement (of which the details remain to be considered) has been agreed upon, between his Grace the Lord Warden and the other Commissioners of Dover Harbour on the one side, and this Company on the other, for the transfer of a portion of land level with and contiguous to the harbour. In order to reach this point, the line will be carried close to, or by means of a short tunnel under, the base of the Archcliffe Fort; and the sanction of the Board of Ordnance, necessary for this purpose, has been obtained by the Directors. This terminus will be very advantageous to the Company, and is expected to be completed in time for the anticipated opening to Dover.

Further particulars connected with the foregoing subjects will be found in the Engineer's Report laid before this meeting.

Application must be made to Parliament to authorise the last-mentioned terminus, as well as the proposed extension to the point near the Bricklayers' Arms, and for raising such sums of money as may be requisite for the completion of both these objects. The regular notices have been already given, and the Board invite the proprietors to sanction the proposed application.

The Directors hope that this application is the last the Company will have occasion to make to Parliament; and considering that when the line is opened the business may be light enough to be properly transacted by a reduced Board, they propose to insert powers for this purpose, and, at the same time, to provide for the appointment of Auditors.

The proprietors are aware, that in order to complete the line according to the estimates laid before previous meetings, two sums of 120,000*l.* and 100,000*l.* remain to be raised under the authority of the Acts already obtained. The order of a general meeting is necessary to enable the Board to raise these sums; that for the 120,000*l.* was given by a previous meeting, and that for 100,000*l.* will now be submitted to the proprietors. The mode proposed by the Board is, the issue of debentures and loan notes, for the whole amount required.

The Directors have had much satisfaction in laying before the proprietors Mr. Stephenson's elaborate Report on the surveys made for lines connecting the South-Eastern Railway, by way of Calais or Boulogne, with Paris and other important places on the Continent of Europe. While this Company, from a sense of propriety as well as of prudence, has always abstained from any interference with the projects for railways on the other side of the Channel, the proprietors cannot fail to receive with interest a Report ascertaining, by a careful comparison of engineering capabilities with existing traffic, the future prosperity of an undertaking calculated to enhance the value of their own line.

A Report, signed by Colonel Thomson and Captain Beaufort, on the proposed improvement of Dover Harbour, was laid before Parliament during the last session by her Majesty's Government, together with the following letter:—

"Admiralty, December 10, 1841.

"Sir,—In obedience to the commands of my Lords Commissioners of the Admiralty, conveyed to me by your letter of the 22nd of November, to put myself in communication with Lieut.-Colonel Thomson, of the Royal Engineers, and with Mr. Cubitt, on the subject of forming a harbour of refuge at Dover, I lost no time in communicating with those gentlemen, and I have now the honour of enclosing our joint Report.

"I hope you will pardon the liberty I take in adding, that the more I have considered this subject, the more am I convinced that Government has never undertaken a work the necessity of which was so urgent, nor the effects of which, whether in peace or war, would be so important.

"I have, &c.,

(Signed) "F. BEAUFORT, Hydrographer.

"Sir John Barrow, Bart."

It is unnecessary to dwell upon the benefits which this great work would be calculated to confer on the South-Eastern line.

Communications have from time to time been made to your Directors on the subject of proposed branches to Maidstone, Canterbury, and other places. The Directors, of course, are anxious to afford every facility for the increased development of local traffic, and while they feel that such undertakings should be regarded, each on its separate merits, they see reason to expect that several will hereafter be carried out, with advantage to their own proprietors, as well as to the parent line.

The very stringent resolutions under which the scrip shares were issued as to forfeiture in default of punctuality in paying the instalments, have been attended in some cases, as was to be expected, with apparent hardship. In proposing these resolutions, the Directors did not seek to reserve to themselves any power of remitting the penalty imposed, and have consequently been unable to consider with a view to their relief the cases submitted to them. 739 shares upon which the sum due is 6,150*l.* are liable to forfeiture on this account. So large a proportion of the capital intended to be raised on these shares being now paid up, it may probably appear to the meeting safe and right that the Directors should be authorised to extend a certain degree of consideration to proprietors who have fallen into arrear.

By resolutions of the Board, dated 30th August last, the Directors declared forfeited 100 shares which were then in arrear, since that date 30 shares have been redeemed from forfeiture. Resolutions for confirming the declarations of forfeiture of the remaining 70 shares will be submitted to the meeting.

The Directors announce with regret, that P. St. L. Grenfell and William Wilson, Esqs., have ceased to be members of the Board. Edward Cardwell, Esq., M.P., and George Hankey, Esq., have succeeded to the vacancies thus occasioned.

Mr. J. S. Yeats has resigned his situation as Superintendent. A temporary arrangement has been made, under which the duties of that office are discharged.

The annexed account of receipts and expenditure shows a balance of 108,375*l.* 10s. 0½d. in the hands of the Company.

JOSEPH BAXENDALE, Chairman.

The CHAIRMAN then read the Report of the Engineer, as follows:—

ENGINEER'S REPORT.

Great George Street, Westminster
December 2, 1842.

GENTLEMEN,—I have the honour to submit to you this Report for the information of the general meeting of proprietors to-day, the object of which is to set forth the present state of the works and the probable expense of their completion.

In the first place, I have the satisfaction to state that the line was yesterday opened to the public from Headcorn to the town of Ashford, a total distance of 67 miles from London, being about 24 miles by road and 20 by railway of the proposed terminus at Dover.

Of this portion of the line to Ashford, all that part to the west or London side of Tunbridge, about 25½ miles (including that taken from the Brighton line) is wholly in the hands of the Company since the 1st of September, but from Tunbridge to Ashford the maintenance of way is under contract to Mr. Betts till the 1st of September next, and I have reason to believe that the whole of the contracts and accounts for the entire line and stations to Ashford, inclusive, will be finally adjusted by the end of the present month, and settled for very soon after, (exclusive of maintenance of way,) as the whole amount due will very little exceed 30,000*l.*

As regards the works from Ashford to Dover, I can report them to be in a most satisfactory state. There is not a single yard in length from the Ashford station to the east end of the Shakspeare tunnel, near Dover, that is not either completed, in hand, or under contract, and in a very forward state; so much so, that with the average of fair weather, and barring accident, I anticipated opening the line to Folkestone by, or very soon after next Midsummer, and into Dover by the close of the year, provided powers to be obtained, and means be provided, to enter Dover and fix the terminus and station there, but which our present powers have never yet comprehended.

Commencing at Ashford, east of the station there, the first contract, comprising about 5 miles in length, and passing in great part through the estate of the Right Hon. Sir Edward Knatchbull, is in course of erection by Mr. Morris; it is at least two thirds completed, and I expect will be wholly so up to formation level, ready for the ballasting and rails, by the latter end of March or early in April.

The next contract, about 8 miles in length, (exclusive of the Saltwood tunnel,) extends from the last mentioned to the viaduct over the Ford Valley, at Folkestone, and is under contract to Messrs. Grissell and Peto, who since taking the contract have entered into a subsequent engagement to have the whole ready for the permanent way by the 1st day of May next, and from past experience I have no reason to doubt of their doing so.

Within this contract, and just at the middle of its length, occurs the Saltwood tunnel, about 1,000 yards in length; this tunnel, which is at a depth of about 100 feet from the

* This amount has since been reduced to 4,585*l.*

Digitized by Google

surface, is in course of rapid and satisfactory execution, under contract for a fixed sum by Messrs. Betts; and Grissell and Peto, who are bound under heavy penalties to complete the same by, or in the month of June next, so as to be no let or hindrance to opening the line as far as Folkestone station, at the next extension beyond Ashford.

The next work of importance is the viaduct over and across the Ford Valley, which it passes at the height of 100 feet above the surface of the mill stream, and will consist of 20 semicircular arches of 30 feet span each, all of plain sound brickwork, without stonework or expensive ornament of any kind; the foundation for all the piers and abutments of this structure are in course of execution, and are nearly completed. The work is under contract to Messrs. Grissell and Peto, at a price per rod for the brickwork, without extra charge for centering, or other requisites in its construction.

Next to this viaduct is a very heavy embankment and cutting, termed the Folkestone A contract, with a large double-arch skew bridge, crossing the turnpike road from Folkestone to Dover and Canterbury at its fork. This contract, which extends from the Ford viaduct to the entrance of the Martello tunnel, has been completed more than twelve months, and was executed under contract by the Messrs. Treadwell, who also executed the deep cuttings along the Uader Cliff or Warren which has been completed nearly two years. This Warren cutting is about two miles in length, and through ground of so unlevel a character as to require cuttings of more than 100 feet deep, and an embankment of upwards of 40 feet high in its course; the cutting contained more than a million cubic yards, which was all removed and the work trimmed without extras at 9d. per cubic yard.

Between the Folkestone A contract and the Warren cutting is the Martello tunnel, about 700 yards in length, which is contracted for and in course of execution by Messrs. Grissell and Peto, and will be completed in the ensuing spring.

Proceeding towards Dover, from the Warren cutting, we enter the Abbott's Cliff tunnel, which is now in rapid progress, under the immediate direction of Mr. Wright, the Resident Engineer, at contract or task-work prices for the various kinds of work. The tunnel is one mile and one furlong, or very nearly 6,000 feet in length; of which upwards of 1,300 feet, or very nearly a quarter of the whole, is done; and it is calculated that the whole may be completed by, or very soon after, Midsummer next.

Leaving the Abbott's Cliff tunnel, we enter on the sea wall, which extends along the foot of the cliffs to the entrance of the Shakspeare tunnel. This wall is three quarters of a mile in length, from 60 to 70 feet average height, and from 25 to 30 feet thick at its base, and 5 feet thick at the top, which forms a parapet: between which parapet and the face of the cliffs is the railway, from which the cliffs are trimmed back, and all projections taken off to a safe and permanent slope. The foundations of this wall are in for its whole length, and the wall up to a considerable height in all parts, and for nearly one half to its full height; in fact, the wall is three-fourths done; and during the winter, whilst the frost stops the concrete work, the operation of cutting down the cliffs, which is now in progress (in such parts as not to interfere with the wall builders below), will be then carried on in much greater force, both by means of blasting with gunpowder as well as by manual labour, as it is found from experience that the judicious use of powder is a great saving of both time and labour.

Next after the sea wall is the Shakspeare tunnel, which is completed, and ready at any time to receive the permanent way.

From the eastern entrance of the Shakspeare tunnel to Arch Cliff Fort, a distance of about half a mile, nothing has yet been done towards the formation of the railway, owing hitherto to the undetermined state of the question as to the situation of the Dover terminus or station; the Company having no powers at present to enter Dover.

The recent decision, however, of the Lord Warden and assistants of the Cinque Ports (as Commissioners of Dover Harbour Estates) has set this question at rest, by their resolution "admitting the principle" of the entrance into, and termination of the railway at Dover, between Arch Cliff Fort and the south pier of Dover Harbour: a situation the most convenient for a station; and the Honourable Board of Ordnance having assented to the line of railway passing through and under the south angle of Arch Cliff Fort, there remains now no further difficulty with regard to the construction of a most perfect and convenient station at Dover but the means for carrying the measure out; and which, from the very nature of the situation and the peculiar circumstances under which it has to be obtained, must necessarily be expensive; as this measure could not be carried into effect without Parliamentary powers by which to obtain the property, and to raise the money to pay for it and to erect the station, &c. I lost no time, therefore, under the direction of the Board, in having a complete survey made of the "locus in quo," on a large scale of 20 feet to the inch, extending from Arch Cliff Fort to the harbour piers inclusive, from which a reduced plan has been engraved, copies of which, with books of reference, have, under the directions of the Solicitor, been deposited with the Clerks of the Peace, in conformity with the Standing Orders of Parliament to that effect; so that, if the arrangements for price and conditions of the property to be taken from the harbour Commissioners can be forthwith settled, the Act of Parliament passed through its stages without let or hindrance, and the means duly provided for defraying the cost, I have no hesitation in saying that the railway *could* be opened to and into Dover by Michaelmas next.

Whilst on the subject of the terminal station at Dover, another occurs to my mind, which I deem of scarcely less importance, possibly even of greater; I allude to the terminal station in London, and the steps that have been taken to secure an additional station for goods, cattle, and West-end passengers, near the Bricklayers' Arms, New Kent Road.

That the London Bridge station, with its confined space and elevated level, can accommodate all the traffic of passengers and goods that will ultimately accrue from the southern and eastern railways, I deem to be totally impossible; passengers, as far as numbers go, it certainly could accommodate to a very great extent, but of these a great proportion from the western parts of the metropolis, and especially with horses and carriages, would find the Bricklayers' Arms a much more convenient station, as is evinced already by the number of horses and carriages shipped and landed at New Cross, since the means for that purpose have been made convenient; but as to heavy goods, merchandize and cattle, the London Bridge Station is quite incompatible with those purposes; and the very small space which is nominally set out for goods' traffic will be required for engine stables and other purposes connected with the passenger traffic of the Brighton and Dover Lines.

The proposed station near the Bricklayers' Arms will comprise nearly 20 acres of land on the level of the ground, accessible on all sides, and from which the railway will proceed after crossing under the Grange road up an inclination of 1 in 200 joining into the Croydon line at the points where it crosses the Grand Surrey Canal; the total length from which point to Swan-street, where the branch line would terminate, is one mile and three quarters, and the total cost it is estimated might be from 170 to 180 thousand pounds, of which sum the land and compensation, which I believe are already agreed for, would comprise about one half; but in order to meet the difficulties of correctly and sufficiently highly estimating the cost of a railway and stations, I would recommend that if the measure be prosecuted powers should be taken to raise £200,000.

Touching the subject of estimates, I have hereto appended an estimate in considerable detail of the probable expense of completing the main line of railway, exclusive of the entrance into, and station at, Dover from this time; the total amount of which is £596,000, which, besides the completion of line and stations thereon, includes 92,000*l.* which is comprised under the heads of Plant, Management, London Bridge station, &c.

The cost of the terminus at Dover it is impossible for me to estimate with accuracy at present, as so much will depend upon the amount of land and buildings thereon, but I have no doubt that the total cost of the terminus, with all its conditions, approaches, and appendages, will somewhat exceed 100,000*l.*, and therefore to meet all contingencies on that as well as on all other points, should any arise, my opinion is, and advice would be, that the Company give the Board powers of some kind and in some way, to raise 200,000*l*; with such means to look forward to, and Parliamentary powers for the Dover station by Easter, I have not the slightest doubt of being able (with good steam boat arrangements) to convey passengers, carriages, and horses, from London to Calais in 7 hours before this time twelvemonths.

Before closing this report, I trust I may be permitted to discharge a debt of acknowledgment to those without whose united efforts and plans that I could have laid down or exertions that I could personally have made would have been but of little avail.

I allude to the staff of resident and assistant engineers, and the principal contractors on the line. With regard to the latter class, it is but justice to state that the contracts did not bind the parties, namely, Mr. Betts, as regards the road down to Ashford, and Messrs. Grissell and Peto, with the stations to be ready to open to Ashford before the 31st of December, whereas at our urgent request, and by making extraordinary exertions, they have, without requiring any extra charge for so doing, enabled us to open the line to Ashford one month before the time stipulated, a result so uncommon as I trust will excuse the mention of the subject, to which I may add that the same spirit runs through the works in course of execution by the same parties between Ashford and Dover, and which, as seeing is the best method of judging, and as the opportunity for reaching the works between Ashford and Dover is now so very easy, I would respectfully advise any proprietor who, from casual reports or any other cause, may have any misgivings as to the state of the works in that district, to go and see for themselves; and as far as my means extend, in the department of which I have the honour to be chief, I will give every facility in my power for their obtaining whatever information they wish, on receiving an application to that effect.

I have the honour to be, Gentlemen, your obedient servant,

W. CUBITT.

Estimate of cost for completing the Railway to Dover, exclusive of the Dover Terminus, with its Entrance and Approaches.

For settlement of contracts and liabilities from Reigate to Ashford		£40,000
From Ashford to Dover—

		£596,000

The CHAIRMAN then spoke nearly as follows:—In rising to move that the Report of the Directors be received and adopted, and that the same, together with the accounts, be printed and circulated amongst the proprietors, there are some few observations which I shall endeavour to make as briefly as possible; the more particularly as we are now coming to a period when we may be said to see our way more clearly than we have hitherto done. In the year 1836, six years and a half ago, the Royal Assent was given to the Bill for constructing the South-Eastern Railway. The first general meeting of the proprietors took place in 1837. I suspect there are a very great many new proprietors since that period, and probably not so very many old ones. The twelfth half-yearly meeting is held this day, and perhaps no railway has ever progressed more slowly than we have appeared to do. The expenditure to the ninth half-yearly meeting, held in May last, was 516,000*l.*, being an average for the 5 years of 100,000*l.* per annum. From March to November of last year, 250,000*l.* was expended, whilst in the year now closed, including the investment for the Brighton Company of 326,000*l.*, 1,230,000*l.* has been disbursed, making altogether a total of about 2,000,000*l.* of money. During this period the Management has, from a variety of causes, been continually changing. There now only remains one of the whole of the original Directors, and I happen to be the third Chairman, this being the third meeting at which I have taken the chair; and therefore, perhaps, we may not be able to give an account of what originally took place, having only lately been mixed up with the undertaking. The expenditure, however, stands as follows:—From June, 1836, including payments in 1835, before the Act was obtained, and to April, 1841, a period of five years, the expenditure, it seems, amounted to 520,000*l.* From March to October, 1841, a period of six months, the expenditure was about 250,000*l.* From September, 1841, to October, 1842, a period of twelve months, it amounted to 1,224,000*l.*, which includes the investment for the 12 miles of the Brighton and Dover joint lines. Up to the 15th November we have made payments amounting to 193,000*l.* The total payments, therefore, have been, 2,187,000*l.* The further expenditure required, as by the statement of Mr. Cubitt, our Engineer, which has been read to you, is 596,000*l.*, making a total of 2,783,000*l.* From this sum, however, must be deducted the interest paid on shares, 88,000*l.*, which has been received back again; the land for the Bricklayers' Arms line, 8,000*l.*, which has been paid for, and which has nothing to do with the original line; together with 5,600*l.* remitted on Mr. Williams's shares, to which the proprietors gave their sanction; leaving a total amount of 2,681,000*l.* The 78 miles of railway, throwing out the 10 miles of the Croydon line, I had estimated at 30,000*l.* per mile, with an addition of 15 per cent. for contingencies, making a total of 2,691,000*l.* If we may rely, therefore, on the estimate for finishing the 22 miles, and that the estimate for the locomotive engines, carriages, &c., will not be exceeded, we shall make good the pledge which we made at our former meeting as to the ultimate cost of the undertaking. The funds to be raised, with the balances, stand thus:—On the 1st of October we had 96,000*l.* in our banker's hands; also for arrears of calls on the first capital 10,600*l.*; and on the second capital

Digitized by Google

23,000*l.*, making a total of 33,600*l.* We have then the 4th and 5th calls on the new scrip, amounting to 280,000*l.*; the bonds not issued to the 1st of October, amounting to 200,400*l.*; and we have powers, if sanctioned by this meeting, to raise 100,000*l.*, and a further sum of 120,000*l.* under the London Bridge Station Act. The total sum, therefore, which we have at command, is 830,000*l.*; but from this must be deducted the sum of 28,000*l.* for interest on shares paid in October, and 24,000*l.* for calls paid in anticipation, leaving at command 778,000*l.* This sum has therefore to finish the work, and find stations and plant to Archcliff Fort, where the powers of our Act terminate. With respect to the Dover terminus, you have the Report of our Engineer; and a special general meeting for the consideration of this question will be called when the proper period arrives. We cannot proceed without a special general meeting, which will be convened sometime in the spring. The Board of Ordnance having given us permission to tunnel through the Archcliff Fort, and the Harbour Commissioners having acknowledged the principle of taking land belonging to them, the necessary steps have been adopted to enable the Company to go to Parliament for a Bill. The Bricklayers' Arms approach is also noticed in the Report of the Engineer, and is a matter of considerable importance. The proposed terminus is 1¾ miles from St. Paul's, 1½ miles from Westminster Bridge, 2¼ miles from Charing Cross, and 2 miles over Waterloo Bridge to the Strand. These distances I have taken by measurement from a map of London. The necessity of this branch, both as a west-end terminus and as a station for goods and cattle, is clear and palpable. At London Bridge the west-end passenger traffic cannot be carried on unless at much inconvenience to the public and to this Company. As to goods, I consider it quite out of the question, for upon that subject I always speak with a great deal more confidence. Some persons may say that I am a little self-sufficient upon that point; but be that as it may, a man whose business it has been all his life to look to these matters, must necessarily see the great advantage which must accrue from having ample space for accommodation, in thus rendering easy a reduction of labour; and knowing that bales, goods, and pockets of hops will not walk as passengers do, I consider it a matter of the highest moment. When I tell you, gentlemen, that the space which is allotted for the three Companies, the Brighton, Croydon, and Dover, is about one-third part of the space of Westminster-Hall, you will readily conceive that at London-bridge, the west-end passenger traffic cannot be carried on, unless at much inconvenience to the public and the Company. For goods the whole space allotted to the three Companies would be 100 feet by 52, whilst at the Camden station, on the London and Birmingham Railway, one carrier's allotment station is 227 by 142. For the cattle, therefore, there will be no accommodation; either we must be mistaken as to the goods traffic of the Brighton and Dover lines, or we must require a great deal more accommodation. The more, therefore, I look at the question, the more am I satisfied as to the necessity for something being done. Whether it will be more beneficial to the public and to the proprietors of the Brighton and Dover Companies to have one station, at a cost of 200,000*l.*, or to leave the Croydon and Greenwich Companies with the London Bridge terminus, and have a separate and distinct railway, spending half a million of money, I leave you, gentlemen, to say. It appears to me that there can be no earthly reason why the Brighton, Dover, and Croydon Companies should not act as one, spending 200,000*l.* instead of one million and a half; for I hold that this would be the best and wisest course of proceeding. (Applause.) The question of the London Bridge station is one in which I have been greatly interested. The South-Eastern Company will be desirous, if the measure is carried, that the Brighton should use it jointly with themselves; but should they decline, there is no doubt of the income of the railway paying interest on the expenditure. It rests, therefore, with the proprietors, either to approve or to disapprove of the proposal. Another point which, in conjunction with my brother Directors, I cannot but look upon as highly beneficial, is the arrangement with the Croydon Company for the joint working of the locomotive power. It would be premature at present to attempt to give any adequate idea as to its cost, but probably it will be sufficient to say that both Companies are satisfied with the way in which the arrangement works. The next matter which claims our consideration is the arrangement made with regard to tolls to and from New Cross over the Croydon line, which has not only enabled us to bring third-class passengers on the line, but enabled the Croydon to keep the tolls low—instead of charging at the rate of 1s. per passenger, which it is their right and privilege to claim. In order to ascertain the number of passengers which had been put down at New Cross, and the rate per passenger which had been paid, I have taken the week ending November 13, and I find that the number of first-class passengers from New Cross was 204, at 8½d.; 327 by the second-class at 3¾d.; and 520 by the third-class at 3½d. It would be quite out of the question, that we could take any third-class passengers to London Bridge if we had to pay 1s. a passenger to the Croydon Company, and 4½d. to the Greenwich. The principle of the arrangement with the Croydon Company in respect of tolls is, that whatever sum the South-Eastern may charge on the fare for passengers, be it high or low, the Croydon Company will agree to receive the same proportion; from which is to be deducted 30 per cent. for the first four years, towards covering the expenses for conveying the passengers on the Croydon line. After the first four years it is assumed that the actual expense for carrying such passengers will be ascertained, and then the actual expenses are to be deducted instead of the arbitrary 30 per cent. The effect of this will be, that on the fare to Tunbridge, a distance of 50 miles including the Croydon line, the Croydon Company will take 1-5th of the fare, after deducting 30 per cent. The same principle applies to the goods; but with this addition, that a certain sum, namely, 7s. 6d. per ton, is to be deducted for the cost of collection. The Croydon refuse to extend this modification, as it affects the Greenwich Railway remains the same—namely, 4½d. per passenger, thus making the difference between the fare from New Cross and the fare from London Bridge. So erroneous have been the statements respecting traffic, not only on this but upon other railways, that this has been at the best but a speculative question upon almost every railway. If we look at the London and Birmingham Railway, we shall find by their original estimates, that they calculated the traffic at 7,500*l.* per week for passengers, and 8,000*l.* for goods. Their traffic in goods, however, does not amount to 4,000*l.*, while their passenger traffic exceeds 12,000*l.* which shews how deceptive their estimates have proved. In taking a statement, which I did about 6 weeks ago, for the week ending 8th October, the number of passengers carried by the South-Eastern Company was 9,288, of whom 3,444 were carried to and from London Bridge, 1,647 from New Cross, and 4,197 were local passedgers from the county of Kent. On the subject of the goods traffic it cannot be expected that we can say much; but every opportunity will be taken to develop it as far as the limited space at London Bridge will permit. The next point to which I would solicit your attention is with reference to the amalgamation of the three Companies. I have invariably, from the first knowledge which I had of railways, which commenced with the Liverpool and Manchester, anxiously watched their progress and development, and attribute much of the loss they have sustained to the fact of contiguous Directories not pulling well together. (Applause.) The Brighton, Croydon, and Dover Companies have no possible excuse for not being actuated as by one mind—(hear, hear, hear)—and I sincerely trust that the proprietors of these Companies will, in these days of reform, adopt some measure to compel the thirty-eight Directors, who really look exceedingly simple and foolish in the whole of the transactions connected with the Companies, to adopt some measures which may act more beneficially for the interest of the proprietaries. (Hear.) I have for a long time avoided speaking on this subject, because I was in hopes that common sense would have prevailed, though it does seem to have gained scarcely any ground at all. When I look around, and see the reforms which are taking place in reducing men's wages from 21s to 19s., by 6d. here and by 1s. there, though I admit that with a great multitude of people it is necessary, yet the first retrenchment, and reform which ought to take place, are where one may be made to do the work of three. We want not thirty-eight Directors, we want not three staffs, nor three separate locomotive departments. What we want is one, and until the proprietors take the subject seriously in hand, all our labours in shillings and pence will be matters of only secondary moment. (Applause.) This being the case, I am not surprised at the complaints upon this point which are daily, and with justice, being made by the public—setting aside our railway proprietaries. Will any man assert that two separate stations are required at Croydon; and again, will any one say that two are required at Reigate, with another at Merstham, only a mile further on? Passengers there see the trains coming from Brighton to the Reigate station, and they have seen the Dover trains pass along within a few minutes of the same time; but instead of being able to go down into Kent by that train, they have had to wait an extra three hours. The complaints which I have from individuals, and in letters from private friends, make me almost ashamed to say that I belong to the 38 gentlemen who are acting in this way. This is a point to which I would more especially direct the attention of our railway reformers; and indeed I should not have thought this a regular and legitimate meeting, if I had not seen my friend Mr. Tyrrell and some other gentlemen present. (Laughter and applause.) The sentiments of my brother Directors upon this head are, I believe, similar to my own. (Hear, hear, hear.) We do not require three sets of Engineers, three Secretaries, three locomotive establishments, but only one throughout the whole of the south-eastern districts of England, a total amalgamation of which must either earlier or later take place. (Applause.) The next question is one on which much discussion has taken place, relative to the accounts between ourselves and the Brighton, for a settlement of which the Dover Company do not cease to urge the Directors of the former Company. The proprietors are aware that 327,000*l.* has been invested in the names of trustees for the use of the Brighton Company whenever they will give us the accounts. I do not hesitate to say distinctly, that it would be a great relief to the Dover Directors to get the whole matter off their hands. More than the endeavour to get them settled it is not in their power to perform; but they are desirous at the same time that it should go abroad that the delay rests not with them. The whole question, which is a plain and straight-forward matter of account, might have been settled long ago had the Brighton Company given us the vouchers. The principal reason to be assigned for the non-settlement of these accounts arises from the fact of there being an excessive quantity of land and whole properties purchased, not for making the railway, but for avoiding Parliamentary opposition; and this being the case, and considering the position in which the respective Companies are placed, the South-Eastern Company consider it right that the cost of this extra land should not fall on them. The land accounts for the Dover line are now entirely closed, and it is satisfactory, amid all the difficulties with which the Company has had to contend, to be able to inform the proprietors that there are no disputed accounts for land—the deeds and conveyances for which, are now in the Company's possession. The proprietors have had a Solicitor,

Digitized by Google

who, by his able management and straightforward conduct, has arranged, at a reasonable rate, all the troublesome bargains for land, without the necessity for any actions at law, and with but few cases which required the intervention of a jury. With our contractors we have had no disputes, though in some Railway Companies these disputes have been known to be prevalent three or four years after the line has been opened. In fact, I saw by the papers only the other day, a case in which a Company could not part with their Engineer at a heavy salary, in consequence of unsettled disputes with the contractors. If I thought there were any disputes with the contractors upon the line, the first step that I would take would be to have them settled at once, and get rid of the question. The fact is, we have all along paid ready money, even when we had but little of it to pay, so that we have been, and continue to be, free from debt. All our transactions being in ready money, every dispute or difficulty that arose has always been met and answered the instant it occurred. This being the state of our affairs, all that we have to look to now, and all that we should be glad to do without, is the money which will be required for erecting the terminus at Dover, together, with your sanction, for the branch line and station to the Bricklayers' Arms. Having, therefore, gentlemen, given you this statement as briefly as I could, it is my duty to propose—first of all premising that I shall be glad to answer any questions which the proprietors may put—that the Report of the Directors now read be received and adopted, and that the same, together with the Report of the Engineer, which speaks sufficiently for itself, be printed and circulated amongst the proprietors. The Chairman then resumed his seat amid general applause.

Mr. JAMES WHISHAW wished to ask a few questions. The Chairman had stated that the ultimate cost of the undertaking would be 2,600,000*l.* That did not include the branch to the Bricklayers' Arms, which, however, might be considered as an essential part of the undertaking, so that if his (Mr. Whishaw's) calculations were correct, the entire line would cost little short of three millions. Was it so? Then as to the arrangement with the Croydon Company, it had formerly been stated that an alliance had been formed with the Croydon as to the Grange-road Approach, and this seemed fair; why was it now hinted that the Croydon Company might not co-operate? He wished to know also why there was so large a sum as 95,000*l.* lying unproductive in the bankers hands as stated in the printed accounts. Then he should like to know what was the cost of working the line. Now that they had opened to Ashford and made arrangements for the working, perhaps the average weekly expense could be stated. Something was said in the Report as to the resignation of the Superintendent. There did not appear to be any mystery in the case; but, at any rate, he hoped the Company would not suffer any loss. He was happy to find that the Directors had adopted the system of low fares, a system which experience had proved to be the best as well for the proprietors as the public, and he trusted they would adhere to it. (Applause.) These were the principal points on which he wished for explanations, which explanations he had no doubt would be creditable to the Directors and satisfactory to the proprietors. (Hear, hear, hear.)

The CHAIRMAN went into various items of account, showing that the actual cash received by the Management had been 2,085,000*l.*, within a thousand or two. If the amount actually received did not come up to the nominal capital, it was the fault of the shareholders themselves. In one item it would be seen from the accounts, there was deducted 234,900*l.* from the issue of shares at a discount; in addition to 100,000*l.*, of interest on capital paid up; items which, it would be evident, had nothing to do with the making of the railway. As to the Bricklayers' Arms branch, the Chairman of the Croydon Board was present, and he would, no doubt, give any explanation that might be required as to the feelings and future proceedings of that Company. He could only say, that the Croydon Directors went hand in hand with this Company for the Bill last session. The meeting, however, ought to be aware that the question was now reduced to this:—Should they go in with or without the Croydon Company? (Hear, hear, hear.) With respect to the next question, the money now lying dead at the bankers would be required—and more than *that*—to meet next week's payments, it being settling day. The Board had placed in the 3½ Consols and in Exchequer Bills a large proportion of their available funds, and these were, of course, quite secure. The balance now at the banker's would, as he had already said, be more than absorbed next week, and even were it otherwise, it would be difficult to lay it out profitably He himself had large balances at his banker's, which remained perfectly idle—such was the state of the times. As to the cost of working the line, he felt some difficulty in answering.—

Mr. WHISHAW begged that no question of his should be answered, if likely to be at all injurious to the Company's interests, or inconvenient to the Roard.

The CHAIRMAN was a great advocate for the fullest explanations. In 99 cases out of 100 no mischief could arise, nor would any arise in this instance. The difficulty was, in giving definite information. A statement had certainly been handed to him on this subject, but he had not been able to give it the requisite attention, and in a few months what was now and must be to some extent, a matter of conjecture, would be certainly and accurately ascertained. In reference to the resignation of Mr. Yeats, he was quite prepared to enter fully into the question if the meeting wished it. He believed the proprietors would sustain no loss from the conduct of Mr. Yeats. He would say, however, to Mr. Yeats's friends, and to his foes, if there were any, that the less said upon the matter the better. (Hear, hear, hear.) With respect to the "temporary" appointment of Mr. Yeats's successor, as referred to in the Report, the Directors hoped that it would be converted into a permanent one. The reason why they had for the present made it temporary was, that the gentleman referred to had been from the first connected with the works of construction, in connection with which his duties had ceased. The Directors deemed him qualified for the duty, and thought it much better, instead of going abroad for an individual who knew nothing of the line, and perhaps of railways, to confine themselves to those on the spot. And looking at the reforms now going forward—reforms which he hoped would be beneficial in the long run, although he had certain doubts as to the way in which they were proceeding—the Board thought it better to confine themselves to those already in their employment, rather than to appoint parties whom it might afterwards be found necessary to remove.

Mr. J. WHISHAW still wanted further explanation as to the cost of the line.

The CHAIRMAN went over his figures again, and said, the cost of the railway from London-Bridge to Archcliff fort, which exhausted thewhole of the Company's present powers, would be 2,691,000*l.*, which tallied with the statements made at former meetings, and to which statements the Directors would adhere. The branch to the Bricklayers' Arms was a separate and distinct affair, and if it were sanctioned by the meeting, would have to be paid for in addition. Whatever the cost of that branch might be, he believed that it would be fairly remunerated by the means which it would furnish of prosecuting a goods traffic, and by saving of toll. Then there was the entrance into Dover, which would require a separate Act and involve a separate payment, the Company's powers reaching no further than Archcliff fort.

Mr. WHISHAW inquired if the 200,000*l.* referred to by the Chairman would include the Dover terminus.

The CHAIRMAN said—Certainly not. It was clear, however, that they must have a terminus in Dover. As to the Bricklayers' Arms branch, it would be for the proprietors now to decide. If they decided against it, they would save him a great deal of personal labour.

Mr. WHISHAW inquired if one Act of Parliament would suffice for the Bricklayers' Arms scheme and for the extension into Dover.

The CHAIRMAN said it might; but it would perhaps not be prudent to risk the loss of both through the failure of one of them.

Mr. WHISHAW wished to know the probable expense of the Dover terminus.

The CHAIRMAN said, the Engineer's Report gave the amount at 100,000*l.* All, however, that the Directors could say was, as the Duke of Wellington had said when they attended the Dover sessions on this business, "We admit the principle, but beyond that we know nothing." The Directors had not made any calculations as to the cost of the property that might be required.

Mr. W. A. WILKINSON (Chairman of the Croydon Board) said, he did not see why the Croydon Company should not go on with the Grange-road branch, for he thought it would prove of itself a profitable speculation. He did not see why the Croydon Company should not be as ready as before. (Hear, hear.)

Mr. LEWIS LEVY said, the Chairman had talked of an increase in the carriage of hops to arise from the Grange-road scheme. [The CHAIRMAN—not an increase.] Now it was well-known that the principal hop market was in the Borough of Southwark, and was it likely the parties would go to the Grange-road when they could have their goods delivered at London Bridge? (Hear, hear, hear.) Then as to cattle—to his certain knowledge very few cattle were brought from Kent to the London market. Even those that came would be disembarked at New Cross and pass the night in the adjoining fields, just as on the Birmingham Railway the cattle were landed at the Hampstead-road and not at Euston-square. (Hear, hear, hear.) As to comparing Birmingham with Dover, the Chairman might as well compare Hampstead with Hammersmith (Laughter and applause.) Birmingham and Manchester were large and populous manufacturing towns, whereas on many parts of he Dover line they would only have to convey a few apples and pears. (Renewed laughter) At all events they were not now in a condition to incur any further outlay, and he would warn the proprietors against voting away money at present. (Applause.) He had heard with great pleasure what the Chairman had said as to a multiplicity of adjoining stations, but if this new scheme were sanctioned, they would have, first a station at London Bridge, upon which a very large sum of money had been expended, then a station at the Grange road, and another at New Cross—all before one could say "Jack Robinson." (Applause and laughter.) When once they got to Dover, it would be time enough to see whether they wanted more accommodation than the London Bridge station could furnish. (Hear, hear, hear.) The Chairman had spoken with a great deal of ingenuity as to the distance of the Bricklayer's Arms station from Westminster Bridge and from the Strand, but he had forgotten to say how far it was from Grosvenor and Berkeley Squares, and other fashionable parts of the western end of the metropolis. The inhabitants of these districts would still prefer crossing Vauxhall Bridge, and going along the excellent road to New Cross. He had not conversed with any proprietor on the subject, but so strongly was he opposed to this Bricklayers' Arms scheme, that without knowing whether he should have a seconder or not, he would move, as an amendment, that the consideration of the Grange road project be deferred till that day twelve months. (Applause.)

Mr. RICHARD SANDERS seconded the amendment.

Mr. WHISHAW inquired on what grounds the Bill of last session was thrown out.

The CHAIRMAN—On a point of form in connection with the Standing Orders. He could only repeat that the rejection of the Bricklayers' Arms scheme would save him much personal labour, but it was right the proprietors should be warned upon the point, and there could be little doubt that ere long the land which might now easily be had, would be occupied in other ways. They might continue to make use of New Cross, but as to London

Digitized by Google

Bridge, the station room was altogether inadequate. He would take that opportunity of complying with a suggestion of the Secretary, and explaining that when he said the 95,000*l.* at the bankers would not be sufficient to meet next week's expenditure, there was no fear of a lack of funds, as they had an abundant supply of Exchequer-bills.

A PROPRIETOR wished to know if there was sufficient room at New Cross for the goods' traffic expected on the South-Eastern Railway.

The CHAIRMAN said there was not. He had not replied to his friend Levy's observations about the hops, because he did not wish to occupy the time of the meeting on details. If they could get a sufficiency of land at London Bridge, there could be no question that that would be the best station; but could this be had on anything like reasonable terms, or upon any terms at all? (Hear, hear). Could they persuade the Governors of St. Thomas's Hospital to remove that magnificent pile of buildings? (Hear, hear). There was not accommodation at New Cross, but if the meeting did not sanction the Bricklayers' Arms scheme, of course accommodation must be found, though *how* he did not know. There would, however, be a specific motion produced on this point, and perhaps it would be as well that further discussion were for the present postponed. (Hear, hear, hear.)

Mr. J. M. PARSONS said, he did not quite understand the figures in the Engineer's Report, and here he could not help pointing out the inconvenience which arose from not publishing the Report of the Engineer simultaneously with that of the Directors. (Hear, hear.) At a recent meeting of the North Midland Company the Directors complained that the Second Report of the Committee of Investigation had not been furnished to them till the morning of the meeting, so as to leave them no time to take it into consideration. In common phrase, "sauce for the goose was sauce for the gander," and if Directors complained on this point, why should not shareholders? He wished to know from what date the estimates of the Engineer as to the 597,000*l.* for the completion of the works to Archcliff fort commenced.

Mr. CUBITT (the Engineer) said, the estimate was dated from the 1st of November. As to the non-publication of his Report prior to the meeting, he might fairly have urged the same excuse as at the last meeting, namely, that the opening of a further portion of the line had fully occupied his time; but the principal reason was his anxiety to bring down the Report to the last moment, and subsequent to the opening to Ashford. In fact, the Report had not been fully drawn out till the previous night.

Mr. PARSONS said, the Report of the Engineer appeared to him an elaborate and excellent one, and compliments on his part were not required. It appeared, from the printed account, that the sum expended on works, to the 1st of October last, was 1,093,987*l.* To this was to be added a month's expenditure since that date, and then, in addition to all, was the 597,000*l.* required to complete the line to Archcliff fort.

The CHAIRMAN repeated the figures he had formerly given.

Mr. PARSONS presumed that as 20,000*l.* for engines, and 20,000*l.* for carriages were comprehended in Mr. Cubitt's Report, in addition to the payment made under those heads prior to 1st October, some considerable addition must have been made within the last two months, otherwise, as compared with other Companies, the estimate for plant was quite inadequate, as the total only amounted to about 900*l.* per mile; in other Companies the cost was usually above 2,000*l.* per mile.

Mr. CUBITT said, 5,000*l.* had been expended on carriages since the 1st October.

Mr. PARSONS said, it seemed to him that the Dover terminus and Grange-road scheme would together require 400,000*l.*?

Several PROPRIETORS—800,000*l.*

The CHAIRMAN thought it better to take the maximum of 400,000*l.*

Mr. PARSONS would be glad to know if it were proposed to raise that amount by shares.

The CHAIRMAN said, it would probably be partly by shares and partly by loans.

Mr. PARSONS inquired if the 400,000*l.* included the amount to be raised by loan.

The CHAIRMAN said, the 400,000*l.* was the computed amount of expenditure, in whatever way the money might be raised.

Mr. PARSONS took it for granted that a special meeting would be called before any farther money was raised.

The CHAIRMAN—Most assuredly.

Mr. PARSONS presumed that if the Engineer was correct in his calculations, the 220,000*l.* now proposed to be raised in loan-notes would complete the line to Dover, exclusive of the terminus.

The CHAIRMAN said that was the view the Directors took of it.

A PROPRIETOR said, he had known the neighbourhood of the Grange-road for 35 years, and ridiculed the idea of any buildings being constructed on such marshy land for the next hundred years. He thought there would be great engineering difficulties in forming such a line.

Mr. KNOWLES wished to know if there were any obstacles to a settlement with the Brighton Company beyond the sale of the extra land?

The CHAIRMAN said, there were very many other difficulties. He would read all the letters which had passed between the Companies if the proprietors wished it. (Cries of "No, no.") He had not entered fully into this matter, because he hoped the questions at issue might be amicably arranged. (Hear, hear, hear.) It was not a matter of feeling, but a matter of principle. No doubt the Brighton Directors were anxious to do all they could for their constituents, and so were the Directors of this Company.

After a good deal of irregular discussion,

Mr. WILSON said, it was desirable to expedite business, and therefore he would second the motion for the adoption of the Report, which entered so clearly and so fully into the past as to give the proprietors every ground of confidence for the future. (Applause.)

Some further conversation followed, and in explanation the Chairman read the resolutions with which it was proposed to follow up the adoption of the Reports. The first (as will be seen from our advertising columns) was to authorise the raising of 220,000*l.* under existing powers, so as to complete the line to the Parliamentary limit; the next to apply for powers to authorise the extension into and terminus at Dover, which he observed the Engineer had estimated at 100,000*l.*, although he did not think that the Engineer or any one else could determine the ultimate cost of it; and the next resolution was for the construction of the branch to the Bricklayer's Arms, which would probably cost another 100,000*l.*

Mr. HILDYARD would dissent from the Chairman on one point, namely that the Engineer could not know the amount requisite to complete the works at Dover. (Hear, hear, hear.) With so many and such vast obstructions, for which the Engineer was in no way answerable, he had managed to bring them to Dover to the Parliamentary boundary of the line, without exceeding his estimates. (Hear, hear.) At a previous meeting he (Mr. H.) had not been aware that the Company had no power to go under the Archcliff fort into Dover, and probably that had led to some misapprehension on his part in regard to certain questions which he had then put. Of course the Chairman could not then have meant to include in his calculations and statements matters which they had not even now power to carry into effect, but even had it been otherwise he thought the proprietors had ground of congratulation that the only after-clap to which they had been exposed was this 200,000*l.* for the Dover works. Mr. Cubitt said 100,000*l.*; and and he (Mr. H.) had so strong a confidence in the judgment of the Engineer, and was so satisfied that Mr. Cubitt would not at last rush into rash or inconsiderate estimates, that he did not believe the 100,000*l.* would be materially exceeded. (Applause.)

Mr. KNOWLES put several questions as to the total amount authorised to be raised by loans.

There was for some time considerable misapprehension as to the tenor of the questions, but at last Mr. CASH having put them in another form,

The CHAIRMAN said, the amount already raised on loan was 716,000*l.*, and it was now proposed to raise an additional sum of 220,000*l.*, making altogether 936,000*l.* There the Directors must rest. Their powers extended no further; all they asked was authority from the shareholders to go to Parliament for further powers.

Mr. HILDYARD made an inquiry as to the 6,150*l.* appearing in the accounts as arrears on calls, and wished to know if there were special circumstances connected with these cases.

The CHAIRMAN said, there would be a motion brought forward by and by on this subject.

A further conversation ensued, but ultimately the motion for the adoption of the Reports was carried unanimously.

It was considered desirable that the other resolutions should be disposed of before entering upon the Grange-road scheme. Accordingly,

The CHAIRMAN proposed the resolutions as to the Loan Notes, as follows:—

"That the Directors be and they are hereby authorised and empowered to issue Loan Notes, under the Common Seal of this Company, for the sum of 220,000*l.*, or any part thereof, being the remainder of the Capital which this Company are authorised to raise. That such Loan Notes do bear interest at the rate of (and not exceeding) 5 per cent. per annum, and that they be for such amounts, and payable at such dates, as the Directors shall determine.

Mr. RICHARDS, Deputy-Chairman, seconded the motion, which was carried unanimously.

The CHAIRMAN then moved the next resolution for the extention from Archcliff fort as follows:—

"That this Company do apply to Parliament in the ensuing session for powers to extend the line, and form a Station and Depot from Archcliff Fort to the South Pier, Dover.

It was seconded by Mr. LEWIS CUBITT (a Director), and carried unanimously.

The next resolution was proposed by the CHAIRMAN; seconded by Mr. DAVIS (a Director), and carried unanimously, as follows:—

"That the Directors be at liberty to receive payment of the arrears due from the Scrip Holders who have been in arrear, and that the forfeiture of such Scrip be not insisted on.

The CHAIRMAN said, he had examined into every case, and was satisfied that indulgence ought to be granted.

The other resolutions were severally proposed by the CHAIRMAN; seconded by Mr. HANKEY, Mr. F. MILLS, Major-General HODGSON, and Mr. SMALE (Directors), and unanimously carried. They were as follows:—

"That so much of the Resolutions of the Board of Directors of the 30th day of August last as declares to be forfeited the shares numbered 19,085 to 19,104 each respectively inclusive, and which were then in arrear by non-payment of the respective calls of £5 per share, payable on the 7th day of October 1841, £5 per share payable on the 8th day of January last, and £2 per share payable on the 9th day of April last, be, and the same is hereby confirmed by this meeting.

"That so much of the Resolutions of the Board of Directors of the 30th day of August last, as declares to be forfeited the shares numbered 19,942 to 19,971, and 20,067 to 20,079, each respectively inclusive, and which were then in arrear by non-payment of the respective calls of 5*l.* per share, payable the 6th day of July 1841, 5*l.* payable the 7th day of October, 1841, 5*l.* per share payable the 8th day of January last, and 2*l.* per share payable the 9th day of April last, be, and the same is, hereby confirmed by this meeting.

"That so much of the resolutions [redacted] Directors of the 30th day of Augu[redacted] to be forfeited the shares numbered [redacted] each respectively inclusive, and wh[redacted] arrear by non-payment of the respective calls of [redacted]

Digitized by Google

per share payable the 15th day of February 1841, 5*l.* per share payable the 6th day of July 1841. 5*l.* per share payable the 7th day of October 1841. 5*l* per share payable the 8th of January last, and 2*l.* per share payable the 9th day of April last, be, and the same is hereby, confirmed by the meeting

"That the Directors be and they are hereby ordered and directed to dispose of the 70 shares, the forfeiture of which has been confirmed at this meeting, in manner directed by the Act of Parliament made and passed in the sixth year of the reign of King William IV., incorporating this Company, and intituled, 'An Act for making a railroad from the London and Croydon Railway to Dover, to be called the South-Eastern Railway.'

The CHAIRMAN then brought forward the motion as to the Bricklayers' Arms branch, as follows:—

"That the Directors be and they are hereby authorised to apply to Parliament in the next session, either alone or in conjunction with the Croydon Railway Company, for powers to make a line of railway, with stations and depots attached thereto, from the Croydon Railway, near Corbet's-lane, to Swan-street, near the Bricklayers' Arms."

Mr. RICHARDS seconded the motion.

Mr. LEVY's amendment was then read.

Mr. W. A. WILKINSON wished to know if the opinions of the Directors, as to the merits of the scheme, remained as at the last meeting. [The CHAIRMAN—Entirely so.] The honourable proprietor then, in very forcible terms, and amid applause, expressed the concurrence of himself and his colleagues of the Croydon Board in the sentiments uttered by the Chairman of this meeting as to the joint working of the three lines. The first step towards this very desirable union would be the prosecution of the Bricklayers' Arms branch by the two Companies. He earnestly entreated the meeting not to come to a decision on so important a point without mature consideration.

A PROPRIETOR thought it would be time enough to consider this question when they get to Dover.

Mr. WILKINSON said the projected line had already stopped the progress of a new street, and he made no question that, if the scheme were not prosecuted within six months, it could not be carried out, except at great cost. (Hear, hear.)

The CHAIRMAN had already stated more than once that the rejection of the motion would to him be a personal convenience; but if he were asked whether in doing so the proprietors of the South-Eastern Railway would be doing a wise thing, he should unhesitatingly say No. (Hear, hear, hear.) He regretted that ever they should have gone to London Bridge at all—(hear, hear, hear) but having done so, let them not aggravate the evil. (Applause.) He had no doubt that if this proposition were rejected, the shareholders would bitterly repent it. For himself, nothing that had been advanced had in the smallest degree shaken his opinion as to the policy, he might even say, the absolute necessity, of such a measure; but the decision must of course rest with the meeting. He might just say, that it was the unanimous opinion of the Directors that the scheme should be prosecuted. Had there been any doubt or diversity of opinion among them on this point, he would not have spoken so strongly, notwithstanding that his own views were very decided with reference to it. (Applause.)

Mr. HILDYARD, at considerable length, and with great energy, supported the motion. On most points he was ready to defer to the opinion of the Chairman, but more particularly in a matter connected with the carriage of goods—a subject with which, perhaps, no other individual in the kingdom was so well acquainted. (Hear, hear, hear.) The Chairman was satisfied that the accommodation at the London Bridge station was totally inadequate, and it was their duty to look out for accommodation elsewhere. At the last meeting the scheme had been sanctioned to a certain extent; and acting on that sanction, the Directors had purchased land to the amount of 35,000*l.*, as appeared from the accounts. He disliked vacillation in public Companies, at the same time that he fully admitted the right, and would urge the necessity, of looking into their own affairs in such undertakings as this. It was said, why not wait till they saw whether another station was required? If they did so, it being admitted that the London Bridge station was inadequate to the wants of the three lines they might never have an opportunity of developing the full capabilities of the South-Eastern Railway, and might be abandoning a very lucrative traffic from lack of means to accommodate it. (Hear, hear hear.) He was not in the habit of placing implicit confidence in Boards of Management, but in this case the Directors certainly had the best opportunities of judging, and they were unanimously in favour of the scheme. ("Hear," and applause.) As to alleged engineering difficulties, Mr. Cubitt was best able to form an opinion. The statements made had convinced his judgment, and he should support the motion. (Renewed applause.)

Mr. WHISHAW had every confidence in the Directors, and although he should be sorry to see money spent if the engineering difficulties were very formidable, or if there were but little probability of obtaining legislative sanction, he must support a proposition which the Directors told them was so necessary. (Hear, hear, hear.)

The CHAIRMAN said, it should not be forgotten, that his colleagues and himself were interested in this railway as holders of shares to an extent not usual with Boards of Management; so that they were expressing not only their feeling as Directors, but as proprietors. (Hear, hear, hear.) In fact, they held about one tenth part of the whole concern, and if this project were sanctioned, several members of the Board would have to pay individually thousands of pounds. It could not be supposed therefore that they had not given the matter full consideration. (Much applause.)

Mr. CUBITT pledged his professional reputation that there were no engineering difficulties of any extent on the proposed branch.

Mr. PARSONS said he had been the mover or seconder of the resolution, which was carried at the last meeting, and which had authorised the Directors to proceed with the purchase of land, but to take no further step without again bringing the subject before the shareholders. He had supported that proposition by way of compromise, thinking, or rather apprehending, that before the meeting now assembled, circumstances might arise which would indispose the proprietors to go forward with the project. It had turned out as he had judged. They had now an excess of 220,000*l.*, and it would be for them to consider whether they would incur a further outlay of 200,000*l.* (Applause.) For himself, his interest in the undertaking was now so small, that it was a matter of little consequence whether the branch were constructed or not.

Mr. T. H. SMITH suggested a compromise on the present occasion, namely, that the Directors should be authorized to go to Parliament with the co-operation of the Croydon Company, but not otherwise.

Mr. SMALE (a Director) said, the Chairman had stated that the Board were unanimous in support of this motion. It was so, with this distinction, that some of the members of the Board, and among others himself, thought the branch was so good a thing, that with every disposition to extend the right hand of fellowship to other Companies, the South-Eastern Company ought to keep it all to themselves. (Applause.)

After some further discussion the amendment was put, when 21 hands were held up for it, and at least 50 against it.

Mr. SMITH then moved an amendment, that the words "either alone or" be omitted from the motion, so as not to authorise the Directors in going to Parliament without the co-operation of the Croydon Company.

This gave rise to some discussion, in the course of which the Chairman and other gentlemen contended that the amendment would needlessly tie up the South-Eastern Company.

Mr. RICHARDS spoke to the same effect, and stated that if the shareholders did not undertake the branch, it was possible that the Directors might undertake it themselves, so fully were they satisfied of its capabilities.

A PROPRIETOR inquired, why the Brighton Company did not join in the project.

The CHAIRMAN said, it would be impossible, even were they to sit there to midnight, to enter fully into that question. (Hear, hear.) As well might it be asked, why the Brighton Company did not come to the Reigate station of the South Eastern Company—for the South-Eastern Company could not go to theirs. In this and other matters, the South-Eastern Board had endeavoured, but without effect, to convince the Brighton Board that certain proposals would, if carried out, contribute to the mutual benefit of the Companies.

The second amendment was then put, and lost by a majority of at least 10 to 1, only 8 hands being held up for it.

The original motion was then carried.

Mr. RICHARD TYRRELL having made some remarks as to the putting of the motion,

Mr. RICHARDS, in a few spirited sentences, alluded to the honourable proprietor's pertinacity in matters of no moment.

This was received with applause and laughter, the latter being renewed when the Chairman jocularly observed, that he should scarcely look upon a meeting as legitimate if it were not graced with the presence of Mr. Richard Tyrrell, the *Reformer!*

Mr. FIELD, after praising the arrangements which the Directors had made for the traffic of towns in connection with the railway, expressed a hope that the mode which he said was adopted in some Companies, of mixing up the coach receipts with those of the railway, would not be adopted in this Company.

The CHAIRMAN assured the honourable proprietor that the returns published comprehended the *bona fide* receipts on the railway, and nothing more. The same system would continue to be observed. In fact the Directors had nothing to do with the coach fares. (Hear, hear, hear.)

Mr. DUNN, in very complimentary terms, which were responded to by the meeting, proposed a vote of thanks to the Chairman, observing, that one of the strongest guarantees for the ultimate success of the railway, was the Chairman's connection with, and deep pecuniary interest in, it.

Mr. RICHARDS, in cordially seconding the motion, bore testimony to the extreme value of the Chairman's exertions.

The motion was carried by acclamation, amid much applause.

The CHAIRMAN made a suitable acknowledgment, and the meeting broke up, after a sitting of nearly three hours.

The late period of the week at which the meeting was held has constrained us to abridge the proceedings, but we believe we have omitted nothing material.

ENGLAND'S "SCREW-HELPS."

To the Editor of the Railway Times.

SIR,—In your number of last Saturday you inserted a description of our Patent Traversing Screw-Jack, and call upon us to favour you with a full description of the same.

You have so fully described it already, that you have left little for us to do. We merely beg to observe that the machine noticed in a Belgian journal is one of our machines, as there are several of them in use in that country, we having obtained letters patent for Belgium, as well as France and Holland.

With regard to this country, we beg to inform you that they have been in use for the last three years, and have had their merits tested by several of our principal engineers to their entire satisfaction.

We are, Sir, your most obedient servants,

GEO. ENGLAND & Co.

Old Kent Road, November 29, 1842.

NOTES TO THE TRAFFIC TALBE
(on the opposite page.)

Main line, 53 miles; Tewkesbury branch, 2. — Total ength, 55 miles.

The total length of line and branches is 25 miles:—15 iles of passenger and general traffic, and 10 miles of oal traffic alone. The Company are now before Parlia- nent for power to raise the capital to 500,000*l.*

The total amount of stock on which dividends are pay- ble is 750,000*l.*

Receipts include the Northern and Eastern toll, &c.

Capital of 1,957,800*l.* is exclusive of the Chester and rewe line, which cost 458,333*l.* The receipts include hose derived from the use of the Liverpool and Man- hester and Chester and Crewe lines, as also the toll rom the Manchester and Birmingham Company. The ivisor employed to ascertain the daily receipts per mile 121 (85+15+21.) The Company do not now carry oods to Manchester.

. The receipts include those derived from the Chel- enham and Exeter lines; the former opened for 18 iles, and the latter for 44¼. The divisor employed to scertain the daily receipts per mile is therefore 180½ 18¼+18+44¼.) The *rent* of the branch lines is together out 1,163*l.* per week. There is likewise a *toll* payable the Exeter Company of a farthing per passenger and er ton of goods per mile travelled.

The dividends have been hitherto (up to 31st Decem- r, 1841) appropriated to completing the line and works.

. Ten per cent. is the maximum dividend allowed by e Company's Act.

Deduct from receipts 48*l.* 1s. 6d. for weekly rent of ylesbury line. The dividend is *nominally* at the rate 10*l.* per cent., but to the original shareholders it is ual to upwards of 11*l.* per cent., as the dividend on the iginal shares is paid upon 100*l.*, although only 90*l.* has en called for. In calculating the receipts per mile, the ven miles of the Aylesbury line are included.

At the last meeting no dividend was declared, the posable balance from the previous six months' work- g being only 1,472*l.* 10s. 9d.

The length stated includes the Shoreham branch. e Croydon and Greenwich tolls are not deducted from e amount stated in the Table. The traffic of the six nths produced 63,326*l.*, and there was a balance from previous half-year of 12,479*l.* Out of these two ounts combined, the dividend (after making certain ductions) was paid.

The capital of 741,000*l.* includes the new capital for ndon and Brighton station. The amount in the ble does not include the Toll from the Brighton Com- ny.

Capital of 993,300*l* includes new capital for widening line, &c. The dividend of 7s. 6d. per cent. does not er to the preference shares on which 5 per cent. is aranteed. The amount in the Table includes the re- pts from the footpath, but is exclusive of the Brigh-, Croydon, and Dover toll.

Capital includes that provided for the Gosport branch. e dividend is calculated on the money actually paid a portion of the shares having been issued at 50 per t. discount. The Gosport branch is included in the gth stated.

Including Toll, &c., from Sheffield Company, and r deducting omnibus charges, &c., and subject to pay- its to the Grand Junction Company.

Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The ipts given are however those from the railway only.

The 4,319*l.* 8s. 2d. are the receipts after deduction. ilbus charges, and payments to other Companies.

The receipts for goods, &c., include, horses, 23*l.* 9s. ; carriages, 24*l.* 12s. 0d.; dogs, 1*l.* 19s. 0d.; parcels, 1s. 2d.; cattle, 75*l.* 17s. 6d.; corn, 5*l.* 7s. 7d.; y goods, 348*l.* 3s. 4d.; coal and lime, 179*l.* 6s. 3d. otal, 902*l.* 16s. 4d.

The amount of stock *created* is 3,000,000*l.*, on which dends are payable; and the sum of 850,000*l.* is bor- d money at interest. The 3,000,000*l.*, however, is inal, inasmuch as the shares were some of them is- at a discount, which reduced the actual amount to ,500*l.*, viz.:—15,000 shares at 100*l.* = 1,500,000*l.*; 0 of 50*l.*, issued at 40*l.* = 600,000*l.*; 22,500 of 33*l.* 8d., issued at 21*l.* 13s. 4d. = 489,500*l*; total ,500*l.* The details of the receipts are as follows— engers, 1,852*l.* 6s. 8d.; carriages and horses, 85*l.* 3d.; parcels, 209*l.* 18s. 4d.; mails, 50*l.* 5s. 9d.; handise, 1,031*l.* 13s. 11d.; minerals, 281*l.* 3s. 8d.; e, 19*l.* 12s. 8d.—Total, 3,529*l.* 14s. 3d.; including h Midland proportion of Manchester and Leeds c, and amount received for Sheffield and Rother- Company.

he receipts are after deduction of Liverpool and chester toll.

he returns are subject to the deduction of rent to astern Counties' Company (about 134*l.* weekly), and oll of 4d. on such portion of the passengers as pass their railway. The 32¼ miles stated as being open for , include the portion of the Eastern Counties' line d over by this Company.

he capital of 533,000*l.* includes that provided for ur and works as well as railway. The dividend a year (since opening of line).

he returns are inclusive of Manchester an Birming toll.

he length stated includes branches.

he traffic stated does not include the Leeds and

TO CORRESPONDENTS.

Investments in Railways.—We are constantly receiving applications for advice with respect to the sale or purchase of particular shares. We have repeatedly stated, that we are very unwilling to offer any opinion upon such points, and, indeed, our readers have the same data as ourselves whereby to form a judgment. Nevertheless, as they *will* have our opinion, we cannot refuse to give it. We wish them, however, to bear distinctly in mind, that we do not, in any instance, hold ourselves answerable for the event. The course we recommend to our correspondents, is simply what we ourselves would follow, were we buyers or sellers under the circumstances detailed by them respectively. With this caution, which we shall take care to keep before parties who apply to us on such subjects, we proceed to notice the applications of the week. We may just add, that the figures and letters have no reference whatever to our traffic list, or to the initials of any railway. We cannot notice questions where this rule is violated. In order that we may not be subjected to needless questions, we must have the name and address of every inquirer, although the answers may be given under a fictitious designation:—T. F. *(near Ipswich). We can not answer letters privately. If we did so, we should be compelled to employ several extra clerks. With regard to the questions, we would recommend investment in No. 4 and 8 above all others. Next to these (if 5 per cent. content our correspondent) we would recommend Nos.* 14, 13, 12, 8. 7, 1, 5. *The others we would not touch. Above all, avoid No.* 11. *There will speedily be a terrible exposé.*—A. B. *No.* 1, *all are equally safe. No.* 2; *we should say* all *were safe. No.* 3; *it is impossible we can answer this question, but in any case a lender would be safe. No.* 4; *we think the shares will rise. No.* 5; *we consider it ill managed, and should be sorry to guarantee* 5 *per cent. within the time stated.*—L. J. *(Oswestry). Buy Nos.* 1 *and* 2. *We do not think No.* 3 *will go higher, but we would not buy even at present prices. We believe No.* 4 *will improve in the course of a few months.*—C. B. *(Mil-bank-row) We have no great opinion of any of the lines. At present prices No.* 2 *is the best.*—J. G. *(Exeter.) We think Nos.* 1 *and* 2 *will ultimately prove profitable. No.* 3 *is very good. No.* 4 *will go lower. No.* 5 *is not very desirable. Of the rest we would not purchase any but No.* 8.—Hallamshire. *Nos.* 1 *and* 2 *we would hold, but would not purchase any more of No.* 2.—P. J. *The Greenwich new shares have a guarantee at present of* 5 *per cent., which accounts for their price as compared with the old. We should say that No.* 1 *was preferrable at present prices. No.* 2 *we would not purchase. For an answer to his other question he must look to the Reports.*

P. *will find that the matter has been taken up by another correspondent.*

J. D. B.—*We believe there is no restriction as to age; certainly not as to height.*

B. S.—*Will our correspondent oblige us with his name? It shall not appear in public.*

Punjab.—*We would* not *retain A. In* 12 *months they will be* much *lower. B will, we think, improve.*

Anti-Humbug *ought to know that we have nothing to do with suspension bridges, or with canals. The "George Stephen," who signs the notices referred to, is* Sir *George.*

Several letters on the Midland Counties', North Midland, Eastern Counties', and other railways, are omitted from want of room—the more especially as we have given letters elsewhere on the same subjects.

A Permanent Holder of Great Western Railway Shares *urges nothing new. There is scarcely a railway respecting which we have not, within the last few weeks, received letters recommending Committees of Investigation.*

R. W. S. *shall appear if we can find room within a week or two.*

J. M. *will see that we have noticed the subject. We shall be glad to hear from him more in detail.*

A Shareholder in the Midland Counties' Railway is, *we have reason to know, a tissue of falsehoods.*

A Holder of Original Shares *would only distract attention from the main point at issue.*

D. W. *(Sandgate) shall not be lost sight of.*

Vigil—*We had struck out the passages referred to previously to the receipt of our correspondent's second note. It was not, however, from such considerations as our correspondent adverts to. Fortunately we can afford to treat very lightly the hostility of the opponents of particular lines. If we treated them as they treat us, we should very speedily bring them to. But we disdain anything of the sort.*

Midland Counties Railway.—Caveto *may be right. At all events it behoves the shareholders to look well to the motions of the leaders in the late stir. The "Grand" Company in which the Messrs. Heyworth have so large a stake, has certainly a direct interest in crushing the* Eastern *lines. Whether Mr. J. H. is a cat's paw, or "a snake in the moss," remains to be seen. We shall not lose sight of the matter, and shall be glad to hear from* Caveto *again. With reference to the same line, another correspondent* (Bets) *writes to know whether Mr. Jessop who thinks a common workman, with a black face, and a dirty apron, at* 30*s. a week, all that is required to superintend an establishment of engines, be the same Mr. Jessop who has a "gentleman" at* 500*l. or* 600*l. a year to superintend* his *engines, and which gentleman (Mr. Glynn) is actually one of the new Committee of Inquiry!*

Quidnunc *is right in his guess, but we doubt the propriety of saying anything on the matter at present.*

P. P. P.—*Many thanks. Write again.*

South-Eastern Railway.—Amicus *is referred to yesterday's meeting*

An Editorial notice of the official correspondence, which we published last week, in reference to the Greenwich Rail way, is unavoidably postponed.

Our correspondents, generally, must excuse us. A large number of letters and other articles are thrust out by the great length of yesterday's meeting. They shall be given as soon as possible.

THE RAILWAY JOURNALS.

The Stamp Returns for April, May, and June, just published by Order of the House of Commons, enable us to complete the Returns for the year ending the 30th of June last. The results, as affecting the railway journals, are as follows:—

RAILWAY TIMES	**146,374**
Railway Magazine	68,500
Majority in favour of the RAILWAY TIMES	**77,874**

from which are to be deducted 10,874 Supplement stamps used for double numbers, still leaving the ordinary circulation of the *Railway Times* just about double that of its contemporary.—*September* 17, 1842.

THE RAILWAY TIMES.

SATURDAY, DECEMBER 3, 1842.

OUR attention has been drawn by a correspondent, whose letter will be found in another part of our present number, to the Eastern Counties' Railway as an investment; and if his suppositions were correct, and his reasonings sound, there certainly exists little to induce persons to purchase shares in that undertaking, even at the present low prices. But his notions are very erroneous, of which, we think, he will himself be satisfied, when he has perused our observations.

The sum taken per week on 17½ miles only of the line can be no just criterion of the sum to be obtained on the opening of the line throughout its whole length, as a scheme fully developed. Carried on to Brentwood only as at present, the traffic, when compared with other short openings of long lines, is rather extraordinary in its magnitude, and may almost b called unrivalled in its production of a very fair profit. But our correspondent is quite in error in thinking this the most valuable part of the line. If so, it would surely hold good that

Digitized by Google

other short openings of the London and Birmingham, South-Western, and other lines, would prove that the receipts on the short distances were greater than the amount taken weekly on the same distances now that the whole of the lines are finished. Facts contradict this theory. It must be quite obvious that at short distances from London there is a mass of different conveyances "running cheap," and adapting themselves to the habits, and passing to and from the doors, of country residents, and that a railway has the greatest possible difficulty to live through such competition. The railway can take a small portion only of this, which may be called metropolitan traffic. The rest is snatched away by omnibuses, short stages, flys, and other vehicles. But whenever a railway stretches into the distant country past the metropolitan vortex, every source of interior traffic bends to it irresistibly, and no coach with horse traction can exist against the superior accommodation, the rapidity, the safety, and the cheapness which railway transit affords. When the London and Birmingham Railway opened to Boxmoor, and even to Tring, the returns produced a weekly loss. Had our correspondent adopted that weekly return on a short opening, and multiplied the weekly loss to Boxmoor by the whole extent of the railway, what a ruinously bad concern would the London and Birmingham have been o the apprehension of men at that time, who rusted to such reasoning as our correspondent has used! So also in regard to the South-Western Railway, and other lines—their short openings were miserable failures; but the entire schemes are reasonably remunerative.

Another item upon which our correspondent as erroneously lays stress, is the great importance of lines leading into populous manufacturing districts; and finding a total want of these in the counties of the East of England, he concludes that the railway traffic must be small. How does it happen that the North Midland remunerates the shareholders so badly, if populous manufacturing districts are so redolent of traffic? The truth is, that this class of population, although most numerous, travel very little; and that they are not nearly so valuable to a railway as are the inabibitants of the 50 towns of Essex, Suffolk, and Norfolk, to the Eastern Counties' line, each of which may almost be said to support a coach of its own, on the average, daily to London. Ten manufacturers employ, perhaps, 1,000 men each, making a population of 10,000 persons; but each manufacturer has perhaps one traveller, who alone uses the line "passing through this populous manufacturing district," whereas one single country town, with 1,000 inhabitants, if within 70 to 100 miles of London, sends its trade thither, and draws its trade thence, probably; and more persons out of that number travel to and from the metropolis in one year, than will travel from amongst the whole 10,000 persons before alluded to. To what conclusion does all this lead? To this—that the only safe criterion for judging of traffic to be expected, is the traffic existing; and it is quite familiar to those who have entered upon the careful estimates of traffic made by the Eastern Counties' Directors from time to time, that the existing traffic is very extensive. Many of the "long coaches" have not yet come to the Eastern Counties' line, and when the railway opens to Colchester we have no doubt that coaches from different places will be doubled, and towns will run and support coaches which have hitherto had no such convenience. The computation of those well and soundly acquainted with the Eastern Counties' traffic is, that at a period greatly shorter than seven years the revenue will amount to 4,000*l.* per week, and any such revenue would, at the present prices of the shares, yield a large dividend.

It is hardly necessary to enter upon details, or to examine our correspondent's calculations, when we conceive him to be so totally in error in the foundation he has assumed; but it will be observed, that although many of the items of annual expense cannot materially increase, and some not at all, by the extension of the line, yet he has computed that every expense will be increased threefold. He has also omitted any credit for goods' traffic, and has estimated a loss to the Eastern Counties' line by the late arrangements with the Northern and Eastern Railway Company, whereas those arrangements were entered into upon an apprehension on both sides of increased revenue to both Companies; and it is a fact that the Northern and Eastern Railway are now paying equal to 15,000*l.* per annum to the Eastern Counties' Railway Company, and the computation of our correspondent states 8,000*l.* per annum only. Upon this subject enough has been said. We turn to another, which also has some relation to the Eastern Counties' line.

Amongst the novelties of the day is the custom arising of certain stockbrokers wishing to bring themselves from obscurity into notice by the distinguished employment of throwing dirt! This office requires the least possible modicum of talent, and principle is an incumbrance, and hangs like a dead weight upon the small mental energy that suffices to allow the slanderous pen to spread a little slime upon clean paper. Some provincial brokers having been engaged in throwing out calumnious assertions against Mr. LOCKE, of being a participator in the gains of the contractor having the maintenance of way to provide on the South-Western line, that gentleman has struck them a heavy blow; and instead of at once acknowledging their error, and admitting that their information was erroneous, or their imagination malicious, they retreat from their assertions in language which would try to make Mr. LOCKE believe that they have done him great service by diseminating the slander! It is a pity that gentlemen of such reputed respectability as Messrs. R. B. WATSON and Co. should attempt to force business by feeding the natural appetite of people to read something "spicy," and which tends to pull down those who stand high, and to encourage envy, hatred, malice, and all uncharitableness.

Every one to his trade. If Engineers misbehave, or are in their public characters or transactions dishonest, or if there be faults in shareholders, or in Directors of Railway Companies, *our* province it is, as public journalists, to comment upon these errors, and expose them to the world. We spare neither friend nor foe where moral rectitude points out the clear course to adopt, and we strongly recommend Messrs. WATSON and Co. to confine themselves in future to simple statements of facts, not involving personalities, and their opinions will be infinitely more valued by sober-minded people desirous of investments, and of confiding in the judgment of the broker whose circular they read.

If obliged to address ourselves in terms so strong to Messrs. WATSON and Co., what must we say of a person named ALLSOP, who issues his petty thunderbolts against Railway Directors and Engineers from a milliners' shop in Regent-street? The utmost attention we can afford him is to point out the worthlessness of his opinion, and to warn persons who might be influenced by his data, that they are good for nothing; that they are held in disrepute in London, the focus of his denunciations; and that they have no weight until they reach some country town, where the ALLSOP oracle is deemed ALLWISE.

In a circular issued by this individual on the 1st of November, he speaks of the Eastern Counties' Railway in terms that indicate malice, arising, probably, from disappointed expectations or some personal pique; and the conclusion is inevitable, because his statements are so widely apart from facts. According to Mr. ALLSOP, maintenance of way, on this line is to be heavier than on any other line, whereas there is every probability, from the substantial character of the works, and looking at the existing contract for maintenance of way, as stated in the half-yearly accounts of the Company, that it will be less.

Many works on the extension line are, according to this railway genius, to cost 10,000*l.* each in two years. Name them, Mr. ALLSOP. You are bound in justice to do so, or for ever to hold your peace. And you must do more—you must point out the distinct scientific grounds which will prove that such an expenditure must become necessary. Slip-shod assertions will not have any weight. With Mr. ALLSOP, also, the "want of manufactures on the line" is to occasion deficient traffic. Can there be a greater error in opinion, as we have already established? Again, he calls the par issue 12*l.* per share—and one would give him credit, as a sharebroker, that he could calculate correctly, if he could do nothing else. He will find, however, upon re-examination of his figures, that the par issue is what we make it by our calculations, viz., about 14*l.* 13*s.* per share. A heavy cutting, recently made at Brentwood. because *its slopes are not yet dressed*, is described as having its sides in a most dilapidated condition. Distinctions drawn from such erroneous data, and by a person betraying so much general ignorance are worthless, and not deserving of examination; and having said this, we dismiss Mr. ALLSOP, with the ancient and wholesome admonition, *Ne sutor ultra crepidam.*

WE last week briefly adverted to the importance of publishing the accounts of Railway Companies according to a uniform system. It is surprising that a measure of such easy execution and obvious utility should have been so long delayed. It has, indeed, been a matter to us, that little jealousies and the love of gratification has had some share in retarding the adoption of so desirable an arrangement, but now that shareholders are taking so great an interest in their own affairs, surely motives so unworthy cannot much longer be permitted to have influence!

The advantages which would result from the publication of accounts drawn up in accordance with some generally recognised standard are numerous. The comparative merits and defects of the many dissimilar systems of railway management now in operation throughout the kingdom would be brought out at once relief. The railway proprietor would then be in a condition to judge for himself of the merits of projected innovations, instead of being, as at present, at the mercy of agitators who may or may not be competent to lead. Light would be thrown on many points of railway economy which are still involved in obscurity. The relative results, as regards economy, of

Digitized by Google

ngines with four wheels and engines with six heels would be known; as would also the earing of the wide and narrow gauges on e same important question. Data for fram- g contracts for maintaining the permanent ay, on equitable terms, would be obtained. it be objected that the causes which affect is branch of railway expenditure are never milar on any two lines, and that therefore no ich advantage could flow from the mere com- rison of accounts, it may be answered, that oner or later the period must arrive when e works on every railway will be consoli- ted; and then, that the tear and wear of the y will be in proportion to the extent of e traffic, or in other words, to the dete- rating action of the engines and trains. e period of complete consolidation might ascertained by the cessation of slips and bsidence. If after the perfect stability of the rks had been placed beyond doubt, it were nd that the outlay for maintaining the per- nent way on two lines of equal length but equal traffic was the same, any proprietor uld be justified in saying it ought not to be and no doubt the result would be an in- tigation leading to a more just arrange- nt.

It would be easy to multiply these illustra- ns of the value of the uniformity we have often and so strenuously recommended, but have said enough to convince the most ptical; and shall proceed to consider the ans by which the object could be best at- ed. We have already suggested that the ard of Trade should take the matter in d; but if this be declined, the leading mpanies might appoint a Committee to in- tigate the systems of accounts now in use, l to report which system is the best, or what bination or modification of the existing tems would be the best. The Report of Committee should then be published, and posed for adoption at the ensuing propriet- y meetings. That such a proposition, ema- ing from such a source, would be favour- y received, there can be little question, and desired uniformity would be thus ob- ed.

There is one difficulty besetting the subject which we have not yet alluded. Perfect tems of accounts may be framed, and pro- tors may pass resolutions declaring that y shall be adopted, but it will still be in the er of any Board of Management so disposed make the uniformity apparent, not real. It be impossible to publish the accounts in h detail as would lead to the discovery of want of good faith in their preparation; , in fact, we know of only one mode in ch this risk could be completely guarded nst. A correspondent once suggested to hat the establishment of a central Audit ce for all railways, under proper control, ld be valuable for many purposes, but there one to which it might be so effectually ap- d as to the prevention of the abuse the pos- ity of which we are anticipating. If all the unts of the various Railway Companies pass through such an office, the proprietors would 3 an assurance that the accounts presented em were in reality what they professed to and any measures based upon a comparison e Reports of the respective Companies ht be taken with the greater confidence. organisation of so extensive an office as we ow recommending would be arduous, but o means impossible, as has been proved on mparatively small scale by the success of the Railway Clearing-House, to which we lately drew the attention of our readers.

It would be very necessary in such a system of accounts as we are now contemplating, that the grand divisions should be broadly marked, that the items of expenditure belonging to each division should be clearly defined, and, in particular, that every doubt should be removed as to what was justly chargeable to the capital account, and what to the income or revenue account. For statistical purposes, the following information should be appended to the half-yearly Reports. The number of passengers of each class conveyed; the gross receipts for each class, and the mileage; the average distance travelled, and the average fare paid by passengers; the average cost per passenger per mile of locomotive power; the number of tons of goods of each description carried; the gross receipts, the mileage, the average distance; charge and cost of locomotive power per ton; the number of passengers' and goods' trains, and their average weights; &c. By this means an invaluable amount of statistical information, in a form accessible to all, would be accumulated in time.

We are obliged to the correspondents who responded to our call of last week, but they will perceive that they have been anticipated by ourselves.

THE Directors of the North Midland Railway have, as we anticipated, virtually resigned office in a body, although circumstances render it expedient that one half of the number should nominally retain their seats until the general meeting of the proprietors in February next.* That *any* one of them should, under *any* circumstances, remain a Director for one moment after what transpired at the recent meeting, affords but another display of the spiritless adhesion to place which has marked the whole of their official career. They stand self-convicted of inefficiency, and notwithstanding that we deeply disapprove, on the ground of precedent, and on other grounds, of the wholesale substitution of the Committee of Investigation, it is to be hoped that the members of the old Direction who still remain, will observe the decency of non-interference with the acts of the Board during the next three months. If personal feeling should (which we can scarcely believe possible) permit them to take part in the proceedings of the new Board, they may perhaps have sufficient recollection of their repeatedly recorded sentiments, and decline to share in the official responsibility of carrying into effect measures which they profess to believe will prove injurious to the property of their constituents, and detrimental to the interests of the public.

With a feeling between contempt and pity —contempt for their imbecility, pity for the plight to which they have been reduced—we should, without another word, dismiss to the obscurity of private life the late occupants of office, did not their publication of a "Second Address" to the shareholders provoke a few further remarks. This document we reprint in another page, and probably a mere reference to it is all the notice which its importance demands.

Its querulous, quibbling character, will at once strike every reader. Instead of boldly and honestly adhering to the statements and opinions which they originally put forth, and of the truth of which we take it for granted they had previously assured themselves, this precious Board of Directors *nibble* at the conduct and suggestions of the Committee, leaving untouched the grand, the essential point in dispute, namely, the practicability of carrying out, with due regard to the public safety, the recommendations embodied in the Committee's Report. What matters it whether the Secretary or the Superintendent has, or has had, a salary of so many hundred pounds a year more or less than the Committee deem necessary, or whether Messrs. BRANCKER and ALSTON, formerly Auditors, more recently members of the Committee of Investigation, and now holding office as Directors, are or are not consistent in their testimony as to the efficiency and proper numerical ratio of the working staff—what matter these and other trivialities dwelt upon with so much emphasis in this "Second Address of the Directors to the shareholders?" If these Directors believe what they profess to believe, namely, that the reductions now to be carried out are inconsistent with the well-being of the Company, they should have thrown to the winds all mistakes and misunderstandings upon points of minor importance—they should have appealed to the reason and good sense of their constituents; and had they failed to influence *them* which in the novelty and high hopes of recent changes we suppose would have been the case—they would at least (coupling their appeal with an immediate retirement from the Board) have testified to their own sincerity, and averted the odium which may result from the ill success, or the disastrous issue, of the alterations now to be effected.

Some injudicious friends of the late Direction —if not certain members of the Direction itself —are advocating the interference of the Board of Trade to prevent the carrying out of the Committee's measures. How ruinously impolitic, how madly suicidal, is such a course, will be evident on the slightest consideration. We ourselves conscientiously believe that the new Board are disposed to push retrenchment too far—to be "penny wise and pound foolish" in the conduct of the Company's affairs—but deeply should we regret to find that a corrective were sought for in external meddling, instead of in the returning sense of the shareholders, and the more mature consideration (when the heat of their disputes shall have subsided) of the Committee-Directors themselves. He is no friend to Railway Companies who would encourage, much less counsel, the interference of the Board of Trade in such a case as this. It would be but the insertion of the thin end of the wedge.

A CORRESPONDENT informs us that a meeting of the proprietors of the London and Brighton Railway resident in York (where about 500 shares are held) will take place on Monday next, for the purpose of adopting measures for the appointment of a Committee of Investigation. It is to be hoped that this example will be followed in other quarters.

Another correspondent, who represents himself as holding upwards of 300 shares, offers through us his co-operation in this matter. Some two or three of the *London* proprietors should stir in the business. What are Mr.

* The names of the parties who formed the Committee of Inquiry, and who are now Directors, are—P. W. Brancker, Esq., J. T. Alston, Esq., George Hudson, Esq., George Wilson, Esq, John Waddingham, Esq., and William Murgatroyd, Esq. The names of those who retire, are — John Walbanke Childers, Esq., M. P., — Pickersgill, Esq. (London), Hatton Stansfield, Esq. (Leeds), Thomas B. Pease, Esq. (Leeds), F. Carbutt, Esq. (Leeds), and — Hall, Esq. (Burton-upon-Trent. The six old Directors who continue in office, are—W. L. Newton, Esq. (Derby), Chairman; Anthony Titley, Esq. (Leeds), Deputy-Chairman; — Laycock, Esq. (Sheffield), — Lee, Esq. (Barnsley), — Cox, Esq. (Derby), and Joseph Holdsworth, Esq. (Wakefield).

PARSONS and the other members of the late Committee about?

Does not the following passage from the Report of the South-Eastern Railway Company, approved of at the meeting yesterday, suggest the necessity of a full and impartial inquiry into the whole of the Brighton Company's affairs? If the charge involved in the Report be well founded as regards a few miles of the Brighton Railway, what must be the case with the entire line? "The Directors [of the South-Eastern Company] *exceedingly regret the delay which has taken place in the settlement of these accounts*—[the payment of the claim for construction.] *This delay has been occasioned by the imperfect manner in which they have been rendered, and* THE NON-PRODUCTION OF THE NECESSARY VOUCHERS! THE EXAMINATION, SO FAR AS IT HAS GONE, HAS ALREADY DISCLOSED QUESTIONS AFFECTING LARGE PORTIONS OF THE MONEY CLAIMED." It remains for the Brighton proprietors to probe this matter to the bottom.

While on this subject, we may just allude to the letter of a correspondent which appears in another column. He would seem to have some connection with the Executive, if we may judge by his railing at "anonymous" writers—himself being all the while anonymous!—for our readers cannot have forgotten the Engineer's denunciation of "anonymous scoundrels." We shall not waste our space by entering into the comparison suggested by our correspondent, between the Birmingham and Brighton lines. When the latter comes near to the former in point of finish and completeness of equipment (to say nothing of the greater difficulties existing in the case of the northern line), it will be time enough to judge of the one by the other, as to cost of construction. What we desire to impress upon our correspondent, and upon our readers generally, is the fact (and we assure him and them that it *is* a fact), that we are in no way prejudiced against the present Directors of the Brighton Railway. It is solely on public grounds, and in the discharge of what we deem to be a duty incumbent upon us, as the acknowledged advocates and organ of railway interests, that we have visited the Brighton Management with some severity of censure. And as to the insinuation of our correspondent, that "*one* unfriendly opponent may fill" our "columns with all sorts of calumnies against the Directors," we have only to say (after denying in *toto* that *any* calumnies, from any quarter, have appeared in the *Railway Times*), that if our correspondent were to see the scores of letters which we receive weekly, and many of which denounce the conduct of the Board in terms much more severe than have ever been used in this department of our paper, even *he* would admit that, so far from endeavouring to *make* occasions of attack, we use very considerable forbearance in keeping back the well-founded strictures of others. When a stray article in defence of the Board comes to hand (and such articles, as may be easily imagined, are indeed few and far between), we invariably make room for it, at whatever inconvenience to ourselves. It is true, that unless the champions of the Directors have some more powerful defence to offer than that volunteered by our present correspondent, they might, without detriment to their *protegés*, remain silent; but *that* is their fault, not ours. Our correspondent makes a fair hit at the apathy of the proprietors in general meeting assembled, but we trust this reproach will speedily be removed. In what he says of the *present* proceedings of the Board, we must not be supposed in any way, or to any extent, to concur. It is true that retrenchment has in some instances been forced upon them by the strictures which have from time to time appeared in our columns, but there is even now vast room for further improvement, not only as regards the remuneration paid to particular individuals, but as respects the necessity of keeping up certain offices at all. We may hereafter enter into particulars, although we should much prefer that several startling facts of which we are in possession with reference to these points were developed through the instrumentality of a Committee of Inquiry. To this it *must* come at last; if the proprietors are wise, it will come at once.

THE proceedings of the South-Eastern Railway Company at their meeting yesterday will be found to possess more than ordinary interest. We can for the present only refer to the official documents and ample Report, which we publish in another part of our journal; but doubtless we shall have frequent occasion of discussing the question which formed the principal business of the day.

WE beg to call the special attention of Railway Executives to a case of trespass on the London and Birmingham Railway fully reported in another column—a case as novel in its appearance before a judicial tribunal, as its results must prove important to railway interests at large. In the present position of affairs, we abstain of course from remark, contenting ourselves with expressing our hope and belief that the Birmingham Company will not allow the matter to rest without bringing it before a jury.

WE find the following in the *Halifax Guardian* of last week:—

"On Wednesday last, Richard Cooke and John Harrison, two of the proprietors of the *Tariff* omnibus, which runs from Halifax to Sowerby Bridge, were each fined in the sum of 5s., with 12s. 6d. costs, by the Todmorden magistrates, for remaining with their omnibus on the Company's ground at the Sowerby Bridge station after being ordered to leave. The case arose out of the following circumstances:—A short time ago the *Tariff* commenced running to Sowerby Bridge, stopping at Marsh's Hotel, near the station. On Saturday last an opposition omnibus was started, and which was favoured with the privilege of running up to the station, there to wait for passengers. The *Tariff* ventured to take the same liberty, when the proprietors were told that they would not be allowed the privilege, unless they paid for it. To this the proprietors consented, and they accordingly continued to drive up to the station until Wednesday last, when they were informed that they would not be allowed to stand upon the station at all, and were ordered to take the *Tariff* off the ground. Not complying with this order, Messrs. Cooke and Harrison were immediately taken into custody by the railway police, and sent to Tormorden by a train which was just coming up. We must say, in common justice, that it was rather hard upon the proprietors to have been taken such a distance to have the case determined, when equal justice, at less cost to the parties concerned, might have been obtained at Halifax, where indeed the parties ought to have been brought."

We sincerely trust there is some mistake in these details. We cannot believe that a respectable Railway Company would descend to the petty tyranny which this case would seem to disclose.

IT appears that the inhabitants of Newcastle-on-Tyne have addressed a memorial to the Postmaster-General, setting forth the inconveniences attending the present arrangement of the mails to and from Newcastle. The memorialists state that from the opening of the Newcastle and Carlisle Railway, until the beginning of June of the present year, they had a bag despatched from Carlisle, on the arrival of the London mails for Edinburgh and Glasgow, which arrived at Newcastle at half-past 9 in the morning. This was found to be a great convenience to the public, inasmuch as they not only were in communication with London, but with the whole of the west of England, and with Ireland generally, and frequently received by that conveyance Dutch and Hamburgh mails, thus affording parties an opportunity of answering them by that day's post. For the last five months, however, (the memorialists state) they have been deprived of this convenience; and while the Post-office authorities and the Railway Company have their disputes unsettled, the public is suffering the loss and disadvantage consequent upon so important an alteration. For instance, the town of Newcastle is nearer London than the city of Edinburgh by 100 miles; yet, owing to a superior arrangement with the latter place the London papers and letters for the morning mail arrive there as soon as they do at Newcastle, since the morning communication with Carlisle was destroyed. A trifling alteration, and so far as it goes a beneficial one, has been made in expediting the evening mail half-an-hour; but this by no means meets the case, and the memorialists still have to complain of great inconvenience and delay in not being able to get their letters till near 3 o'clock, when the offices are closed, and when business is in a great measure suspended. It would be exceedingly difficult (they say) to find another town in the United Kingdom of equal commercial importance (for there were no less than 17,000 sail of ships cleared from the port last year), and at the same time contributing an equal proportion of the revenue, which is so badly furnished with mail conveyance as Newcastle, with respect to delivery of London letters and papers by the day, and that when it is so far advanced as to render them, for that day at least, of very little value. Besides, if facility of communication be an assistance to more general prosperity, the memorialists are unfavourably, if not unjustly, placed with towns of far less consequence, and thus have difficulties to contend with which, we presume, might be very easily obviated. There are two mail coaches which run in company from Lancaster to Carlisle, and though for the short distance of 60 miles they have an excellent railway, connecting the two cities with Newcastle, the inhabitants of the latter town are excluded from all those benefits which appear to be freely awarded to other places.

Such is the substance of the Newcastle memorial. Of course, the "subject is under consideration" of the Post-office, but we presume not to conjecture when the parties will make up their minds, upon a question respecting which all the rest of the public has long since come to a decided opinion. The following letter, although scarcely connected with the ways, contains a suggestion which appears to be worthy the attention of the Post-office authorities:—

To the Editor of the Railway Times.

SIR,—While Lord Lowther is endeavouring, pretending to effect retrenchment in the Post-office by paring down salaries and reducing the pay

Digitized by Google

accommodation, he neglects one easy simple method which I am informed has been suggested, and which one would imagine need only be suggested to be at once adopted, as it would diminish expense and prevent peculation, while it would greatly facilitate dispatch. It is simply to compel *all who pay in money to pay double*, or at least to pay 2d. with each letter instead of 1d.

The crowds who now infest the windows of the post-office in every town would soon disappear, and one-half the clerks would transact the business in quarter of the time now wanted. A fruitful source of petty pilfering both in the office and out of it would be dried up. Servant boys would no longer, by cribbing their masters' pence to buy gingerbread, lose their habits of honesty. A notice should be given in all large towns calling on every householder to have a slit made in his door to receive letters. It is wonderful how few there are in London. Fine folks think it is vulgar.

A good system of country delivery is greatly needed. There should be a Post-office in every village, and the keeper and letter-carrier should be paid out of the highway rates. A poor body now has but little chance of receiving a letter in a remote village. In some parts of England the stage coaches carry the bags free of charge to escape tolls. Why is not this plan extended?

I am, Sir, yours, &c.,

PHILO-HILL.

—o—

A PRIVATE opening of a further portion of the South-Eastern Railway to Ashford took place on Monday last. The Directors, accompanied by General Pasley, and many influential gentlemen connected with railways, made a trip on that day, and have reason to know that the Government Inspector expressed himself highly satisfied with the condition of the road. The new portion of the line was opened to the public on Thursday. We understand that the entertainment on Monday was furnished at the private cost of the Directors.

—o—

A CORRESPONDENT says, "the Brighton Directors will not give you any advertisements, I see; this is quite hing their own throats, for when I was in Paris, I regularly received your journal, but could find no account of the Brighton line and steamers, and so I came home by Boulogne."

—o—

It will be seen from an advertisemnt in another column that the award in the case of Ross *v.* the Duke of Cornwall Harbour and Railway Company, has at last been given, and that the matter will come before a meeting of the proprietors in the following week.

—o—

A CORRESPONDENT of the *Atlas*, signing himself "S. Miles (late Dadwell and Miles), East India Army Agents, 69, Cornhill," thus refers to a project which we have already noticed under the head of "Ærial Steam-Carriage:"—

"I have taken much pains to ascertain the fact, and have now no hesitation in corroborating the paragraph you have submitted for the public information.

"It is perfectly true that such an invention is in existence, totally distinct from the principle of balloons; that a working model has been shown me, which, by its action, appears to establish the perfect practicability of travelling through the air, being so complete and simple in its construction, and the combination of its parts so extraordinary, that little doubt remains that the important results of the invention will be fully achieved.

"I am given to understand that the first carriage will be ready for operation early in the ensuing year; and therefore behoves individuals to await the development of this wonderful invention, when it may become an important subject for consideration as to the changes that will result to society, whether under the control of the Government, or in the hands of a public Company."

We can only say, that when we see this wonderful "invention" developed and put to a practical test, we shall put some faith in it—but not till then.

—o—

AN attempt was made on Tuesday to upset a train on the Chester and Birkenhead Railway. Fortunately none of the passengers were injured. A man is in custody on the charge.

LONDON AND DOVER (SOUTH-EASTERN) RAILWAY.

Traffic Receipts for the Week ending November 29, 1842—the Thirteenth Week of the Low Fares.

Date.	First-Class.	Second-Class.	Third-Class.	Total.	Amount.

Total	193	248	524	965
Add total to the 22nd November, from last week's *Railway Times*.....				15,722
Total loss to the Greenwich Company in *thirteen* weeks by their prohibitive toll.....				16,687

MIDLAND COUNTIES' RAILWAY.

To the Editor of the Railway Times.

SIR,—I have read with considerable interest your remarks in the leading article of the last week's *Railway Times*, relative to the late meeting of the proprietors of the Midland Counties' Railway, at which I was present as a shareholder. I agree generally with your opinion as to the way in which the meeting was conducted, but I think you lean a little too favourably towards the party connected with the Directors, and not sufficiently so towards their opponents. That the meeting was occasionally a little "uproarious," and that a few interruptions occurred, I willingly admit; but certainly not to such an extent (except in one instance) as to prevent any one of either party from saying what he pleased, or of taking his own time while speaking. The instance I allude to was when Mr. Mather (who always seems to me to be specially retained as the Directors' champion) rose a second and third time to oppose the motion. He had been patiently borne with (not listened to certainly, inasmuch as he was perfectly inaudible to nineteen-twentieths of those present) during his first speech; and a good deal of unjustifiable interruption certainly occurred during his second and third attempts, conduct which I was concerned to see in so numerous and respectable an assemblage. But the measure was evidently a popular one with nearly the entire meeting; and although the conduct of the Directors on that occasion was, generally speaking, irreproachable, I am inclined to think, from observations made by older proprietors than myself, that it has by no means been always so, but that they themselves have on more than one occasion forgotten "that the *suaviter in modo* may be joined with the *fortiter in re*." No one can possibly admire more than I do myself the behaviour on all occasions of the Chairman. He is evidently one of those men whom to see is to admire, and to know is to respect; but we must bear in mind that he is the chief Director of a most important trust, and to enable him to perform his duties justly to those who placed him there, something more than a preponderating infusion of the milk of human kindness is requisite. He is evidently one who, knowing no wrong, suspects none in others, and is hence easily led to tacitly give his sanction to acts, which, if he had more decision and "John Bullism" in his composition, he would never have permitted for one moment; in proof of what I assert it is only necessary to name the contracts for coke and timber, which have more than once given rise to some acrimonious discussion at former meetings.

I do hope and trust that your fears that the inquiry "will degenerate into a scramble for office" will prove unfounded. I really cannot bring myself to think that Mr. Heyworth, after so feelingly alluding to those whose little "all" is invested in the undertaking, has nothing more in view than, by thrusting the present Management out, to make room for himself and friends; he cannot surely be so lost to honour and consistency as for one moment to entertain the thought. I know but one of the Committee of Investigation, but if the others are in all respects like him, I should have no hesitation whatever in "implicitly committing Directoral power to them." He stands high in his profession, is an excellent man of business, and, which is of more importance than either, he is thoroughly honest; he is moreover deeply interested as an investor in the success of the railway.

Is it possible that there should be any truth in the report that the Directors of the London and Birmingham Company are in treaty with the Birmingham and Derby Directors, respecting the latter leasing their line to the former? Surely the high honour which has ever and so long distinguished the Management of the London and Birmingham Railway, will never be tarnished by so partial an arrangement. To them, both lines are mere feeders, and ought to be treated with the most perfect equality; but if they were to become lessees of either, they must inevitably become opponents to the other—with what result need scarcely be asked, especially if the Birmingham and Derby were the line leased. But there is no necessity for leasing either line, or rather would not be, if the respective Managements understood their interests better than they appear to do. Why not the Midland Counties' pay the Birmingham and Derby Company a consideration for the *whole* of the southern traffic, the latter confining itself to what legitimately belongs to it, namely, the northern and western trade? It would be very much better than the present competition for both parties, and certainly better than a lease of one of the lines to the London and Birmingham Company. The latter Company can well afford to be just, and from the position in which they stand with reference to the two lines in question, they are in honour bound to be so; let them therefore keep aloof from treating with either Company, but especially so with the Birmingham and Derby, and if either of the lines must be leased at all, let the transaction be confined exclusively to the two rival Companies.

AN ENGINEER, AND RAILWAY MANAGER.

November 30, 1842.

MARYPORT AND CARLISLE RAILWAY.—This work is now rapidly progressing. The rails have already been laid from Carlisle to Cardew, about six miles; and Mr. Hutchinson's locomotive engine *Dalston* is daily running between Carlisle and Dalston, with materials for the contractor. It is not now intended to open the line to Dalston until it be finished to Wigton, which, according to the contract of Messrs. Blackburn and M'Kie, will be completed by the end of February next. The iron railing is contracted for to complete the line from Carlisle to Maryport, and the traffic of coal at the Maryport end already exceeds the anticipated revenue three-fold, and will in a short time amount to 200*l.* per week.—*Carlisle Patriot.*

INTENDED APPLICATIONS FOR RAILWAY ACTS.

THE following are the principal notices of intended applications during next session, which have appeared during the past month in the official *Gazette*. It will be remembered that what are called "November notices" are now all that are required:—

To make a railway from Peterborough to Northampton, as frequently referred to in our columns. The notice is signed "Parker and Hayes, Solicitors, Lincoln's-Inn-fields."

To amend the Act authorising the construction of the Warwick and Leamington Railway.

To extend the Northern and Eastern Railway to Cambridge. The notice is signed by "Crowder and Maynard," the Solicitors of the Northern and Eastern Company.

To make a railway "commencing by a junction with the Northern and Eastern Railway, in the parish of West Ham, in the county of Essex, and terminating in the parish of West Ham, at or near the river Thames, at or near the place where the river Lea flows into the said river Thames, and also a branch railway, commencing from and out of the said intended railway, and terminating at the river Lea, in a neck of land south and south-west of the road from Barking to London, and which branch railway will be situate wholly in the said parish of West Ham; and also to construct a basin or basins' wharfs, warehouses, and other works at or near the said terminus at the river Lea, in the said parish of West Ham." This notice is signed by the Solicitors of the London and Blackwall Railway Company.

To make a branch line from the Eastern Counties' Railway, from Kelvedon to Bury. Signed by the Solicitors of the Eastern Counties' Railway Company.

To make a branch line, commencing from the Cambridge terminus of the proposed railway to Cambridge, and terminating at Norwich. The notice is not signed by any solicitor.

In the course of a notice for power "to authorise the better drainage of the marshes and low lands within the several parishes of Postwick, Brundall, Witton, Bradeston, Strumpshaw, Buckenham, Hassingham, Cantley, Limpenhoe, and Reedham, or some of them, in the county of Norfolk," it is stated that "it is intended by the said Act to alter, amend, and enlarge some of the powers and provisions of an Act passed in the last session of Parliament, entitled, 'An Act for making a railway from Great Yarmouth to Norwich, in the county of Norfolk;' and to enable the Company thereby incorporated to erect engines, and to do, or participate in, or contribute towards the doing of all such other acts as may be necessary for carrying into effect the drainage aforesaid, and to raise a further sum of money for such purpose."

To amend the Acts of the Thames Haven Railway Company, and to effect a junction with the Blackwall Railway at Stepney. Also to make a branch to Tilbury Fort. Signed "*Sir* George Stephen, King's-Arms Yard, London, Solicitor to the Bill."

To make a branch line to Harwich, from Colchester. Signed "Edward Chapman, Agent for the Bill."

To make a branch railway from Harwich to Colchester. Not signed by any solicitor.

To "alter, amend, and enlarge" the Acts of the London and Croydon Railway Company.

To extend the South-Eastern Railway into the town of Dover, "and also to erect a new station, or to enlarge the station at present occupied by them (the South-Eastern Company) jointly with the London and Croydon Company, at or near New Cross." Also, for various local purposes.

To make a branch line from the South-Eastern Railway at Ashford to Canterbury, Ramsgate, and Margate.

To make a branch from the South-Eastern Railway to Maidstone.

To make a railway from Maidstone to Rochester and Gravesend. No signature.

To make a railway "from the line of the London and Croydon Railway, at or near the point where the railway crosses the Grand Surrey Canal, in the parish of St. Paul, Deptford, in the county of Surrey, to or near to the south side of Swan-street, in the parishes of St. Mary Magdalen, Bermondsey, and St. George the Martyr, Southwark, or one of them, in the same county. * * And it is intended by the said Act or Acts to enable the South-Eastern Railway Company and the London and Croydon Railway Company, or either of them, to construct the said intended railway and depot or station, or depots or stations, and works, and to levy tolls upon, and to enter into agreements with, any other Railway Company or Companies, in respect of the use of the same." The notice is not signed.

To make a railway from Croydon to Vauxhall, "to commence by a junction with the London and Brighton Railway, in or near to a certain bridge over the London and Brighton Railway, at the cross roads, at Croydon Common, in the parish of Croydon, and to terminate at a place between the London and Southampton Railway, and the Wandsworth-road, near the Nine Elms-road, in the parish of Battersea or Lambeth, or both of them." The notice is signed by the London Solicitors of the Brighton Railway Company.

To "alter, amend, and enlarge the powers and provisions of an Act passed in the first year of the reign of her present Majesty, intituled 'An Act for making a railway from the London and Croydon Railway to Brighton, with branches to Shoreham, Newhaven, and Lewes;' and in which Bill, or in some other Bill to be introduced into Parliament in the next session, will be contained powers to make and maintain one or more additional station or stations near to or adjoining, or communicating with, the present station of the London and Greenwich Railway, the London and Croydon Railway, the South-Eastern Railway, and the London and Brighton Railway, near London Bridge, or some or one of them, together with warehouses, wharfs, landing-places, arches, tunnels, bridges, and all other suitable and proper erections, works, communications, approaches, and conveniences attached thereto or connected therewith; which said station or stations, and other works, are intended to be made in the several parishes of St. John, Horselydown, St. Olave, Southwark, and St. Thomas, Southwark, or some or one of them, all in the county of Surrey." The notice is signed by the Solicitors of the Brighton Railway Company.

To make a railway "commencing at or near New Tavern Fort, in the parish of Milton next Gravesend, in the county of Kent, and terminating at or near the banks of the river Medway, in the parish of Frindsbury, in the said county of Kent." This is in lieu of the Medway Canal. The notice is signed by the London Solicitors of the Brighton Railway Company.

To make a railway "principally by means of a tunnel" from the terminus of the Manchester and Birmingham Railway to the junction of the Leeds and Liverpool Railways.

To make a junction line from the Sheffield and Manchester Railway at Peniston, to the North Midland at Carlton.

To make a branch from the Sheffield and Manchester Railway at Ashton to Stalybridge.

To make a branch from the Birmingham and Gloucester Railway to Worcester, as frequently adverted to in the *Railway Times*.

To make a branch line from the Great Western Railway at Didcot to Oxford. The notice is signed "Swain, Stevens, and Co.," Whitehall, and "P. Walsh and Son," Oxford.

To amend the Acts of the Bristol and Gloucester Railway Company.

To amend the Acts of the Forest of Dean Railway Company.

To amend the Acts of the Chester and Birkenhead Railway Company.

To make two branches from the Chester and Birkenhead and Chester and Crewe Railways signed "Timothy Tyrrell."

To amend the Acts of the Cromford and High Peak Railway Company, and to authorise an extension to the North Midland Railway.

To authorise certain deviations in the Great North of England Railway.

To amend the Act authorising the construction of the Great North of England and Clarence and Hartlepool Railway.

To amend the Acts of the Clarence Railway Company.

To extend the powers of the Hartlepool Dock and Railway Company, and to authorise further works. (Two notices.)

To extend the Bishop Auckland and Weardale Railway.

To make a branch from the Stockton and Darlington Railway to the Clarence.

To amend the Acts of the Hayle Railway Company, and to extend the line.

To make a railway "commencing at or near a place on the Liskeard and Looe canal, called Lamellion-bridge, in the parish of Liskeard, in the county of Cornwall, and terminating at or near a place called Tokenbury-corner, in the parish of Linkinhorne, in the said county of Cornwall; also power to make and maintain a branch railway, commencing at or

Digitized by Google

near a place called Crow's-nest, in the parish of St. Cleer, and terminating at or near a place called Cheesewring, in the said parish of Linkinhorne, in the said county of Cornwall.

To make a railway from Nantyglo to Newport, in Wales.

For Section No. 1 of the Caledonian Railway from Lancaster to Carlisle, as frequently referred to in this journal. Notice is also given "that it is proposed to enable the London and Birmingham Railway Company, the Grand Junction Railway Company, the Liverpool and Manchester Railway Company, the North Union Railway Company, the Lancaster and Preston Railway Company, and any other Companies or persons who may be so minded (out of their corporate or other funds), and either jointly or severally, to take shares in and subscribe for or towards the making, maintaining, working, and using of such intended new line or lines of railway, or any part thereof, or to purchase, rent, work, and use the same, or any part thereof; or to guarantee to the said Company or Companies to be incorporated by the said intended Act or Acts, or to be in any manner concerned thereunder in the said intended new line or lines of railway, or any part thereof, such interest or profit on their outlay as may be agreed upon; and also to enable all or any of the said Companies hereinbefore mentioned or referred to, to enter into such further and other arrangements and agreements, either jointly or severally, and either mutually or with any other parties, with relation to the said intended new line or lines of railway, or any part thereof, as may be expedient or proper." The notice is signed by Messrs. Clay and Swift, Solicitors of the Grand Junction Company.

To make a railway from Rampside, in Lancashire, across the Dudden Sands, to join the Maryport and Carlisle Railway. Signed by Mr. Algar, the Solicitor of the Preston and Wyre Railway and other solicitors.

In an application for power to construct certain docks "with an entrance from the river Humber," notice is given that "it is proposed to incorporate a Company for the purpose of making, maintaining, working, and using the said dock or docks, and also to enable the Hull and Selby Railway Company, the York and North Midland Railway Company, and the Manchester and Leeds Railway Company, out of their corporate or other funds, and either jointly or severally, to take shares in, and subscribe for or towards the making and maintaining, working and using the said dock or docks, or to purchase or rent, work, and use the same, or any part thereof, when completed, or otherwise to guarantee to the said intended Company, or to any person or Company who shall execute the said works respectively, such interest on the outlay requisite for the formation of such works respectively, or any of them, as may be agreed on between them and the said Companies or persons respectively; or to enable the said Railway Companies, either jointly or severally, to make, maintain, work and use the said dock or docks, basins, piers, wharfs, and other works aforesaid; and, for the purposes aforesaid, it is intended to enable the said Railway Companies, each or any of them, to raise a further sum or sums of money, either by mortgage or by the creation of new shares, or by such other means as may be deemed expedient," and to alter, amend, and extend the Railway Companies' Acts for that purpose.

TRESPASS ON THE LONDON AND BIRMINGHAM RAILWAY.

Edgeware Petty Sessions, Wednesday, November 16, 1842.

MAGISTRATES PRESENT—Major Abbs; Mr. B. Rotch.; Mr. Phillimore; Mr. Burchall.

BEDFORD ON BEHALF OF THE LONDON AND BIRMINGHAM RAILWAY COMPANY *v.* ELMORE.

In this case a summons had been obtained by complainant who is Superintendent of Police on the London and Birmingham Railway, under the provisions of the Company's Acts, William and Victoria, against the defendant, George Elmore, jun., son of the well-known horse dealer of that name. In the summons defendant was charged with having on the 17th September last wilfully and unlawfully damaged certain locks belonging to certain occupation gates on the line of railway, in the parish of Harrow, the property of the Railway Company, whereby he had incurred a penalty of 40s. Defendant pleaded "Not guilty" to the charge.

Robert Corbett, having been sworn, said, that he was foreman of the platelayers on the London and Birmingham Railway, and resided near the Harrow station. On the 17th September last he was on the line of railway, about 10½ miles from London. On the side of the railway, at that spot, there was what was termed an occupation gate, used for the purpose of crossing the railway, and which gate was the property of the Railway Company. The gate opened on to one of the Company's approaches from a field that opened on the line. There was a lock on the gate, called a D lock (now produced), which was required to keep the gate close, to prevent cattle straying on the line. Saw defendant near the gate on that day about 10 minutes before 4. Saw the padlock on the gate at that time; While working a distance of two yards off, saw some hounds cross the line, and expected that some horsemen would come up. Ran towards the gate and saw two gentlemen on horseback coming up, one of whom was the defendant, but did not know who the other was. Witness then heard the sound of a hammer, and supposed that they were knocking the lock off, and in about half a minute defendant came through the gate, and walked across the line, and the other gentleman followed after him with defendant's horse. Saw defendant then hammer at the lock of the second gate across the line. Could not see the hammer, but saw defendant's hand go, and heard the noise of a hammer. Witness then went up to the gate, and found that the lock was broken. Picked up both locks and sent them to Mr. Henry Hill, the proprietor of the gates, who gave them to Henry Coe, the Inspector. Witness afterwards took possession of the locks, and had retained them ever since. Would swear that they were the identical locks, and that they were the property of the Railway Company. Witness ran after the defendant, and said to him, "Do you know that you have broken two locks upon the railway, and left the gates open?" to which defendant replied, "Yes, and I will make them all good again."

Defendant—I did not knock them off. I said I would make them good again, but I did not break them.

Witness—Defendant said, "If you will send a man I will make good the locks, and give the man 1s. for coming."

Some conversation here ensued amongst the magistrates as to whether the case came within the meaning of the Railway, or the Trespass, Act.

Mr. ROTCH—It would be desirable to take it under the Railway Act, because it proves that the Company have the power to prosecute.

The clerk then read the two clauses in the Act under which the summons had been granted. They were as follows:—

Clause 75 provides, that gates opening on the railway shall be shut and fastened after persons have passed through them, in the following terms:—"And be it further enacted, that all persons opening any gates set up across the said railway, or any gate set up on either side of the said railway, and communicating with the adjoining lands, shall, and they are hereby respectively required, as soon as they, the carriages, cattle, or other animals or other things under their care, or which they may accompany, shall have passed through the same, and shut and fasten the said gate; and every person neglecting to do so shall forfeit and pay any sum not exceeding 40s., for every such offence."

Clause 205. "And be it further enacted, that if any person shall wilfully, and to the detriment of the said undertaking, or of the said Company, injure, break, throw down, destroy, steal, or take away any part of the said railway, or other works erected or made by virtue of this Act, or any part of the materials of any such works, so that the use of any passage on the said railway shall be liable to be obstructed, impeded, or otherwise interrupted, every person being convicted of any such offence, shall be subject and liable to pay the penalties to which persons shall be liable in case of simple larceny."—Acts, London and Birmingham Railway Company, 3rd, 5th, and 6th Gulielmi and 1 Vic.

A MAGISTRATE—You can hardly call a padlock a "work."

Mr. BEDFORD—We do not so much rest the case upon that, as upon the fact that there were cattle in the field where the second gate was, which would bring it under the 75th clause.

Major ABBS—That is a strong point. It wa only a week before that there was an ox killed upo the line, and the trains delayed and kept waitin for an hour and a half. In the present case th consequences might have been serious and dan gerous.

Mr. ROTCH—We were against the Railway Company when they came with an improper case, and we decided against them, but this appears to me a most important case, if made out.

A MAGISTRATE—The passage over the railway is liable to be obstructed by cattle.

Mr. ROTCH—That is the point which made the Railway Company move in the matter. They struggled hard during the last session to get a clause into their Act for protection, so that it might be decided whether the farmers should be bound to keep these gates locked, or whether the Company should furnish them. The Board of Trade took part in the matter, and a great discussion ensued.

Major ABBS — Who has the custody of the locks?

Mr. BEDFORD—The Railway Company and the farmers.

Defendant said he had no questions to put. He would only state that he did not break the locks.

Witness cross-examined—Would swear that the locks were perfect 10 minutes before the time. The gate was scarcely ever out of his sight.

John Hodsdon, jun., farmer of Greenhill, in the parish of Harrow, said he was in the field where the gates were on the day in question. Saw defendant while hunting, and remembered the first witness speaking to defendant.

Major ABBS—When was it?

Witness—On Monday, the 17th October.

Defendant—In the summons it is dated the 17th of September.

The CHAIRMAN—That is a valid objection.

Mr. ROTCH (to Mr. Bedford)—Your only alternative now is to withdraw, and have a fresh summons. Defendant is entitled to his acquittal unless he would prefer going on with the case. How old are you? (to defendant).

Defendant—Seventeen.

Mr. ROTCH—I should submit whether under the circumstances, being so young, you should leave the case without some assistance.

The BENCH—He has his brother here.

Mr. ROTCH—Then he had better consult with him.

After a minutes' conversation together, defendant's brother said they would prefer a re-hearing of

Digitized by Google

the case, as it would afford them an opportunity of consulting their solicitor.

The magistrate's clerk was then ordered to draw up a fresh summons, and announced that the case would again be heard before the Bench on that day fortnight.

Wednesday, November 30th.

MAGISTRATES PRESENT—Major Abbs (Chairman); Mr. B. Rotch; Mr. H. H. Burchall; Col. Carvick; and Mr. John Shuter.

The case was resumed to-day, and appeared to excite very considerable interest.

It was stated, that the Railway Company had elected to proceed under clause 205, above quoted.

The witnesses on both sides were ordered to leave the room while the examination proceeded.

Robert Corbett then deposed as follows:—I am foreman of the platelayers on the London and Birmingham Railway. On 17th October I was near the 10½ milestone from London. I saw the hounds cross the line, and presently afterwards two horsemen came up to the gate on the eastern side of the railway. I heard the sound like a hammer. I saw he locks 10 minutes before. I saw them pull the gate to them and come through. Mr. George Elmore (defendant) walked across; another gentleman who was with him rode his own horse, and led Mr. Elmore's whilst Mr. Elmore went up and began to hammer at the gate on the western side. He opened it. Mr. Elmore remounted his horse, and they both rode away, leaving both gates open. I ran up to the gates, found the locks laying down; I picked them up, found they were broken, laid them down, shut the gates, and ran after them between a quarter and half a mile. They came to a check, and I overtook them. I went to Mr. Elmore and said, Do you know that you have broken two locks, and left two gates open? He said, Yes, I do, and will make them good again; and if I would send or go down to his house he would make them good again, and give the man 1s. for going. He said, Whose gates are they? I said, Mr. Jackson, the contractor, had the management of them. He said, If he would send a man he would make them good. I said, I shall not go myself. He said, Why, where do you live. I said, Near Harrow station. I asked him his name. He said, Elmore, of Uxenden. The person present is the same. I produce the locks in the same state as when I picked them up at the gate. One boy went through the gate, but it was after the locks were broken. I swear defendant broke the lock on the western gate, but I cannot say who broke the lock on the eastern side.

Cross-examined by Mr. ROTCH—The party who was with the defendant was taller than himself, and had dark hair. I do not believe that the gentleman recently in the room (Mr. Elmore, sen.) was the party. The gentleman in the company of defendant was much thinner.

By the BENCH—I can swear that the locks were perfect 10 minutes before the defendant and his companion crossed the line. I was about 300 or 400 yards from the gates when I first heard the sound of a hammer. After defendant and his friend went through, both gates were left open. I had been repairing the fences, and therefore had paid particular attention to the state of the locks. Was never out of sight of the gates from the time that I saw the locks perfect, to the time that defendant broke them. Will swear that no one went through the gates in the interim. A boy came up at the same time as myself, and passed through the gate on the eastern side, which he attempted to close. He did not, however, close the other gate. The gate on the western side was open for 2 yards; that on the eastern side was partially closed by the boy after he went through. The western gate was not shut at all.

Mr. BURCHALL expressed some surprise at a remark made by Mr. Rotch, to the effect that the mere riding across a line of railway, even without committing any damage, would constitute an offence.

Mr. ROTCH said, it was so; and instanced a case on the Great Western Railway, where a nobleman was fined for such a trespass.

Mr. BIRCHALL appeared to think that this would prove a great discouragement to field sports, and that although railways might have their advantages, this was not one of them.

Mr. BEDFORD said, the case was altogether a novel one. Had the defendant cleared the gates without damaging them, and of course endangering the traffic of the railway, perhaps these proceedings might not have been instituted.

John Hodsdon being sworn, deposed that he is a farmer at Harrow Weald; on his oath, saith, on a day in the early part of October, on a Monday or Wednesday, I saw the hounds cross the railway. I followed them until there was a check. Corbett came up, and said to defendant, You have broke the locks; he said, I will give a man a shilling to go to my house for a couple more.

Defendant being asked if he had any question to put to this, or to the other witness, said, he denied having broken off the locks, or left the gate open. The party who was with him knocked off the locks.

On being asked to produce witnesses, he called his father, Mr. Elmore, sen., who stated that on the day in question he saw his son (the defendant) and another person, ride up to the gates when the other party broke the locks.

Mr. ROTCH—What is the name of the party referred to?

Mr. Elmore, sen., objected to answer the question. He said he had been instructed by his solicitors not to answer any question having a tendency to implicate others. It was stated that the solicitors were Messrs. Yates and Co.

Mr. ROTCH, after alluding to the little acquaintance which Mr. Elmore's solicitors appeared to have with the law, again inquired what was the name of the party.

Mr. Elmore objected to answer the question, not from any disrespect towards the bench, but because he would decline to implicate others.

Mr. ROTCH said, the witness was by his oath bound to speak, not only the truth, but the whole truth, and nothing but the truth, in the matter.

Colonel CARVICK objected to this. He did not see that the witness was bound to implicate others.

Mr. ROTCH would not sit there to be a party to such a mockery of justice. The witness was bound to speak the *whole* truth, and if examined at all, he must answer in all matters connected with the inquiry. The conduct of the other person was one of the *res gestæ* of the transaction.

The worthy magistrate here rose and took up his hat, evidently to leave the room, but after a few words of explanation from Colonel Carvick, he resumed his seat, and the case proceeded.

Mr. Elmore, sen., still hesitated to give up the name of the party alluded to, but repeatedly assured the bench that this disinclination did not arise from any feeling of obstinacy, and that he had acted under legal advice.

Mr. ROTCH said, Mr. Elmore's conduct was no doubt creditable to him as a gentleman unwilling to implicate his friend, but he (Mr. Rotch) as a magistrate, was bound to have the whole circumstances of the case disclosed. If Mr. Elmore were not prepared to disclose all he knew of the affair, he should not have appeared as a witness. He might decline altogether to give evidence, but he could not be allowed to have reservations on particular points. In such a case, he (Mr. Rotch) would have no hesitation in committing a witness for contempt of Court.

Ultimately it was agreed, on the suggestion of Mr. Rotch, that Mr. Elmore's evidence should be wholly expunged from the depositions.

Mr. Elmore was then told that if he deemed it requisite, he might act as the adviser of his son, and with that view the evidence previously taken was read over to him.

Robert Corbett was re-examined, and in answer to questions by Mr. Elmore, sen., and the magistrates, positively swore that he saw the defendant break the lock on the western side of the railway, although he could not swear who broke the lock on the eastern side.

Mr. BURCHALL thought that in any case the defendant was *particeps criminis*.

Mr. ROTCH said, the case was a novel one, and although the offence was in the Act placed on the same footing as that of petty larceny, it might be doubted whether the charge would extend to others as in the case of larceny.

After some conversation, the room was cleared, but in a few minutes the public were re-admitted, whereupon

The CHAIRMAN said, the case had been proved against the defendant to the satisfaction of the Bench, and it was their duty to commit him for trial.

Mr. ROTCH said, the terms of the Act left the magistrates no alternative. They must treat the case as they would treat a case of picking pockets. Taking into consideration, however, the station and character of the defendant, bail would be accepted.

Mr. Elmore, sen., at once gave the requisite security, and after a short delay, Mr. James Child, farmer in that district, became co-bail. Each was bound over in the sum of 50*l.* to produce the defendant at the Middlesex Sessions on Monday next.

Mr. Bedford was then bound over to prosecute, and the witnesses in the sum of 20*l.* to give evidence.

There was a second charge against the defendant, under the 75th clause above quoted.

Mr. Bedford (whose mode of conducting the business was marked by great tact and discrimination,) said he had received no instructions on the subject, and therefore, without any ill-feeling towards Mr. Elmore, he was bound to press the charge.

Mr. ROTCH thought, that as the major charge was hanging over the defendant, a nominal penalty would in this instance suffice.

The BENCH assented, and a fine of 10s. with costs was imposed, and immediately paid.

HULL AND SELBY RAILWAY.

To the Editor of the Railway Times.

SIR,—The dormant shareholders of the Hull and Selby Railway ought to be thankful to the writers of two letters that have in two successive weeks appeared in your journal. Although no shareholder myself, I have been for some time a close observer of the working and management of this line; and I have no hesitation in stating as my opinion, that there is no line now in full operation that more requires the keen scrutiny of an Investigation Committee. Their traffic returns at once show that there must be "something rotten in the state." I would draw the attention of shareholders to the goods' traffic more particularly. Let them inquire into the Sheffield, Masbro', and Bridlington traffic, and see what their rates of charges are both to the public and the carriers, if any, and then examine into the expense of working this traffic; and if I mistake not, it will be found that they are working "more for love than money,"—that they are running a factious opposition to the river conveyance, without any prospect of "running them off, and then raising their rates." This is also an important point for the Investigation Committee of the North Midland Company. Let them look to the amount of their proportion of the toll from Sheffield to Atliff, and also from Bridlington to Atliff. Does that proportion cover wear and tear, to say nothing of risk and remuneration, which a man of business will always look to? Without going at present more fully into this wide field for inquiry, I will conclude by hoping, for the sake of the poor shareholders, that you will exert your able pen in their defence.

I remain, Sir, your obedient servant,

A SUBSCRIBER.

Digitized by Google

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

SIR,—As an original and constant reader of your well-conducted and independent paper, I claim a small space in your columns. I am an original shareholder in the Brighton Railway, and acknowledge the great service you have rendered our concern by the timely and fearless manner in which you brought before the public and the shareholders the original greatly exceeded cost of its construction, as compared with the carefully digested estimates. I think, and indeed have reason to know, your efforts have not been thrown away upon the Directors themselves; *they* have opened their eyes to the circumstances and causes of the great excess, and have awakened them to a vigilant observance of every species of practical economy and retrenchment, which I feel assured they will faithfully carry out—as, indeed, they are already doing. I do really deprecate the very indiscriminate admission into your journal of the anonymous attacks that I so constantly read; and according as they do so much with the frequent intemperate Editorial strictures you indulge in, I cannot but fancy I detect an identity of purpose in them both. You should recollect, there are many interests at this moment working, and indeed have been from the commencement of the undertaking, against us. There is the South-Eastern—the old leaven of the party who subscribed to Stephenson's line; there is the honourable Baronet, who cannot find terms harsh enough whereby to express his bad opinion of the line and the works, or to stigmatise the Directors, *among whom he was one up to a very late period.* Now I do repeat, that instead of being, as I fear you are unwittingly, led on to these attacks by the prejudice that is excited in your mind by these and other interested parties, whose anonymous slanders you too readily admit and allow to influence your mind, your should bring your mind unprejudiced to bear upon the real facts themselves, and look at the case as it really stands between the Directors and the proprietors. Is there a man upon that Direction who will deny, that if Mr. Rastrick and they—(with the experience they and *we* have bought in the construction of the Brighton line)—had to begin those works anew, there might not be a saving in the cost to a very, *very*, considerable amount? Well, granted. Now I put the same question with reference to the Directors and Engineer of the London and Birmingham line; will any one of them deny the same fact as applicable to them? By the way, I see they have called up the remainder of their money, and this will bring the cost of their construction, mile for mile, *beyond* that of our line. Now do I, or does anybody, attempt to impugn either *their* honesty or *their* sagacity? No one adopts a harsher mode of remark than that suggested above, viz., that with the experience they have gained in the carrying out of this stupendous work, had they to do it over again, a very, *very*, considerable amount might be saved out of the cost of the same. "Ah!" you answer, "but look at their (the Brighton) estimates, and look at their excess." I reply, look at those of the Birmingham line, and how much they have been exceeded; you will find it to the same, nay, to a greater extent; and what anonymous correspondent of yours dares to impugn *their* honesty or sagacity? There is a "fashion" in the railway world, and the Brighton line and the Brighton Directors are unpopular among the writers in railway papers. Is it more than this? How do they fare when put face to face with the proprietors? Do we find them respond to the vilifyings of the railway press, as propounded by its anonymous correspondents? At the last general meeting they had a vote of thanks for their manly, straightforward, and I believe satisfactory, explanations. What is to be inferred from this, but that ONE unfriendly opponent may FILL YOUR COLUMNS with all sorts of calumnies against our Directors, and which it only requires a return of our half-yearly general meetings to efface from the high characters of those gentlemen. I know many of these gentlemen, and I happen to know the desirableness of lessening the number of the Board originated with themselves; and they only waited the opportunity afforded by the necessity of an Act of Parliament, for some object or other, to carry their wishes on this head into effect, and which could not be done by other means than by an Act. Everybody knows how the Board came to be so numerous, but none know so well as themselves the great inconvenience that has resulted from it. They are now using every effort to retrench; but if a paid Direction be considered best, no one will think that 100*l.* per annum for each Director, whether 20 or 12, too much. They frequently meet more than three days a week, each and all, and often sit three or four hours at a time. They are *mostly* men of business; and can you expect such men as they mostly are to give their time for less than these men receive? If the proprietors have no confidence in their Directors, let a vote of "want of confidence" be moved at their next general meeting; and if I know them (as I do many of them), if that vote be carried, you will have the opportunity of replacing them by electing others, who, lacking the *dear-bought* experience they possess, may not be so well calculated to carry on our valuable concerns as those gentlemen are who are so constantly the objects of your anonymous correspondents' calumnies.

I am, Sir, your constant reader,

A. B.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

SIR,—I have only now been enabled to cast my eye over the proceedings of the Midland Counties' Railway, and I also notice the letters of "Mercator" and "R." in your last Saturday's journal, on the subject of the Brighton Management. Mr. Heyworth and Mr. Ormerod have nobly and independently, and like men of business, done their duty to themselves and their fellow-shareholders in the Midland Counties' Railway, and I only wish we had such men as those in the Brighton line to face the Directors, to tell them to their teeth how absurd is the "cuckoo-cry of confidence," and to move for an efficient and thoroughly investigating Committee.

Mr. Ormerod most aptly refers to the Bank of Manchester; and with that warning, we ought all to be hanged by the neck if we were to keep back investigation from feelings of delicacy. Had investigation into the affairs of the Bank of Manchester taken place in time, and the Directors of that day been turned about their business as they deserved, the poor shareholders would not have been ruined, as they now are. By all that is good, then, I say, let us look to our prospects in the Brighton Railway, and let a regularly organised plan of acting be fixed upon "previously to the next half-yearly meeting," in order that we may succeed in having a Committee of Investigation from the shareholders appointed.

There are many of the remarks made by Mr. Heyworth and Mr. Ormerod perfectly applicable to this mismanaged line of the Brighton; as for instance, when Mr. Ormerod says, "If they looked back to the accounts [and Reports] presented from half-year to half-year, they would see there was no cause for confidence!!"

Certain I am, that with a proper, able, and vigilant Directory, the Brighton Railway will prove one of the best lines in the kingdom. I shall be happy if your columns can be the means of bringing an efficient party of us together to fix upon some plan previous to the meeting.

I am, Sir, yours, &c.,

BRIGHTON.

Liverpool, November 25, 1842.

EASTERN COUNTIES' RAILWAY.

To the Editor of the Railway Times.

SIR,—Some weeks ago I felt inclined to invest in the Eastern Counties' Railway, at the present prices, thinking thus to compensate myself for losses incurred by sundry of the original shares; but a little fact that came to my knowledge on the road to the city, from which I gleaned that even parties connected with the line were investing in other undertakings, led me to look rather more narrowly into the circumstances of the Eastern Counties'. The results I will proceed to state, under the conviction that if my premises and conclusions are incorrect, some of your readers will set me right.

The capital of the Company, or rather I should state the cost of the railway from Whitechapel to Colchester, cannot be quoted at a single farthing less than 2½ millions; and looking at the usual excess in every other railway, when the capital account is finally closed, I should not be surprised to hear of a good round sum beyond that. Ultimately, of course, the nominal capital will be upwards of 3½ millions, as the debentures (amount 1,600,000*l.*) will be turned into shares of 25*l.* each, although only one-third of that sum has been paid; but with this I will not encumber the statements, as I propose only to endeavour to ascertain the interest upon the actual outlay. The present length of line is 17½ miles, and the sum available for dividends was during the past year 22,073*l.* 12s. 11d., after paying all expenses. Now it must be borne in mind, that these 17½ miles are nearest to London, and therefore the most valuable part, and the proposed extension to Colchester does not connect the line with any other, or with any populous manufacturing district; therefore if we deduct the toll and mileage of the Northern and Eastern Company, and then take the proportionate length of line (17½ to 51 is the proper ratio), it is actually more than can be fairly expected to be realised.

Profits for year ending July 4, 1842	£22,073	12	11
*Deduct toll and mileage of Northern and Eastern Railway (say)	10,000	0	0
Net profit on 17½ miles.....	£12,073	12	11
Probable profits on 51 miles.....	£36,220	17	9
Add toll and mileage of Northern and Eastern, less 2,000*l.*, reduced by last contract..	8,000	0	0
Total.....	£44,220	17	9

or about 1*l.* 15s. 6d. per cent. upon the actual cost of the road, and of course much less upon the future nominal capital, as I have before explained.

Nor do I see how this is likely to be exceeded; for the district commanded by the railway is hemmed in on the one side by the sea; and, whatever the worthy Chairman may wish us to believe, is it thickly populated, or does possess a very locomotive tenantry? Then, again, the splendid and cheap water conveyances from Ipswich and Harwich to London, will always command the districts beyond Colchester.

In conclusion, I will honestly confess that I do not see any very brilliant prospects even for purchasers at present prices in the Eastern Counties'. My vision, however, may be dull; and as my own interest is somewhat concerned, shall be glad if any of your readers can clear away the film.

I am, Sir,

YOUR CONSTANT READER, BUT NOT A CONSTANT CORRESPONDENT.

Westminster, November 12, 1842.

* The precise amount does not appear in the accounts.

NORTHERN AND EASTERN RAILWAY.

To the Shareholders of the Northern and Eastern Railway.

GENTLEMEN,—I am not without fear that some temporary mischief, at least, may accompany the good which will certainly arise from the violent measures the conduct of the Executives certain railways has rendered absolutely necessary. Among other sins already chargeable upon the Directors of the North Midland is the heavy one of the convulsed state of its numerous managers and servants, the uncertainty which is springing up in the public mind as to its safety, and the character of the attention passengers are likely to receive in future. With these feelings I certainly should hesitate to call your attention to the propriety of appointing a Committee to investigate the affairs of the Northern and Eastern, did not its present posi-

Digitized by Google

tion, in my opinion, imperatively demand such a step.

The Directors are gentlemen of property, and of high standing—men who have conducted their own private affairs to the most honourable results; and yet is it possible to conceive anything more miserably pitiful than the affairs of the railway in their hands? At one time their destination was York—then Cambridge—then Bishop's Stortford—then Cambridge again; and when we country shareholders were pluming ourselves upon the classic terminus of our line, with as much surprise and as little goodwill as John Gilpin, our high-mettled Directors galloped off with us to Ware. Whether they thought themselves likely to share in honest John's immortality, or not, I cannot tell; but Ware was abandoned, and off we were hurried again to Cambridge. One would have imagined that after all this some definite course of action would have been pursued. No. Cambridge is once more abandoned, and Ware is the honoured place. An Act was now obtained, and to Ware we thought the line would actually go; but up to this hour the first sod is unturned. What means the Board delegating its power to two Directors—bye and bye resuming it again? What means the constant charge in Managers? Why is a Director a salaried Manager? and what qualifications has he for either—at once master and servant? The road has been opened two years. Why are not goods carried? Mr. Bidder stated that his calculations led him to expect a profit of 14 per cent. from the line. If he is right, must not the management be bad? The prosperity of the line clearly depends upon its extension to Cambridge, and branches from thence. Is such a rope of sand as our Directory likely to compete with the activity of other parties, who are competitors for the Norfolk traffic? Gentlemen, it is time we opened our eyes. The Directors, I suppose, will at the next meeting resign, but very probably will offer themselves for re-election. Let us know whether they are worthy of having the trust committed to them or not; if they have done the best under the circumstances in which they have been placed, let us re-elect them; if not, let us have better men.

I am, Gentlemen, yours, respectfully,
A FELLOW-SUFFERER.

November 29, 1842.

LANCASTER AND PRESTON RAILWAY.

To the Editor of the Railway Times.

SIR,—My attention has been called to a paragraph in your paper of the 26th instant, stating that the mail train was delayed by the snow between Lancaster and Preston, on the morning of Tuesday the 22nd instant, for nearly three hours. Such statement being wholly *untrue*, I have to request you will give equal publicity to this contradiction as you have to the original circulation of the incorrect report. On the day in question none of the mail trains were more than 50 minutes in performing the distance (20 miles) between Lancaster and Preston, notwithstanding there was a little snow on the line that morning. The statement of detention of the mails on Shap Fells is equally without foundation' as the mails on that day performed the journey between Lancaster and Carlisle, in both directions, within the time allotted to them by the Post-office regulations.

I am, Sir, yours, &c.
S. E. BOLDEN, Secretary.

Lancaster, November 30, 1842.

[We copied the paragraph from one of the daily papers.—ED. R. T.]

GREAT NORTH OF ENGLAND RAILWAY.—TO RAILWAY CONTRACTORS, COLLIERY OWNERS, &c.—For Sale, by Private Contract, a quantity of flat-bottomed Iron Rails, averaging from 22 to 32 lbs. per yard. Also a number of Earth-Waggons, and other materials suitable for Railway purposes, the whole of which are now lying at the Bank Top, Darlington.

For particulars, apply to Mr. Joseph Stephenson, Resident Engineer to the Company, who is authorised to dispose of the same.

W. O'BRIEN, Secretary.

Great North of England Railway Offices,
Darlington, November 23, 1842.

NEWCASTLE AND DARLINGTON JUNCTION RAILWAY.—SECOND CALL OF £3 PER SHARE.—In pursuance of a Resolution of the Board of Directors, the Proprietors of Shares in this Company are requested to pay a Second Instalment of £3 per Share, on Monday, the 2nd day of January, 1843, at either of the undermentioned Banks:—

London—Sir R. C. Glyn and Co.
York—The Union Bank.

The 6 per cent. Guarantee Interest will be computed from the time the said Call is paid.

GEORGE HUDSON, Chairman,
ROBERT DAVIES, Deputy-Chairman, } of the Board of Directors.

By order,
JNO. CLOSE, Secretary.

BOLTON AND PRESTON RAILWAY COMPANY—TENDERS FOR LOANS ON MORTGAGE.—The Directors of this Company are prepared under the powers of their Acts of Parliament, to receive Tenders for the Loan of Money, in sums of not less than £200, and for terms of 3, 5, 7, or 10 years, and to grant Mortgages of the said undertaking, and of the Rates, Tolls, or monies arising therefrom, as securities for such Loans, bearing interest at the rate of £5 per cent. per annum.

Interest Warrants, for the whole term for which the Loan shall be made, will be delivered to the Lenders along with the Mortgages, and be made payable half-yearly, at the Company's Bankers in London or Bolton, as may be preferred.

The Tenders are to express the sums, and the term of years for which the same are proposed to be lent, and to be addressed to the Secretary, at the Company's Office, Bolton.

By order of the Board of Directors,
PETER SINCLAIR, Secretary.

Bolton, 24th May, 1842.

MANCHESTER AND LEEDS RAILWAY.—TO IRONFOUNDERS, &c.—The Directors are ready to receive Tenders for a Turntable 30 feet in diameter, capable of turning an Engine and Tender. The Table to be delivered and fixed near the Locomotive Shed at Manchester. Particulars may be known on application to the Resident Engineer, at his Office, Oldham Road, Manchester. The Tenders must be sent in addressed to the Secretary, not later than Saturday, the 17th December next.

Resident Engineer's Office, Manchester,
November 30th, 1842.

TAFF VALE RAILWAY.—CONTRACT FOR MAINTENANCE OF PERMANENT WAY.—The Directors are ready to receive Tenders for the above-mentioned work, and will meet in Cardiff on Tuesday, December 20, to let the same.

The Specification may be seen at the Railway Office, Cardiff, on and after Monday, December 5.

Persons desirous of making Tenders, must forward them under cover to the Secretary, not later than Monday, December 19.

The Directors do not bind themselves to accept the lowest Tender.

By Order,
WILLIAM BURGESS, Secretary.

Cardiff, November 28, 1842.

CONTRACT FOR MASONRY.—The Liverpool and Manchester Railway Company are desirous to receive Tenders of Contract for the Erection of a Railway Viaduct (or certain portions of the same), through the town of Salford, in conformity with plans, sections and specification, which may be seen at the Company's Office in Lime street, Liverpool.

The Contract will be let in two divisions as explained in the Specification—No. 1 extending from Ordsal-lane to Irwell street, near the New Bailey prison. No. 2 extending from New Bailey-street, Salford, to Great Ducie-street, Manchester.

The Plans and Specification will be ready for inspection, on and after Monday the 5th December, and Sealed Tenders addressed to the Treasurer, and endorsed "Tender for Contract," must be delivered at the aforesaid Office, on or before Thursday the 29th December next,

By Order of the Directors,
HENRY BOOTH, Treasurer.

Liverpool, November 25, 1842.

SCOTTISH (WIDOWS' FUND) LIFE ASSURANCE. Founded A. D. 1815.—Constituted by Act of Parliament.

Capital accumulated and invested—Upwards of One Million Two Hundred Thousand Pounds.

Annual Revenue nearly Two Hundred Thousand Pounds.

Head Office, Edinburgh, No. 5, St. Andrew's Square.

Assurances effected previous to the 31st December will have the advantage of a Full Year's Standing, and are entitled to participate in the profits for the current year. But in order that this may be done, all proposals must be lodged at the Head Office before 31st December, or with the Society's Agent in time to enable him to forward it to the Head Office before that date.

JOHN MACKENZIE, Manager.

December, 1842.

London Office, 7, Pall Mall.—HUGH M'KEAN, Agent.

NORTHERN AND EASTERN RAILWAY.—NOTICE is hereby given, That in pursuance of a Resolution of a Special General Meeting of the Proprietors held on the 5th of October last, the Directors of the Northern and Eastern Railway Company are ready to receive Tenders from parties willing to advance money upon the Loan Notes of the Company.

The Tenders must state the periods for which the money will be advanced, and the rate of interest at which it will be lent.

By order of the Board of Directors,
WM. BOURNE, Secretary.

Shoreditch, London, November, 3, 1842.

NORTH MIDLAND RAILWAY.—WANTED, a Person of practical knowledge and experience, to act as Superintendent of the Locomotive Department of the North Midland Railway.

Applications with Testimonials to be sent in, on or before the 3rd day of January next, to

R. FROST, Secretary.

Secretary's Office, Derby, 30th November, 1842.

All the advantages peculiar to Mutual Life Assurance, arising from a division amongst the assured of the whole of the mutual profits, and that security and freedom from responsibility which proprietary Companies can alone afford, are combined by the constitution of this, the only guaranteed Mutual Society. For the non participating, and for assurances for temporary purposes, or debtor and creditor transactions, tables have been prepared, by which a *less immediate payment is required than by any other plan*.

By a half premium credit system one half of the premiums may be retained for the first 7 years, and repaid at the convenience of the assured; and by the ascending scale a diminished rate of premium is required for the first 12 years, combining the advantages of an assurance for the whole duration of life with the economy of a temporary policy.

Specimen of Ascending Table.

Age.	First Three Years.	Second Three Years.	Third Three Years.	Fourth Three Years.	Remainder of Life.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
20	0 19 1	1 5 6	1 11 11	1 18 4	2 4 9
30	1 6 6	1 14 7	2 2 8	2 10 9	2 18 10
40	1 13 5	2 5 7	2 17 9	3 9 11	4 2 1

60	4 8 11	5 17 4	7 5 9	8 14 2	10 2 7

By the Deed of Constitution of the Company all Policies issued by them are declared to be indefeasible and indisputable, unless obtained by fraudulent misrepresentation.

Prospectuses, schedules, and every information requisite to enable parties to effect assurances, will be forwarded, free of expense, by the Agents or Manager.

ALEX. ROBERTSON, Mana

PATRONISED by all the principal Architects and Builders in this Country and Abroad.—SEYSSEL ASPHALTE.—In consequence of the daily attempts made to imitate this valuable mineral production, and of the name of "Asphalte" being given to most of the spurious and "cheap" materials, the Directors of this Company particularly recommend Architects, Builders, and others (for the purpose of securing the use of the genuine article), to insert in their Specifications "The Seyssel Asphalte, Claridge's Patent," and not merely "Asphalte," or "Bitumen," as, in many cases where these terms have been used, gas-tar and other worthless and offensive compositions have been introduced. For the information of those residing at a distance from London, and of those who, having employed the spurious composition, may, from its failure, have become prejudiced against the use of Asphalte, the following are mentioned as some of the distinguishing qualities of the genuine material. The Asphalte of Seyssel is of a light colour, closely resembling Yorkshire stone, has a smooth surface (without being slippery), and joints almost imperceptible; it is also free from smell, is not acted upon by change of temperature, and is at all times dry and warm, and remarkably pleasant to walk upon, and, from its elasticity, never cracks. The fictitious material, on the contrary, has a dark and dirty looking appearance, presents a rough and coarse surface, and from its brittleness, is liable to crack, particularly in frosty weather. In consequence of the above qualities, the genuine material (being perfectly impervious to wet) has been used with great advantage for roofing; it can be laid down to any extent, presenting one uniform surface, and is far superior to lead, as it is not liable to expansion or contraction in consequence of any change in the temperature. For covering of arches (to prevent the percolation of wet) it is invaluable; the Greenwich Railway Company alone having covered upwards of 400,000 superficial feet. It has also been used on the Great Western, Birmingham, Midland Counties', South-Western, Brighton, Blackwall, and other Railways; at the joint Stations, London Bridge, and at the South Metropolitan, Highgate, and Nunhead Cemeteries. As proof of the great durability of the genuine Asphalte, it need only be mentioned that the first work executed in this country with this material (amounting to 3,952 feet), was at Whitehall, opposite the Horse Guards, in the month of April, 1838, and which, although only half an inch in thickness, has remained up to this time (a period of four years and eight months) in the most perfect condition. Books of Testimonials, with Scale of Prices, may be obtained on application to

J. FARRELL, Secretary.

Seyssel Asphalte Company's Depot, Stangate, London.

Note.—Neither the pavement in Parliament street, London, nor the works at the Model Prison, at the Abney-park Cemetery (which, from its failure, has since been removed), or at the Hotel at the Slough Station of the Great Western Railway, were executed by this Company.

CAUTION.—This is to Caution the Public against employing William Forster, who has been lately at work on the Paris and Rouen Railway, near Pont de L'arche, 12 miles from Rouen, as a brickmaker, and who has absconded, leaving his workmen and other creditors unpaid, although 3,000 francs (about £120) was given him for these purposes. He has besides left debts owing to various tradesmen to the amount of about 16,000 francs (£640).

The said William Forster is about 35 years of age, of dark complexion, and about 5 feet 8 inches high, and belongs to Portsmouth. He was last employed in England on the Gosport branch of the Southampton Railway, and resided near Fareham.

Previous to absconding, he had been in the habit of remitting the greater part of the money he received for his work to his brother in England, and it is reported he is now at work on the South-Eastern line of Railroad.

MACKENZIE AND BRASSEY,
Contractors on the Paris and Rouen Railway.

6, Petite Rue Verte, Paris,
28th October, 1842.

TO ENGINEERS, RAILWAY PROPRIETORS, AND OTHERS.—An Apparatus, consisting of a powerful Lamp and Reflector, which is calculated to throw a strong light upwards of 300 yards in advance of an Engine on a Railway, has lately been constructed, and the value of its application proved by a considerable number of trials, lately made. By its effect, any material obstacle on the line being easily seen, the Engineer would have time either to stop the Engine, or so to decrease the speed as in great measure to prevent the accidents which otherwise might occur.

For further particulars apply to

THE SOHO PLATE COMPANY,

Soho, near Birmingham; or 16, Salisbury-square, London.

THE TWELFTH THOUSAND.

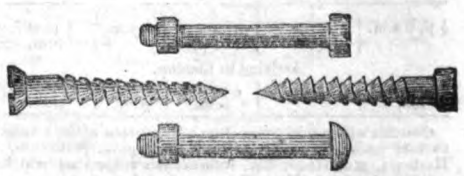
Just published, *in a Sealed Envelope*, price 3s., and sent free, on receipt of a Post office Order, for 3s. 6d.,

MANHOOD: the Causes of its Premature Decline, with plain Directions for its Perfect Restoration; addressed to those suffering from the destructive effects of excessive indulgence, solitary habits, or infection; followed by observations on the treatment of Syphilis, Gonorrhœa, Gleet, &c., illustrated with cases, &c.:

By J. L. CURTIS and Co., Consulting Surgeons, London.

TENTH EDITION—Published by the Authors, and sold by Burgess, Medical Bookseller, 28, Coventry-street, Hay Market; Mann, 39, Cornhill; Strange, 21, Paternoster-row, London; Guest, 51, Bull-street, Birmingham; T. Sowler, No. 4, St. Ann's-square, Manchester; G. Philip, South Castle-street, Liverpool; Fannin and Co., 41, Grafton street, Dublin; Drummond, 114, High-street, Edinburgh; and sold in a *sealed envelope*, by all Booksellers.

OPINIONS OF THE PRESS.



"This work, *a tenth edition* of which is now presented to the public, *ten thousand copies having been exhausted since its first appearance*, has been very much improved and enlarged by the addition of a more extended and clear detail of general principles, as also by the insertion of several new highly interesting cases. We feel no hesitation in saying that there is no member of society by whom the book will not be found useful, whether such person hold the relation of a *parent*, a *preceptor*, or a *clergyman*."—*Sun*, evening paper.

"This is a work that we fear there exists too much need for to cause us to hesitate to recommennd it for general perusal. Every branch of those frightful maladies, whether the result of immoral habits or secret vices, is here succinctly treated, and divested of all medical technicality, plain and easy directions are given for the best mode to be pursued in all cases, however complicated or apparently hopeless. To the married, as well as the unmarried, this little work alike affords consolation and cure in peculiar cases, and we are doing a service to society in recommending it to general notice."—*Essex and Herts Mercury*.

"Messrs. Curtis's work, entitled MANHOOD, is one of the few books now coming before the public on such a subject which can lay claim to the character of being strictly professional, at the same time that it is fully intelligible to all who read it. The moral and medical precepts given in it, render it invaluable."—*Magnet*.

Messrs. Curtis and Company are to be consulted daily at their residence, No. 7, Frith-street, Soho-square, London.

Country Patients are requested to be as minute as possible in the detail of their cases. The communication must be accompanied by the usual consultation fee of £1, and in all cases the most inviolable secrecy may be relied on.

I. AND D. GLASGOW, Trafford St. Knott Mill, MANCHESTER, Manufacturers, by Improved Machinery, of Wood Screws, Screw Bolts, Spikes, &c., for Railways; also Boiler Rivets, &c.

SOUTH-EASTERN RAILWAY.—At the Half-yearly Meeting of the South-Eastern (London and Dover) Railway Company, held on Friday, December 2, at the London Tavern, the following Resolutions were passed:—

Resolution 1.—That the Common Seal of the Company be affixed to the Register of Proprietors.

Resolution 2.—That the Report of the Directors, as now read to this meeting, be received and adopted; and that the same, together with the Report of Mr. Cubitt, be printed and circulated amongst the Proprietors.

Resolution 3.—That the Directors be and they are hereby authorised and empowered to issue Loan Notes, under the Common Seal of this Company, for the sum of £220,000, or any part thereof, being the remainder of the Capital which this Company are authorised to raise. That such Loan Notes do bear interest at the rate of (not exceeding) 5 per cent per annum, and that they be for such amounts, and payable at such dates, as the Directors shall determine.

Resolution 4.—That this Company do apply to Parliament in the ensuing Session for powers to extend the line, and form a Station and Depot from Archcliffe Fort to the South Pier, Dover.

Resolution 5.—That the Directors be at liberty to receive payment of the arrears due from the Scrip Holders who have been in arrear, and that the forfeiture of such Scrip be not insisted on.

Resolution 6.—That so much of the Resolutions of the Board of Directors of the 30th day of August last as declares to be forfeited the shares numbered 19,085 to 19,104 each respectively inclusive, and which were then in arrear by non-payment of the respective calls of £5 per share, payable on the 7th day of October 1841, £5 per share payable on the 8th day of January last, and £2 per share payable on the 9th day of April last be, and the same is hereby, confirmed by this meeting.

Resolution 7.—That so much of the Resolutions of the Board of Directors of the 30th day of August last as declares to be forfeited the shares numbered 19,942 to 19,971, and 20,067 to 20,079, each respectively inclusive, and which were then in arrear by non-payment of the respective calls of £5 per share payable the 6th day of July 1841, £5 payable the 7th day of October 1841, £5 per share payable the 8th day of January last, and £2 per share payable the 9th day of April last, be, and the same is hereby, confirmed by this meeting.

Resolution 8.—That so much of the Resolution of the Board of Directors of the 30th day of August last as declares to be forfeited the shares numbered 20,080 to 20,086, each respectively inclusive, and which were then in arrear by non-payment of the respective calls of £5 per share payable the 15th day of February 1841, £5 per share payable the 6th day of July 1841, £5 per share payable the 7th day of October 1841, £5 per share payable the 8th of January last, and £2 per share payable the 9th day of April last, be, and the same is hereby, confirmed by this meeting.

Resolution 9.—That the Directors be and they are hereby ordered and directed to dispose of the 70 shares, the forfeiture of which has been confirmed at this meeting, in manner directed by the Act of Parliament made and passed in the sixth year of the reign of King William IV., incorporating this Company, and intituled, "An Act for making a railway from the London and Croydon Railway to Dover, to be called the South-Eastern Railway."

Resolution 10.—That the Directors be and they are hereby authorised to apply to Parliament in the next session, either alone or in conjunction with the Croydon Railway Company, for powers to make a line of railway, with stations and depots attached thereto, from the Croydon Railway, near Corbet's-lane, to Swan street, near the Bricklayers' Arms.

Amendment proposed and negatived (Mr. Levy and Mr. Saunders)—

"That the consideration of the Bricklayers' Arms project be postponed for 12 months.

BIRMINGHAM AND GLOUCESTER RAILWAY.—BY RAILWAY THROUGHOUT BETWEEN LONDON AND WORCESTER, CHELTENHAM AND GLOUCESTER, WITHOUT CHANGE OF CARRIAGES.

First-Class Carriages of this Company will be attached to the quarter to 10 Morning Mail Train from Euston Station, and to the 4 o'Clock Afternoon Train from Birmingham.

Both these Trains call only at First-Class Stations.

From London at a quarter to 10 in the Morning, arriving at Worcester at half-past 4, at Cheltenham at 5, and at Gloucester at a quarter past 5.

From Gloucester at 1; from Cheltenham at 20 minutes past 1; from Worcester at 25 minutes to 2 in the Afternoon; arriving in London at 9 in the Evening.

By order,
GEORGE KING, Secretary.

THE HYDRAULIC RAILWAY AND THE CIVIL ENGINEER'S JOURNAL.—*To the Editor of the Railway Times.*—Sir,—I have just read in the above described journal, published to-day, a review of my mode of Hydraulic Propulsion of so extraordinary a nature, and replete with assertions so unexpected (in a scientific point of view), that I should not wish to designate or characterise it on the first impulse of the moment. I therefore, now only desire to avail myself of the opportunity of giving publicity to any statement which your columns afford, to say that I shall forward an answer, moderate in style, and I trust justly argumentative in matter, to the Editor of the *Civil Engineers' Journal* in good time for his next publication; and, in the interval, if any parties should desire to be informed of the true facts of the case and merits of the invention, the Pamphlet which I have published, (at Weale's, &c.) entitled "The Hydraulic Railway," will, I flatter myself, supply them, founding its demonstrations and arguments on accepted data and the very first authorities.

I am, Sir, your obedient servant,
J. G. SHUTTLEWORTH.

Bath, December 1st, 1842.

SPLENDID CART HORSES.—Mr. DIXON begs to announce that he is instructed by Mr M. Faviell, jun., to Sell by PUBLIC AUCTION, at the City Repository, Barbican, on Friday, December 9, 1842, commencing at Twelve for One o'Clock, precisely, on account of the number of valuable Lots for Sale on that day, Eighteen first-rate, young, sound, seasoned Cart Horses, comprising six Blacks and four Greys, that are beautifully matched, and without blemish; also, that elegant Grey Entire Horse, the *Little Wonder*, and the truly admirable rich-coloured Brown Horse *Hodman*, being the first part of the splendid stock that have been employed on the Colchester Contract of the Eastern Counties' Railway, sold in consequence of it being completed.

And 30 remarkably fine-shaped, fresh, young, powerful, Cart Horses, the property of Messrs. B. and N. Sherwood, being the third portion of the valuable stock that have been employed by them on the Chelmsford Contract, also on the Eastern Counties' Railway, sold in consequence of having finished the work.

☞ To the Nobility, Gentry, Brewers, Distillers, Agriculturists, &c., the above lot of superb Cart Horses are worthy the most careful and immediate attention. That they have been selected at an immense expense, and by first-rate judges, is indisputable, as for figure, elegance, muscular power, and activity, they are really matchless, and now in the finest possible working condition; the inspection of such a splendid stock cannot fail to afford a high treat to all admirers of perfection in that useful and beautiful animal—the Draught Horse.

Colours—Bays, Greys, Roans, Chesnuts, and Blacks.

On view, and catalogues may be had two days previous.

A great variety of new and second-hand Carriages, of every description, always on Private Sale at this Establishment, remarkably cheap.

SIXTY-EIGHT HORSES, HARNESS, CLOTHS, &c.—To be Sold by AUCTION, by Mr. ROBINSON, at his Repository, Little Britain, City, on Thursday, December 8, 1842, at 11 for 12 precisely, Twenty-eight very fresh, fast, fine-shaped, Horses, 4 sets of capital Four Horse Harness, (one set equal to new); 20 Horse Cloths (including the 4 splendid Pad Cloths, and the 4 Dress Quarter Cloths); 6 new Brown extra Collars, Headstalls, &c., comprising the very genuine stock the property of Messrs. Gilbert and Coulstock, which have been working the *Age* well-known fast Brighton coach from Mersthan to the County Oak, and from Hand Cross into Brighton; parted with in consequence of that celebrated coach being now entirely discontinued.

Also, 20 Horses, which have also been working the above coach from London to Mersthan, and driven by Major Gwynnee; 3 Sets of Harness and Clothing. Among this valuable lot of Horses will be found 2 Teams of Greys, 1 Team of Chesnuts, and 2 Teams of Bays.

And Twenty particularly good Post Horses, off the same road.

The above superior lot of Horses are well worthy the attention of Gentlemen, Job Masters, &c., requiring neat short legged Buggy, Phaeton, or Brougham Horses, as well as Coach, Post, and Omnibus Masters, Four-wheel Cab Proprietors, Public Companies, Commercial Travellers, Tradesmen, and others wanting really useful Horses in first-rate condition for immediate work.

Colours—Greys, Chesnuts, Blacks, Bays, and Browns.

On view two days previous to the sale, when catalogues can be had.

THE DUKE OF CORNWALL HARBOUR AND LAUNCESTON AND VICTORIA RAILWAY COMPANY.—Whereas at the last Half-yearly General Meeting of the Proprietors of the above Company, holden at the London Tavern, Bishopsgate-street, it was arranged that the Proprietors should be made acquainted with the result of the award of the Arbitration, respecting all matters in difference between the Company and Mr. George Ross, their late Secretary, as soon as the same should be published. The award having been now obtained, the Proprietors are particularly requested to meet the Directors at the London Tavern on Thursday next, the 8th of December instant, at One o'Clock precisely, with a view to a final settlement of the Company's affairs.

JOHN RAMSBOTTOM, Chairman.

Copthall-buildings, December 1, 1842.

DOUCEUR.—A young man of business habits, and respectable reference, is willing to present a Douceur of £50 to any lady or gentleman that can procure for the advertiser a permanent Mercantile, or other Situation.

Address A. B. J. Ovenden, Cheesemonger, 10 Mile-end road.

LOCOMOTIVE ENGINE FOR SALE.—A New Six-wheeled Coupled Engine, having 13 inch cylinders, 18 inch stroke, copper fire box, brass tubes, Stephenson's patent hollow-spoked wheels, driving wheels 5 feet diameter, hind wheels 3 feet diameter. The above Engine weighs 12¼ tons, (in of the best materials and workmanship) and may be seen at Messrs. Thompson and Coles, Hope Foundry, Bolton, to whom application must be made.

LONDON: Printed by JOHN THOMAS NORRIS, 137 and 138, Aldersgate-street, in the Parish of St. Botolph Without, Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet-street, (facing Saint Bride's Church), in the Parish of Saint Bride's Fleet-street, Middlesex.—Saturday, December 3, 1842.

"Lord Bacon saith truly, there are three things which make a nation great and prosperous,—a fertile soil, busy workshops, and easy conveyance for men and commodities from one place to another; to which, let me add knowledge and freedom."—Bishop Hall.

No. 258. Vol. V.—No. 50.] SATURDAY, DECEMBER 10, 1842. [Price 6d.

BRISTOL AND GLOUCESTER RAILWAY. —Notice is hereby given, That the Directors of this Company are ready to receive Tenders of LOANS of MONEY, in sums of not less than £200, and for terms of not less than Three, nor more than Seven Years, on security of Loan Notes, under the Corporate Seal of the Company, with Interest Warrants attached, bearing Interest at the rate of 5 per cent. per annum, payable half-yearly in London.

Tenders, expressing the sum, the term of years, and the residence of the Lender, to be addressed to the Secretary.

By order of the Board of Directors,
ROBERT FLETCHER, Secretary.

Bristol Office, Exchange-Buildings,
November 7, 1842.

BRISTOL AND EXETER RAILWAY. — Notice is hereby given, That in pursuance of a Resolution of the last General Meeting of Proprietors, the Directors of this Company are ready to receive Tenders of Loans of Money, in sums of not less than £200, and for terms of not less than three, nor more than seven years, on security of Loan Notes under the corporate seal of the Company, bearing Interest at the rate of 5 per cent. per annum, payable Half-yearly.

Tenders expressing the sum, the term of years, and the residence of the lender, to be addressed to the Secretary.

By order of the Board of Directors,
J. B. BADHAM, Secretary.

Bristol, Office, 30, Broad-street, 14th Oct., 1842.

Interest Warrants will accompany the Loan Notes.

MANCHESTER, BOLTON, AND BURY CANAL NAVIGATION AND RAILWAY.—LOANS.—The Committee of Management are prepared to receive Tenders for the Loan of a limited amount of Money, in sums of not less than £1,000 each, to be secured by the Bonds of the Company, bearing interest at 4 per cent. per annum, payable half-yearly. Period of the Loans to be either for three, five, or seven years, the term preferred to be mentioned in the Tenders, which must be addressed to the undersigned.

By order,
JOHN HAWKSHAW, Clerk of the Company.

Canal and Railway Office, Salford, Sept. 22, 1842.

NEWCASTLE AND DARLINGTON JUNCTION RAILWAY.—TO CONTRACTORS AND OTHERS.—The Directors of this Railway are ready to receive Tenders for the execution of the whole of the works necessary for the formation of that portion of their line extending from Darlington to Brafferton, being a distance of three miles and three-quarters, which will be Let in One Contract.

Plans, sections, and specifications of the works, may be seen at the Office of Mr. Thomas E. Harrison, South Shields, on and after Monday, the 5th of December.—Sealed Tenders addressed to the Secretary must be delivered at the Company's Office in York on Wednesday, the 11th day of January, 1843, before One o'Clock. The Directors will meet at their Office, at York, on Thursday, the 12th day of January, 1843, at Twelve o'Clock at Noon, to Let the Contracts; when parties who have previously sent in Tenders, or persons duly authorised by them, are requested to attend.

The Directors do not bind themselves to accept the Lowest Tender.

GEORGE HUDSON, Chairman.

THE *HINDOSTAN* STEAM-SHIP and H. M. FRIGATE *PENELOPE*.—The two above named grand Steam-ships are entirely fitted with ANDREW SMITH'S PATENT WIRE ROPE for their Standing Rigging; thus demonstrating that practical experience is daily and progressively establishing its superiority over all other Standing Rigging. For all Mining and other purposes it is already proved to be the best and most serviceable description of Rope, superseding Hemp and Chain.

For further particulars, address Mr. Andrew Smith, 2, White-Lion court, Cornhill, London.

In Royal Octavo, 3s. 6d., cloth, lettered, with four Engravings.

TELEGRAPHIC RAILWAYS; OR, THE SINGLE WAY, recommended by Safety, Economy, and Efficiency, under the safeguard and control of the Electric Telegraph; with particular reference to Railway Communication with Scotland, and to Irish Railways. By WILLIAM FOTHERGILL COOKE, Esq.

Contents: Objects of the Treatise—Distinguishing Characteristics of present Railways—Evidence before Select Committee—Advantages of Telegraphic Communication—Mode of working the Blackwall Railway, by the Electric Telegraph—Description of the Electric Telegraph—Plan for a "Telegraphic" Railway—Course of an Express Train—Ballast Waggons—Permanent Obstruction—Crossing of Two Trains—Description of Signals—Concluding Remarks on Single Way—Mixed Lines—Scottish Junction Line—Irish Railways—Advantages common to Single, Mixed, and Double Lines—Public Confidence—Reduction of Stock—Income from Telegraph—Alertness—Adaptation to Wants of Country—Conclusion.

London, Simpkin, Marshall, and Co.; Liverpool, Wareing Webb, Castle-street; Manchester, Simms and Dirham; Birmingham, Wrightson and Webb; Leeds, Slocombe and Simms.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secresy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

Just published,

TUCK'S ROLLER CALENDAR FOR 1843.—This is a mode of affixing the Calendar for the whole year on two revolving cylinders, within an elegant case, so as to exhibit each day's information in a bold and novel manner, presenting Daily Memoranda indispensable to every housekeeper and man of business. It possesses the advantage of a Date Box and Almanac, and is adapted for the Library, Board Room, Counting house, Warehouse, or Parlour; and is the best application of the Calendar ever yet devised. In Mahogany Box, price 5s. 6d.; in Ornamented Box, 6s. 6d. In addition to much useful information relating to business, &c., the Calendar contains the times of High Water at London, Liverpool, Dublin, Glasgow, Leith, Bristol, and Hull, for every day in the year.

Railway Times Office, Fleet-street; Letts, Cornhill; and Ackerman, Strand.

THE PARISIAN BITUMEN COMPANY take leave to inform their numerous friends and the public that offices are established at 4, Great Winchester-street, Broad street, for the City, and at 8, Denbigh-street, Belgrave-road, for the West-End and its vicinity, where every information will be promptly given.

SCALE OF PRICES PER FOOT.

1 inch.	1½ inch.	2 inches.	5 inches, for block paving.
4½d.	6d.	7½d.	1s.

GOODS' CLERK WANTED—NORTHERN AND EASTERN RAILWAY.—Wanted a Clerk fully competent to undertake the Management of the Goods' Traffic on this Line. Security will be required. Application to be made by letter, post paid, on or before the 13th instant, directed to the Secretary, at the Company's Offices, Shoreditch.

London, 7th December, 1842.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

SUPERIOR CART AND TROOP HORSES. —To be Sold by AUCTION, by Mr. DIXON, at his Repository, Barbican, on Friday, December 16, 1842, commencing at Twelve for One o'Clock, precisely, on account of the number of valuable Lots for Sale on that day, Eighteen first-rate, young, sound, seasoned Cart Horses, comprising six Blacks and four Greys, that are beautifully matched, and without blemish; being the second portion of the splendid stock of Mr. M. Faviell, jun., of Colchester, that have been employed on the Colchester Contract of the Eastern Counties' Railway, sold in consequence of it being completed.

Ten valuable, firm, useful, good Cart Horses, the genuine property of Mr. George Wythes, of Kelvedon, that have been employed on the Kelvedon Contract of the Eastern Counties' Railway, now nearly completed.

Fourteen fine-shaped, long tailed, Black Troop Horses, Supernumeraries of Her Majesty's First Regiment of Life Guards, sold by order of the Commanding Officer.

Ten firm, useful, particularly light, active Cart Horses, being the second portion of the stock of Mr. Bray, of Ingatestone, have been employed on the Margaretting Contract, and sold in consequence of it being completed.

Eight first-rate, young, powerful, sound, seasoned Cart Horses, remarkably well matched and handsome, the property of Mr. Walker, of Boreham, being the first part of his admirable stock, that have been employed on the Boreham Contract, which is now nearly completed.

☞ The above lot of young, valuable seasoned Cart Horses are worthy the attention of Brewers, Distillers, Wharfingers, Wholesale Warehousemen, Corn and Coal Merchants, Contractors, and all Persons wanting them for immediate work, having been purchased at great expense for the above Contract, and are now in remarkable fine condition.

Colours—Bays, Greys, Roans, Chesnuts, and Blacks.

On view, and catalogues may be had two days previous.

STEAM-ENGINE FOR SALE.—A Condensing Engine of 33 Horses Power, manufactured at the Butterly Works, in good repair, to be Sold. For Particulars apply to M. Coupland, Engineer, Pond's-yard, New Park-street, Southwark, where the Engine may be seen; or to the Proprietor, at No. 7, Cowper-street, City-road.

TO DIRECTORS OF RAILWAYS.—A Gentleman having a thorough and practical knowledge of Railway Accounts and Traffic, is desirous of an appointment as Accountant to a Railway Company, or as Superintendent of a Terminal or large First-Class Station.

Unexceptionable references will be given. Address, prepaid, A. M., care of Mr. Norris, 137, Aldersgate-street.

Digitized by Google

THE LATE ACCIDENT ON THE LONDON AND BRIGHTON RAILWAY.

CARPUE *v.* THE DIRECTORS OF THE LONDON AND BRIGHTON RAILWAY COMPANY.

Court of Queen's Bench, Westminster, Dec. 8. (Sittings at Nisi Prius before Lord Lenman and a Special Jury.)—This was an action to recover from the defendants compensation for an injury sustained by the plaintiff, through the alleged negligence of their servants; and the damages were laid at 1,000*l*. The defendants had pleaded, first, not guilty by statute, and secondly, they denied the allegation as to the want of care and skill made by the declaration.

The Attorney-General, Mr. Hayes, and Mr. Attree were for the prosecution, and the Solicitor-General, Mr. Thesiger, and Mr. Swann for the defence.

The ATTORNEY-GENERAL, in stating the case to the jury, said that the plaintiff, for whom he had the honour to appear, had been long known to the public as an eminent medical practitioner. The defendants were the carriers upon the London and Brighton Railway, and were also the owners of the line; and the present action was brought against them, not in their character as constructors of the railway, but as persons who used it as a highway for the conveyance of passengers and luggage. On the 2d of October, 1841, an accident, of which no doubt the jury had heard, and the consequences of which had been most serious, had occurred on this line of railway. Upon that day the plaintiff, with his four daughters and two servants, left London for Brighton by the railway, and, taking a place in the front seat of an open carriage with his servants, his daughters were put into another carriage. Near the station, called Hayward's-heath Station, at a distance of about 36 miles from London, there was a cutting called the Copyhold-cutting. There was a descent to that cutting, and in the course of that descent the accident before-mentioned had occurred. The two servants of the plaintiff were thrown out and killed on the spot, and one of his daughters, who was then in a delicate state of health, suffered so much in consequence of the accident (though the plaintiff, according to the law of this country, could not complain of that in any form of action), that her death, which afterwards took place, was attributed in some degree to the accident. The plaintiff was also much injured, and was taken from under the carriage in a state of the greatest suffering. He was removed to Brighton, and there received the most anxious attention; but it was more than six weeks before he was able to leave, and when he did leave, he found himself so much injured in health and constitution as to be unable to attend to those professional duties from which he had before derived such large emoluments It was to recover compensation for the injury that the had suffered on that occasion, produced, as he contended, by want of proper care and skill on the part of the defendants' servants, that this action was brought. The defendants had pleaded first the general issue by statute. That circumstance obliged him to call the attention of the jury to the sort of defence which that plea raised, and which the defendants, therefore, intended to set up. It was for the jury to say how successful that defence would be. By that plea the defendants represented themselves as constituting a corporate body to which the law gave the privilege of having notices of action, and of a certain *venue*. With respect to the notice, he must admit that it had not been given, nor had the other formal restriction been observed, in consequence of which the defendants would contend that the action could not be maintained. Such defence would do little credit to the Company by whom it was made, and it was met by a case which had been argued in the Exchequer, where it was held that such a notice was not absolutely required to be given.

The SOLICITOR-GENERAL inquired when the case was reported?

The ATTORNEY-GENERAL continued — He was surprised that his learned friend was not aware of the case, for if he had, he would not have put that plea on the record. Having stated the particulars of the case referred to, he proceeded to say, that the plaintiffs were entitled to recover, notwithstanding that the notice had not been given, and that, therefore, the case depended on the question of the want of care and skill on the part of the defendants' servants It would be in evidence before the jury, that the part of the railway where this accident had happened had been opened but a short time previously; that the season of the year had been very wet, that the road was not properly settled, and that it was important that the engine-drivers should go with great care and caution over that part of the line. It would also be proved that those precautions had not been attended to, and that the two engines ran off the line, breaking the strong iron rails, and drawing after them some of the carriages of the train. They would also hear that, in the opinion of scientific men, the use of two engines to a train was considered unsafe, and that the speed with which a train could go over old ground should be slackened in going over that part of the line which was new. He could also show that a signal had been made to slacken the speed just as the train arrived at the spot where the accident occurred, but the signal was not attended to as it should have been, and the consequence was the unfortunate accident which led to this action. The complaint was not as to the conduct of the Company's officers after the occurrence, but that their want of care and skill had occasioned it. He would not withhold from the jury in asking them for damages the fact that the plaintiff was a man somewhat advanced in years, but still he had until the accident been able to discharge the duties of an extensive professional practice, and from which he was deriving a large income. He would, therefore, ask from them such damages as they considered were just, fair, and reasonable, as a compensation to a man who, in consequence of the injuries he had sustained from this accident, was deprived for life of many sources of pleasure and advantage, and of the same profitable means which he had previously enjoyed of providing for his family.

Baron Lionel de Rothschild—I was a passenger on the train on the 2d of October, 1841. I do not remember the hour of the train's leaving London. I know the spot called the Copyhold-cutting, where the accident occurred. Just before, they were going very fast. The train stopped suddenly. The carriage in which I was seated was nearly the last in the train, and the shock was not very great when it stopped. I got out of the carriage, and on walking to the forepart of the train I saw the persons who were injured. I saw the two servants under the wheels, and Mr. Carpue between the wheels. I helped to pick him up. I knew him personally before. One of the carriages was thrown on the back. There were two engines to the train, both in front. One was nearly broken to pieces. I did not notice the engines much. Two of the men were on the engines. I do not think Mr. Carpue recognised me when he was picked up.

Cross-examined by the SOLICITOR-GENERAL—I had travelled by the same railway only a few days before, but do not know how long it had been opened as far as the spot where the accident occurred. Mr. Carpue was, I believe, in one of the second-class carriages, in the same carriage with his servants; he said it was a satisfaction to have them in the same carriage with him at the time. I do not know how near the carriage was to the engine. Mr. Carpue was lying under the carriage, but it was not upon him. I do not remember whether we had two engines when I travelled on the railway before. It was a long train. I at first got into a first-class carriage, but objecting to be so near the engine, I requested to be put into another carriage. The men told me that that could not be done unless a fresh carriage was put on; but, one being afterwards put on, I got out of the one I had first entered, and took a seat in the fresh carriage. The plaintiff is, I believe, about 60 years of age.

By the ATTORNEY-GENERAL—There was no tender, I believe, between the engine and the carriage.

Mr. S. Nathan—Is an insurance broker. Was in the same carriage with the last witness. They were going pretty fast just before the accident. After it occurred he observed that the engines were broken. First saw Mr. Carpue when he was taken away; he appeared to be very ill. Witness had travelled almost every week by railway.

Cross-examined by the SOLICITOR-GENERAL—Cannot form a good notion of the exact speed at which they were travelling. Observed to the last witness just before the accident that there was an undulating motion such as he had noticed on the Birmingham line. That was about five minutes before the accident, at the distance of from two to three, or perhaps four miles. Could not tell the time exactly, for after making the observation witness dropped into a doze. If he had anticipated any accident he would no have gone on the rail, nor would he have dropped off to sleep. Had not before been on the line. Had seen Mr. Carpue at the countinghouse of the last witness. When he saw him in the carriage he was reclining. Said to him, "I hope you are not severely hurt," upon which he bowed to witness; but when witness spoke to him afterwards he did not recollect witness's having spoken to him.

Re-examined—Had travelled faster by the Great Western Railway. Thought they were going at the rate of 40 miles an hour. The concussion was very great. A person sitting opposite to him was thrown against witness, and his nose bled very much.

Professor P. Barlow—I am first mathematical master at the Cadets' College at Woolwich. I have been much employed by Government in inspecting railways since 1836. I was then appointed one of the Commissioners on the Irish railways, and since then I have been employed by the Treasury and the Board of Trade, and have made Reports to Government respecting railways. I was sent by the Government to inspect this railway, and went on the 5th of October. I made my inspection on the Friday after the accident. I went to the spot pointed out as the one where the accident occurred. The spot I examined looked like one where an accident had happened. A part of the phalange of one of the rails was cut by the phalange of a wheel. There were many bent rails lying about.

By the ATTORNEY-GENERAL—What occasioned that?

Mr. THESIGER objected to such questions being put.

Lord DENMAN—The witness found things as they had been left, and with certain appearances—he may, therefore, I think, state what had occasioned that.

Examination continued — The appearances were evidently the consequence of great violence; but I could not tell from them whether they were produced by a speed of 20 miles an hour. I think that in no other way than by great violence could the phalanges have been cut. I saw the two drivers of the engines. Mr. Rastrick told me that they were the drivers.

Mr. THESIGER objected that the drivers must be identified, and therefore this witness could not speak as to them.

Lord DENMAN considered that the objection was good.

Examination continued—The soil at the spot which I examined was very bad. That spot is about 36 miles from London, and is in a descent from London. The line ascends about 6 miles from Horley, on the Brighton side, and there descends for about 6 miles towards Hayward's Heath. The rails were very strong, and about the heaviest that are used. Men were working upon the drains.

Cross-examined by the SOLICITOR-GENERAL—I have not much practical knowledge as to the making lines of railway. I have gone over some thousands of miles of railways, but have not taken gradients in person. That is the work of surveyors. It is necessary to keep the drains open. I was on the line after I went to inspect it, not with the Directors, but by the next public train afterwards. I noticed on the side of the cutting that what ought to be water running down the side was a mixture of sand, mud, and water. The upper soil where the accident happened was not sandstone. It would, in my opinion, have required a very great power to produce the effect which I observed on the rails. I should imagine that it was the first engine which produced the mischief.

Re-examined—Where the accident occurred there is a deep cutting.

By a Juryman—The sleepers were not on the wet soil, but on the proper sand ballast.

By Lord DENMAN—It was the subsoil which had given way. I could only judge of the nature of the subsoil from the drains and the matter I saw running into them.

Mr. W. Lucas—Is a brewer; was in the train when the accident happened; just before thought that the speed was great, and observed that there was an oscillating motion. After the accident, witness drew up the window, and got out—then saw the soil of the cutting—it was a sandy soil. The spot where the accident occurred was about 1¼ miles on the London side of Hayward's Heath station. There was much wet on each side of the cutting. The road was wet two or three inches deep, but could not say whether the water was running or standing water. Just before the accident the train was faster than usual.

Cross-examined by the SOLICITOR-GENERAL—The previous day had been very wet. The rain lay very much on the sides of the road; was in a carriage some distance from the engine; his wife, who was with him, had just before observed that the motion was unpleasant.

Lieutenant-General Sir F. Smith—I was at that time Inspector General of Railways. On level lines and in ascending gradients I see no danger in two engines being both in the front of the train. If a train were such as to require more than one engine, two might be placed in front, but it would be safer to divide the train, and start the second about 15 minutes after the other. I examined the line before that part of it was opened (it was opened in July, 1841), and, generally speaking, I thought the line was in good order. I did not examine the soil under the ballast at this part of the road, but I am inclined to think that it was sand rock.

Digitized by Google

Cross-examined by the SOLICITOR-GENERAL—*My inspection* was official, and I went over the whole carefully and attentively. I thought that in many respects the line had been admirably done. A new *line requires* much more care than an old one in being used. One that has been opened six weeks or two months only I should call a new line. It may some*times be* considered so for a much longer period. That would depend on the soil: here the ballast was light—it was, I believe, lying on sand rock. I think the *sleepers* were lying on ballast placed on sand rock. I do not think two engines to one train a safe practice—it would be better to divide the train. An interval of 15 minutes between them would make it safe even at night. If *an accident* happened to the first train, a guard could be sent to stop the one that was behind. Two engines are frequently put to a train: sometimes three, and *occasionally* four. It has been the practice on all railways to put two or more, but on the Gloucester and Birmingham, when that is done, one of the engines is afterwards taken off on coming to a descent. Shutting out the steam from the second engine would be less dangerous than allowing the two to run on together; shutting it out from the first engine would be dangerous. The descents on the Birmingham and Gloucester are more severe than on the Brighton.

Re-examined—The ruling gradient on the Brighton line is 1 foot in 264. The Great Western is a level line, except the Box tunnel. High vehicles may be used on a level line with greater safety than on one with inclinations. I have travelled 60 miles an hour on the Great Western line. In my Report to the Board of Trade, I said that I had specially called the attention of the Company to that point, but on recollection, I think that that was not correct.

By Lord DENMAN—What was seen in the drain might or might not be a test of the subsoil.

Mr. W. Attree—Is a surgeon practising at Brighton; knows the plaintiff; was called in to attend him on the 2nd of October, 1841. When he first saw him, he was fearful, from his appearance, of great danger. His countenance was very pale, his lips livid, and his pulse intermittent; his body was much compressed, but chiefly his chest. Witness was afraid of internal hæmorrhage. He was in great pain, but was anxious to make Mrs. Carpue and his daughter believe that he was not hurt. Witness treated him as if he had a fractured limb. For eight or ten days he was incapable of moving. For four or five days he saw him several times a-day, and considered him in great danger. He did not get better until ten days afterwards, and when he left Brighton was still in a very bad state. Up to the time the accident happened he was quite capable of practising as a surgeon, but had not been so capable since. Would not call him in to attend him (witness) professionally—that is, on account of the effects of this accident. I do not think he is likely to follow his profession again.

Cross-examined—He is about 72 years of age. I understand that up to the time he was practising as a consulting surgeon. His injury was internal, and at first witness feared that the heart or lungs were injured. He was confined to his bed for a fortnight, and was altogether at Brighton about six weeks.

Re-examined—The effect of the accident has been to shake his whole nervous system. In witness's opinion he is incapable of attending to his profession.

By Lord DENMAN—The heart, lungs, and viscera are not injured. The injury might be occasioned by fright, and might be permanent.

Mr. Simpson—I am a surgeon, residing in Bedford-street, Bedford-square, and have known the plaintiff for 22 years. I have seen him since his return from Brighton. When I first saw him he was very much affected, and was not in a state to no more than sit in the parlour in a large chair, and I think he should have been in bed. I should not now call him in professionally. Before the accident he was capable of attending to his practice. Since the accident he has sent to me patients for operations to be performed, which he thought he was not himself in a fit state to perform.

Cross-examined by the SOLICITOR-GENERAL—I have seen him repeatedly since his return. Until the accident he was practising as a surgeon.

By Lord DENMAN—He received some very severe contusions.

Mr. John Beaufort—Is a surgeon, residing in New Cavendish-street, Portland-place; has known the plaintiff 24 or 25 years. Had attended his family professionally, and it was at his recommendation that plaintiff took his family to Brighton. The plaintiff's nerves were now shattered, and he was incapable of performing any surgical operation. Witness did not think the plaintiff at his time of life would recover.

This was the plaintiff's case.

The SOLICITOR-GENERAL then submitted to the Court the following objection on the part of the defendants:—By the declaration it was charged that the defendants were an incorporated Company, and alleged that they were the proprietors o the railway and the carriages used upon it; that the plaintiff, on the request of the defendants, went by their carriages as a passenger, and that it was the duty of the defendants to carry him safely, and then it alleged for breach the happening of the accident. The Act under which the defendants were incorporated as a Company gave them the power of regulating the means for the carriage of goods and passengers on the railway, and declared that for anything done in pursuance of the powers and provisions of that Act, or in pursuance of the orders of the defendants made under the provisions of that Act, no suit should be maintained except after notice given to the defendants. No notice had been given in this case under the provisions of the Act of Parliament, and he therefore contended that this action was not maintainable.

Lord DENMAN said, he would take a note of the objection.

The SOLICITOR-GENERAL then addressed the jury for the defendants. It was impossible but that he should feel the greatest difficulty in addressing them, not indeed that the difficulty was as to the facts of the case, but that no one could hear of an accident when four lives were lost, and a gentleman like the plaintiff had been so severely injured as he had been, without having a strong feeling excited in their minds, and that feeling he believed was a feeling of prejudice against the Company. There was, he knew, a general supposition that no accident of this kind could happen without negligence on the part of the Company; but that opinion was erroneous—for with the greatest care, and the greatest outlay of expense, accidents such as this would occasionally happen, and most unfair would it be if in such cases the Company were to be held responsible for the consequences. Accidents would happen on the best regulated railways, and although he knew that there was a general opinion that verdicts against Railway Companies would be advantageous to the public, yet the jury had a solemn duty to perform, and would never allow such prejudices to affect their minds, but would listen calmly and dispassionately to the evidence; and however they might deplore the accident which had occurred, and sympathise with the sufferings of the plaintiff, they would fairly, truly, and calmly discharge their duty, and do justice between the plaintiff and defendants. It had been stated by the Court that a *prima facie* case of negligence had been made out; it was necessary then to consider what that negligence was, and what was the proof given of it on the part of the plaintiff; but the Company would not be content with getting a verdict in their favour from the insufficiency of the plaintiff's evidence; they would, therefore, call witnesses, and he should lay before them the evidence of officers of the Company, in order to show that every care and precaution had been taken, and that nothing like negligence had been committed. How had the railway been opened? It had been, in the first place, opened after an inspection and a Report by the Inspector-General of Railways appointed by the Government, and the Report made by that officer was so favourable and so flattering to the Company, as to their construction of the line, that he sent a copy of it to the Directors of the Company. That Report was justified by the facts; for no expense or care had been spared in the construction of the line. But he should show that not only was that care observed in making the railway, but that every care had also been observed to prevent any accident occurring. It was said at first, that it was wrong to have two engines to one train; and Sir F. Smith, on being asked whether he did not think that such a practice was dangerous, said that he did, and recommended that, instead of having two, the train should be divided, and the two parts should start at an interval between them of 15 minutes. But, if the Company had adopted that plan, and one of the trains had by chance run into the other, then the Company would have been charged with the grossest negligence. In fact, then, there was no mode that could be adopted that would be entirely free from liability to accident, and none that, if followed by an accident, would not be said to have been the cause of it. It was impossible, with a new mode of conveyance like railways, entirely to guard against accidents. The rapidity of the motion, the force given to the engine and the train, and their own weight, impelled on the line in this manner, rendered it probable that accidents would happen; and when it was considered how general this mode of travelling had become, it was a matter of wonder that so few accidents had happened. They were only so in consequence of the care taken by the Directors of the railways to secure carefulness and skill on the part of their servants, and that those servants did exercise that carefulness and skill. He should now proceed to the present case; and he would contend that no satisfactory proof had been given that the accident had arisen from want of care or skill on the part of the defendants' servants. He should be able to show that the drivers employed, when the accident happened, were perfectly sober—that the speed was not unusually fast—that they had seen and obeyed the signal to slacken their speed, and that the accident must have arisen from one of those circumstances over which the defendants could have no control, and for which, therefore, they ought not to be held responsible. The drivers had been for some time before in the service of the Company, and were so still, and the jury would hear from them the circumstances of the accident. The jury would also hear the evidence of persons travelling as passengers by the train, or who had seen it passing along at the time of the accident, and from that evidence they would find that the engines were not driven at an improper speed, that no blame was to be attributed to any one, and that, although every one must lament the occurrence, yet that under the circumstances the plaintiff had no right to recover from the defendants any compensation for the injuries he had sustained.

Thomas Kitchen—Is a guard in the service of the Company. Was guard to the train when the accident happened. It was heavily laden from Horley. They had two engines; the first was a four-wheeled engine; the second a six-wheeled one: the former was driven by Goldsmith, the latter by Jackson. Before entering the Copyhold-cutting witness observed that the four-wheeled engine had more steam on than the six-wheeled. Could not say whether the latter had any on. The train was then going at between 23 and 25 miles an hour. Saw the drivers before they left Horley: they appeared to be perfectly sober and fit to conduct the engine. Had been a guard for 4½ years.

Cross-examined by the ATTORNEY-GENERAL—Could not state accurately the number of carriages; it was the duty of the head guard to take an account of the carriages; he should think there were about 12. There were about 120 passengers. On that part of the road from New Cross to the Dartmouth Arms they had two engines on; the second engine then left. At Horley they also took on a second engine, to go up the ascent there: did not stop to take it off when they got to the top of the hill The carriage nearest to the engine was a composite carriage, that is, a carriage with three divisions—the middle part being a first-class, or close carriage—the other parts are open. Was on that first carriage when they reached the cutting. Saw no signals before the accident. Had heard since that a signal was made. To the best of his recollection the signal was "All right." Hinge, the policeman, he believed, made that signal. Was injured by the accident, and continued ill from the 2nd of October to May following. If there were any fear of going safely over any ground the men on the line were to give signals. Does not know where the inclinations on the line are.

David Arthur was the under-guard, and on the last passenger carriage. That was some distance from the engine. Was there when the accident happened. They had two engines from Horley. A short time before the accident he felt the speed decrease. He stood prepared to apply his break at the time of the accident. The first thing he observed was the diminution of the speed—that made him look out. Saw no signal. That was about half a mile from the place where the accident occurred. Could not distinguish the engines so as to see whether there was more steam on one than the other. Felt at the time of the accident a slight jerk. Witness got off and found both the engines off the rail. Observed the speed of the carriages during half a mile before the accident occurred. At the time of the accident the rate was about 22 miles an hour.

Cross-examined by the ATTORNEY-GENERAL—Could not distinguish between the two engines. There were 2 composite carriages, 5 first-class, 1 horse box, and 2 carriage-trucks. Did not know the time, nor whether they were late. Had had no delays on the road. Had not stopped at the stations more than usual Had not used more than the usual speed before the accident to make up lost time. The average rate is about 25 or 30 miles an hour. Before the pace slackened they were going at about 28 miles an hour. Four persons were killed by the accident; two of the persons who were killed were in the carriage nearest the engine. Except in that carriage and the engineer's no persons were seriously hurt.

Re-examined—On the day this accident happened

Digitized by Google

the trains were not going quicker than the ordinary rate.

James Copley—I was employed by the Brighton Railway Company at the time the accident happened to look after the men who had to see that the drains were clear. Was employed at the Copyhold-cutting, and was stationed there for some days before the accident. It was my duty to make signals. By holding out the hand horizontally it meant "All right," if vertically, "to slacken the speed." There had been a great deal of wet some days before. In consequence of that, for three or four days before, I held up my hand to the trains to slacken speed. On the day of the accident I did the same. The trains appeared to be travelling at the same rate as usual. Had given the same signal to all the trains for the last three or four days. The six-wheeled engine put all her steam off. I think the four-wheeled engine slackened her steam. I am not in the service of the Company now. I left last June. The soil in the cutting is clay and sand-rock. The sleepers are laid on the sand-rock.

Cross-examined by the ATTORNEY-GENERAL—We were employed in getting stone-rock at the side of the railway when this accident occurred. There had been a great deal of wet. Means were taken to get rid of the wet. We cleared away clay and stuff that kept running down the slope. We did that for several days before. It had rained very hard on Friday morning. Cannot say whether any wet got amongst the sleepers, but it would soak through, I should think, and would lighten the road, that is, make it not so firm—rather loose. That was what I guarded against. I was endeavouring on the Friday and the Saturday to get the wet away. I was doing that nearly all the week. The number of men employed for that purpose before the accident was 5, but afterwards 10.

Re-examined—The train had passed me about 250 yards when the accident happened. I did not see it. There was no mischief done to the road. The ten men were employed in getting ballast. The train was about a mile off when I held up my hand.

Mr. John Hardy, M.P., for Bradford—I was a passenger by the train, and was in the closed part of the carriage next to the engine. I was sitting with my back to the engine, and in the centre seat. I first observed a great shock, and heard dreadful screams. The carriage I was in was thrown across the road. I had been grumbling all the way at our being late, and that we should not arrive at Brighton at the time mentioned in the paper. I was doing so at the time of the accident. We were travelling at about 23 miles an hour. That was the 11th or 12 h time I had travelled on that line in six weeks. I had travelled on the Great Western, the Manchester and Birmingham, London and Birmingham, and Manchester and Liverpool and the Eastern Counties' railways. There were about 11 or 12 carriages I was accompanied by a gentleman named Wood, my son-in-law. It was to him and the other persons in the carriage that I mentioned the slowness of our travelling.

Cross-examined by the ATTORNEY-GENERAL—They were rather behind time. I think we did not get off from London at the time we ought. We were about eight or ten minutes behind. I did not make any remark as to the slowness of the speed in the hearing of the servants of the Company. Mr. Carpue and his two servants were further from the engine than myself. If the two trucks that were behind had been between the first carriage and the engine, I think the accident would not have happened to the plaintiff, because only the first three carriages were injured. I think it the saftest plan to put a luggage carriage between the engine and the first carriage for passengers, and I endeavoured to get that done by an Act of Parliament. I have travelled on a special train, in the first mail-train that ever travelled from Brighton; but there was no truck between the engine and the carriages. If the proprietors put a blank carriage there it would materially lessen the danger.

By the SOLICITOR-GENERAL—Do not think the speed had increased before the accident, but it is difficult to make a distinction. I have not observed that on any railway it is the practice to put a blank carriage between the engine and the first carriage with passengers.

Mr. John Wood—Is son-in-law to Mr. Hardy. Was a fellow-traveller of his on this occasion, in the same carriage. Shortly before the accident, witness considered the carriages were not going unusually quick. Mr. Hardy had made some observations about their not arriving at the usual time. Should suppose they were going about 25 miles an hour.

Charles Goldsmith—I was in the service of the Company as engine driver at the time of the accident, and had been so about six or seven months before. I had been similarly employed on the London and Southampton and London and Birmingham lines. I am still in the service of the Company, as an engine-driver. On the day of the accident I joined the train at Horley. I drove the four-wheeled engine, and Jackson the six-wheeled Had been on the line some time. I was driving about 23 or 25 miles an hour; not an unusual or improper speed. Before the accident I observed that Jackson had shut out the steam of the other engine. That was about a mile or three-quarters from the place of the accident. I let off a good portion of the steam of my engine. I had not gone over that part of the railway the same day, nor the day before. I have seen Copley; I saw him on that day. I observed the signal, but did not slacken my speed any more than I had done; the train was going at the time of the signal at a less rate than it was before. I was very much hurt. I believe my engine was thrown off the rail; but I was insensible, and suffered for 10 months.

Cross-examined by the ATTORNEY-GENERAL—I was laid up for about five weeks. I first went out about three weeks after the accident. Had been in the service of the Company about six or seven months. Was first taken on as a fireman, to put coke on the fire. I had been a driver a month or five weeks. My wages as fireman were 24s. a week—as driver 42s. I will swear that it was not less than a month I had been a driver in the service of the Company before the accident. I think I had not been going at more than 30 miles an hour within the last 10 or 12 miles before the accident When I was examined before, I did say I was going at 30 miles an hour, but not more; it was about two miles from the place where the accident happened that I altered my speed; it was about five miles to that place from the top of the last incline; had gone about 30 miles an hour for about a couple of miles. I saw no signal to slacken speed until I came to the Copyhold cutting. I will swear that the rate was then under 23 miles an hour. Before the accident I perceived a rocking. That was momentary, and just before the accident. There are no four-wheeled engines now for passenger trains. I am still employed as a driver at Horley, but only sometimes, in case of necessity, with pasenger trains. I go sometimes with the pilot-engine to help trains in when they are late, but am not regularly a driver of the passenger train—I never was. At the time of the accident I was driving the pilot-engine. There has been no change since in my appointment. I was 22 years of age on the 27th of last May. I was fireman for 18 months on the Southampton Railway. Before that I was working in the shops of the Birmingham Railway. Was never apprenticed, but for the last six or seven years had been employed in engine works. I have driven the engine of the ballast train for about 18 months since the accident. During that time I was not employed to drive the pilot-engine. This is not the only accident I have met with One more has happened to me since, on the Croydon Railway.

By the SOLICITOR-GENERAL—That accident was by getting into a ballast train before. I was employed in the ballast train when the slip took place on the Croydon Railway. I was not punished for the accident. The cause was that the signal light was misplaced. That accident happened in the dark. It is usual for drivers to accompany the engines first as firemen. I served in that capacity on the Birmingham line for 17 or 18 months, assisting the engineer, and did the same for about the same time on the Southampton line, travelling every day. On the accident to the Croydon Railway it was necessary to put on ballast trains, and more engines were wanted. I was employed as an engineer when I was able to return to my work on the Brighton Railway.

Mr. Bredham—I am a builder at Brighton. On the day in question I was driving to Cuckfield from Brighton. My attention was drawn to the train as it passed over the viaduct, that is about half a mile from the cutting. It was travelling about 25 miles an hour. I was about one-third of a mile off. I had a view of the train before it came to the viaduct.

James Jackson—I am in the employ of the Company as an engine driver. I have been employed on other railways as a driver. I joined the train at Horley, and drove the six-wheeled engine. I shut off all my steam about a mile and a half before the accident happened, and had very little on before. I lessened the steam when we came to the top of the incline After the steam was shut off, the work was done by the pilot-engine. The train was going at about 22, or between that and 23 miles an hour, when the accident happened.

Cross examined by the ATTORNEY-GENERAL—I have been a driver nearly five years.

Mr. T. Statham—I am Resident Engineer in the service of the Company. My duty is to be in constant attendance to see that everything is going on right. At the place where the accident happened, and on each side of it, the inclination is 1 foot in 264; that is not a severe inclination. There is no greater inclination on the Brighton Railway. On going through the Copyhold-cutting there is another inclination, that is 1 in 264 also. That is some distance beyond. I have been employed 10 years on railways. I cannot imagine there is any danger in going 30 miles down such a descent. On the Grand Junction they go faster. Such a speed would not be dangerous. On the day in question I went over the line. I drove over with Jackson from Brighton. I had passed through the Copyhold-cutting that morning, and clearly saw the state of the road. It was then in good order. I cannot conceive such an idea as raising the sleepers by wet. If there is good ballast beneath we can travel as fast in wet as in dry weather. The soil there is sand rock principally. The bottom is all rock. There is clay higher up. In laying the sleepers about two feet of the solid rock is excavated, and broken rock is put there. That is better than the solid rock for the sleepers to lie on. There is no clay where the accident happened. The broken rock is put for the purpose of drainage. I observed the place after the accident. The rails were damaged by the engine getting off the road; but the drains were not injured. There was a good deal of water, but it was going off as it came. In my judgment there was no damage to the rails in consequence of the wet when the accident happened. The rails were in perfect order the same morning when we passed through. I was on the spot four hours after the accident, but it was dark, and I did not observe the damage until the next morning.

Cross-examined by the ATTORNEY GENERAL—The engine had got off the rail the day before at the Haywards Heath tunnel. That was on the new part of the line. I was there about half an hour after the train got off. I cannot say what that was owing to. It was very dark; and my opinion is, something was on the rail. They were ballasting—I mean the men employed by the Company—they are always doing so. I believe they must have left something on the road. I observed on the following morning nothing different from what I saw the day before. I returned after the accident, of which I was informed at Croydon. When I afterwards went to the spot where the accident happened, repairs had been done to replace the rails. The Company's servants did it by the Direction of Mr. Hall, my District Assistant. It is my duty, under the sanction of the Directors, to take on or dismiss the engine-drivers. I had no knowledge of Goldsmith's age before I came here to-day. He was lent to the Croydon Railway Company as ballast engine-driver at the time of the slip, because we had too many hands.

Re-examined—In my judgment he is an efficient driver; he was chosen because his character was good, and he is as steady as we have. The day before Mr. Rastrick and I had examined the road where the engine got off at Hayward's Heath, but could not perceive anything the matter.

Mr. M. Hall—I am Assistant-Engineer to the Company, under Mr. Statham. I saw the accident, being in the cutting at the time. I was at one end when I saw the train enter at the other. I went through the cutting to examine it; that was my duty. I examined the state of the road in the cutting that morning. I agree with what Mr. Statham said as to the state of the road; the road was in good order at the time. The rails were damaged by the engine coming off; it was necessary to replace them; that was done in a few hours by my direction. After that the train passed regularly over it.

Cross examined by the ATTORNEY-GENERAL—The accident happened between 12 and 1 o'clock. After we got the broken carriages off the line, we assisted the train through in its journey to Brighton. We got the broken carriages off in about an hour and a half. From the report the men left the other works and came there. There was a dozen perhaps. I think there were four bent rails taken up. I did not examine them minutely to see how they were cut; all I saw was, that they must come out. By 5 o'clock that afternoon the repairs were all finished. I believe there were no people working during the night. There were men put on the cutting all night to watch; I should say half a dozen, it is the outside. I had the superintendence of the work during the night, in conjunction with a Mr. Moore; he was a resident district engineer. Mr Rastrick placed him there. I left about 8 o'clock. A great many persons were there; they were led there by curiosity. I will swear there was nothing done to the road except within the hour and a half after the accident. There might be more men

Digitized by Google

aken on to clear the drains after the accident, but I new nothing about it.

By the SOLICITOR GENERAL — The engine was *emoved that* night, I think. Some parts of the wreck were left, and persons were left by the Company to watch. A great number of persons were attracted by *he accide*nt to the spot.

The ATTORNEY-GENERAL, in reply, contended that it was the duty of the defendants to show that *this* accident had not happened through the negligence of their servants. They had utterly failed in doing this; indeed, they had proved to a great extent the fact that it was the negligence of their servants which had occasioned the injury, for they had shown that an accident had happened on the day before, in consequence of a stone from one of the ballast trains having fallen on the railway. What had happened on one day might well happen on another from the same cause, and therefore, assuming that there had been no overdriving, which he did not admit, for indeed he asserted that the proof of the overdriving was clear, still the defendants' own evidence showed a cause for an accident which could not have existed without carelessness on the part of the defendants' servants. He submitted, therefore, that the case for the plaintiff was fully made out.

Lord DENMAN summed up the case to the jury, who retired for some time, and then returned with a verdict for the plaintiff—Damages, 250*l*.

ACCIDENT ON THE LONDON AND BIRMINGHAM RAILWAY.

Euston Station, December 8, 1842.

THE train which leaves Aylesbury for London at 11 a.m., consisting of a second-class carriage next the tender, two first-class carriages, and another second class carriage at the end, was passing over the embankment about three-quarters of a mile north of the Northchurch tunnel, when the near fore-wheel of the engine was suddenly separated from it by the breaking of the fore-axle (which is four inches and a half thick) between the journal and the wheel. The engine and tender were in consequence thrown over the near side of the embankment, which is there about 15 feet high, and the leading second-class carriage over the off side. The other carriages remained on the road. The engine-driver escaped without injury; his assistant was considerably hurt: and three passengers, who were in the second-class carriage, which was overturned, also received severe, though, it is hoped, not fatal injuries. The following is the official Report of the surgeon who attended on behalf of the Company:—

The names of the persons who were injured by the accident at Northchurch, Dec. 8th, 1842:—

John Tomlin, of Boxmoor—severe injury to the head and fracture of ribs.

Mary Bye, of Aylesbury—severe injury to the head.

John Pemberton, Company's stoker, concussion of the brain.

Matthew Lowe, overlooker, Berkhampstead—injury to back. (Signed)

THOMAS BROWN, Surgeon,
Berkhampstead.

On an examination of the fractured axle, it appears that the iron, with the exception of a very small portion, is defective, although not externally apparent, and that the separation is so close to the wheel, that at first view it would seem to have been made by a knife.

The circumstances of the accident will be fully reported to the Board of Trade for investigation by General Pasley.

The following are the latest accounts:—

Berkhampstead, 8th December,
10 o'Clock, P.M.

Sir,—We regret to have the melancholy duty of informing you that the poor woman Mary Bye, or Boyd, expired about half an hour since. You may be assured that every means have been assiduously used to save her, but she never rallied from the shock at the time of the accident, gradually declining till she sunk at the above time.

The man Tomlin is a very unfavourable subject for an accident, from his very great weight and age. His injuries you are aware of: he has lost some blood from the arm this evening, and we trust we shall find him better in the morning. His present circumstances are very precarious.

We are Sir, very respectfully yours,

(Signed) H. H. HILDEN, Surgeon.
T. BROWN, Surgeon.

Berkhampstead, Friday, December 9th.

We beg to state, that on our visit to John Tomlin this morning, we find he has passed a restless night—is suffering severe pain from his injuries on the head and chest, and must be still considered in circumstances of great danger.

(Signed) H. H. HILDEN, Surgeon.
T. BROWN, Surgeon.

R. Creed, Esq.

Matthew Lowe and the fireman of the engine are both going on favourably.

(Signed) THOS. WHATELY, Surgeon.

December 9th, 1842.

R. CREED, Secretary.

THE FATAL ACCIDENT ON THE VERSAILLES RAILWAY.

(*Further Particulars.*)

THE important trial arising out of the awful railway accident on the 8th of May last, and which, in fact, is a grand inquest taken on the causes and consequences of this lamentable event, commenced on the 22nd ult., and was continued *de die in diem*, with the lapse only of Saturday, Sunday, and Monday last, to enable the Judges of the Correctional Tribunal to take a judicial view of the spot on which it happened, until Saturday last. The Chambre de Conseil having, after mature consideration of the previous examinations, declared that there were no grounds for including the Council of Administration of the Company of the Paris and Versailles Railway (Left Bank) in the prosecution, decided that M. Jules Bourgeois, Administrateur Delegue; M. Bordet, Provisional Director; M. Henri, Chief of the Paris Station; M. Bricogne, Civil Engineer, Directeur du Materiel; M. Lamoninare, Chief of the Station at Versailles; and M. Milhau, Inspector of the Service, should be arraigned as guilty of homicide through imprudence. The act of accusation, or indictment, gave a full and minute recapitulation of all the disastrous circumstances attending the accident, enumerating the persons who became its victims, either by loss of life or severe mutilation. Of these, six were found dead in a condition to be immediately recognised. Ten were afterwards identified upon more minute examination; and twenty-one, though so entirely burnt and disfigured as not to be recognised, were afterwards identified by certain objects belonging to them found among the ashes and fragments, and from their having been known to be among the passengers; and two more bodies were found dead, but in such a state as to defy recognition. In addition to these thirty-nine sufferers, fourteen more died subsequently, either in different hospitals, or at their own houses, making the total loss of life amount to fifty-three. To these must be added one more, whose death was made known to the Court during the trial. The number mutilated either by the flames or by the crushed fragments of the carriages amounted to 109. In this last category we must notice the dreadful case of a M. Apiau, who appeared on the trial as a party claiming damages. This gentleman and his two sons were together in the train. The eldest son was burnt to death, and irrecognisable; M. Apiau was so severely injured in his lower limbs that he has had the left leg amputated, and his younger son was so frightfully disfigured in the face, that it has lost all traces of the human countenance, and, although only eighteen years of age, he can never be seen in society. He also made a most painfully affecting appeal to the Tribunal for the restoration of the body of his eldest son, which, he said, the Company had buried obscurely at Meudon, and would not tell him where it was. In fact, the distresses of this sufferer seemed to have almost shaken his reason. The Court sympathised with the heart-stricken man, and said all in its power to console him, but, of course, could not in any way meet this part of his complaint, as his son was unquestionably among those whom it was impossible to identify. The points of accusation insisted upon by the prosecution were—the insufficiency of the number of engines for the service of the road, so as not to allow time enough between their respective journeys to be properly inspected and repaired, when requiring repair; the unfitness of the four-wheel engine, the *Matthew Murray*; the want of judgment and prudence in placing it before the *Eclair*, a six-wheel engine of much greater force; and lastly the imprudence of running the train with too great a velocity, whereby the accident was caused. To enter upon the evidence and arguments in support and in defence of these several charges, would lead us far beyond our limits, nor, indeed, would they be interesting to the much greater portion of our readers, as they consisted, in part, of technical details and conflicting opinions of scientific men. On the question of the fitness of the *Matthew Murray*, the testimony was so various and so contradictory, that we conceive it is extremely difficult for any one who has no actual acquaintance with that engine itself to come to any conclusion. It certainly appeared from the evidence that its peculiarities required a skilful conductor, but it was declared that with such conductor, it was an effective machine. On the subject of the opinion of George, who guided it on the 8th of May, and who was among those who lost their lives on that day, who also is acknowledged by every one to have been both skilful and zealous in the service, the evidence was very contradictory. Some witnesses deposed that he had frequently denounced it as incompetent and dangerous, and others declaring that it was a favourite with him, and that he took great pride and pleasure in guiding it. The charge of want of skill and judgment in placing the weaker engine before the more powerful one was rebutted. This was proved by men of experience to be the universal practice, and the suggestion that the strongest engine must over-run the weakest was shown to be false and unfounded, as the swiftness did not depend upon power of traction, and further that if the stronger machine, by drawing with greater force, took the weight of the train, the weaker, by being thus relieved, would go the faster, and thus keep out of the way of the other, and could not be overtaken by it. The last charge, that of the train being urged to an inordinate degree of velocity, was like the others, a subject of strongly conflicting opinion. Many witnesses, as well from among the persons who were passengers as from others who observed it from the road-side, when passing Sevres and Meudon, immediately before the accident, testified that the train was then moving with a degree of rapidity that excited in their minds the most serious alarms. Opposing witnesses, however, affirmed that the train was not going at any greater rate than it usually ran when going direct, that is to say, without having to stop at the intermediate stations, as was the case in the present instance; and others deposed that a much greater velocity is constantly kept up on many railways, without increase of danger. Upon the whole of the evidence it would seem that this deplorable disaster was occasioned by the breaking of the axletree of the hind wheels of the *Matthew Murray*, but the cause of this breakage could not be accounted for, and most certainly did not arise from her being over-run by the *Eclair*. What the impressions made on the minds of the Judges were remains yet to be known; for on the conclusion of the trial on Saturday, the President announced that the Court would take time till Saturday next to consider its judgment. — *Galignani's Messenger.*

The important trial arising out of this awful accident concluded on Saturday last, when it was decided that the *administrateur delegue*, the provisional director, the chief of the Paris station, the civil engineer, the chief of the station at Versailles, and the inspector of the service, should all be arraigned as "guilty of homicide through imprudence."

ELECTRO-MAGNETIC LOCOMOTIVE.

A TRIAL of this very ingenious machine, constructed by Mr. Davidson, was made last month on the Edinburgh and Glasgow Railway, in presence of a number of gentlemen, many of whom are eminent for their scientific knowledge. The carriage was impelled along the railway about a mile and a half, and travelled at the rate of upwards of 4 miles an hour, a rate which might be increased by giving greater power to the batteries, and enlarging the diameter of the wheels. We understand that the carriage was built at the expense of the Railway Company, and we cannot but congratulate them in having the discernment to employ Mr. Davidson, a gentleman of much practical knowledge and talent, to whose genius great discoveries have been made in electro-magnetism, by whom the carriage was projected, and to whose unwearied exertions the practicability of the scheme is almost placed beyond a doubt.

The dimensions of the carriage are 16 feet long by 7 feet wide, and is propelled by 8 powerful electro-magnets. The carriage is supported by 4 wheels of 3 feet diameter. On each of the two axles there is a wooden cylinder, on which are fastened three bars of iron at equal distances from each other, and extending from end to end of the cylinder. On each side of the cylinder, and resting on the carriage, there are two powerful electro-magnets. When the first bar on the cylinder has passed the faces of two of these magnets, the current of galvanism is then let on to the other two magnets. They immediately pull the second bar until it comes opposite them. The current is then cut off from these two magnets, and is let on to the other two. Again they pull the third bar until it comes opposite,

and so on—the current of galvanism being always cut off from the one pair of magnets when it is let on to the other.

The manner in which the current is cut off and let on is simply this:—At each end of the axles there is a small wooden cylinder, one-half of which is covered by a hoop of copper; the other is divided alternately with copper and wood (three parts of wood and three of copper). One end of the coil of wire which surrounds the four electro-magnets, presses on one of these cylinders, on the part which is divided with copper and wood; the other end of the coil presses on the other cylinder in the same manner. One end of the wires or conductors which comes from the battery, presses constantly on the undivided part of the copper on each cylinder. When one of the iron bars on the wooden cylinder has passed the faces of two magnets, the current of galvanism is let on to the other two magnets, by one end of the coil which surrounds the magnets passing from the wood to the copper, and thereby forming a connexion with the battery. This wire continues to press on the copper until the iron bar has come opposite the faces of the two magnets, which were thus charged with magetism. On its coming into that position, the current is cut off from these two magnets, by the wire or rod of copper passing from the copper to the wood, and thereby breaking the connexion with the battery. But when the wire or rod of copper leaves the copper on the one cylinder, it leaves the wood, and passes to the copper on the other cylinder at the other end of the axle, and in so doing connects the other two magnets with the battery, and they pull the next iron bar in the same manner. At the other end of the carriage there are four other magnets and wooden cylinder, with iron bars arranged in the same manner.

The battery which is used for propelling the machine is composed of iron and zinc plates immersed in dilute sulphuric acid, the iron plates being fluted so as to expose greater surface in the same space. The weight propelled was about six tons.—*Edinb. Journal.*

BRISTOL AND EXETER RAILWAY.

To the Editor of the Railway Times.

SIR,—I have the misfortune to be one of the shareholders in the Exeter Railway Company. I purchased my interest in it when the shares were about par, having put faith in the Reports of the Directors as to the cost of the line, the traffic likely to pass along it, and the handsome dividends to be derived therefrom.

For some time past a calm has succeeded the storms to which the Directors were exposed from the shareholders, and an attempt has been lately made to persuade the public that this is a concern which is going on with the unanimous approbation and concurrence of the shareholders. This is quite a delusion. True, indeed, the futile plan of paying interest out of capital—of taking money out of one pocket and putting it into the other—did for a time allay the irritation of the incensed shareholders; and true it also is, that that arrangement has been changed to paying interest out of the amount received from leasing the line to the Great Western Company: but all this has nothing to do with the *security of the capital invested in the undertaking.* That is the *vital question* for the consideration of the shareholders. I propose to investigate that question; and I think shall show my fellow-shareholders that they are resting their hopes upon a broken reed, if they expect that ultimately, on the completion of the line to Exeter, they will ever receive 3 per cent. for their money. They are now receiving 4 per cent. The railway is open to Taunton; and with what results? The answer we have in the diminished receipts of the Great Western Company, as published weekly in your paper. But let us look at the figures furnished by the Report of the Great Western Company at their last half-yearly meeting, and from them try to discover the prospects of this Exeter *El Dorado, which we were assured, in one of the Reports of the Directors, would be completed to Bridgewater for 35l. per share, and pay a dividend of 12½ per cent.* The Great Western Report informs us, that the sum received upon that line alone amounted to 273,877*l.*, and from the Exeter and Cheltenham leased lines together 36,994*l.* This is, indeed, a lamentable amount. The Report goes on to state the expenses at 41 per cent. upon the united sums. This amounts upon the two leased lines to 15,167*l.*, leaving a balance of 21,827*l.*; to do what? Why, to pay the Exeter rent and toll, 17,737*l.*, and the Cheltenham rent, 8,500*l.*, together 26,237*l.*—an absolute loss to the Great Western Company, on the half-year, of 4,410*l.*; and the further they go down the worse will be the receipts.

Now, let the Exeter shareholders look carefully at these figures, and ask themselves, seriously, whether such a line is ever likely to pay a reasonable dividend upon the *ultimate outlay?* what has already been that outlay? and what it is likely to be before the works are completed? Let us see.

Calls of 70*l.* per share on 15,000 shares	£1,050,000
Debentures	500,000
Proposed to be raised by loan notes (are these legal?)	450,000
Total	£2,000,000

Here we have an acknowledged excess over the estimates of 500,000*l.*; and it must not be forgotten that not one syllable has yet been uttered by the Directors as to the amount requisite to be provided for stations at Bristol, Exeter, and all along the line, nor any calculation submitted to the shareholders relative to the cost of the plant necessary to work the line. These items, with land and other *et ceteras* for constructing the proposed branches, will, I venture to predict, amount to *nothing short of another million.*

Then as to the future receipts. We have seen that the Exeter line, open to Bridgewater, and the Cheltenham branch, produced 37,000*l.* in the last half-year. That the Cheltenham traffic is more in proportion than the Exeter no one conversant with the two lines can doubt; but let us take them in the same proportion. Then we have 51 miles, giving 37,000*l.*, 18 miles, 13,000*l.* *Again*, 37,000*l.*—13,000*l.*=24,000*l.*, deduct the expenses at Great Western rate, 41 per cent., 9,840*l.*, leaves balance for dividend, payment of interest of debentures and loan notes, 14,160*l.*, to say nothing of the repairs on the line to be paid for agreeably to the terms of the lease. (See 4th clause of the lease.) Again, if 33 miles give 14,160*l.*, 76, the length of the line, gives 32,610*l.*, which being doubled, this being a calculation for a half-year only, gives a receipt per annum of 65,000*l.* to pay dividends on 2½ millions, which will certainly be expended before the branches are commenced.

We know, too, that should they attempt to work the line when completed, independently of the Great Western, a lamentable failure, similar to that of the Birmingham and Gloucester and Birmingham and Derby would be the result, the shares in which are now selling at 40*l.* after paying 100*l.*, one of the Companies paying no dividend at all. Such are the bright prospects of the Exeter Railway Company.

Before concluding, I will just refer to an item of expense which must be borne by the Exeter Company before declaring a dividend. I allude to the depreciation fund. The Great Western Directors, exercising a sound discretion, have resolved to appropriate 20,000*l.* per annum to that purpose; that the Exeter Company must do so likewise is, I imagine, unquestionable. Here then we have, taking it at the same rate as the Great Western for the 76 miles, to make a deduction from the receipts, in addition to all the other expenses, of the sum of 12,800*l.* per annum!

Can such a line, I again ask, ever pay a reasonable, a satisfactory, dividend? VIGIL.

Bristol, November 30, 1842.

P.S. It is now currently reported in this city that new shares are to be created. How much longer is the bridge near the cattle market, over the river, to remain in its present disgraceful state?

BRISTOL AND GLOUCESTER RAILWAY.

To the Editor of the Railway Times.

SIR,—My inclination and incredulity are both so assailed by letters in your publication on the subject of width of gauge on the Bristol and Gloucester railway, that I begin to find my confidence in the Directors shaken, and I find it difficult to remain satisfied on a point which until lately I had considered decided, viz., *that the narrow gauge was intended.*

It would be doing injustice to your correspondents to suppose that their object is to raise an unfounded alarm, which would be both wanton and cruel, as it cannot but have a tendency to lower the value of the stock in the market, and if the latter, it would lead to the conclusion that the object of the parties is to benefit by such depreciations.

By perusing attentively the above, I conceive the writers have sufficient reasons for thus adverting to the subject, and I most cordially agree with your correspondent "R. G." that it is high time for proprietors to "open their eyes," and at least to ascertain what are the facts. This might be done by requiring the Directors to call a general special meeting, and the earlier the better, to prevent the useless expenditure of their funds; and *more* than useless, because, should the attempted plan (if really *to be* attempted) be effected, *one half the value of our line will be sacrificed.* On the other hand, allow this railway to stand upon its own merits, and it might vie with any line in the kingdom; *the cost of construction* (the principal point in all lines that are to PAY) will be very moderate *with the narrow gauge*, less, far less, THAN ONE HALF of *many other lines.*

This unwarrantable attempt on the part of the Directors must be stopped *in limine*—no time should be lost—the question is of too much importance to be allowed to remain in uncertainty; and unless the shareholders exert themselves, they may discover the effects of their apathy when too late. The "three Directors" should not be allowed to mature their plans, and probably influence other members of their body. I would not charge these individuals with conduct unworthy of their situation, when *professedly* conducting our affairs; but prevention is better than cure, and whether they are acting under mistaken opinions, or with intentions less excusable, the well-known adage, "Delays are dangerous," will apply in all its force. I am, Sir, yours, &c.

A. B.

November 30, 1842.

LONDON AND SOUTH-WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—In your valuable paper I have seen several letters inquiring for, and others attempting to give, information as to the prospects of the South-Western Railway, but the writers of the latter are evidently not masters of the subject; perhaps therefore the annexed statement formed on past facts and future fair calculations, placing the prospects of the line honestly before the proprietors, may be interesting. It is evident the receipts of the present half-year must be correct to a few hundred pounds, and the item of 1,200*l.* interest is not quite 3 per cent. on cash on hand to March next; and the Chairman at the last meeting said that though to that time the Board had never been much troubled with balances on hand, yet from that time the employment of them would receive their best attention. The folly of allowing a large dormant balance to remain in any banker's hands is too glaring to need one word being written on the subject.

In the second calculation I have added 16,000*l.* as increase to the receipts of the previous corresponding half-year, and I am quite persuaded, from the knowledge I possess as to the increased traffic coming on the line, the actual receipts will exceed that sum. I have deducted 38 per cent. for working charges, which is a liberal allowance, comparing them with the London and Birmingham, Grand Junction, and other important lines. The late proceedings in the appointing of Committees on the North Midland and Midland Counties' Railways will no doubt induce the Directors on this line at once to introduce a proper economy throughout their whole expenditure. At the last half-yearly meeting it was requested by the proprietors that in future an earlier day might be fixed for the meeting; I beg to suggest that either the day before or the day after the London and Birmingham meeting would be a most convenient time to many Lanca-

UNIFORMITY OF RAILWAY ACCOUNTS—SOUTH-WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—Among the advantages which would arise from Railway Companies adopting a uniform system of account publishing, may be mentioned the facility it would afford to those who take the trouble of thinking and judging for themselves. Under the present system, it requires much time and study to come to anything like a conclusion as to the comparative merits of these undertakings. To illustrate this, I will suppose a person to take the *Railway Times* containing the last two Reports of the South-Western Company (Nos. 218 and 244), with the intention of thoroughly examining its position. He would find that the revenue for the half-year ended 31st December, 1841, was..... £153,300

Working 45¾ per cent.	£70,225	
Interest	15,600	
Dividend, 1*l.* 10s. per share.	58,725	
Balance	8,750	
		£153,300

For the last half year the dividend was the same, and although the revenue was 12,000*l.* less, 15 miles more had to be worked, and 10,200 shares more participated in the dividend. The prospects for the present half year appear most promising. The sum earned between the 5th July and 21st November is—

Passengers	£120,320
Goods, &c.	18,740
Total	£139,060
For the corresponding period of 1841	124,120

being an increase of 12 per cent., which, on the revenue for the half-year ending 31st December, 1841, would make 171,700*l.* for the present half-year—

Revenue (December, 1841)		£153,300
Increase (December, 1842)		18,400
Revenue (December, 1842)		171,700
Working expenses (40 per cent.)	£69,000	
Interest	15,600	
Dividend on 46,000 shares, at 1*l.* 10s.	69,000	
Depreciation	10,000	
Balance	8,100	
		171,700

All this appears very satisfactory; but now comes the difficulty! If in June, 1842, 10,200 shares participated in the dividend for the first time, the number in December, 1841, would be 36,000 shares, to pay a dividend on which at 1*l.* 10s. would require 54,000*l.*, but it took 58,798*l.*; and adding 15,300*l.* for the 10,200 shares, it would require 74,000*l.* to pay the dividend declared for June, 1842, which would take 5,000*l.* from the balance brought forward, or 7,000*l.* including the income tax. Although the line has been open 15 miles further since February, the expense for locomotive power has fallen off 15¾ per cent., and very remarkable differences will be seen by referring to the following tables:—

Working Expenses for the Half-year ended 31st December, 1841, compared with that ended 30th June, 1842.

	Half-years ending, Dec. 31, 1841.	Half-years ending, June 30 1842.	Per cent. Increase	Per cent. Decrease
Locomotive power	£17,135	£14,497	..	15¾
Coke	7,208	6,229	..	13¼
Maintenance of way	12,066	12,066	..	..
Ditto sundries	368	397	7¾	..
Carriage and general traffic	7,876	6,227	..	20¾
Management	3,119	3,837	23	..
Guards' and Porters' wages	5,894	5,898	1	..
Direction	500	500	..	..
Insurance	237	425	79¼	..
Station repairs	609	956	58¼	..
Traffic compensation	241	398	65	..
Advertisements, gas, &c.	2,067	2,730	32	..
Printing, stationery	700	965	37¾	..
Police	2,131	1,827	..	14¼
Mileage duty	7,552	4,981	..	34
Rates and taxes	2,702	3,349	23¾	..
Interest	15,600	15,600	..	..
Total	£85,884	£80,831	..	5¾

Half-year.	No. of passengers.	Receipts.	Duty.	Miles travelled.
31st Dec., 1841	333,855	£130,878	£7552	14,499,920
30th June, 1842	319,583	115,407	4,981	9,563,872

Average by each Passenger.

Half-year.	Distance travelled.	Amount paid.	Second class fare.
31st Dec., 1841	43 43-100	7s. 10d.	8s. 9¼d.
30th June, 1842	29 92-100	7s. 2½d.	6s. 0¾d.

* Calculated from that charged to Southampton, which is 9.72 farthings a mile.

Now these difficulties might, I have no doubt, be very easily cleared up; but how is it possible to do so by referring to the Report? Here are mens' wages, repairing, oil, &c., all mixed up under the head of locomotive power, advertisements and gas, &c., and other expenses, amounting to 4,700*l.* a-year, &c. &c.

At the end of the Report is a monthly traffic account, but which is neither an account of the receipts from passengers or goods, or of both together, and it can be of no use whatever to attempt to make any calculation from it.

Your obedient servant,

F. F. F.

SOUTH-EASTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—There is one point that certainly requires explanation in the Report of the South-Eastern general meeting, and I am induced to trespass on your columns in the hope of obtaining an explanation.

The Engineer states, that (every expense included) about 596,000*l.* will be required to complete the railway to Archcliff Fort. The Chairman states the total sum remaining at command, (after deductions) to be 778,000*l.* unexpended; now the 596,000 being deducted, a balance remains available for other purposes of 182,000*l.*

Yet the Directors wish to raise an additional 400,000*l.* Mr. Cubitt's supposition being for the Dover terminus a sum somewhat exceeding 100,000*l.*, and for the Grange-road 170,000*l.* or 180,000*l.*, the Chairman thinks it better to take the maximum of 400,000*l.* (an excess of 120,000*l.* or 130,000*l.*), though he afterwards states the Dover terminus to be estimated by the Engineer at 100,000*l.*, and that the construction of the Bricklayers' Arms branch would probably cost another 100,000*l.*, thereby reducing the cost of the two termini to 200,000*l.*, which the first-mentioned balance in hand would almost cover.

Why are these termini now first brought forward? Has it but just become clear that there must be a teminus at Dover? Have all estimates of expense been hitherto without a terminus?

Of goods' traffic I know nothing; but when it appears that on the London and Birmingham it was over-estimated by 50 per cent., surely we may doubt the South-Eastern, and wait until the profusion of "fruit and hops" renders additional warehouse room necessary. Is it impossible that the New Cross station can be made to supersede the necessity for a new and most extensive terminus? I believe not, and trust the proprietors will after all not accede to the Grange-road scheme. I have only to add, that your country readers look with impatience for your own opinion of these proceedings.

I am, Sir, your obedient servant,

DEVON.

Plymouth, December 6th, 1842.

SOUTH-EASTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—On the 1st October you inserted a letter of mine on the South-Eastern Railway, stating reasons for considering a further creation of shares inevitable; in reply to which in your impression of the 22nd idem, a Liverpool correspondent, "Scold," first uncourteously imputing to me stockjobbing motives, made the following truthless statement:—"I have been informed by one of the Directors, a gentleman of high standing, that no more money will be required beyond the 750,000*l.* already borrowed."

Now, what is the fact? At the half-yearly general meeting held on the 2nd instant, the Directors required and obtained authority to add, beyond the 750,000*l.*, or more properly 716,000*l.*, the large amount of 620,000*l.*, making, in addition to the capital already represented by 56,000 shares, no less a sum than 1,336,000*l.*

I am, Sir, your most obedient servant,

IDEM.

London, December 6, 1842.

EASTERN COUNTIES' AND NORTHERN AND EASTERN RAILWAYS.

To the Editor of the Railway Times.

SIR,—As a shareholder in the Eastern Counties' Railway, I beg to thank you for the support which your journal gives to this undertaking; and I also thank the Directors for having enabled me, by the conversion of my old shares into the new debentures, to realise a profit. I request your opinion upon the following facts. Take the last week:—

Eastern Counties', 17½ miles, produced	£794 4 7
Northern and Eastern, 32¼ miles, produced	1,012 13 6
By a comparison of these two railways, having the *same terminus*, the Eastern Counties' ought only to have produced, according to its length	£549 10 3
Actual produce	794 4 7
Balance in favour of the Eastern Counties'	£244 14 4

Again—

By the same standard of length, the Northern and Eastern ought to have produced	£1,463 13, 0
But it only produced	1,012 13 6
Balance in favour of the Eastern Counties'	£450 19 6

Again, your correspondent in the *Railway Times* of the 19th says, that the Northern and Eastern are well paid for carrying a ton of goods from Bishop's Stortford to London for 5s. 4d.; but the Southampton charge is 2*l.* for 75 miles; consequently, if the Northern and Eastern are well paid by 5s. 4d. for 32¼ miles, the Southampton ought to be well paid, if they charged about 13s. a ton; and if the Southampton charge 2*l.*, the Northern and Eastern ought to charge about 17s. a ton.

Digitized by Google

In looking at your returns of the last Northern and Eastern, I observe each passenger pays upon an average not quite 3s., and I believe for second-class passengers the price from London to Bishop's Stortford is 5s. 6d., so that 1 ton pays less than 1 passengers. You will excuse my ignorance, but I cannot reconcile these facts with the probability of remuneration.

I am, Sir, yours, &c.,
AN EASTERN COUNTIES' SHAREHOLDER.

NORTHERN AND EASTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—What are these Directors about?

Months have passed since the last general meeting, at which you reported the speeches of Mr. Smale, Mr. Cook, and others of the large proprietors, who, while expressing their respect for members of the Board individually, distinctly avowed their want of confidence in them as a Board; you also reported the reply of Mr. H. G. Ward, M. P., one of those Directorsr, stating it to be the intention of that Board to retire, and yet here we remain! Remain, said I? No; retrogade! with diminished traffic weekly, daily, and hourly, whilst the proprietors of the coaches and omnibuses on the road are laughing at us, and the very turnpikemen are witnessing our shame and defeat. Of all the virtues, I know none so deserving as "resignation." Would that our Directors would manifest such, and not give the proprietors the trouble of getting up a requisition to them to effect an object, without which it becomes more obvious every day, that the resources of a valuable property must be cramped and destroyed.

I remain, Sir, yours, truly,
A PROPRIETOR.

NORTH MIDLAND RAILWAY.

To the Editor of the Railway Times.

SIR,—Your correspondent "H. H." has been led into a misstatement, as to the amount of the weekly return of goods traffic on the North Midland line, by two errors which appear to have crept into the *Railway Times*. The first respecting an entry of 1,873*l.* for the week ending the 11th of September, 1841, which ought to have been 1,373*l.*; the other 1,820*l.*, for the week ending 16th October in the same year, which ought to have been only 1,320*l.*, making a difference of 1,000*l.* in those two items alone.

In addition to this, it may be observed, the column printed in the *Railway Times* is for "goods, cattle, &c.," and that cattle is not included in the goods' department of the North Midland Company.

The actual increase in goods during the 12 weeks is 1,440*l.*, instead of 20*l.*, as stated in the letter of "H. H."

Requesting you will have the goodness to insert this explanation in your paper.

I am, Sir, yours, &c.
R. FROST, Secretary.

Secretary's-office, Derby, December 1, 1842.

[We regret that this letter was accidentally omitted last week.—ED. R. T.]

NORTH MIDLAND RAILWAY—THE ENGINEER.

To the Editor of the Railway Times.

SIR,—I am not one of the Directors of the North Midland Railway, nor one of the Committee of Inquiry, but I am a shareholder in that undertaking, and endowed with selfishness enough to wish it increased success. Neither am I a fit person to enter into a competition of opinion on this or any other railway subject, with one whose knowledge and experience are so extensive as yours, and whose judgment, therefore, must be felt to be so generally valuable. But you will perhaps permit me to speak to a matter of fact, referring to the acting Engineer of the North Midland, whom you characterise in the last number but one of the *Railway Times* as the "*Gentleman Engineer.*" Now, that he is a gentleman in character, education and principle, I certainly, from all that I have seen and heard of him, believe; but you did not employ the words in this sense; you meant that he was a man *too fine to do his work*. Now though, as a leader of public sentiment, you may feel very strongly on the character and management of this undertaking, I yet am assured that your feelings of generosity and justice would alike prevent your intentionally saying anything to injure a man's character undeservedly, whether he be connected with a prosperous or an unprosperous concern, but especially if he be connected with one of the latter description, as that of course would be in itself trial enough to any man of delicacy and honour.

Suffer me then to say, that I know that for three or four years together that Engineer did not consider a day in the week, or an hour in the day, his own; that he laboured literally day and night—that it was a common, sometimes a constant thing, for his household to be retired, or retiring to rest, before he could return home at night, and for him to be off again before they were stirring in the morning. The same indefatigable energy which he manifested personally, he strove to the utmost of his power to infuse into all the contracts on the line. His character stood unparalleledly high for so young a man. At that time neither he nor any one else dreamed of the attacks that have since been made upon him. Is, then, the *man altered?* Is he become slothful and inattentive? Are his past exertions annihilated? Are his talents, instead of increasing by enlarged experience, rusting? No, not at all! *But the traffic on the North Midland is not as great as was expected*—a lamentable circumstance truly, and proving that the Engineers, Directors and shareholders, were mistaken; but no more proving that the Engineer had been negligent than that all the shareholders were fools. There is one thing to be said of the Engineer, in proof of his perfect good faith, and that is, that he put himself into the same boat which it is now said he was steering to a whirlpool, and participated, as a shareholder, in whatever fate might be preparing for others.

It is said, however, that there was great extravagance in the outlay. On this subject I venture not to dissent from any opinion which you, on better grounds, and no doubt with better judgment, may feel called upon to form. But, Sir, was the Engineer in question, "monarch of all he surveyed?" Could he conjure up station-houses and bridges by the touch of his wand? Had he an absolute "open sesame" to the coffers of the Treasurer? Had he no coadjutors and advisers? Had he no principal? Had he no masters? He had all these; but we can only touch *them* with a flash of powder—we can take aim at *him*, and bury our *shot* in him. He is one, and prominent; we can single him out; and one is always more easily abused and punished than a body. I believe, when the character of the works is proved by the test of time, when returning national prosperity brings increasing traffic on the line and restores to the shareholders their good humour, they will scorn to fire any more at this solitary target, but will, like men of honour, their momentary fit of anger passed, treat their Engineer with better temper, and with greater justice. But in the meantime, Sir, I think you will be able to interpret, and will be generous enough to pardon while you allow to be heard, one dissentient voice, anxious to bear its feeble and hasty testimony to a matter of which the utterer of it is cognizant, viz., the incessant toil and anxiety, the active talents and resolution, of the eminent Engineer on whom at present so many shareholders are looking unfavourably, because despondingly and forgetfully.

I have the honour to remain, Sir, your obedient humble servant,

A FRIEND TO JUSTICE AT ALL TIMES.

Leeds, December 6, 1842.

NORTH MIDLAND AND MIDLAND COUNTIES' RAILWAYS.

To the Editor of the Railway Times.

SIR,—The present position of the North Midland and Midland Counties' Railways demands your most active vigilance and assistance to wrest them from the ruin that inevitably threatens them, if the mad career of the "Committees of Inquiry" be not checked. As to the North Midland, the matter is already gone too far; the management is now placed in the hands of men pledged to economise, no matter at what risk or sacrifice; they must go on, or quit their places in the Directory. Already has the *Times*, in its Editorial article of Friday last, denounced the proceedings as calculated "*beyond the possibility of a doubt to compromise the public safety in a serious degree;*" and "*warned the public that, if these measures are forced into operation, these lines will be unsafe during the winter.*" Already have the proceedings of this Committee furnished a sufficient pretext for Government interference. If anything were wanting to prove the inexpediency of this noisy Committee, this is sufficient. This single article of the *Times*, this notion of the revival of railway accidents, will lose the Company more in the traffic of this winter than ten times the reductions of the Committee will compensate; and if such be the case on the North Midland, which commands a monopoly in its traffic, what may be the result of the suspicion of safety to the Midland Counties', where a line runs directly in competition with it.

Reports have been circulated that the whole proceeding of the attack on the Midland Counties' Directors was settled and arranged at the Grand Junction Board; and that the bone of contention was the Manchester luggage traffic, which fair competition brought over the Midland Counties'. Others have stated that the probable opening at no distant period of the Sheffield line, which will bring the Midland Counties' more immediately into competition with the Grand Junction, both in passengers and goods, is the cause of the jealousy of that grasping Directory. Whether this be true or not, certain it is that the two principal movers in the matter are deeply interested in the Grand Junction, and one of them a Director in that Company. It is not necessary, however, to inquire into the cause of this proceeding. That it was uncalled for no one looking calmly at the circumstances can deny; and that it is fraught with the greatest danger to the interests of the proprietary is clear from the menacing position already taken by the public press and the Board of Trade.

The proceedings of the shareholders at the Derby meeting resembled more the infatuated assemblages of the operatives in August last, than those of men in their proper senses. Blind to all reason; intoxicated with the pompous speeches of their Chartist leaders, and their hypocrital allusions to the "*widow and the orphan,*" they have placed their property in the hands of men whose interests are opposed to them, and whose acts have already brought down a denunciation from the press, which will practically impress upon them Mr. Ormerod's gentlemanly caution of looking to their pockets.

Trusting you will endeavour to retrieve this fatal blunder of the shareholders, and stay the current before the *gaunt-cry* of *public danger* supplants the "cuckoo-cry of confidence;" before the interference of Government supplants that of shareholders' Committees; and last, though not least, before their property is abandoned to the hands of their direst enemies,

I am, Sir, yours, obediently,
MEDICUS.

Manchester, December 6, 1842.

MIDLAND COUNTIES' RAILWAY.

To the Editor of the Railway Times.

SIR,—In your notices to correspondents in the last week's *Railway Times* occurs the following:—"Another correspondent 'Beta' writes to know whether Mr. Jessop, who thinks a common workman, with a black face and dirty apron, at 30s. a-week, all that is required to superintend an establishment

RAILWAY TIMES NEWSPAPER

of engines, be the same Mr. Jessop who has a 'gentleman' at 500*l.* or 600*l.* a-year to superintend his engines, and which gentleman (Mr. Glynn) *is actually* one of the new Committee of Inquiry!" to which I answer, he *is* the same Mr. Jessop. Judging from the way in which the communication is *worded*, and from the note of admiration appended to it, "Beta" will probably fancy that he has made an important discovery in the matter of identity, and *that* as a necessary consequence Mr. Jessop will stand self-convicted of inconsistency. "Beta," however, knows but little of the economy of an Engineer's establishment if he cannot distinguish between an *engineer* and a *foreman*, or see no important difference between the inventing, contriving, or designing a complicated machine, and the mere repairing of it. Mr. Jessop employs a competent person at as liberal a salary as an engineer as any other manufacturer of engines and machinery would; but having done this, he does not certainly appoint a "gentleman at 500*l.* or 600*l.* a-year" to superintend the execution of the plans, but commits this department, as he says, "to a workman at 30s. a-week"—(we need not add the "black face," as that is mere *colouring*). Now in this arrangement there is nothing either novel or extraordinary, inasmuch as precisely the same system is followed by every engine manufacturer; but unfortunately, as regards railways, our ideas are so associated with visions of magnificence and splendour, that we can scarcely bring ourselves to believe that the most ordinary operations can possibly be performed by any other than extraordinary men. The locomotive engine is (notwithstanding its marvellous performance) the most simple of all steam-engines, though by no means sufficiently so, and consequently requires no extraordinary abilities for its construction, and certainly no conjuror for its repairs. I contend, therefore, that Mr. Jessop is perfectly right in principle, that an intelligent foreman is all that is requisite for the superintendence of the locomotive department of a railway; but in reference to the particular case to which his remarks apply, I doubt its propriety under existing circumstances.

I am, Sir, your very obedient servant,
AN ENGINEER AND RAILWAY MANAGER.

MIDLAND COUNTIES' RAILWAY.

To the Editor of the Railway Times.

Sir,—I beg the favour of a portion of the next number of your journal, while I address a few words to my fellow-proprietors in the Midland Counties' Railway, on the propriety of transferring the Management of the undertaking from the present feeble and inefficient hands, into those of the energetic and well-trained London and Birmingham Company. I know I may be told that we shall have an opportunity of electing another Board of Directors at the next February meeting, but I will venture to say that no Board of Management, let it be composed of gentlemen ever so clever and well-intentioned, can make the line pay so good a dividend as could be afforded by the London and Birmingham, were it under their entire control. I certainly do believe that the incoming Directors will be able, by reducing the expenditure and improving the receipts (and which I am sure can be done), to raise the dividend at least 1 per cent.; and that when the contracts fall in for coke and maintenance of way, and the loans are renewed at a reduced rate of interest, another 1 per cent. will be added to it; but all these advantages the London and Birmingham would reap as well as ourselves. I, therefore, will give you my reasons for saying that the London and Birmingham could afford to pay a better return than can be expected from any Board that has the management of this railway solely and exclusively. Well, then, there would be saved, first, the allowance to our 24 Directors, with all its concomitants, such as free riding (*which is very much indulged in on our line*), and the giving of places with high salaries, and overpaid contracts to relatives and friends; ditto to our Secretary, ditto to the Superintendent, ditto to the Superintendent of the Locomotive Department, ditto to several superior clerks; a great saving would be effected in the general conduct of the business at the head office, one ticket and one set of carriages would suffice between London and Derby and Nottingham. Then there might and ought to be a curtailment of the number of trains, for I am sure there would be no necessity for six per day from Rugby to Derby or Nottingham, consequently a very great gain would be made here. In fact, it is impossible to enumerate all the benefits that would accrue were the London and Birmingham to have the government of the good long run of 130 miles. The fare might then be raised a few shillings without danger, which would amount up considerably; indeed it should now be done on our line, for we are below the rate of most of the other great lines. I have said nothing respecting what the London and Birmingham could do for the road more than we can, but I think no one will charge me with over-rating it when I say, I believe that they could bring as much extra traffic upon it as would increase the dividends at least 1 per cent. Another considerable saving would follow (to the London and Birmingham), viz., it would enable them to procure their coke at a much less cost than they are now paying for that article; it is very probable they could supply all their wants even up to London from the Midland Counties', and save some thousands per annum. With these preparatory remarks, then, I now have no hesitation in declaring it to be my firm belief, that it would be *to the mutual benefit of both Companies were they incorporated.*

At all events it is a consummation (I trust every proprietor will admit) most sincerely to be wished for by all interested in the Midland Counties' Railway, for what can be more grievous and disheartening than to see *their property continually sinking at every succeeding half-yearly meeting.* It is the duty, then, as well as the interest of our Company to make the offer; for although it would be beneficial to the London and Birmingham, we cannot expect them to volunteer their services to extricate us out of our difficulties. We must look to ourselves, and if we only show half the energy we lately displayed at Derby, I think the day is not very remote when we may reasonably hope to receive *a regular (not a reduced one every six months)*, though small, dividend. I will not now state the conditions that I may consider proper for carrying out this object, but may throw out some hints hereafter, should this appeal create the interest I am anxious to see evinced by the body of shareholders. It is a question that demands the serious attention of all, not only the present Directors, but the Committee of Inquiry also; and I do trust that both these parties will look at it in the light of fair honest dealing, apart from any unpleasant or hostile feeling that may have been engendered by the proceedings that have recently taken place, and use their best endeavours to obtain this most desirable end.

I am, Sir, yours, &c.,
A MIDLAND SHAREHOLDER.

December 3, 1842.

MIDLAND COUNTIES' RAILWAY.

To the Editor of the Railway Times.

Sir,—As a shareholder in the Midland Counties' Railway, I beg to express my approbation to you, for your suggestions in recommending the leasing of this line to the London and Birmingham Company; and I do assure your I speak the sentiments of a great number of proprietors who hold the same opinion, that it would be most desirable to do so; for although they voted for Mr. Heyworth's Committee for inquiry, they are greatly afraid that reductions cannot be effected sufficient to enable them to declare so good a dividend as could be afforded by the London and Birmingham Company, there being much larger and necessary expenses attending a double establishment, which might be considerably saved under one control. I beg also to state that it has been thought it would be more advantageous to both parties, and likewise more feasible in inducing all interested to join by incorporating the two Companies together, or further, to sell the line "out and out" to them. For my part, I am most anxious for any of the projects rather than continue under the present system of management. I have only to say, that I earnestly trust you will return again to the subject very soon, and give us your assistance to obtain this most desirable object.

I am, Sir, yours, &c.,
A SUFFERER.

Nottingham, November 28, 1842.

MIDLAND COUNTIES' AND BIRMINGHAM AND DERBY RAILWAYS.

To the Editor of the Railway Times.

Sir,—Your correspondent, "An Engineer and Railway Manager," thinks the "high honour of the Management of the London and Birmingham Railway will be tarnished" by their taking the Birmingham and Derby line on lease. I do not see it in that light. It is a great misfortune that the legislature has permitted two lines to be made so decidedly opposed to each other as the Midland and Birmingham and Derby; but at the same time they did not say which line the southern traffic should pass over, and therefore the Directors of all the three lines are bound, I think, each to consult the interests of their several proprietaries, provided they afford equal accommodation to the public. The London and Birmingham could, I believe, convey passengers from London to Derby in as short a time by the Derby line as by the Midland Counties' (the distance is 8 or 9 miles further, but there would be no time lost in changing at Rugby), and it is so manifestly to the advantage of the London and Birmingham line to have the whole of the northern traffic go over an additional 20 miles of their line, that the Directors would, I conceive, not be doing their duty to their shareholders if they neglected so beneficial an arrangement. The Birmingham and Derby line would also be equally benefited, so that two lines would be improved and only one deteriorated. If, as your correspondent proposes, the Midland Counties' line paid a consideration to the Birmingham and Derby for the southern traffic, then, no doubt, the *whole* of the northern carriage would go up the Midland line and do serious injury to the London and Birmingham, which *now has* several trains daily passing to and from Derby by Hampton. Would the London and Birmingham Directors be justified to their shareholders to allow such a bargain if they could prevent it? I am told the Midland Directors have tried to take the Derby and Birmingham on lease, and have failed in the attempt; therefore the Derby and Birmingham line, I think, would consult the interest of their concern by amalgamating themselves (if I may so term it) with the London and Birmingham line; and as a very much larger number of people would receive advantage in proportion to the few on the Midland Counties' line who would suffer less, I think the London and Birmingham and Derby and Birmingham Directors would fail in their duty to their respective lines if they neglected the opportunity of making the arrangement which is reported.

I am, Sir, yours &c.,
X. X.

YORK AND NORTH MIDLAND RAILWAY.

To the Editor of the Railway Times.

Sir,—Can you inform me what is the reason that the Darlington and Newcastle shares are not selling for more money in the market. It appears to me that if 6 per cent. is guaranteed to the holders of these shares, they ought to be worth nearer 7*l.* than 4*l.* Five shares would then be worth 35*l.*; and as there is 17*l.* a share more to pay in calls, when all the money is called up, five shares would then be worth 120*l.*, and the purchasers would then be receiving after the rate of 5 per cent. for their money.

You no doubt have heard this week that all the Directors of the North Midland are going to resign in February next. I think this would be a most favourable opportunity to unite the Midland Counties' with the North Midland, and make them one

Digitized by Google

Company. The shares are at this time about the same value in the market; and if the two were united they could both be worked by one establishment, and a great number of supernumerary officers could then be dispensed with; and with Mr. Hudson, of York, for Chairman of the Board of Directors, we should get on famously.

I am, Sir, your obedient servant,

A PROPRIETOR IN BOTH COMPANIES.

Bromley, Kent, December 1, 1842.

NORTH UNION RAILWAY.

To the Editor of the Railway Times.

Sir,—The excellent management of Mr. Hudson, the Chairman of the York and North Midland Railway, and his strict attention to economy of expenditure, I find frequently and deservedly praised in your journal; but I think there cannot be a doubt that, great as his merits may be, they shrink into insignificance when compared with those of Mr. Theodore W. Rathbone, the Chairman of the North Union Company. In proof of this I give an abstract of the two last balance sheets of that Company, as given in pages 193 and 757 of your present volume, which show for the half-year ending

	Receipts.	Expenses.	Per cent.
31st December, 1841 ..	£32,884 ..	£13,831	£42
30th June, 1842	27,199 ..	7,514	27½

Now there is here a reduction of expenditure, in the course of 6 months, of from 13,831*l.* to 7,514*l.*, or 45½ per cent.; and this, too, accomplished without any pressure from without, which sometimes, as in the North Midland and Midland Counties' Railways, forces reluctant Directors to economise. Ought such conduct to pass unnoticed? Ought such good management to pass unrewarded?

In some instances it might have been feared that so enormous a reduction, so speedily accomplished, was a piece of *trickery*, and that the amount of expenses was *manufactured* to leave a sufficient sum to allow the former balance to be maintained, and the shares thus to be propped in value till the knowing ones had escaped from the falling concern; but here the respectability of the Chairman, of the Directors, and of the worthy Secretary, all forbid the suspicion of so unworthy a motive.

Ever yours,

CALEB CREDULOUS.

December 3, 1842.

MANCHESTER AND LEEDS RAILWAY.

To the Editor of the Railway Times.

Sir,—"Haud Captus Oculis" charges me with a disposition to personal altercation, instead of a discussion of the merits of the case. The only question of a personal nature I ever raised was as to his motive for exulting in the fall of our shares, which, as he affirms himself to be a shareholder, was, I think, a fair subject of remark. He denies that he did triumph; but I beg to refer to his letter about three weeks back, in which was the following passage:—"Such, Sir, are the brilliant prospects of the Manchester and Leeds line—the *pet* line of Manchester men, &c. &c. *Sic transit gloria mundi.*" Surely, if language has any meaning, these are terms of exultation. Again, he says that his object was to protect, not holders, but investors (which is extremely generous, as he is a holder of shares now saleable at 25 to 30 per cent. above their real value as estimated by him). I beg to refer to the two concluding sentences of his last letter, to account for the mistake into which it seems I fell.

Having now dismissed personality, let me "grapple with facts." He showed, that if interest on *all* the money borrowed, and 10,000*l.* for depreciation, had been charged upon the receipts from 1st July, 1841, to 1st July, 1842, the dividend could only have been 4 per cent. This I did not attempt to controvert; for, if he be right as to the amount borrowed, the result is undeniable. But a part of that money was not borrowed at all at the beginning of that period; and, for the information of the public, I stated the principle on which a part of the interest on money actually raised was charged to capital, as being incurred on incomplete works. This is, in my opinion, a fair answer to give to one who roundly taxes the Company with paying more than they can afford.

Following up the same attack he then stated, that the *branches* (including the extension!) would be unproductive; and gave an estimate of 600*l.* per week additional, as being required to pay 5 per cent. on the junction line alone. I attempted to show—and on his own principle I suppose I succeeded, because he has not contradicted me—that half that amount would be sufficient. He now says that the Directors stopped short the Oldham line to save expense, &c. To this I answer, that it is as near to Oldham as it was ever intended to be. He represents it as a miserable failure. I am not able to state the receipts upon it, but I know that goods are not even yet carried upwards—*i. e.* to Oldham—upon it, and therefore his judgment is at least premature. He says, that the Halifax line is a bad, if not a ruinous, concern. It is notorious that this branch was forced on the Company in Parliament, and also that now all parties would be glad to have it abandoned. The total cost which the Company is *compelled* to incur is under 40,000*l.* This can hardly cause actual ruin, even if all be utterly lost, which I do not anticipate.

In conclusion I have only to say, that I want nothing but a fair representation: and in comparing this line with the London and Birmingham, he seems to forget that the latter has been in full operation for four years, and the former for not quite two, so that investors may perhaps look to some improvement in the traffic (as well as better prices) with reasonable confidence. In short, the present price bears a reference to future value, in which even *bona fide* holders on investment may *speculate*.

I am, Sir, yours, &c.,

A LEEDS SHAREHOLDER.

November 28, 1842.

P.S. On the subject of the "tremendous blow" to be expected whenever the Sheffield line shall be opened, his intimations are so very vague (though he had already alluded to the dangerous influence of it once before), that I am unable—if indeed I were willing—to undertake to reply. But perhaps he will let us know how, and to what extent, injury may be apprehended, unless we are to be doomed to imaginary terrors. I can assure you I have not the least objection to "naked truth," however I may dislike to see her disguised in the rags with which some people seemed disposed to invest her.

MANCHESTER AND LEEDS RAILWAY.

To the Editor of the Railway Times.

Sir,—A writer in your journal, under the signature of "Haud Captus Oculis," has laboured hard a long time to bring the shares of the Manchester and Leeds Railway into disrepute. However, it has fortunately happened that hitherto all his efforts have been in vain, for the Leeds shares, so far from having been at all affected thereby, have actually been steadily rising whilst he has been adversely writing, and are now much more buoyant than they have been for some time past.

"Haud Captus Oculis" (perhaps the same writer as "Tempora Mutantur") must have been well aware that the traffic returns weekly published in your journal, so far from showing any diminution in the receipts of the Leeds line, prove clearly that the traffic during the present half-year has been greater than for the corresponding period of last year, although this line is essentially a commercial one, and trade being in a most lamentably dull state at this very time, as every one knows; nay, a very little consideration, it might have been supposed, would have convinced your correspondent that so long as the traffic on the Leeds line continues so considerable as it now is, it can suffer no material injury, let public writers assail it as they may.

"Haud Captus Oculis" seems to find fault with the amount of the dividend declared during the last two half years, complaining that although fairly made from the proceeds of the traffic, yet interest of borrowed money expended in t struction of the Halifax branch, and the e line through Manchester, has not been ch the debit of the traffic account of the m Now, as these two branch lines are not pleted, nor will they be for some time to c as of course, therefore, no income or em of any kind whatever can yet have been therefrom, the interest of the borrowed mo out in their construction could with no be charged otherwise than it has been, viz., tal account; indeed, had this same Manche Leeds Company been now in the course structing another entirely new line, say other part of the kingdom, and for this pur borrowed money to the extent of several even "Haud Captus Oculis" would scarc wished the Company to have debited t account of the old line with the interest large amount of borrowed capital, whilst line was still unfinished, and of course w productive.

When the branch lines to Halifax and thr town of Manchester shall have been compl opened to the public, there is no reason that good interest on the capital expended forthcoming and then "Haud Captus Ocu have no reason to complain of the omissi interest on the borrowed capital in the appears so anxious to have it.

The following is the traffic on the Ma and Leeds Railway for the 20 weeks ending ber 19, 1842, and also that of the neare sponding period of 1841, by which it may ceived that Leeds shareholders will certainl at the end of the present half-year a divid the rate of 5½ per cent. per annum, payab out of the half-year's profits—the more e as the Directors of this line have been eco their expenses for some time past. Now i to be the amount of dividend, may we with some surprise, why the price of t shares (70*l.* being paid up) should be no m 68*l.*, when 3 per cent. consols are 94⅞*l.*, th appearing more willing to pay down the 94*l.* 12s. 6d. for Government stock, pa annual interest of but 3*l.*, than 68*l.* fo shares, for which they would receive 3*l.* nually! In other words, preferring an an terest of 3*l.* 3s. 5d. to one of 5*l.* 13s. 3 cent. for their money. Surely this state o cannot continue long, let the aversion to investment be what it may!

I am, Sir, your most obedient serv

that may be expected in the half year end ing on the 31st December, 1842.

* An investment in the shares of the Manche Leeds Railway at 68*l.*, the present price, will pay 5 per cent. interest, and ultimately in all probabili more.

† The Parliamentary elections considerably sw traffic in the summer of 1841, and accounts for th in the receipts of that period over the correspondi of 1842.

Deduct working expenses same as last half year	£38,608	
Rates, taxes, and duty on passengers same as last half year	6,436	
Int. chargeable to revenue same as last half year	33,107	
	£78,151	
Minus this sum which will be saved by the renewal of the earlier bonds at lower interest; diminution of the passenger tax (1,000*l.*); in maintenance of way and repair of engines, and in power, all these being greater in the spring half than in the summer half of the year; also, in more economical management generally	2,500	
		75,651
Balance		41,741
To pay a dividend after the rate of 5¼ per cent. per annum, it will require		37,596
Leaving as an addition to the present depreciation fund (7,605*l.*)		4,145
To which may be added the surplus of last half year, and thereby adding this half year to the depreciation fund		6,935
		£11,080
The total amount of the depreciation fund will then be		£18,685

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

SIR,—A meeting of the shareholders in the London and Brighton Railway resident in York and its vicinity was held yesterday. The meeting unanimously came to the conclusion of forming themselves into a Committee to correspond with and solicit the co-operation of the shareholders in other parts, for the purpose of appointing a Committee to investigate matters connected with the construction, outlay, and general management of the line. I may add, that a gentleman from Leeds attended, who stated the feelings of the shareholders there to be in unison with our own. A Chairman and Secretary of course were appointed, whose names will be made known to the public; and it will now depend upon the shareholders generally whether they will come forward to have their property rescued from that pitiable position in which it has so long been placed. If the Directors are honest men, and have done and are doing their best to protect and improve the property of the shareholders, let them have the merit due to them, and let us not grudge them suitable remuneration. But the only way to ascertain this is by the appointment of an efficient Committee, who, after a thorough investigation, shall satisfy the shareholders on these points. I trust, therefore, that the shareholders in other towns (and I hope to see London immediately follow our example) will at once proceed to hold their meetings; the result, I have no doubt, will be the appointment of an able Committee, who shall either rescue the Directors from that odium and suspicion which are daily poured upon them, or, by a general vote of want of confidence in them, call in to our assistance others able and willing to watch over our interests.

I am, Sir, yours, obediently,

EBOR.

York, Dec. 6, 1842.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

SIR,—I can, as far as my experience goes, corroborate the remarks which the Chairman of the Dover Company made at the recent meeting of that body. He said:—

"With our contractors we have had no disputes, though in some Railway Companies these disputes have been known to be prevalent three or four years after the line has been opened. In fact, I saw by the papers the other day, a case in which a Company could not part with their Engineer, at a heavy salary, in consequence of unsettled disputes with the contractors. If I thought there were any disputes with the contractors upon this line, the first step that I would take would be to have them settled at once, and get rid of the question. The fact is, we have all along paid ready money, even when we had but little of it to pay, so that we have been, and continue to be, free from debt."

I undertook to make the new road from Reigate to the Red Hill station for a stipulated sum of money; the road was made in two months, and the amount agreed to be given was paid immediately.

Not so with the Brighton Company; I wish I could bear the same testimony in their favour, but I regret to be obliged to say that I have not met with the same conduct in my transactions with them. I call upon the proprietors of the Brighton Company to mark what has been, and is, the conduct of their Directors and their officers.

I have an outstanding account with the Company to the amount of 3,000*l.*, and I can neither obtain a statement of how they consider the account stands, an agreement to refer the matter to honest men, nor, in fact, any answer at all, except a verbal one from the Company's Solicitor to my Solicitor, "that I may get what I can, for they did not owe me anything;" although he knows well that under the contract 10 per cent. has been kept back, and that even that sum I could not recover at common law without the certificate of the Engineer.

The consequence is, that having patiently endeavoured for two years to bring the matter to a close, I am compelled either to go without my money or file a bill in Chancery, which I have this day done. I should have done so sooner, but waited in the expectation that a Committee would be instituted to inquire into such matters as this, and into the general management of the Company's affairs. I am, Sir, yours, &c.,

CHAS. PENFOLD.

Croydon, Dec. 6, 1842.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

SIR,—I would solemnly urge upon the proprietors the necessity of *a stern preparation* for the ensuing meeting. To the Directors I do not address myself, considering menace a despicable and unworthy auxiliary of any cause. It is particularly unsuited to this, because the very fact of the accessibility of the direction to such an influence should of itself constitute the ground of its removal. Without the confidence of its constituents it ought not to exist an hour.

It is the proprietors I call upon. They owe a duty to themselves at this juncture, the due performance of which must be of the most effectual consequence to their future interests in this undertaking: it is the duty of a calm judgment upon the conduct of their officers during the past half-year. It may be the duty of passing sentence upon them, or the more pleasing one of conferring reward. They cannot in either case lose anything by preparation, whilst in the more disagreeable exigency they will have gained much by it. I advocate not precipitation, which so naturally borders upon rashness, but this cannot apply, however remotely, to this proprietary. They will be, as they ever have been, patient, most patient—forbearing, most forbearing—in council; their sentence, if it must fall, will acquire dignity from the celerity of its execution, and the completeness of its scope. The absolute annihilation of its subject will prevent the further contemplation of an abject and humiliating spectacle.

Prepare, then, my brother-shareholders. The lines of Torres Vedras attacked nothing, yet were the deliverance of the Peninsula—perhaps of Europe and the world. You have a fine property; pity it were that a supine neglect of union should cast it to the curs. Let, then, the first evidence of your officers' further incapacity on the approaching occasion be the signal for their uncompromising deposition. No after-terms, no faltering, but *finis*.

As we are going to Parliament again in the ensuing session, the opportunity of this meeting should decidedly be embraced by the proprietors *to move resolutions for embodying clauses in the new Bill, making it compulsory upon the Directors to call quarterly meetings, and pay the dividends also quarterly*. The Brighton Railway owes this to the republic of railways, in apology for its protracted lethargy. Let it henceforth take the van, and by deserving success obtain it.

These are my opinions; and in support of them I pledge myself to place the votes or proxies of from 80 to 100 shares at the disposal of any gentlemen who may have organised the requisite plan of operation.

I am, Sir, yours, very truly,

VINCIT OMNIA VERITAS.

London, December, 7, 1842.

BIRMINGHAM AND BRIGHTON RAILWAYS.

To the Editor of the Railway Times.

SIR,—Your correspondent, "A. B.," having adopted the favourite line of defence pursued by those who wish to palliate the expenditure of the Brighton Railway Company, viz., that the excess over the estimate on the Brighton line is not greater than it has been on the Birmingham, though I have no interest in either of the Companies, I cannot, as a railway shareholder, see such false statements made without putting them in their true colours.

It is well known that that admirable undertaking, the Birmingham Railway, was about the third line projected in this country, and was in course of execution *long before the Brighton line was thought or dreamt of*. I will say nothing about the unequalled difficulties the Company had to contend against from the *then* novelty of the system just introduced, and the tremendous character of the country they were compelled to carry their line through, but will observe, that there is this grand difference between the Brighton and Birmingham lines—that while the latter have from the first kept their books in a business-like manner, *and have vouchers to show for every sixpence expended*, it is notorious that the Brighton Company have kept their books (if they ever had any) in a most slovenly manner; and as to vouchers, the less that is said the better.

There is something so presumptuous in comparing the Birmingham, which is undeniably the best-managed railway in the world, with the Brighton, which has been confessedly the worst, that it is time this should be put a stop to. It is a pity "A. B." did not carry his comparisons a little further; for instance, with respect to the different Managements of the two Companies. The Birmingham Directors, notwithstanding the immense responsibility attached to their duties, only divide among themselves about 900*l.* per annum, while the Brighton Board have the modesty to take 2,100*l.* from their proprietors. The Birmingham Company are paying dividends of 10 per cent. on their shares; the Brighton have only paid about 3 per cent.

"A. B." chuckles while alluding to the announcement of a further call of 10*l.* on the original shares of the Birmingham Company, and evidently wishes it to be believed that this money (which would amount to about 200,000*l.*) is required to be expended on the undertaking. I cannot believe that "A. B." is really ignorant of the facts of the case, which are these:—When 90*l.* had been paid on the original shares of 100*l.* each, it was proposed, with a view of relieving the proprietors, that the remaining 10*l.* per share should be borrowed on debentures, with the understanding that when they arrived at maturity those shareholders holding the 100*l.* shares should make good the amount. As the dividend of 10 per cent. has been paid on the *full* amount of the 100*l.* shares, as well as the interest on debentures, it is clear that the Company's income will be improved by this operation, which is a very different result from what "A. B." would have us expect.

I have no stake in the Brighton Railway, and under its present Management have no inclination to invest in it. I form my opinion of its future success by judging of the past. Experience has convinced me that the fairest prospects of a railway may be blighted by bad management of its affairs. I am, Sir, yours, &c.,

A RAILWAY SHAREHOLDER.

NOTES TO THE TRAFFIC TALBE
(on the opposite page.)

3. Main line, 53 miles; Tewkesbury branch, 2. — Total length, 55 miles.

4. The total length of line and branches is 25 miles:—15 *miles* of passenger and general traffic, and 10 miles of coal traffic alone. The Company are now before Parliament for power to raise the capital to 500,000*l.*

5. The total amount of stock on which dividends are payable is 750,000*l.*

8. Receipts include the Northern and Eastern toll, &c.

12. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the Liverpool and Manchester and Chester and Crewe lines, as also the toll from the Manchester and Birmingham Company. The *divisor* employed to ascertain the daily receipts per mile is 121 (85+15+21.) The Company do not now carry goods to Manchester.

14. The receipts include those derived from the Cheltenham and Exeter lines; the former opened for 18 miles, and the latter for 44¼. The divisor employed to ascertain the daily receipts per mile is therefore 180¾ (118¼+18+44¼.) The *rent* of the branch lines is together about 1,163*l.* per week. There is likewise a *toll* payable to the Exeter Company of a farthing per passenger and per ton of goods per mile travelled.

15. The dividends have been hitherto (up to 31st December, 1841) appropriated to completing the line and works.

18. Ten per cent. is the maximum dividend allowed by the Company's Act.

19. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. The dividend is *nominally* at the rate of 10*l.* per cent., but to the original shareholders it is equal to upwards of 11*l.* per cent., as the dividend on the original shares is paid upon 100*l.*, although only 90*l.* has been called for. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.

20. At the last meeting no dividend was declared, the disposable balance from the previous six months' working being only 1,472*l.* 10s. 9d.

21. The length stated includes the Shoreham branch. The Croydon and Greenwich tolls are not deducted from the amount stated in the Table. The traffic of the six months produced 63,326*l.*, and there was a balance from the previous half-year of 12,479*l.* Out of these two amounts combined, the dividend (after making certain deductions) was paid.

22. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company.

23. Capital of 993,300*l* includes new capital for widening the line, &c. The dividend of 7s. 6d. per cent. does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table includes the receipts from the footpath, but is exclusive of the Brighton, Croydon, and Dover toll.

24. The dividend is calculated on the money actually paid up, a portion of the shares having been issued at 50 per cent. discount.

25. Including Toll, &c., from Sheffield Company, and after deducting omnibus charges, &c., and subject to payments to the Grand Junction Company.

26. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

27 The 3,756*l.* 8s. 11d. are the receipts after deductive omnibus charges, and payments to other Companies.

28. The receipts for goods, &c., include, horses, 28*l.* 19s. 0d.; carriages, 20*l.* 8s 6d.; dogs, 2*l.* 11s. 6d.; parcels, 219*l.* 9s. 6d.; cattle, 55*l.* 12s. 6d.; corn, 9*l.* 9s. 11d; heavy goods, 376*l.* 12s. 2d.; coal and lime, 229*l.* 18s. 2d. —Total, 943*l.* 1s. 3d.

31. The amount of stock *created* is 3,000,000*l.*, on which dividends are payable; and the sum of 850,000*l.* is borrowed money at interest. The 3,000,000*l.*, however, is nominal, inasmuch as the shares were some of them issued at a discount which reduced the actual amount to 2,589,500*l.*, viz.:—15,000 shares at 100*l.* = 1,500,000*l.*; 15,000 of 50*l.*, issued at 40*l.* = 600,000*l.*; 22,500 of 33*l.* 6s. 8d., issued at 21*l.* 13s. 4d. = 489,500*l*; total 2 589,500*l.* The details of the receipts are as follows—Passengers, 1,738*l.* 14s. 11d.; carriages and horses, 92*l.* 14s. 1d.; parcels, 229*l.* 0s. 1d.; mails, 50*l.* 5s. 9d.; merchandise, 941*l.* 8s. 6d.; minerals, 305*l.* 18s. 1d.; cattle, 83*l.* 7s. 2d — Total, 3,391*l.* 8s. 7d.; including North Midland proportion of Manchester and Leeds traffic, and amount received for Sheffield and Rotherham Company.

32. The receipts are after deduction of Liverpool and Manchester toll.

33. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 134*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway. The 32¼ miles stated as being open for traffic, include the portion of the Eastern Counties' line passed over by this Company.

34. The capital of 533,000*l.* includes that provided for harbour and works as well as railway. The dividend is for a year (since opening of line).

35. The returns are inclusive of Manchester an Birmingham toll.

37. The length stated includes branches.

39. The traffic stated does not include the Leeds and Selby.

TO CORRESPONDENTS.

Investments in Railways.—We are constantly receiving applications for advice with respect to the sale or purchase of particular shares. We have repeatedly stated, that we are very unwilling to offer any opinion upon such points, and, indeed, our readers have the same data as ourselves whereby to form a judgment. Nevertheless, as they *will* have our opinion, we cannot refuse to give it. We wish them, however, to bear distinctly in mind, that we do not, in any instance, hold ourselves answerable for the event. The course we recommend to our correspondents, is simply what we ourselves would follow, were we buyers or sellers under the circumstances detailed by them respectively. With this caution, which we shall take care to keep before parties who apply to us on such subjects, we proceed to notice the applications of the week. We may just add, that the figures and letters have no reference whatever to our traffic list, or to the initials of any railway. We cannot notice questions where this rule is violated. In order that we may not be subjected to needless questions, we must have the name and address of every inquirer, although the answers may be given under a fictitious designation:—H. S. *The new shares were issued at a discount. Both are equally safe.*—J. P. *(Jersey) Of course if the calls are in arrear the dividend will not be paid. We should say, therefore, "pay without delay." The other questions we cannot answer for want of references. We must repeat that, except in very special cases, we cannot answer letters by post*—Mr. T. B *(Blackburn) If we sold any, it would be No. 1 only. The others will, we think, rise. We would not answer for No. 1 maintaining its ground. If our correspondent will name three or four lines for further investment, we will give him our opinion.*—W. C. *(New North road.) We sympathise with our correspondent's misfortunes, and thank him for his good opinion. No 2 would be the best to keep, but as he must sell, it would be a pity to sacrifice No. 1 at present prices, as they will ultimately go higher We think, therefore, he should sell No. 2.*—L. K. *(Brighton.) No. 1 is not saleable at any price. No. 2; of course the shares will be awarded and the money returned. Nos. 3 and 4 will not return more than 4 or 4½ per cent for a year or two, even at present prices*—C. J. *(Bradford.) We think that in a few years (although not immediately) both lines will prove good investments, even to the original holders. To buyers at present prices they must, of course, prove still more advantageous.*—S B. *We still think No. 1 will go lower, though not perhaps "in a few weeks." We see no reason to doubt that No 2 will maintain their present price. We would not purchase No. 3.*—Q. O. *(Liverpool.) We would not sell Nos. 1, 2, and 3; certainly not Nos. 2 and 3. Of the others we would only purchase Nos. 6 and 7. If you happen to hold Nos. 4 and 9, get rid of them at once.*—Argus. *(Wilts.) No. 1; hold on for 7 or 8 months longer. The only other lines in which we would invest at present prices would be Nos. 5, 6, and 7 Even there, no immediate benefit will be reaped.*—X. V. *(Derbyshire.) We would sell Nos. 2 and 4—the latter most decidedly. No. 1 we would return, and purchase No. 3. We do not know the OBJECT of the questions, and therefore must give general answers*—Iota. *We would sell Nos. 2, 13, and 14—increase our holdings in Nos. 6, 7, 8, 11, 15, and leave the rest as they stand for the present.*

A Proprietor *(in the Eastern Counties' Railway) came too late for this week, but shall be given in our next. We shall attend to the request contained in the* private *note*

An Old Subscriber.—*Perhaps the best answer to the inquiry will be found in the following sentence from the Directors' Report, approved of at the general meeting in February,* 1841. *After alluding to a very minute and careful inquiry made by highly competent persons, it is said:*—"*It has been found, after deducting 50 per cent. for the expenses in the conveyance of goods, and 40 per cent. for the expenses of the passenger traffic, that a net yearly income of 219,480l. will remain.*"—See another column.

A. F. *should at least have given us* his *name. He should not impute motives to others without disclosing his own.*

Justice *is very "confidential" (to use his own phrase), but the confidence would have been greater had he given us his name and address. How know we that he is not one of the parties against whom he very properly declaims?*

A Conditional Shareholder *has been very scurvily treated, and we hope he will resist the further imposition now attempted. He will at least have the satisfaction of exposing the schemer in a court of law, should that party venture to go to trial, which we do not deem at all likely. Such is the state of the law as affecting the press, that the mere exposure of such* swindling *tricks as* A Conditional Shareholder *describes, would, in all probability, entail much annoyance, and possibly some pecuniary loss. If it be any consolation to our correspondent and his friends to suffer in company with others, we call his attention to the following fact, which has come to our knowledge within the last few days. A* gentleman, *who writes* C. E. *after his name, undertook—how long ago we shall not say—to complete the survey of a proposed railway, on condition that certain other parties guaranteed the repayment of the money he might actually be out of pocket should the project not be proceeded with. The survey was finished—in how slovenly a manner it matters not—but the scheme remained in abeyance, when, lo! the parties were duly favoured with their Engineer's bill, in which was fully set forth, not only every charge to the full extent (and more than the full extent) usual in cases of unconditional engagement, but the* time *of the great man's assistants was estimated at the rate of about 700l per annum, these same assistants receiving probably a weekly salary not exceeding 1l. 10s. or 2l.! Fortunately, the parties held a written memorandum, signed by the C. E., of the terms on which the survey was undertaken, and of course they resisted the demand. Mr. C. E. has not yet attempted to enforce his claim; will he ever venture to do so? We hope he may.*

Anti Humbug *need be under no apprehension as to the "Aerial Steam Carriage" scheme; we shall put faith in the invention when we see it perform one-twentieth part of what is said of it, and not before.*

"Statistics of the Greenwich Railway."—*We have received a small pamphlet of 24 pages under this title. It seems to be printed for the Company, as it has no publisher's name attached. It will be found to contain a great deal of useful information as to the Company's capital, &c., very concisely expressed.*

Preston and Wyre Railway Company.—*We omitted in our Report of the meeting to mention amongst the names of the London Directors resigning, the name of F. Cortazzi, Esq.*

H. W. *contains nothing worthy of publication. We are sorry for it, as we should be glad to oblige him, but we must have somewhat better than mere "words."*

Beacon *is too long for insertion in our present number We shall endeavour to make room for it next week.*

P., *who threatens to withdraw his patronage because we do not think fit to insert his communication, is informed that we have sanguine hopes of being able to exist, even should so terrible a calamity overtake us. As a matter of policy, we think we are in the right, for were we to insert P's lucubrations, and thereby keep P. our friend and subscriber, we should run the risk of losing (and certainly should deserve to lose) ten other friends and subscribers, for having occupied our valuable space with such stupid balderdash.*

S. P. B.—*Mr. J. H.* does *retire in February.*

C. M.—*We should say that 8l.* more *would be called for—and that even* that *would not suffice.*

A Constant Reader. *(City.)—The matter has already been discussed very fully, and our correspondent throws no new light on it.*

The attempts of Quiz *to be facetious are by no means successful.*

Thanks to Mr. A. *of Leicester Such communications are always welcome. Also, to* An Admirer, *and* E. F.

G. J. *as soon as we can find room. The question, however, has already been fully discussed.*

West Cumberland Railway.—*We are reluctantly compelled to hold over the letter of* An Inhabitant.

The letters of A Well-Wisher to Railways, R. W. T., A., *and others, are in type, and shall appear next week.*

THE RAILWAY JOURNALS.

The Stamp Returns for April, May, and June, just published by Order of the House of Commons, enable us to complete the Returns for the year ending the 30th of June last. The results, as affecting the railway journals, are as follows:—

RAILWAY TIMES.....	**146,374**
Railway Magazine	68,500
Majority in favour of the RAILWAY TIMES ..	**77,874**

from which are to be deducted 10,874 Supplement stamps used for double numbers, still leaving the ordinary circulation of the *Railway Times* just about double that of its contemporary.—*September* 17, 1842.

THE RAILWAY TIMES.

SATURDAY, DECEMBER 10, 1842.

THE recent railway meetings in the north demand, from their importance, more notice than we have yet been able to bestow on them. The discontent which exploded at those meetings

Digitized by Google

had long been smouldering, and we lent our humble aid to fan the flame. We did not, however, expect, far less wish, so violent a convulsion; and we are not without fears, that in the agitation now existing, some may be thrown into positions for which they are unfit. Whether these fears are or are not well founded, time alone can decide; but we feel assured that it will not be easy to replace Mr. DICEY, Mr. CROPPER, Mr. RATHBONE, and others who are to secede from the Direction of the Midland Counties' Railway, by men equally distinguished for knowledge, talents, and high honour.

In paying this tribute to the characters of those gentlemen, we do not wish to be considered the apologists of the Boards now virtually dissolved. These Boards, in common with too many others, erred grievously in giving such unlimited powers to their Engineers and lawyers; by virtually abandoning their functions of control; by submitting their manly understandings and sound judgments to the bondage of professional mystification and professional arrogance, and in giving full scope to professional extravagance. To this fatal confidence is owing much of the embarrassment in which Railway Companies are involved. If all the sums lost through the profuseness and errors of legal agents—through the blundering ignorance of boy Engineers, through the rage for wild experiments and useless decorations, and through the actual dishonesty of subordinate officials, screened from detection by the mantle of infallibility thrown over their departments by the Engineers-in-Chief, with the acquiescence of the Directors—if all the sums thus squandered could be recovered, the amount would form a fund, which, if applied to the necessities of the suffering Companies, would go far to remove their difficulties. This being impossible, the work of retrieving their affairs must be pursued in some other way. We do not, however, think that those have started on the right track who have commenced by exchanging men of undoubted talents and worth, and (whatever may have been their former mistakes) now enlightened by experience, for men whose qualifications are, to say the least, very questionable. We have also, as we have more than once hinted, very grave doubts as to the wisdom of many of the proposed reductions. We admit that the number of persons employed, and the subdivision of offices may at the outset have been greater than is needed now that the officials have become skilled in their duties, and the exigencies of the establishments are better known. There may, therefore, be few railway establishments, as at first constituted, which might not be safely reduced; but the utmost retrenchment, compatible with safety, can go but a little way towards realising the original expectations of the shareholders of the non-paying lines. The new Boards may attenuate their establishments until they become as transparent as their dividends; they may prove their claims to be styled Reformers by pointing to a Secretary out at elbows, and to squalid porters starving on 10s. a-week; they may trust the lives of passengers to boys, inspired with caution and vigilance by the dread of losing the sumptuous pay of 1s. per day; they may rejoice in rails so undulating, that to the fundamental discomfort of the passenger the carriage seats, worn out by continued friction, may require to be renewed weekly; they may send out dirty carriages unexamined, and rickety engines unrepaired—these things they may do, and what will be the benefit? The addition of a few shillings to the dividend, at the risk of losing more by accident than they save in salaries, and of bringing railways into a discredit even more injurious than the loss in money, to say nothing of the disgraceful disregard of that attribute which more than any other ought to distinguish a Christian community—a sense of moral responsibility.

But retrenchment carried even to this perilous extent can do but little for the proprietors, unless other sources of revenue be explored. A reduction of fares and tolls, by leading to new accessions of traffic, might do much, but a remedy so slow in its operations, and so doubtful in its effects, is ill suited to the natural impatience of men whose hopes have been so long deferred.

Our own opinion is, that there are many Companies which must create the means of their prosperity by attracting an industrious population to the localities through which their railways run. This can only be done by bold, decisive, and self-denying measures; by the sacrifice of the present profits, small as they are; by being for a time satisfied with such a revenue as will suffice to meet an outlay brought down to the lowest limit of prudent economy; and by a liberal encouragement of every collateral undertaking tending to promote the welfare of the line.

There are other railways so situated in relation to each other, and to great and successful lines, that the proprietors might easily secure all the benefits to be derived from abandoning their isolated positions for a system of concentrated Management—from being amalgamated as it were, into one great railway under the control of one Board of Directors. That such an arrangement might be easily effected by men sincerely desirous of bringing it about there can be no doubt, but we fear that the proprietors must suffer a few more half-yearly disappointments before the pressure on the Directors will become sufficiently great to make them resign their authority, their emoluments, and their patronage. It may not, however, be without its use to point out some of the modes in which the union we recommend might be arranged.

In cases in which the non-paying railways run into or communicate with lines which do pay, the proprietors of the latter might take the former on lease, guaranteeing to the lessors a certain annual rent, and also a certain portion of the sum by which the net earnings might exceed the amount of this rent; or if the guarantee of a rent should be objected to, the net profits might be divided between the two Companies in equitable proportions—the lessees to be in both cases responsible for the whole expense of working the traffic and maintaining the railway in an efficient state. The lessors would have to dispose of their stock of carriages and engines; and as the lessees would only require a part of it, the remainder might be sold at reduced prices to other Companies, the prices being regulated by the extent of deterioration from previous use.

In order to develop the full advantages of the concentrated system of management, it would be necessary to work all the united lines with one stock of engines, carriages, and waggons, as well as with one staff of such officers and servants as are from the nature of their duties itinerant, or whose duties might be performed in a central office. Great nicety of arrangement would therefore be necessary in order that the actual cost of working each line might be ascertained with precision. It would be requisite to keep a separate account for each engine, carriage, and waggon, showing the cost of its repairs, and the work done, or miles run, by it on each line. A rate per mile for each engine and vehicle would thus be obtained, which, if multiplied into the number of miles run by it on each line, making due allowance for difference of gradients, would give the exact proportion chargeable to the Companies respectively for locomotive power and carriages; and the salaries and wages might be divided according to an analogous scale. The other divisions of expenditure—such as the cost of maintaining the permanent way, and the wages of local clerks and servants, &c.—might be kept quite distinct in each line.

There might, perhaps, be some difficulty in determining the exact ratio in which the profits should be divided between the lessors and the lessees, but the latter should be content with a very moderate share, on the ground that while the expenditure on their own line would be lessened by concentrated management, they would incur little risk by being responsible for the expense of working the leased railways, there being at present, if any faith can be placed in published accounts, no railways worked at a positive loss.

If, however, it should be found impracticable to effect the desired object by leasing the lines, there still remains the alternative pointed out by Mr. BAXENDALE at the South-Eastern meeting last week. He recommends a federal union of railways, without any one Company being responsible for the expenses, or being participators in the profits of another Company. The Board of Directors would in this case be, we presume, composed of deputies from each of the confederated Companies; and the number of votes assigned to each railway would, no doubt, be determined by its magnitude and its traffic. Whichever of these two modes of bringing about this beneficial union might be selected, the arrangements for arriving at a just apportionment of expenses already described would be applicable. We confess, however, that though from concentrated management, whatever form it may take, much good would result, we should prefer to see it effected in a way which would give some great leading Company an absolute control over the inferior railways, and a direct interest in working them at the lowest possible cost.

To dwell on the advantages which would result to the public, and to the Companies, from the measures we advocate is almost superfluous. It is no exaggeration to say that the expenses would be reduced one-third. The feeble, vacillating, penurious management which now characterises unsuccessful railways, would be superseded by an energetic Executive, uniform in its regulations, decided in its measures, and powerful for the protection of the public and the shareholder. The petty jealousies of rival Boards, which have so seriously interfered with the prosperity of many Companies, would disappear; and when long lines of communication were once subjected to the control of one liberal and enlightened Board of Directors, no doubt the experiment of low fares would be tried under the most favourable circumstances, and with the full certainty of success.

The union of adjacent railways, under a centralised Management, is therefore a consummation devoutly to be wished, by the passenger, as leading to a reduction of fares; by the proprietor, as the sole means of retrieving

Digitized by Google

his losses; and by the nation at large, as the *only* certain mode of completely developing the incalculable advantages of the new mode of locomotion.

THE very important case, of which we gave a full and exclusive particulars last week, relative to the committal of Mr. GEORGE ELMORE, Jun., for trial at the Middlesex Sessions, on a charge of felony, for breaking certain locks on the London and Birmingham Railway, is still undecided, and consequently we are again *with*held from entering into any minute discussion of the matter at issue.

It will be seen, however, from the notice which we give elsewhere, that the Directors of the Company have waived the charge of "larceny," and confined themselves to that of "misdemeanour"—a charge which Mr. ELMORE (a true bill having been returned against him by the Grand Jury) will have to meet at the next sessions. Perhaps, under all the circumstances, and looking at the novelty of the case, it is just as well that a charge which, if substantiated to the satisfaction of a jury, must have resulted in the incarceration of the offender, should not have been pressed; but we take it for granted, that a recurrence of the offence will not be allowed to pass so lightly. We are sure that Mr. ELMORE himself would be the last person to impute anything like vindictive feelings to the parties who move in this prosecution, and that he will duly estimate the grounds upon which the more serious portion of the accusation has been abandoned. At the same time, we think it would have been quite as well if Mr. Serjeant ADAMS, the Chairman of the Middlesex Magistrates, had spared his comments on the clauses of the Company's Act. It is to be presumed that the legislature were fully aware of what they did in conferring upon Railway Companies the powers and privileges with some of which the dispensers of justice, metropolitan and provincial, are so ready to find fault; and, perhaps, Mr. Serjeant ADAMS would have better discharged the duties of his office by enforcing the law as he found it, than by setting himself up as a judge of what amount of authority ought, and what ought not, to be entrusted to Railway Managements. The learned Serjeant's remarks clearly point out *his* impression as to the offence charged upon Mr. ELMORE, and no doubt it will have considerable influence in the future consideration of the case.

Venial, indeed, does any offence seem to many of Mr. Serjeant ADAMS's colleagues in the magistracy, where a Railway Company is opposed to a gentleman sportsman. The public, however, are not likely to take a similar view of transactions such as those which Mr. Serjeant ADAMS thinks "afford no grounds for a charge of felony." They reflect that an act like that imputed to Mr. ELMORE may result in the destruction of life to a great extent, and instead of condemning, they will applaud, the salutary strictness of the Railway Company who have the courage to bring the culprits to justice—and who are bound to do so, not only to protect the passengers who commit their safety to their hands (which is unquestionably the main consideration), but to protect themselves against the awards of Coroners' juries, who may have a fancy for the imposition of heavy deodands.

For the present we refrain from entering more at length into this matter, merely expressing a hope that in every future case of the kind, not only the Birmingham Company, but every other Railway Company in the kingdom will, in spite of the dictum of Mr. Serjeant ADAMS, prosecute the offender to the FULL EXTENT of their several Acts of Incorporation, even should the party have to pay in person (or perhaps we should say, *in order that* he may have to pay in person), for conduct which, whether resulting from wanton malice or boyish thoughtlessness, might be attended with consequences so lamentably disastrous.

While on the subject of railway trespass, we would call attention to a case briefly reported under the proper head, from which it would appear that certain sportsmen claim not only to cross a railway, but to pass along it, on pretence that certain rights are still retained by the Lord of the Manor, notwithstanding the Railway Company may have paid (and no doubt in the case referred to *did* pay) very handsomely for the soil. If the claim now attempted to be set up be sustained, the proprietors of the Bolton and Leigh Railway may at once shut up their line, for they can never call it their own, nor take efficient means for the protection of their passengers.

Another case noticed under the same head shows very clearly the *aminus* of certain justices when Railway Companies are the complainants. It appears that a man named DON was taken before a personage designated in the report as "Bailie ANDERSON," charged by the Dundee and Arbroath Railway Company with drunken and disorderly conduct. "It was clearly proved, by the evidence of several respectable witnesses upon oath, that DON was very tipsy, and made use of abominable and abusive language to the Company's servants;" yet this most sapient Bailie, "on the statement of DON's wife (for she was not put upon oath) 'that her husband had just had one glass of whiskey that day,' dismissed the case!" Who is it that has the supervision of these Bailies? Assuredly Bailie ANDERSON is out of his sphere when placed on the bench to administer the *law*. Well may the Editor of the journal from which we have copied the case express surprise at such a decision as this (if indeed anything connected with Justice's justice can now-a-days excite any feeling but contempt and disgust), and most cordially do we concur with him when he says:—

"The Acts of Parliament regulating the management of railways, enact severe penalties on trespassers and disorderly persons, and it is only by enforcing those penalties that the public safety can be secured; but a few more such decisions as this, and we will not be surprised to find Railway Companies showing a degree of apathy in incurring the expense of prosecuting offenders against their regulations. The mere *statement* of the offender's wife, a very incompetent witness in the matter, is made to outweigh the strong and conclusive evidence of several respectable witnesses on oath. What would Bailie Anderson and the community generally have said had this offender been allowed to go by the train in his then state, and an accident had befallen him? The negligence of the Company, of course, would have been dilated upon, and their conduct reprobated as highly culpable; and yet, when they show a regard for the safety of the public by incurring the expense of bringing offenders to justice, their complaints are slighted, and offences involving the most serious consequences entirely overlooked. This ought not to be; the public safety demands otherwise."

WE promised the week before last to revert to the subject of the official correspondence between certain proprietors of the Greenwich Railway, and the Directors of the Croydon and Greenwich Companies, upon the toll question. We certainly hope that the gentlemen who have taken so commendable a part in the affair will not allow it to rest here, for we cannot admit the assertion of the Greenwich Directors, that the great body of their proprietors is prepared to support them in their present suicidal course.

Experience has abundantly proved that, in the case of a short metropolitan traffic, high fares will not bring a large revenue; and in proof of this we may advert to the experiments which have been tried upon every metropolitan line, without exception—the Croydon, the Greenwich, the Blackwall, and the Northern and Eastern. Indeed, we may safely go further and affirm, that nothing but the very lowest possible fares—lower, in fact, than any which have yet been tried—will ensure the prosperous working of these lines of railway. There is, we believe, scarcely any limit to the price at which passengers may be carried profitably on a railway, if we can only ensure sufficient numbers; and that sufficient numbers are *not* to be obtained, can only be proved when the lowest possible fares have been *tried* without a profitable result. We are of opinion that the partial attempts which have been made at lower charges were inefficient, just because they have not been carried far enough, or have been coupled with restrictions and inconveniences to the public, and thereby have been rendered ineffectual; and we are borne out in this opinion by the fact, that in every case in which a recurrence has been made from one of these inefficient attempts to the old system of higher fares, the failure has been complete. Witness the cases of the Croydon, Blackwall, and Greenwich Railways, where the number of passengers has fallen off so much, in every instance, as to make the weekly receipts much less at the high than they were at the low charges.

If this position be correct, and we think it incontrovertible, it must be equally clear that railways so situated as to be subject to the necessity of these *low* charges to the public, cannot, by any possibility, afford to pay a high rate of toll, and that the imposition of such high rate of toll must effectually destroy their traffic. Thus we see that the Croydon traffic, or at least all the intermediate traffic between Croydon and London, is about to be stopped altogether, and all the low-priced traffic of the South-Eastern line is stopped at New Cross until the projected terminus at the Bricklayers' Arms shall have been obtained. There can be no question that if the low charges established on the South-Eastern line should be found to answer, and the weekly receipts of that line should exceed, as they soon may, those of the Brighton, a change will be loudly called for on the Brighton line also, and another low-priced traffic will be diverted from the Greenwich Railway.

And what are the Greenwich Directors about all this while? Consoling themselves with the fancied security of their monopoly "*toll gate*," and setting the other lines at defiance—clamouring about the "infamous conduct of the Croydon Company," in objecting to pay the 4½d. toll after all the enormous outlay of the Greenwich Company, and in presuming to divert its traffic! Cannot those gentlemen perceive that this is no question of voluntary action on the part of the Croydon Company, but that it is utterly *impossible* for that Company to carry on its traffic profitably except at such fares as are perfectly incompatible with a fixed toll of 4½d., or anything approaching to it—in fact, that such a toll upon the number of passengers *necessary* to the Croydon Company's profits would amount to a larger sum

Digitized by Google

than the Greenwich Company ever contemplated receiving from all the Companies put together? And is it not equally clear that, if this case can be proved with respect to the traffic of the Croydon Company (that is, *the impossibility* of their being subjected to a toll of this description), it can be equally proved with respect to all *low-priced* traffic, come from whence it may; and that this fact once proved, namely, *the impossibility*, the right of the Greenwich Company to the monopoly becomes altogether nugatory? Suppose that Parliament *has* granted to the Greenwich Company the right of levying a toll to this amount for the purpose of indemnifying them for a certain outlay, if it can be proved that traffic *cannot* be carried under such a toll—that on the contrary the Greenwich Company might get a very fair remuneration for such outlay by a much smaller toll, under which traffic *could* be carried—must not this opportunity be afforded, or will not the legislature be inclined to grant to other Companies the power to evade this toll, to avoid this impossibility; or is the public convenience to be permanently sacrificed to the fancied advantage of the Greenwich Company?

We counsel the *proprietors* of the Greenwich Railway to be wise in time. An interference with the policy of their Directors is as necessary in their case as an inquiry into the expenditure of other Companies has lately become imperative in theirs; and we recommend strongly that a requisition be immediately got up for a public meeting, and that, if necessary, a Committee of Inquiry be appointed, which may or may not end in the superseding of the present Board of Direction—the lamentable state into which the interests of the *old* proprietors in this undertaking has fallen, leaving no hope of resuscitation but by some such measure. Of course the present Board can have no objection to a Committee of Investigation, seeing that it was thus they themselves got possession of office.

THE career of Mr. GEORGE ROSS, in connection with the Duke of Cornwall Harbour and Railway scheme, of which we believe he was the concoctor, and at different periods the Secretary, Managing-Director, and factotum, now approaches a close. It will be seen from the report of Thursday's meeting, given in another page, that Ross's large claims against the Company have disappeared, under the scrutiny of a gentleman to whom they were referred, while, instead, a balance of about 500*l.* has sprung up on the other side!

The annoyance, trouble and expense, which this person has caused to the *Railway Times*, because we performed fairly and impartially our duty as honest journalists, are well known, and need not now be insisted on. Our reason for recurring to the past is, that we may earnestly recommend to the public, and particularly to those who feel inclined to put faith in plausible prospectuses, a full inquiry into the history of this Cornish concern, from its first appearance in the market up to the present day; and greatly mistaken shall we be if they do not elicit from the examination much interesting and useful information with reference to a class of projects of which Sir PETER LAURIE and the *Times* take especial cognizance.

We hope some one will venture to write fully and faithfully the story of this Duke of Cornwall and Launceston and Victoria Railway roject. Looking at what *we* have suffered, it might be a work of peril; but the benefit resulting therefrom, to the community, would be large and lasting.

IF it were our practice (which most assuredly it is *not*) to keep back communications which seem to make against our own opinions, the letter of a correspondent, who steps forward in vindication of the character and conduct of Mr. SWANWICK, the Engineer of the North Midland Railway, would claim exemption from suppression. It is so courteous and complimentary to ourselves, and so earnest and kind towards its object, that to refuse to publish it would be ungracious in the extreme.

Having done so, it probably is not required of us to say much on the matter of which it treats. We need scarcely state, that we meant no imputation upon the talents or character of the gentleman whom our correspondent so highly lauds, when we expressed an earnest hope that the new Directors would take an early opportunity of removing so heavy a charge as the Engineer's salary from the current expenditure of the concern. What we *did* say, and what we would now with double energy urge upon all concerned, was this—

1st. That with common care there would not have existed any disputes with the contractors, so as to have rendered necessary the continuance in office of an Engineer at a high salary;

2ndly. That to the negligence of the Engineering Department, in not properly and fully drawing out the various contracts, or in not seeing them faithfully and impartially enforced, are to be ascribed the present disputes;

3rdly. That Mr. SWANWICK, as Acting Engineer, was, or ought to have been, a principal, if not *the* principal, party in arranging definite terms with the contractors; and that, therefore, to allow him *any* salary, pending the settlement of disputes which his own or his colleagues' want of attention had been instrumental in creating, was unjust to the shareholders, and was holding out a premium to protracted litigation; and,

4thly. That even admitting the necessity of Mr. SWANWICK's services, no man in England was worth 1,000*l.* a year to the North Midland Railway Company, were he to devote his whole time to the interests of the Company, and therefore that the giving up of 200*l.* out of 1,200*l.* was a mere *ad captandum* act, which ought to have no influence with a Board of Direction so enthusiastic in the cause of economy as to cut down the wages of a policeman or a porter from 20s. to 19s.

Does anything that our correspondent advances affect in the smallest degree any one of these propositions? His tribute to the talents, and moral worth, and persevering assiduity of Mr. SWANWICK, is hearty and eloquent, and far be it from us to say that it is not amply deserved. We trust that we, no less than our correspondent, are "FRIENDS TO JUSTICE AT ALL TIMES," but in this case there is justice due as well to the unfortunate shareholders of the North Midland Railway as to their Engineer—with whom indeed in his professional capacity, and not with Mr. SWANWICK individually as a gentleman, we, as public journalists, have to do. It may be (and we have no doubt it is so) that Mr. SWANWICK had, as our correspondent hints, "coadjutors and advisers," a "principal" and "masters," while the works of the North Midland Railway were going forward, but never, to our knowledge, has Mr. SWANWICK shown that his own better judgment was over-ruled by others; and until he does so, he must bear, as an individual, his share of all the blame which may justly be imputed to the body collectively. And in Mr. SWANWICK's case, the cause for public censure is peculiarly obvious, seeing that he—as an Engineer at 1,000*l.* a year, for years after his services *might* have been, and ought to have been, dispensed with—is profiting by the inattention or ignorance (to give it no harsher name) of those who, along with himself, were the active Managers during the construction of the works, whether as Directors or Engineers.

THE distant shareholders in the London and Brighton Railway are, we rejoice to see, shaking off their apathy. We have been favoured, from a quarter on which we can rely, with the following:—

"The proprietors residing in York held a meeting on Monday last, for the purpose of taking into consideration the affairs of the Company, and to advise with each other as to what steps it was desirable to take at the next half-yearly meeting, whereby that confidence and good understanding which ought on all occasions to exist between Directors and shareholders might be restored. The meeting was attended by nearly all the shareholders in York and its vicinity, holding between 1,000 and 2,000 shares, who formed themselves into a Committee, whereof Sir JOHN SIMPSON was chosen Chairman, and Mr. BAKER Honorary Secretary, to whom all communications are to be addressed. It is the intention of the Committee to correspond and unite with the shareholders in London, Leeds, Manchester, Liverpool, Bristol, Bath, Sheffield, &c., for the purpose of agreeing to such propositions as they may think best conducive to the prosperity of this hitherto ill-managed undertaking. The meeting was very ably addressed by the Chairman, Aldermen Meek and Hotham, Thomas Laycock, B. T. Wilkinson, George Dodsworth, and William Bloyden, Esqrs.; and was attended by a gentleman from Leeds, deputed by the shareholders in that town to express their readiness to unite with the shareholders in York, in supporting such measures as may, after mature deliberation, appear most desirable. We hear it was the opinion of the meeting that a Committee should be proposed at the next half-yearly meeting, with full powers to examine the accounts and vouchers, and to settle the disputed account between the Brighton and the South-Eastern Companies, for that portion of the line made at their joint expense; to examine into the fares and charges at present made for the conveyance of passengers and merchandise; if they advise any alterations in the number of trains in daily use upon the line, and if an arrangement can be come to between the three Companies, respecting the working by one locomotive power that portion of the line between London and Croydon, as recommended by the Chairman of the South-Eastern Railway, and if any reductions can be made in the general expenses of Management."

A similar meeting is to be held at Leeds on Tuesday next.

We hope and believe that the *London* shareholders will not be less energetic than their fellow-sufferers in the provinces. They have no time to lose. A correspondent, who signs himself "A SPY IN THE ENEMY'S CAMP," assures us that already the Directors are straining every nerve to secure proxies for the meeting in February next. It is for the proprietors

to look to it in time. Forewarned is forearmed.

We trust that we shall have many such *meetings* as that of the spirited gentlemen of York to place on record long before February. In the meantime, we would suggest to several *correspondents* who ask our advice as to the disposal of their proxies, *at once* to put themselves in communication with the York Committee.

MR. WALLACE, whose services in the cause of Post-office reform both in Parliament and out of it are well known, has addressed a letter on the subject to the local journals. One of these journals thus notices the matter:—

"It may be in the recollection of our readers that the demand made upon the Post-office by the Directors of the Edinburgh Railway, for *three* services daily, was upwards of 2,000*l.* per annum. On the Liverpool and Manchester Railway there are *six* services daily to each of the two great towns on the line, and *three* on Sunday, and for this extent of accommodation the whole expense to the Post-office is only 733*l.* 17s. per annum. If Mr. Wallace's statement is correct, either the Liverpool and Manchester Railway Company are sadly underpaid, or the demand of the Edinburgh Railway Company is one of the most gross pieces of extortion that ever was attempted to be practised upon the public. Such at least seems to be the first blush of the affair; but we shall wait to ascertain whether the Edinburgh Directors have any explanation to offer that may lead us to think otherwise. We begin to suspect, whatever may be the faults of Post-office management, that the Postmaster-General is not the only party that must be blamed for the present discreditable state of the mails between this city and Edinburgh. The Railway Company have obtained a certain monopoly, and we fear that, like the bulk of monopolists, they are prepared to use it for their own advantage, without much regard for the interests of the public. For a time they may proceed unchecked; but they may depend upon it that ultimately conduct of this description will recoil upon their own heads, and lead to a remedy anything but pleasing to those who have been the aggressors."

A correspondent of the *Scotsman*, an Edinburgh paper, says:—

"I wish you would keep at the Greenock Railway for having no Sunday trains. Their stock is falling, their dividends are failing, their funds are exhausted, and Parliament is to be applied to, to grant them an additional capital; and, in spite of all these failings and fallings, the Directors persist in so mismanaging this line, as to force the Postmaster-General to use a gig to convey the London mail to Paisley and Greenock, and force the shareholders to lose the fares of several thousands of persons who go on foot every Sunday between Glasgow and Paisley, because, forsooth, the Sabbath may be desecrated on the turnpike road without offending the Deity, but not on the Glasgow and Greenock Railway. I am confident we shall get a good mail communication now between Glasgow and Edinburgh, and better hours for passenger trains too."

A correspondent has brought under our notice a very sensible article which appeared in the *Standard* of the 28th ultimo, under the head of "Money Market," but which we did not see at the time:—

"The grievances connected with the transmission of the mails from Manchester continue to be the subject of much anxiety and annoyance to the great and important community interested in the matter. The only obstacle to the application of a prompt and satisfactory remedy is the reduced state of the Post-office revenue; but as it appears that the Postmaster-General has the power, not only of fixing the hours of departure of the mail-trains, but also of submitting the question of payment to two arbitrators, one being of his own selection, it is confidently hoped that a rate of charge may be agreed upon alike satisfactory to the public and to the Railway Companies. The necessities of the Post-office are, it is true, very great; but facts have been adduced since the new arrangements have been under discussion, which go far to show that these new arrangements, so far as they have reference to Manchester, if they economise expenditure, are calculated at the same time to decrease the revenue even below its present impoverished condition. In addition, however, to the strong claims, both of convenience and policy, which would thus seem to require a return to the railway system so recently abandoned, the Railway Companies concerned contend that there are strong and peculiar reasons why *their* individual interests should not be overlooked by the Government—why they should not lose the profit, if there be any profit—of carrying the mails. It is, they assert, a fact beyond all question or doubt, that the facilities for the conveyance of troops, &c., afforded by the railways during the late riots, were the principal means by which the disturbances were so speedily and so effectually put down. Whilst, however, the railways saved the country a vast expenditure of money, if not of life, their own receipts, they say, were materially curtailed, and that too, at the season of the year most favourable to railway traffic. The railways in the manufacturing districts were all severe sufferers; but the line which effected most public good, and which consequently suffered most, is the very line which is the sufferer by the new arrangements of the Post-office. It is estimated that the Manchester and Leeds Railway, which is the one referred to, experienced a loss of 5,000*l.* or 6,000*l.* by the riots. This statement is not made in order to justify exorbitant demands, but it is argued that, as the Post-office have the effectual check on the amount of remuneration to which we have already alluded, such important public services, rendered by parties themselves subjected to heavy pecuniary loss, entitle those parties to consideration, when public money is to be paid away in return for the performance of public duties. Such are the arguments of the Railway Directories and proprietaries: we make no comments ourselves."

THE proposed branch line from Peterborough to the Blisworth station of the London and Birmingham Railway, has met with the decided approbation of the inhabitants of Northampton, Peterborough, and other towns on the route, as expressed at public meetings. We had intended to go somewhat into detail, but are prevented by want of space. We shall return to the subject.

As everything tending in the smallest degree to throw light upon the causes of railway accidents cannot but be of interest and importance to Boards of Management, and to the public at large, we give up a very considerable portion of our space to-day to a report of a trial in the Court of Queen's Bench, arising out of the late accident on the Brighton Railway, although we cannot say that the *cause* appears, even now, much clearer than it was before

It will be seen that Mr., or as he is usually styled, Dr. CARPUE, has obtained a verdict, with 250*l.* damages (subject to a decision on a point of law), against the Directors of the Company, for injuries received on the occasion of the accident. The damages are not excessive, supposing culpable negligence to have been brought home to the Company or their servants; but we do not think that the evidence will bear out such a charge, and therefore we are sorry that any damages at all have been awarded. The accident was a most serious and very deplorable one; but as regards the old gentleman, the plaintiff in the late action, it is manifest that he was "more frightened than hurt." The idea of bringing forward evidence with a view to prove that Dr. CARPUE had suffered in a pecuniary way, from not being able to attend to his professional duties, was most absurd—the Doctor, a septuagenarian, having long since retired from the toils of business, with great credit to himself, and, we believe, with a very handsome provision honourably acquired. Dr. CARPUE was till recently a Director of a Railway Board, although the concern with which he was connected, the West London, has never yet got so far as to risk the life or limb of a passenger.

It will be seen, from a notice elsewhere, that an accident has occurred to an Aylesbury train on the London and Birmingham line. One of the sufferers having unfortunately since died, we refrain from making any remarks till after the Coroner's inquest shall have been held. We understand that the Directors of the Company yesterday dispatched a special engine with Mr. LAWRENCE, the eminent surgeon of St. Bartholomew's Hospital, to visit the parties injured.

WITHIN the last few the days, original shares in the London and Birmingham Railway have been sold in the market at a *premium* of 10*l.* per share upon 90*l.* paid up, or considerably upwards of cent. per cent. About two years and a half ago, when the same shares reached 100*l.* premium, the members of the Stock Exchange hailed the event "with three-times-three." Yesterday the shares of the Birmingham and Grand Junction Railways were sold at precisely the same figure, namely, 190*l.* per share; but in the case of the latter, the amount paid up is 100*l.*

—o—

WE made some remarks last week upon the novel, and, as it seems to us, most objectionable plan now springing up, of share-brokers converting their Circulars into critical papers commendatory or condemnatory, as the case may be, of particular railways and particular Engineers. We have something further to say on the subject, but shall defer it for the present. A letter from Mr. Allsop in reference to *his* Circular will be found elsewhere. It does not require any comment from us. Messrs. Watson and Co., of Leeds, the other firm named in our last week's article, have not addressed us directly, but we find in their printed Circular, dated on Monday last, the following passage:—

"What we said in our Circular a month ago, respecting the Southampton Railway and Mr. Locke, seems to have drawn upon us some very severe strictures by the Editor of the *Railway Times*, to whom we shall make a formal reply through the same channel as that in which we are so furiously attacked. It may be looked upon by some as not a little *temeraire* on our part, "to break a lance" with so formidable an opponent, but we shall not for a moment shrink from the task. Our engagements may be such this week as to prevent our letter appearing in the *Railway Times* next Saturday, but most assuredly it will the following, if the Editor does not object to insert it, of which we have no fear."

Messrs. Watson's "reply" shall, of course, have insertion whenever it comes to hand—with such remarks of our own as it may seem to require.

—o—

THE local papers contain an account of a visit made to the unfinished works of the Eastern Counties' Railway by the Directors on Wednesday last. Thirty miles (beyond the present temporary terminus) were passed over by an engine and carriage, and the Directors are said to have ex-

Digitized by Google

pressed much satisfaction with the condition and character of the works. It is added that a few weeks of fine weather would suffice to complete the whole line, but under present circumstances, Mr. Braithwaite, the Engineer, deems it more prudent, and more consistent with true economy, not to press forward the works too rapidly.

—o—

We learn from the *Essex Mercury*, that such is the demand for building-ground near the Colchester terminus of the Eastern Counties' Railway, that "400*l.* an acre has been refused for a piece of ground adjoining the road, being 300 per cent. more than it would have fetched previously to the railway being thought of." After all, it would seem that the good folks of Colchester will not suffer by the railway, and their memorials to the Company and to Earl de Grey might have been spared.

RAILWAY OFFENCES AND OFFENDERS.

John Mooton, the man charged with an attempt to upset a train on the Chester and Birkenhead Railway, as alluded to in our last number, has been fully committed for trial. The train in question left Birkenhead as usual, a few minutes before 7 o'clock, to proceed on to Crewe, where it joins the Grand Junction London train, which arrives in London about 5 o'clock in the morning. On the train reaching Heath Lower Bridge, near the Sutton station, about half way between Birkenhead and Chester, a fearful concussion took place, and on examination there was found a sleeper about nine feet long, which had been placed in the ground at an angle of 45 degrees, so as to cause the opposite end to come in contact with the engine; and it had penetrated the engine, but most fortunately not the boiler. As it happened, however, the injury to the train was not so extensive as to prevent it passing on to its destination. Information was soon conveyed to Mr. Alfred Yarrow, the Engineer, who immediately proceeded to the spot where the accident happened, when he found the piece of wood which had caused the accident as already related, and which had been broken in two by the force of the blow. There was also a pick, supposed to have been used for the purpose of placing the sleeper, lying on the rails. Near the spot were the footmarks of a person, and these were traced a short distance along the line, up the embankment, and near to the cottage of a labouring man named Mooton. In consequence of this he was taken into custody, and the boots he had on exactly fitted the marks above-mentioned—one of them having a curious-shaped patch on the sole. When before the magistrates, one of the railway constables, named John Davies, said that he was in the service of Mr. John Graham, who had contracted to keep that part of the line in repair, and that in the performance of his duty he passed along the line where the accident happened about half-past 6 o'clock, and all was then safe. About 6 o'clock the prisoner called on him, and asked what time he was going on duty. Witness replied in about half an hour, on which he went home. After passing along the line witness reached the Sutton station about 20 minutes before 7. The witness then deposed to hearing of the accident about a quarter past 7 o'clock, and to noticing the footmarks as already related. On the day previous to the concussion, the prisoner came up to witness at the spot where it took place, and, in the course of conversation, said, "I wish the rails were turned upside down, and the sleepers topmost—it would make some work." On a subsequent examination there was some further evidence adduced respecting the impressions of the boots of the prisoner on the ground adjoining the spot where the accident happened, and William Dixon, the driver of the engine at the time of the collision, gave a more detailed account of the collision, from which it appeared that the shock to the train had thrown both him and the fireman down, but without doing them any other injury. Mr. A. Yarrow also stated that the sleeper was placed in such a position that if it had only been 4 inches in the ground, it would have stood at an angle of 45 degrees; but it would seem, from his statement, that the ground was quite soft in that place, and the engine had driven the timber 4 feet into the ground, or most probably the machinery would have been broken to pieces, and the fire scattered among the third-class passengers, of whom there were about 30 in the train that evening. The prisoner being asked what he had to say, made a long statement as to where he was that evening, and added, that he had been at the place the day previous to the accident, which would account for his footsteps being at the place. He called one witness, but his testimony did not materially alter the case against him. He was then committed for trial, as before stated.

Since the above was in type we have been favoured by Mr. Yarrow, the Company's Engineer, with the following account of the occurrence:—

"On the evening in question, as the mail-train was on its way to Chester, and proceeding with considerable velocity, it came in contact near Heath-lane Bridge with an impediment which nearly threw the engine off the rails, but was providentially accompanied with no other consequences. A slight stoppage took place to ascertain the cause of the collision, when the train resumed its journey to Chester, at which place it arrived in good time.

"On being informed of the circumstance, I at once proceeded to the spot, and found that, in the *centre of the way*, the ballast had been disturbed, and a sleeper about 9 feet long had been placed with one of its ends under one of the transverse beams, and resting upon a quantity of broken rock, at an angle of about 35 or 40 degrees. Having satisfied myself on this point, which is fairly assumed from several fragments of the *end* of the timber being found firmly wedged in the front of the engine, I examined the spot, and discovered the distinct impress of foot-marks, which, added to other information, enabled me to identify a person named Mooton, whom I caused to be apprehended on suspicion. On the following day Mooton was brought before the Birkenhead Police-court, where such facts were adduced in evidence that the prisoner was remanded to Saturday, the 3rd inst., when, further facts tending to implicate him being produced, he was fully committed to take his trial at the next Chester Sessi n

Yesterday week, according to the daily papers, a respectable-looking young man was arraigned at the bar of the Central Criminal Court, Old Bailey, charged with stealing five sacks, value 25s., the property of the Northern and Eastern Railway Company, to whom he was a servant.

The only witness called was the Superintendent of the Company's police, who stated that the sacks in question were found at the prisoner's "quarters."

Mr. Doane (for the accused)—What mean you by "quarters?"—Witness—I mean his house.

Mr. Doane—Pray, drop your military phrases, and speak in a plain manner.

The witness said that the sacks were found lying outside the prisoner's house without any attempt at concealment.

The prisoner had been for some time in the employment of the Company as gatekeeper, and bore an excellent character.

Mr. Doane expressed his indignation at the conduct of a public Company in dragging a man of good repute to a criminal bar upon a charge for which there was no pretence whatever. The property was never taken off the premises, and there was no appropriation of it by the prisoner, and but for the officiousness of a meddling person the sacks would have been deposited in the proper place. The fact was, the prisoner stepped into the house for a proper purpose, and left the sacks outside the door in the view of everybody.

The Common Serjeant stopped the case, and directed the jury to acquit the prisoner, to the satisfaction of every one in Court except the accusing witness.

We should like to know who advised this prosecution, and what magistrate committed the accused.

On Thursday, November 25, Robert Chester, of Derby, was charged before the magistrates (at Derby) by Mr. Russell, Inspector of Police, on behalf of the Midland Counties' Railway Company, with riding in a second-class carriage without a ticket. He was fined 40s., and in default of payment committed to prison for three months.

On Friday, the 2nd December, at the same place, John Pearson, of Beeston, was fined 20s. for refusing to give up his ticket when required by the ticket-collector so to do.

And at the same time and place, Joseph Anthony, of Nottingham, was fined 20s. and expenses for riding in a third-class carriage from Nottingham to Derby without a ticket, and getting out on the wrong side of the carriage to evade payment.

The *Manchester Guardian* states, that at the Old Sessions-room, on Monday last, James Schofield, gamekeeper to William Hulton, Esq., was summoned for trespassing upon the Bolton and Leigh Railway. It appeared that Schofield had passed along the railway in pursuance of his duty as gamekeeper, on the 23rd ult., and on being ordered away by one of the Company's servants refused to obey the command. The defence set up was, that Mr. Hulton being Lord of the Manor and the defendant having a deputation, had a right to pass upon the railway in pursuance of his duties; for that, although the surface belonged to the Company, the manorial rights were still retained. The case stands over for decision.

We learn from the *Dundee Courier* of Tuesday, that on the previous Friday a weaver, named Don, was charged before a local magistrate, at the instance of the Dundee and Arbroath Railway Company, with being drunk and disorderly at the Broughty Ferry station of the railway, on the previous evening. It appeared from the evidence that Don, on being refused a ticket, became so very noisy and abusive that the clerk in charge of the station found it necessary to have him taken into custody, and sent to Dundee. It was clearly proved by the evidence of several respectable witnesses upon oath that Don was very tipsy, and made use of abominable and abusive language to the Company's servants; but Bailie Anderson, on the statement of Don's wife (for she was not put upon oath) "that her husband had just had one glass of whiskey that day," dismissed the case.

Dean Forest Railway.—We are glad to learn that it is intended to call a public meeting, by advertisement, of the inhabitants of this city and neighbourhood, to submit to them the details of this important measure. We sincerely hope that it will be well supported by our fellow citizens; it is a subject of the greatest consequence to the welfare of every individual and to the trading interests the benefit will be incalculable. The main object in view is a great reduction in the price of coals at Gloucester and at Cheltenham.—*Gloucestershire Chronicle.*

LECTRO-MAGNETIC EXHIBITION.

AR is now open to the public at the Egyptian Piccadilly, a most interesting exhibition of apabilities of electro-magnetism as a moving r. The exhibitor is Mr. Robert Davidson, of deen, who, in spite of a vast number of diffi- s, has at last with singular ingenuity, and by me patience, brought *so far* to the test of ical utility the discoveries heretofore effected, es adding to our previous knowledge many veries of his own. Among other applications e power now exhibiting is a locomotive engine ar in principle to that which Mr. Davidson tried with success on the Edinburgh and ow Railway, and of which a notice (taken a local contemporary) will be found in an- column. There are many who have san- expectations that ultimately electro-magnetism supersede the use of steam power, and really ese days of improvement, there is nothing improbable in the notion; but be this as it we earnestly urge upon all persons interested ways, more especially upon Railway Direc- nd Engineers, to pay a visit to the Egyptian Hall, and judge for themselves. We can promise them that at least they will feel greatly interested in witnessing Mr. Davidson's experiments. We shall take an early opportunity of describing the exhibition more fully.

DUKE OF CORNWALL HARBOUR, AND LAUNCESTON AND VICTORIA RAILWAY COMPANY—SPECIAL MEETING.

A SPECIAL general meeting of the proprietors of the Duke of Cornwall Harbour, and Launceston and Victoria Railway Company, was held on Thursday, at the London Tavern, Bishopsgate-street; JOHN RAMSBOTTOM, Esq., M.P., in the chair.

The CHAIRMAN said, the present meeting had been called in accordance with a promise made by the Directors, that the shareholders should be convened as soon as the award of Mr. Wilson, to whom the matters in dispute between the Company and Mr. George Ross had been referred, should have been delivered. That award had now been given in; and Mr. Cole, the Solicitor of the Company, would, with the permission of the meeting, read it. He was sorry to see the meeting so thinly attended.

Mr. COLE accordingly read the award. It is not necessary to give it in all its technical prolixity. The result was, that Ross is indebted to the Company to the amount of 489*l.* 13*s.*

Mr. PRYOR, as the Solicitor of a large number of the shareholders, would, on the part of his clients, very sincerely congratulate the Directors on having brought this very protracted business to a termination. He could in part account for the thinness of the meeting, inasmuch as his clients were so thoroughly satisfied with the conduct of the Directors that they did not deem it necessary to attend in person on the present occasion. The Directors had given up much valuable time to this very lengthened, vexatious, and profitless matter, and he had no doubt that it would now be properly followed up by Mr. Cole. (Hear, hear, hear.) It would be worth the while of the public to investigate the circumstances under which this Company had been got up, and for a time carried forward. He must, however, be cautious as to what he said on this subject. He recollected very well that in that room, about two years ago, some observations were made by himself and friends as to the conduct of Mr. George Ross, in which the terms fraud and forgery were used, and the result was, that the *Railway Times*, having correctly reported the meeting, was proceeded against by Mr. George Ross. The *Railway Times* pleaded a justification, and the conduct of Mr. George Ross might be judged of from the fact that a verdict was returned for the defendants. (Hear, hear.) He believed some proceedings were still pending in the case, otherwise he could have said much more. He had again to tender the best thanks of his clients to the Directors for the energy and zeal which they had evinced in this matter. (Hear, hear, hear.)

The CHAIRMAN said, it had at all times been the anxious wish of the Directors to perform their duties conscientiously; and he himself having attended most, if not all, of the meetings which had been held since the formation of the Company, could bear testimony to the zeal of his colleagues. The affair had, it was true, turned out a bad speculation, but this was principally owing to the person who had given them so much trouble. The matter was now in a fair way of being brought to an issue, provided the proprietors would come forward and support the Directors by paying their calls, without litigation. A call had been made of 2*l.*, but of that amount as little as possible would be required—he did not think more than 1*l.* If the proprietors did not voluntarily come forward, the Directors would be put under the disagreeable necessity of enforcing the settlement of the call, in justice to those who had paid up.

Mr. PRYOR expressed a hope that as this call would be the final one, the shareholders would come forward readily, if not cheerfully.

The CHAIRMAN having stated that there was no further business before the meeting,

Mr. C. CRAUFURD proposed the best thanks of the proprietors to the Chairman, for his uniform urbanity and impartiality in the chair. (Hear, hear, hear.)

Mr. RICHARDS seconded the motion. At previous meetings there had always been a cry of "No compromise," and it might now be asked what they had gained by resisting the claim of Ross. They had always deemed the claim of Ross founded in injustice, and the award of Mr. Wilson had proved it to be so. If they had yielded to Ross's claim, which amounted to nearly 2,000*l.*, the whole of the 2*l.* call would have been required, whereas he (Mr. Richards) would pledge himself that less than half that amount would now be required. They had besides the satisfaction of knowing that they had not yielded to a getter-up of Companies —a race of persons now very prevalent, and against whom he (Mr. Richards) would always set his face. (Hear, hear.) In many Companies a compromise would have been effected, but he was happy to find that in this Company he was associated with gentlemen of firmness and decision. (Hear, hear.) This firmness had saved the proprietors at least 50 per cent., even if nothing should be recovered from Ross, against whom he had the assurance of his brother Directors that every effort should be used. ("Hear, hear," from the Directors.) Whatever inconvenience Ross might in consequence be put to mattered nothing. * * * (Applause.)

It was stated in conversation that in addition to the claims above referred to, Ross had put in a claim for upwards of 50,000*l.*, for the land upon which the proposed harbour was to be constructed This elicited much laughter, and various remarks not very complimentary to Mr. George Ross were made, but which for obvious reasons we decline to report.

The motion for the vote of thanks was then carried unanimously.

The CHAIRMAN returned thanks, and expressed his constant anxiety that to all proceedings in which he was interested, the greatest publicity should be given.

The meeting then broke up.

THE LATE CASE OF TRESPASS ON THE LONDON AND BIRMINGHAM RAILWAY.

THE Middlesex Sessions commenced on Monday, before Mr. Serjeant Adams and a full Bench of magistrates.

The CHAIRMAN in the course of his charge to the Grand Jury said, he seldom thought it necessary to address any observations to the Grand Jury with reference to any particular case that was likely to be brought under their consideration, but he understood that an indictment would be submitted to them of so extraordinary a nature, that he felt it his duty to call their particular attention to it

Digitized by Google

It was an indictment charging a person named George Elmore with felony, in breaking the locks of certain gates, the property of the London and Birmingham Railway Company.

Mr. WITHAM (a magistrate) here interrupted the Chairman, and said the indictment to which he had alluded would not be preferred at those Sessions, but at the Central Criminal Court.

The CHAIRMAN inquired if any person was in attendance on the part of the London and Birmingham Railway Company, with the intention of preferring an indictment in the case to which he had alluded.

Mr. BEDFORD, Superintendent of the Company's police, said he was in attendance for that purpose.

The CHAIRMAN inquired whether the indictment was to be preferred under the Company's Act.

Mr. BEDFORD replied in the affirmative.

The CHAIRMAN said, that if there were a clause in the Act authorising the committal of a person for felony for breaking a lock off one of their gates, the sooner such clause was repealed the better. He should like to see the Act.

Mr. HUMPHREYS, the Solicitor for the prosecution, here handed the Act to the Bench, and called the attention of the Chairman to section 205, which enacts:—"That if any person shall wilfully, and to the detriment of the said undertaking or of the said Company, injure, break, throw down, destroy, steal, or take away any part of the said rail, or other works erected or made by virtue of this Act, or any part of the materials of any such works, so as that the use of or passage on the said railway shall be liable to be obstructed, impeded, or otherwise interrupted, every person being lawfully convicted of any such offence, shall be subject and liable to the pains and penalties to which persons shall be liable in cases of simple larceny."

The CHAIRMAN then said, that it appeared from the depositions in the case that Mr. Elmore resided somewhere near Edgeware, and that on the 17th of October last he and some other persons were out hunting, when the hounds crossed the line of the London and Birmingham Railway, upon which Mr. Elmore dismounted and attempted to open one of the gates, in order that he and his party might follow them, but that finding it fastened he wrenched the lock off, and having opened the gate, the whole party crossed the line of the railway. There was no doubt he had acted wrong, but there was no ground whatever for charging him with felony. The magistrates, however, before whom he was taken, committed him for trial on that charge, but he was admitted to bail.

Mr. Edmonds, the Deputy Clerk of the Peace, here informed the Court that the prosecutors had abandoned the charge of felony, and that the indictment they were about to lay before the Grand Jury charged the defendant with a misdemeanour only.

The CHAIRMAN said that it would be for the Grand Jury to decide whether the act of which he had been guilty amounted to a misdemeanour, and whether he had caused such an obstruction of the railway as was contemplated by the Act of Parliament. The learned Chairman, after some general observations on the nature of the duties they were called upon to discharge, dismissed the Grand Jury, who shortly afterwards returned into Court with a true bill against Geo. Elmore for a misdemeanour.

Subsequently, it was settled that the trial should be postponed till the next Sessions.

CALEDONIAN RAILWAY.—The plans for this important undertaking were all duly lodged, in compliance with the Standing Orders of the House of Commons, on Wednesday evening; and we understand the Carlisle Committee has been summoned to meet on Saturday next for making other arrangements for the prosecution of the great work.—*Carlisle Journal.*

LONDON AND CROYDON RAILWAY.

To the Editor of the Railway Times.

SIR,—It having been announced by a Director of the Croydon Railway, in one of the Company's carriages the other morning, that it was all arranged and determined that the trains were to be put down on the 1st January next, I have to request you will kindly inform me whether such a measure can be carried out without my consent being first obtained, or asked?

I have hitherto on every occasion supported the Direction, but if they really contemplate or attempt to carry out this measure, I oppose them, on the grounds that it would be very injurious to the Company and to property on the line, and likewise productive of great inconvenience to the public.

I would recommend, as far preferable, the reduction of the fares between London and Croydon and a small rise between all intermediate stations. True this would benefit the Greenwich Company, but it would enable us to carry on the traffic of our line *at a small profit, instead of as now, at a loss.* I am no Greenwich proprietor, nor do I wish to advocate their cause, for I think the policy of the Board has been most erroneous, but I am anxious that we should make something, although in doing so we may be of benefit to them; and every-day observation has convinced me that by a remodelling of the fares we could make something, which, with the tolls we receive, would enable us to pay a good dividend. The Greenwich will suffer enough by-and-by when the traffic becomes diverted, as it in all probability will be by the west-end terminus.

I am, Sir, your obedient servant,

A CROYDON SHAREHOLDER AND CONSTANT READER.

December 8, 1842.

[We feel perfectly assured that, concluding our correspondent is rightly informed as to the announcement, the "arrangement and determination" could only have been made, subject to the consent of the proprietary, a meeting of whom, it will be seen in a correspondence between the Croydon and Greenwich Companies, given in our journal of the 26th November, the Directors have signified their intention to convene for that purpose.—ED. R. T.]

THE LONDON BRIDGE RAILWAYS—PROPOSED CONSOLIDATION.

To the Editor of the Railway Times.

SIR,—I have been much pleased with Mr. Baxendale's suggestion for the union of the Brighton, Dover, and Croydon Railways, under one Direction, which I believe to be the plan best adapted to give increased accommodation to the public, and in consequence the best hope of remuneration to the shareholders. As a holder of upwards of 100 shares in the Croydon Railway, I shall be willing to concur in any equitable arrangement to carry that plan into effect, which I should think cannot be difficult of execution.

I am, Sir, your most obedient servant,

W. K.

City, December 5, 1842.

THE LONDON-BRIDGE RAILWAYS—PROPOSED CONSOLIDATION.

To the Editor of the Railway Times.

SIR,—Since I wrote to you a year ago, recommending a consolidation of the four railways having their terminus at London Bridge, I see several correspondents have advocated it. The public is so materially interested in this consolidation, that I think Parliament would be justified in compelling it. The inconvenience felt by all travellers, from the quarrel between the Greenwich and Croydon Boards, would be at once remedied by this union, and apparently by no other means, and the absurdity of the two Reigate stations would be instantly put an end to.

I would entreat, then, the shareholders of these four lines to act vigorously in pressing on this point, remembering that the main opposition will arise from the number of officials it would be necessary to discharge. The economy arising from such a consolidation is the main reason for it, and at the same time will create the main opposition to the proposal. The interest of the shareholders is now sacrificed to keeping up four sets of officers where one would do. Were the union of the Companies to take place, I believe there is not one of them that would not instantly return a handsome interest.

I would recommend that each of the four Companies agree to appoint two representatives, and that this body of eight meet to appoint two persons to examine the accounts and prospects of the four Companies, and then award to each its due share in the general consolidated Company. These two persons should have power to appoint a referee in case of dispute, and should be paid 200*l.* a piece, each Company giving 100*l.*, in order to remunerate them for the labour in undertaking the investigation. I earnestly hope the shareholders will join me in advocating this proposal, so suited to advance their interests.

I am, Sir, your obedient servant,

A GREENWICH SHAREHOLDER.

November 30, 1842.

JUNCTION OF LONDON RAILWAYS.

To the Editor of the Railway Times.

SIR,—Allow me, though the medium of your columns, to ask if it would be feasible to unite the West London and South-Western Railways by a suspension bridge over the Thames at Battersea. If this could be done, and the New Cross and New Elms stations also connected, the railways south of London might, by a combined arrangement among the Companies, run up to Paddington or Euston square *ad libitum* (on the completion of the West London), and passengers *through* London would proceed to their destination almost without change of carriage. The convenience this would be to the public I need not remark upon, and I should suppose would be conducive to the interests of the London Companies.

Perhaps some of your numerous correspondents possessing local information, will favour me with a reply. I am, Sir, yours, [&c.. L. S. D.

Cheltenham, December 7, 1842.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—Your correspondent, "Argus," in his praiseworthy anxiety to caution the public against the sanguine expectations of "V." has run very naturally, into the opposite extreme, of underestimating the dividend of the Company for the current half-year.

"V." has published a calculation, which promises a dividend of 8 per cent.; and "Argus," in your last number, gives a calculation which shows a dividend of 6 per cent. I will now subject to the figures, to show the probability of a dividend of per cent.

Your readers will probably agree with me, the truth is usually found in the happy medium between the extremes.

Actual receipts to November 27	£
Probable receipts to December 31	
Surplus of last half-year	
Less—Rent and tolls	£36,140
Interest	86,819
Expenses, the same as last half-year	127,778
Depreciation fund	10,000
Dividend at 7 per cent.	
Surplus	

I am much surprised, that "Alpha" has not, even yet, replied to my arguments, or answered my questions. Must I impute this, too, to inadvertence?" I presume that, in your next, he will apologise, and reply in all candour and courtesy.

I am, Sir, yours, &c.

DINBURGH AND GLASGOW AND BIRMINGHAM AND GLOUCESTER RAILWAYS.

To the Editor of the Railway Times.

SIR,—Your correspondents, "W. T." and "Delta," have both given replies to "T. W.'s" uiry as to the cause of the disparity in price of shares of these two lines, by simply referring to facts stated in the last Reports of the two mpanies. This is well as far as it goes, but I do think it goes to the root of the matter, for I gine "T. W.'s" desire was to know *why* the arity in the dividends and consequently in the ket price of the shares of two Companies in many respects nearly similar to each other, should so great as it is. With the view of throwing t upon this point, I have drawn up the follow- table, to exhibit the *working expenses* of the lines; and I think no one, after duly considering will deny that there is either great need of cau- on the one hand not to anticipate too much *one* of the lines, or great need of an econo- al reform in the management of the *other*. bably both these conclusions are not far from truth, but if the *future* should confirm the low of working the Edinburgh and Glasgow, it st be admitted that such a result would open a spect of improvement to the Birmingham and ucester line, and many others, which seems at sent little practicable. There is no doubt that point of *traffic*, as well as in gradients, the tch line has the advantage, whilst in *cost* it ewhat exceeds the Birmingham and Gloucester; there can be no such difference in these respects justify such an enormous disparity in the work- expenses as that between 663*l.* and 1,048*l.* per per annum. Taking the expenditure of both s up to the 30th June last, the cost of the nburgh and Glasgow line is 30,067*l.* per mile f the *Birmingham and Gloucester* 26,636*l.*; the rence being equivalent at 5 per cent. to the of 171*l.* 11s. per mile per annum, in the receipts. In this calculation, as well as in con- cting the table, I take the length of the Bir- gham and Gloucester line at 54 miles, reckon- the two miles of single branch to Tewkesbury as al to *one* mile of main line.

difficulty in comparing the two accounts to the June arises from the unequal periods to which respectively apply; the Edinburgh and Glas- account dating from the 21st February, or 19 ks, the Birmingham and Gloucester being for a plete half-year. To obviate this, I have in- sed the items of the former account in the pro- ion of 26 to 19, as shown in the table, no other e less productive of error suggesting itself to I am aware that some objections may be taken to sult thus obtained, but they are not of much ht. I should observe, that the printed account *raffic expenditure* of the Edinburgh and Glas- Railway in your journal of 27th August (as as in a contemporary) is in some way incorrect, e *items* fall short of the *total* (11,034, 7s. 1d.) he sum of 313*l.* 2d. As the *total* is referred the body of the Report, I have taken it as the ct amount, and thrown in the deficiency with incidental charges. This way must be right, he accounts give no clue to the *head* of ex- e which is omitted. It will be noticed that in *Birmingham and Gloucester* accounts, there harges for carriage depreciation and compensa- besides the expense of branch coaching, from h the Scotch line is free. The latter appears to be unburthened with parochial rates, which is country are becoming a very serious tax on ay proprietors. I have classed the items of wo accounts so as to compare them in the best I could, but from the very different arrange- adopted by the two Companies, it is not likely the corresponding charges answer exactly to mounts stated in the table. This, however, s no difference in the general result, which I would fain hope will obtain the serious attention of the Birmingham and Gloucester Directors.

I am, Sir, yours, &c.

CRITO.

November 28, 1842.

EDINBURGH AND GLASGOW AND BIRMINGHAM AND GLOUCESTER RAILWAYS.

To the Editor of the Railway Times.

SIR,—My letter of the 11th instant, calling the attention of the railway public to the great disparity of the price of the above two lines, was not with the intention of disparaging one and holding up the other, but to get information for myself, thinking that some cause did exist for the difference in their value; and your correspondents, "W. T." and "Delta," have given me information, but whether in all truth, I will leave the public to judge "W. T." values the Gloucester at full 20*l.*, for which I will willingly give him double that sum, if he can find any for me; and the Glasgow he values at 100*l.* Now I will undertake to find him as many as he pleases at one-half that sum. "W. T." must bear in mind that the capital account of the Edinburgh and Glasgow is not yet closed, and such things have been as paying dividends out of capital; but it is not my intention, as I said before, to disparage any railway, having had too great a stake in some of them. I really wish them all well, and was in hopes of receiving a few crumbs of comfort for myself and fellow shareholders in this unfortunate line; but I cannot think our prospects are quite so bad as "W. T." or "Delta" would strive to make them. I take it a 30s. dividend is almost certain in February; the receipts have been this half-year, up to your last publication of receipts, which I take to be to the 21st of November, 41 596*l.*; and if I say for the next six weeks 1,550*l.* per week, 9,300*l.*, making a total, 50,896*l.*, with a disposable balance of 4,338*l.* left at the last meeting; grand total, 55,234*l.*—deduct for interest and working expenses, as per last half-year, 40,338*l.*, and I do not think it will be quite so much—will leave for dividend on 9,300 shares 14,896*l.*; which at 30s. a share will take 13,950*l.*, leaving a balance in hand of 954*l.*; and future prospects are not so bad as "W. T." would make them appear. When the Bristol and Gloucester is completed, I expect a considerable increase in our receipts.

I remain, your obedient servant,

T. W.

Leicester, Nov. 29, 1842.

* This is the actual charge, as 250*l.* was carried to the *capital* account last half-year.

† Including 313*l.* not specified in the printed account.

EDINBURGH AND GLASGOW RAILWAY.

To the Editor of the Railway Times.

SIR,—I beg to send you the following figures on the Edinburgh and Glasgow Railway for the consideration of your readers who are fond of comparing this line with the Birmingham and Gloucester, &c., and shall offer no further remark than that the subjoined expenditure will be found at, the next meeting in February, rather over-rated than otherwise:—

RECEIPTS.

Actual receipts to November 26.....		£52,005	18 6
Probable receipts for the next five weeks to 31st December, at 1,600*l.* per week		8,000	0 0
Balance from last half-year.....		1,449	4 2
		61,455	2 8
Deduct for expenses and half-yearly amount of interest on loans		27,401	0 0
Balance for dividend.....		34,054	0 0
Dividend at the rate of 6 per cent. per annum on old share capital, 900,000*l.*.....	£27,000 0 0		
Dividend at same rate on 1st call, 3*l.* per share, 54,000*l.*	1,620 0 0		
Ditto on 2nd call of 2*l.* for 4 months	720 0 0		
		29,340	0 0
Balance remaining after paying a dividend of 6 per cent.		4,714	0 0

EXPENDITURE.

Maintenance of way, at 140*l.* per mile per annum	£3,220 0 0
Locomotive power, including expenses of stationary engine, &c.	5,717 0 0
Salaries and wages in coaching department, including police, &c	3,109 0 0
Salaries in Secretary and Superintendent's departments	800 0 0
Expenses attendant on delivery of goods ..	1,030 0 0
Direction	375 0 0
Mileage duty	2,700 0 0
Sundries, including carriage cleaning, advertising, tickets, stationery, and incidental charges	1,900 0 0
Total expenditure.....	£18 151 0 0
Interest on old loan, 300,000*l.*, at 5 per cent., for the half-year.....	7,500 0 0
Half year's interest on 50,000*l.* of new loan, at 5 per cent.	1,250 0 0
Ditto on remaining 25,000*l.* of new loan, at 4 per cent.	500 0 0
Total.....	£27,401 0 0

I am, Sir, yours, &c.,

SUBSCRIBER.

December 5, 1842.

EDINBURGH AND GLASGOW RAILWAY.

To the Editor of the Railway Times.

SIR,—I beg leave to hand you a statement of the receipts of the Edinburgh and Glasgow Railway for the twenty weeks ending 19th November, 1842, amounting to 50,143*l.* 4s. 2d. Thus is a dividend after the rate of 6 per cent. per annum all but certain. Nothing can prevent it but a falling off in the next six weeks' receipts, or a grievous want of economy in the half-year's expenditure; neither of which should we be prepared to expect. As to the last, the Edinburgh and Glasgow Directors have had the opportunity of profiting by the fatal experience of the older Companies. It is not therefore probable that they will have run into the ruinous extravagance and have totally discarded economy, as the Directors of the North Midland, Midland Counties', and the other non-paying lines assuredly have done!

I am, Sir, your most obedient servant,

OBSERVATOR.

SHEFFIELD AND MANCHESTER RAILWAY.

To the Editor of the Railway Times.

SIR,—I am informed from good authority that the Directors of the Sheffield and Manchester Railway Company have recently received from the Exchequer Loan Commissioners the sum of 50,000*l.* as a first instalment. I was also told that this sum was advanced on condition that part of it should be laid out or expended on the works at the Sheffield end of the line; but in my opinion there seems very little chance of much being expended there at present. If the Sheffield people do not look after their own interests there are none but themselves to blame. For my part, I think a Committee would be of service, and of very great service, too, in investigating the appropriation of the Company's funds; and with regard to Engineer's, Secretary's, and clerks' salaries, &c. A less number of Directors might answer all the purposes of so numerous a body.

A SUBSCRIBER.

December 6, 1842.

SHARE-BROKERS' CIRCULARS—MR. T. ALLSOP.

To the Editor of the Railway Times.

SIR,—Having in your number for the 3rd December, noticed the opinions I entertained with respect to the Eastern Counties' Railway, and having imputed to me "disappointed expectation or personal pique," I must at once deny all personal motives.

Those to whom I am known will not for a moment entertain the charge; but as I have endeavoured, during the many years I have been connected with railways, to collect and convey the most accurate information, I trust that I may not have my views misrepresented by a journal of so much authority and influence as the *Railway Times*. If my views are erroneous, they are as open to refutation as I am to conviction, and I assert fearlessly, that I have never on any single occasion given an opinion other than as the result of my honest and deliberate conviction. This, which I claim for myself, I have ever accorded to the *Railway Times*, which, with equal injustice I believe has been charged with sinister interest and personal feeling in making the strictures which a sense of justice compelled you to make from time to time.

I am, Sir, your obedient servant,

T. ALLSOP.

GREAT NORTH OF ENGLAND RAILWAY.

To the Editor of the Railway Times.

SIR,—A single glance at the following comparison of the *estimate* of cost of construction, &c., and the *real* cost of the above-named line of railway, will soon convince any disinterested person *how much* future faith and reliance is to be placed on the *interestedly got-up*, long, and elaborately detailed, minute *paper*-calculations of Railway Agents:—

Engineer's Estimate in 1836, 1837, 1838.			
Cost of construction of way, &c., from the city of York to Newcastle-upon-Tyne, a distance of 74 miles	£1,000,000	0	0
Average of cost, as estimated per mile	13,513	10	3
Including *contingencies*, the maximum average of cost per mile was not to exceed	15,000	0	0
Which *maximum* would allow the *reasonable allowance* or excess over the original estimate of	110,000!!!		
The *dividend* or *per-centage* for risk of investment as per Engineer's account was to be 10 or 15 or 20 per cent.!!			
Estimated *probable* value of 100*l.* share according to per-centage 200, 300, or 400!!!			
The realised result, so far as 1841, 1842, 1843.			
Cost of construction of way, &c., from the city of York to Darlington, a distance of 45 miles	£1,201,670	12	8
Average *real cost* per mile	26,703	15	10
Which *real cost average* exceeds the *estimated maximum average* of the Engineer by per mile	11,703	15	10
Real cost exceeds the estimated average by per mile of	13,200	5	7
Dividend *received* per share of 100*l.* 5 and 2½ per cent.!!!			
Shares of 100*l. sold at* 53, 54, 55, 60, 57!!!			

At the last half-yearly meeting, the Directors *had the pleasure* of acknowledging, that they had had a *better* and an *improved* traffic and passenger receipt when compared with 1841, and yet the shareholders received *only* 2½ per cent., or 25s. per share, as *dividend* of the *improving* and prosperous receipt; *while the bad year of* 1841 *afforded a dividend of* 5 *per cent.*!!! If such improving prosperity can afford *only* the paltry 2½, I suppose that *when* the great Caledonian line sweeps away 19/20ths of the Scotch traffic, as it will undoubtedly do, should it be carried forward, as there is every good reason to expect, that, like the inverse operation of the indifferent and dull 1841, shareholders will have the *pleasure* of receiving the *probable* and agreeable Storey estimate of 10, 15, or 20 per cent.!!

I am, Sir, your most obedient servant,

HONESTAS.

December 5, 1842.

RAILWAY ADJUDICATIONS.

EX PARTE MARR *v.* THE NORTH MIDLAND RAILWAY COMPANY.—JUDGMENT.

Vice-Chancellor of England's Court, December 3.—His HONOUR gave judgment to-day on this case, confirming the purchase of certain lands, not included in the schedule of the Act constituting the railway.

BARRETT *v.* THE STOCKTON AND DARLINGTON RAILWAY COMPANY.

Vice-Chancellor of England's Court, December 5.—This was a bill by certain shareholders on behalf of the Durham County Coal Company against the Stockton and Darlington Railway Company, to recover the amount of an alleged overcharge in the rate of toll for the carriage of export coal. The Railway Act was passed in 1825, and restricted the Company from charging more than a ½d. a ton per mile for the carriage of coal to be exported at the "port of Stockton-upon-Tees:"—the general charge being 4d. The terminus of the railway was at that time at the town of Stockton, where alone exportations could have taken place. In 1829 the Clarence Railway was made, which opened into the Stockton and Darlington Railway several miles short of Stockton, and thus made another communication between the collieries and the "port of Stockton-upon-Tees," at a place some miles below Stockton, called Port Clarence. The question between the two parties appeared to be whether the Stockton and Darlington Railway Company were restricted to the charge of a ½d. per ton per mile upon coal carried only on the upper part of their railway, and exported afterwards along the Clarence Railway, at Port Clarence.

Mr. STUART (with whom was Mr. Fisher) was proceeding with the case for the plaintiffs, when

Mr. BETHELL (with whom was Mr. Smythe) for the Railway Company, urged that the hearing should stand over until the decision of the House of Lords should be given upon a writ of error now pending upon a judgment at law between the same parties, in which the question of the construction of the Railway Acts was raised.

His HONOUR intimated his opinion that the hearing should be postponed upon the terms that the disputed amount of overcharge should be paid into Court in the meantime.

ACCIDENT ON THE EDINBURGH AND GLASGOW RAILWAY.

A DISTRESSING accident occurred on Monday, at the Falkirk station of this railway, by which a gentleman, whose name is Captain M'Nab, from near Callendar, lost his life. The circumstances which led to this fatal result, we understand, are these:—Captain M'Nab, on leaving the train from Edinburgh, stepped from the platform after the train had started, intending to walk across the line to the station-house. Before he was able to cross the north line of rails, the engine of the train from Glasgow, which was at that moment drawing up in front of the station house, threw him down betwixt the rails, and caused his almost instantaneous death. It appears that the unfortunate gentleman fell down betwixt the rails, and that the fire-box of the engine crushed him in a most dreadful manner while passing over him. So far as we can learn, the deceased alone was to blame in this case. He was warned not to attempt crossing the rails; and the porter of the station endeavoured to hold him back: he grasped at a plaid which was round Captain M'Nab's shoulders, but it gave way, and was left in his hands. Still, we think, some means should be devised by the Railway Company to prevent similar accidents in future. Falkirk station is the most important on the line; it is here that the trains usually meet, while there is no other way of passing from the one side of the railway to the other than by walking over the rails. With such an arrangement it is surprising that more accidents do not occur. We are not prepared to say what ought to be the best mode of avoiding the evil—the Railway Company are the most competent judges on such a point: but we may ask if a bridge thrown over the line at this point, for the accommodation of passengers, would not afford a simple remedy!—*Caledonian Paper.*

CONTINENTAL RAILWAYS—PARIS AND ROUEN RAILWAY.—We are informed that the works of the Paris and Rouen Railway are so far advanced, as regards the contract of Messrs. Mackenzie and Brassey, that it will certainly be ready for circulation by the end of April; and that the only thing which could prevent it being then opened to the public would be a delay in the supply of rails, which, however, is not apprehended. Should the expectation of its completion by the end of April be accomplished, this railway, which is more than 80 English miles in length, will have been made within a period of two years and a few weeks from the day when the workmen first broke ground—a rapidity of execution which is altogether unprecedented even in England, and on lines presenting none of the difficulties of the Paris and Rouen line, on which there are many works of unusual labour, particularly two tunnels of great length, cut through flinty rocks, and which are *chefs d'œuvre* in their way. It has been stated that the works on the different portions of the line have been entirely directed by English engineers. This is an error which, in justice to all parties, we feel bound to correct. Out of 21 resident engineers only a few are English. The superintendents of the line, as regards the interests of the contractors, are, we believe, chiefly English; and this fact has probably led to the error in question.—*Courrier Français.*

Digitized by Google

NORTH MIDLAND RAILWAY.—The old and the new Directors of this Company met for the first time on Wednesday, at Derby. The visit of General Pasley, from the Board of Trade, is postponed till next Saturday. We understand that the new and the old Directors met in a friendly spirit, and are likely to cooperate in an harmonious way. In consequence of the resignation of Mr. Frost, the Directors have advertised for "a person of practical knowledge and experience in railway management," to undertake the joint office of Secretary and Superintendent: the salary to be 500*l.* a year. Also, in consequence of the resignation of Mr. Marshall, the Directors have advertised for a new superintendent of the locomotive department.—*Leeds Mercury*, December 3rd.

THE RAIL AND THE ROAD—MANCHESTER AND LEEDS RAILWAY.—The trustees of the Manchester, Oldham, and Austerlands turnpike road, have suffered to a rather serious extent, by the diversion of traffic from their road to the Oldham Branch Railway; and as a method of obtaining satisfaction for their losses, they have erected a toll-bar in Manchester-street, in the town of Oldham, betwixt the Oldham station and the centre of the town. By this means they will levy a charge on all conveyances passing to and from the railway, and thus obstruct the facilities and diminish the advantages of that undertaking. The Railway Company are strenuously opposing this attack on their profits. The trustees of the above roads, are also about to erect an additional toll-bar, on the highway betwixt Hollinwood and Royton, which crosses the Oldham Railway, and has been extensively improved of late, at a cost of about 4,000*l.*; this second new toll-bar will be a further disadvantage to the Oldham Railroad.—*Manchester Courier.*

SIGNS OF THE TIMES.—We lately stated that the *coerign* day coach from this city to London, *via* Oxford and the Great Western Railway, had ceased to run on two days in the week, and we have now to add that another old-established coach—the *Bang-up* from Worcester to Wolverhampton—will in future only make three journeys in the week instead of six. The depression in the traffic trade all over the country, during the last fortnight, is, we are told, unparalleled.—*Hereford Journal.*

It the advantages peculiar to Mutual Life Assurance, arising from a division amongst the assured of the whole of the mutual profits, and that security and freedom from responsibility which proprietary Companies can alone afford, are combined by the constitution of this, the only guaranteed Mutual Society. For the non participating, or assurances for temporary purposes, or debtor and creditor transactions, tables have been prepared, by which *a immediate payment is required than by any other*

For a half premium credit system one half of the premiums may be retained for the first 7 years, and repaid at convenience of the assured; and by the ascending scale a diminished rate of premium is required for the first 12 years, combining the advantages of an assurance for the whole duration of life with the economy of a temporary policy.

Specimen of Ascending Table.

First Three Years.	Second Three Years.	Third Three Years.	Fourth Three Years.	Remainder of Life.
£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
0 19 1	1 5 6	1 11 11	1 18 4	2 4 9

By the Deed of Constitution of the Company all Policies issued by them are declared to be indefeasible and indisputable, unless obtained by fraudulent misrepresentation. Prospectuses, schedules, and every information requisite for intending assurable parties to effect assurances, will be forwarded, free of expense, by the Agents or Manager.

ALEX. ROBERTSON, Manager.

EASTERN COUNTIES' RAILWAY COMPANY.—The Directors are ready to RECEIVE TENDERS for LOANS of MONEY, to be secured by the Loan Notes of the Company bearing Interest at 5 per cent. per annum, payable half-yearly. The Tenders to be for Sums of not less than £500, and for periods not exceeding Three Years.

By order of the Board,
A. BULKELEY, Secretary.

Offices, Shoreditch Station,
December 7, 1842.

PATENT ELASTIC STEEL IRON, MADE (EXCLUSIVELY) BY THE YSTALYFERA IRON COMPANY, BY THE USE OF ANTHRACITE COAL WITH COLD-BLAST.—Mr. Mushet, the author of the celebrated *Treatise on the Manufacture of Iron and Steel*, who has made a series of most elaborate experiments on this extraordinary iron, in concluding, remarks:—"From these and the former comparative experiments, it is abundantly evident, that the pig iron now making with cold blast and anthracite, at the Ystalyfera Iron Works, greatly exceeds in strength, in deflective powers, and capacity to resist impact, any iron at this time manufactured in the United Kingdom. It now remains for me to mention a property peculiar to this iron. The property referred to is one of great springiness or elasticity, which communicates a tendency to the bar in deflection and breaking to resume its rectangular form. Bars that had obtained a permanent set of 2-10ths, when afterwards broken, presented but a slight deviation from a right line, and in no case did the acquired curvature exceed one-fourth of a tenth. It was also remarked, that most of the fractures in breaking presented a regularity of grain throughout, resembling the structure of unhardened steel.

(Signed) "DAVID MUSHET."

The following comparisons are drawn from Mr. Mushet's trials and Report:—The Ystalyfera cold-blast anthracite iron, as cast from the furnace, is 36 8-10ths per cent stronger than the Yniscedwyn hot-blast iron, made with a mixture of coke and anthracite. It is stronger than the Yniscedwyn hot blast iron, made with anthracite alone, by 23½ per cent. The Ystalyfera cold blast anthracite iron, remelted in cupola, was found stronger than Mr. Mushet's results on the Yniscedwyn hot-blast iron, remelted in cupola, by 28 7-10ths per cent. The Ystalyfera cold blast anthracite iron, from the furnace, surpassed Tredgold's average of remelted iron by 22½ per cent. When remelted in the air furnace it surpassed Tredgold's average by 36½ per cent. When remelted in cupola, with anthracite, it surpassed Tredgold's average by 59 per cent. Mr. Mushet's results on the Ystalyfera cold-blast iron, compared with the extensive series of most able experiments made by Mr. Richard Evans, on their hot blast iron, are as follow:—Cold blast iron, remelted in cupola, superior to hot blast remelted, in strength, 25 8-10ths per cent.; in deflection, 21 3 10ths per cent.; in power to resist impact, 69½ per cent. As compared with Mr. Fairbairn's well known table of results on cast iron, the Ystalyfera cold blast anthracite iron was found superior to Fairbairn's hot-blast iron trials, in strength 44 7-10ths per cent.; in deflection, 24 6-10ths per cent.; in power to resist impact, 79 per cent. To Fairbairn's cold blast iron trials it was found superior in strength, 44 7 10ths per cent.; in deflection, 18 8-10ths per cent.; in power to resist impact, 68 2-10ths per cent.

The Ystalyfera Iron Company, without lengthened comment on these results, beg to call the attention of Engineers, Iron Founders, Railway Managers, &c., to the extraordinary merits of their patent elastic steel iron. As complaints are now universal of the weakness of modern pig iron, they hope they have supplied a metal deserving to be received in the arts as the strongest and most elastic machinery iron. In remelting, fusibility, soundness, extent of shrinkage, and toughness in turning, it is all the Iron Founder can desire. The Neath Abbey Iron Company authorise the Ystalyfera Iron Company to refer to them for its working qualities in the foundry and lathe. The Ystalyfera Iron Company recommend their No. 3 as an iron peculiarly calculated to remelt with Scotch hot blast pig, to which it imparts elasticity and fibre. They recommend their No. 2 as an iron for the best and every useful purpose; it is very grey, but, from its strength carries a honeycombed face. The Ystalyfera Iron Company are prepared to execute, with dispatch, orders for railway chairs, cast rails, tram-plates, cast wheels, and similar articles, for which their elastic steel iron is singularly adapted. Their prices are very moderate.

Ystalyfera Iron Works, Swansea, November 21.

LIVERPOOL DOCKS—TO CONTRACTORS.—The Committee of Dock Works will be ready on Saturday, the 17th day of December next, to receive Tenders for excavating and removing by Waggons, &c., the Materials from the site of the Albert Dock and Half-tide Basin, (west of the Salthouse Dock), containing about 400,000 cubic yards, more or less.

The Specification, with Plans and Sections of the Ground, may be seen at the Dock Surveyor's Office, south side of the Coburg Dock, from the 24th instant to the 15th December inclusive, betwixt 9 a.m. and 5 p.m. each day.

The Committee do not bind themselves to accept the lowest Tender.

The Tenders, sealed, must be addressed to "the Chairman of the Dock Committee," endorsed "Tender for excavating Albert Dock," and sent in to this office, under cover, to the Secretary, not later than 10 o'Clock, a.m., on Saturday, the 17th day of December next.

By Order,
DANIEL MASON, Secretary.

Dock Office, Liverpool, November 21, 1842.

GREAT WESTERN RAILWAY—Call for Second Instalment of Eight Pounds per Fifth Share.—The Directors of the Great Western Railway having Resolved, at a meeting held this day, to call, under the provisions of the Act 2nd Victoria, for an Instalment of Eight Pounds per Fifth Share, NOTICE is hereby given, That the Proprietors of Fifth Shares are requested to pay, on or before the 12th of January next, to any of the undermentioned Bankers, the sum of Eight Pounds on each of their respective Fifth Shares, viz:—

London—Messrs. Glyn, Halifax, Mills, and Co., at the Great Western Railway Office, Princes-street, Bank.
Bristol—Messrs. Miles, Harford, and Co.; Messrs. Elton, Baillie, Ames, and Co.; Stuckey's Banking Company; the West of England and South Wales District Bank.
Liverpool—The Bank of Liverpool.
Cheltenham—The County of Gloucester Bank.
Reading—Messrs. J. and C. Simonds.

By order of the Board of Directors,
CHARLES A. SAUNDERS, } Secretaries.
THOMAS OSLER, }

Offices, Princes-street, London, and
Temple Mead, Bristol.
December 1, 1842.

SIR W. BURNETT'S PATENT PRESERVATIVE FOR TIMBER, CANVASS, CORDAGE WOOLLEN, &c.—This process is a very cheap one. It effectually protects even the commonest domestic or Colonial Timber and Deals from Dry rot, and other causes of premature decay; and it renders them equal to the best Timber from the Baltic. No doubt can exist of its efficacy in the preservation of all the above-named articles, after the Official Reports from the heads of various Government Departments, which may be seen, together with the specimens, at the Company's Office, No. 4, Castle-court, Birchin-lane, Cornhill, London.

MIDLAND COUNTIES' RAILWAY—UNCLAIMED £20 SHARES.—The Directors of this Company have resolved to Dispose of the Unclaimed 5th or £20 Shares by Tender.

£2 only is at present called up, and no further Call is intended to be made before the 1st of October, 1843. Interest after the rate of £6 per cent. per annum, from the time of payment, is guaranteed upon the paid-up Calls on these Shares.

Tenders to be sent to the Secretary, at Leicester, on or before Saturday, the 17th instant.

By order,
J. F. BELL, Secretary.

Leicester, 8th December, 1842.

TO BE SOLD, A FOUR AND A HALF HORSE HIGH PRESSURE STEAM-ENGINE, quite new; also, several Slide and Centre Lathes; Slotting, Planing, and Drilling Machines. Apply to J. and D. Glasgow, Trafford-street, Manchester.

THE TWELFTH THOUSAND.

Just published, *in a Sealed Envelope*, price 3s., and sent free, on receipt of a Post office Order, for 3s. 6d.,

MANHOOD: the Causes of its Premature Decline, with plain Directions for its Perfect Restoration; addressed to those suffering from the destructive effects or excessive indulgence, solitary habits, or infection; followed by observations on the treatment of Syphilis, Gonorrhœa, Gleet, &c., illustrated with cases, &c.

By J. L. CURTIS and Co., Consulting Surgeons, London.

TENTH EDITION—Published by the Authors, and sold by Burgess, Medical Bookseller, 28, Coventry-street, Hay Market; Mann, 39, Cornhill; Strange, 21, Paternoster-row, London; Guest, 51, Bull-street, Birmingham; T. Sowler, No. 4, St. Ann's square, Manchester; G. Philip, South Castle-street, Liverpool; Fannin and Co., 41, Grafton street, Dublin; Drummond, 114, High street, Edinburgh; and sold in a *sea ed envelope*, by all Booksellers.

OPINIONS OF THE PRESS.

"This work, *a tenth edition* of which is now presented to the public, *ten thousand copies having been exhausted since its first appearance*, has been very much improved and enlarged by the addition of a more extended and clear detail of general principles, as also by the insertion of several new highly interesting cases. We feel no hesitation in saying that there is no member of society by whom the book will not be found useful, whether such person hold the relation of a *parent*, a *preceptor*, or a *clergyman*."—*Sun*, evening paper.

"This is a work that we fear there exists too much need for to cause us to hesitate to recommend it for general perusal. Every branch of those frightful maladies, whether the result of immoral habits or secret vices, is here succinctly treated, and divested of all medical technicality, plain and easy directions are given for the best mode to be pursued in all cases, however complicated or apparently hopeless. To the married, as well as the unmarried, this little work alike affords consolation and cure in peculiar cases, and we are doing a service to society in recommending it to general notice."—*Essex and Herts Mercury.*

"Messrs Curtis's work, entitled MANHOOD, is one of the few books now coming before the public on such a subject which can lay claim to the character of being strictly professional, at the same time that it is fully intelligible to all who read it. The moral and medical precepts given in it, render it invaluable."—*Magnet.*

Messrs. Curtis and Company are to be consulted daily at their residence, No. 7, Frith-street, Soho-square, London.

Country Patients are requested to be as minute as possible in the detail of their cases. The communication must be accompanied by the usual consultation fee of £1, and in all cases the most inviolable secrecy may be relied on.

GREAT NORTH OF ENGLAND RAILWAY.—TO RAILWAY CONTRACTORS, COLLIERY OWNERS, &c.—For Sale, by Private Contract, a quantity of flat-bottomed Iron Rails, averaging from 22 to 32 lbs. per yard. Also a number of Earth-Waggons, and other materials suitable for Railway purposes, the whole of which are now lying at the Bank Top, Darlington.

For particulars, apply to Mr. Joseph Stephenson, Resident Engineer to the Company, who is authorised to dispose of the same.

W. O'BRIEN, Secretary.

Great North of England Railway Offices,
Darlington, November 23, 1842

MANCHESTER AND LEEDS RAILWAY.—TO IRONFOUNDERS, &c.—The Directors are ready to receive Tenders for a Turntable 30 feet in diameter, capable of turning an Engine and Tender. The Table to be delivered and fixed near the Locomotive Shed at Manchester. Particulars may be known on application to the Resident Engineer, at his Office, Oldham Road, Manchester. The Tenders must be sent in addressed to the Secretary, not later than Saturday, the 17th December next.

Resident Engineer's Office, Manchester,
November 30th, 1842.

TAFF VALE RAILWAY.—CONTRACT FOR MAINTENANCE OF PERMANENT WAY.—The Directors are ready to receive Tenders for the above-mentioned work, and will meet in Cardiff on Tuesday, December 20, to let the same.

The Specification may be seen at the Railway Office, Cardiff, on and after Monday, December 5.

Persons desirous of making Tenders, must forward them under cover to the Secretary, not later than Monday, December 19.

The Directors do not bind themselves to accept the lowest Tender.

By Order,
WILLIAM BURGESS, Secretary.

Cardiff, November 28, 1842.

NEWCASTLE AND DARLINGTON JUNCTION RAILWAY.—SECOND CALL OF £3 PER SHARE.—In pursuance of a Resolution of the Board of Directors, the Proprietors of Shares in this Company are requested to pay a Second Instalment of £3 per Share, on Monday, the 2nd day of January, 1843, at either of the undermentioned Banks:—

London—Sir R. C. Glyn and Co.
York—The Union Bank.

The 6 per cent. Guarantee Interest will be computed from the time the said Call is paid.

GEORGE HUDSON, Chairman,
ROBERT DAVIES, Deputy-Chairman, } of the Board of Directors.

By order,
JNO. CLOSE, Secretary.

NORTH MIDLAND RAILWAY.—WANTED, a Person of practical knowledge and experience in Railway Management, to undertake the joint office of Secretary and Superintendent of the North Midland Railway, at a salary of £500 per annum.

Applications with Testimonials to be sent in, on or before the 3rd day of January next, to

R. FROST, Secretary.

Secretary's Office, Derby, 30th November, 1842.

NORTHERN AND EASTERN RAILWAY.—NOTICE is hereby given, That in pursuance of a Resolution of a Special General Meeting of the Proprietors held on the 5th of October last, the Directors of the Northern and Eastern Railway Company are ready to receive Tenders from parties willing to advance money upon the Loan Notes of the Company.

The Tenders must state the periods for which the money will be advanced, and the rate of interest at which it will be lent.

By order of the Board of Directors,
WM. BOURNE, Secretary.

Shoreditch, London, December, 8, 1842.

CAUTION.—This is to Caution the Public against employing William Forster, who has been lately at work on the Paris and Rouen Railway, near Pont de L'arche, 12 miles from Rouen, as a brickmaker, and who has absconded, leaving his workmen and other creditors unpaid, although 3,000 francs (about £120) was given him for these purposes. He has besides left debts owing to various tradesmen to the amount of about 16,000 francs (£640).

The said William Forster is about 35 years of age, of dark complexion, and about 5 feet 8 inches high, and belongs to Portsmouth. He was last employed in England on the Gosport branch of the Southampton Railway, and resided near Fareham.

Previous to absconding, he had been in the habit of remitting the greater part of the money he received for his work to his brother in England, and it is reported he is now at work on the South-Eastern line of Railroad.

MACKENZIE AND BRASSEY,
Contractors on the Paris and Rouen Railway.

6, Petite Rue Verte, Paris,

NEW EDITIONS of the following useful Works are just published at the *Railway Times* Office, 122, Fleet-street

I.

TUCK'S MAP OF THE RAILWAYS for 1842 throughout ENGLAND and WALES to the Capital of Scotland, beautifully coloured, distinguishing the Lines open from those in progress, and showing the nearest route by Railway to the Continent, the north and south of Ireland, and the Lakes of Westmoreland and Cumberland. The cheapest Map ever published.

Bound in cloth, 1s 6d; in paper covers, 1s; mounted on canvass, in cloth case, 2s. 6d.; on rollers, 3s. 6d.

II.

ROBINSON'S RAILWAY TIME AND FARE TABLES, containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources, with Map, and an official List of Coach and Cab Fares to all the Metropolitan Railways. Corrected to August. Price 1s., in cloth.

III.

ROBINSON'S RAILWAY DIRECTORY FOR 1842, containing the Names of the Directors and principal Officers of the Railways in Great Britain, derived from authentic sources, price 1s.

IV.

TABLES OF HACKNEY CARRIAGE FARES from the BIRMINGHAM RAILWAY to all parts of the METROPOLIS, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand with a Map of London. Price 6d.

V.

TABLES OF HACKNEY CARRIAGE FARES from the GREAT WESTERN RAILWAY to all parts of the Metropolis, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.

BIRMINGHAM AND GLOUCESTER RAILWAY.—BY RAILWAY THROUGHOUT BETWEEN LONDON AND WORCESTER, CHELTENHAM AND GLOUCESTER, WITHOUT CHANGE OF CARRIAGES.

First-Class Carriages of this Company will be attached to the quarter to 10 Morning Mail Train from Euston Station, and to the 4 o'Clock Afternoon Train from Birmingham.

Both these Trains call only at First-Class Stations.

From London at a quarter to 10 in the Morning, arriving at Worcester at half-past 4, at Cheltenham at 5, and at Gloucester at a quarter-past 5.

From Gloucester at 1; from Cheltenham at 20 minutes past 1; from Worcester at 25 minutes to 2 in the Afternoon; arriving in London at 9 in the Evening.

By order,
GEORGE KING, Secretary.

PATRONISED by all the principal Architects and Builders in this Country and Abroad.—SEYSSEL ASPHALTE.—In consequence of the daily attempts made to imitate this valuable mineral production, and of the name of "Asphalte" being given to most of the spurious and "cheap" materials, the Directors of this Company particularly recommend Architects, Builders, and others (for the purpose of securing the use of the genuine article), to insert in their Specifications "The Seyssel Asphalte, Claridge's Patent," and not merely "Asphalte," or "Bitumen," as, in many cases where these terms have been used, gas-tar and other worthless and offensive compositions have been introduced. For the information of those residing at a distance from London, and of those who, having employed the spurious composition, may, from its failure, have become prejudiced against the use of Asphalte, the following are mentioned as some of the distinguishing qualities of the genuine material. The Asphalte of Seyssel is of a light colour, closely resembling Yorkshire stone, has a smooth surface (without being slippery), and joints almost imperceptible; it is also free from smell, is not acted upon by change of temperature, and is at all times dry and warm, and remarkably pleasant to walk upon, and, from its elasticity, never cracks. The factitious material, on the contrary, has a dark and dirty looking appearance, presents a rough and coarse surface, and from its brittleness, is liable to crack, particularly in frosty weather. In consequence of the above qualities, the genuine material (being perfectly impervious to wet) has been used with great advantage for roofing; it can be laid down to any extent, presenting one uniform surface, and is far superior to lead, as it is not liable to expansion or contraction in consequence of any change in the temperature. For covering of arches (to prevent the percolation of wet) it is invaluable; the Greenwich Railway Company alone having covered upwards of 400,000 superficial feet. It has also been used on the Great Western, Birmingham, Midland Counties', South-Western, Brighton, Blackwall, and other Railways; at the joint Stations, London Bridge, and at the South Metropolitan, Highgate, and Nunhead Cemeteries. As proof of the great durability of the genuine Asphalte, it need only be mentioned that the first work executed in this country with this material (amounting to 3,952 feet), was at Whitehall, opposite the Horse Guards, in the month of April, 1838, and which, although only half an inch in thickness, has remained up to this time (a period of four years and eight months) in the most perfect condition. Books of Testimonials, with Scale of Prices, may be obtained on application to

J. FARRELL, Secretary.

Seyssel Asphalte Company's Depot, Stangate, London.

Note.—Neither the pavement in Parliament street, London, nor the works at the Model Prison, at the Abney-park Cemetery (which, from its failure, has since been removed), or at the Hotel at the Slough Station of the Great Western Railway, were executed by this Company.

SCOTTISH (WIDOWS' FUND) LIFE ASSURANCE. Founded A. D. 1815.—Constituted by Act of Parliament.

Capital accumulated and invested—Upwards of One Million Two Hundred Thousand Pounds.

Annual Revenue nearly Two Hundred Thousand Pounds.

Head Office, Edinburgh, No. 5, St. Andrew's Square.

Assurances effected previous to the 31st December will have the advantage of a Full Year's Standing, and are entitled to participate in the profits for the current year. But in order that this may be done, all proposals must be lodged at the Head Office before 31st December, or with the society's Agent in time to enable him to forward it to the Head Office before that date.

JOHN MACKENZIE, Manager.

December, 1842.

London Office, 7, Pall Mall.—HUGH M'KEAN, Agent.

LOCOMOTIVE ENGINE FOR SALE.—A New Six-wheeled Coupled Engine, having 13 inch cylinders, 18 inch stroke, copper fire box, brass tubes, Stephenson's patent hollow-spoked wheels, driving wheels 5 feet diameter, bind wheels 3 feet diameter. The above Engine weighs 12½ tons, (is of the best materials and workmanship) and may be seen at Messrs. Thompson and Coles, Hope Foundry, Bolton, to whom application must be made.

LONDON: Printed by JOHN THOMAS NORRIS, 137 and 138, Aldersgate-street, in the Parish of St. Botolph Without, Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet-street, (facing Saint Bride's Church), in the Parish of Saint Brides, Fleet-street, Middlesex.—Saturday, December 10, 1842.

THE *HINDOSTAN* STEAM-SHIP and H. M. FRIGATE *PENELOPE*.—The two above-named grand Steam-Ships are entirely fitted with ANDREW SMITH'S PATENT WIRE ROPE for their Standing Rigging; thus demonstrating that practical experience is daily and progressively establishing its superiority over all other Standing Rigging. For all Mining and other purposes it is already proved to be the best and most serviceable description of Rope, superseding Hemp and Chain.

For further particulars, address Mr. Andrew Smith, 2, White-Lion court, Cornhill, London.

In Royal Octavo, 3s. 6d., cloth, lettered, with four Engravings.

TELEGRAPHIC RAILWAYS; OR, THE SINGLE WAY, recommended by Safety, Economy, and Efficiency, under the safeguard and control of the Electric Telegraph; with particular reference to Railway Communication with Scotland, and to Irish Railways. By WILLIAM FOTHERGILL COOKE, Esq.

Contents: Objects of the Treatise—Distinguishing Characteristics of present Railways—Evidence before Select Committee—Advantages of Telegraphic Communication—Mode of working the Blackwall Railway, by the Electric Telegraph—Description of the Electric Telegraph—Plan for a "Telegraphic" Railway—Course of an Express Train—Ballast Waggons—Permanent Obstruction—Crossing of Two Trains—Description of Signals—Concluding Remarks on Single Way—Mixed Lines—Scottish Junction Line—Irish Railways—Advantages common to Single, Mixed, and Double Lines—Public Confidence—Reduction of Stock—Income from Telegraph—Alertness—Adaptation to Wants of Country—Conclusion.

London, Simpkin, Marshall, and Co.; Liverpool, Wareing Webb, Castle-street; Manchester, Simms and Dirham; Birmingham, Wrightson and Webb; Leeds, Slocombe and Simms.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secresy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

Just published,

TUCK'S ROLLER CALENDAR FOR 1843.—This is a mode of affixing the Calendar for the whole year on two revolving cylinders, within an elegant case, so as to exhibit each day's information in a bold and novel manner, presenting Daily Memoranda indispensable to every housekeeper and man of business. It possesses the advantage of a Date Box and Almanac, and is adapted for the Library, Board Room, Counting house, Warehouse, or Parlour; and is the best application of the Calendar ever yet devised. In Mahogany Box, price 5s. 6d.; in Ornamented Box, 6s. 6d. In addition to much useful information relating to business, &c., the Calendar contains the times of High Water at London, Liverpool, Dublin, Glasgow, Leith, Bristol, and Hull, for every day in the year.

Railway Times Office, Fleet-street; Letts, Cornhill; and Ackerman, Strand.

THE PARISIAN BITUMEN COMPANY take leave to inform their numerous friends and the public that offices are established at 4, Great Winchester-street, Broad-street, for the City, and at 8, Denbigh-street, Belgrave-road, for the West-End and its vicinity, where every information will be promptly given.

SCALE OF PRICES PER FOOT.

Thickness.

1 inch.	1½ inch.	2 inches.	5 inches, for block paving.
4½d.	6d.	7½d.	1s.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

PATENT RIVET WORKS, SMETHWICK, NEAR BIRMINGHAM.—ROBERT GRIFFITHS, Manufacturer of every description of Railway Fastenings, Railway Spikes, Bolts, and Screws; Engineers and Coachmakers Bolts and Nuts; Boiler, Gasometer, and Tank Rivets of every description; Square and Hexagon Nuts; punched Washers, &c. &c.

IMPORTANT TO THE RAILWAY PUBLIC.—Engineers and Managers of Railways, at Home and abroad, who have not yet availed themselves of the advantages attending the use of the PATENT TRAVERSING SCREW-JACK, are respectfully solicited to communicate with the Patentees, who will forward them an Engraving and full Description of the Machine, "*free*," to any part of the world.

G. England & Co., Patentees and Sole Manufacturers, Pomeroy-street, Old Kent-road, London.

HORSE CLOTHS.—Horse Cloths made WATERPROOF by the celebrated Burmese Japan Process of Newbery & Co.—This excellent protection for that good and useful animal, the Horse, is fast superseding every other cloth or covering. It is totally impervious to rain, does not shrink, shrivel, or crack, and is very strong and lasting. The prices are moderate.

Improved Horse Cloths.—Horses, like ourselves, are benefited by a clothing which, while waterproof, will not impede the free escape of perspiration. Newbery's Lycopodium, or ventilating process of waterproofing, is admirably adapted, and may be safely applied, for saturating the clothing of gentlemen's horses.

When very hard wear is required, and for common use, their Burmese Japan Canvass will be found all that can be desired, for it is at once the most impervious, tough, flexible, and durable composition ever offered to the public.

THE LATE ACCIDENT ON THE LONDON AND BIRMINGHAM RAILWAY.

On Saturday an inquest on the body of Mary Bye was held at the George and Dragon Inn, Northchurch, near Berkhampstead.

Mr. Creed, the Secretary of the Railway Company; Mr. Bury, the Superintendent of the Engineering Department; and Mr. Barker, the Chief Inspector of the Company's Police, were in attendance.

The first witness examined was John Bye, who, being sworn, deposed—The deceased was my wife; she was nearly 70 years of age, and resided with myself at Aylesbury. She left home on Thursday morning by the 11 o'clock train for London. She rode in a second-class carriage. I saw her off, but did not notice the number of carriages. I heard in the afternoon of Thursday that there had been an accident on the line, and hearing that my wife was injured, I came up to Northchurch yesterday morning, but she was dead before I arrived.

Mr. H. Hilder, surgeon, of Berkhampstead, sworn.—No medical skill could have saved deceased. I think the causes of her death were the wound in her head and the great shock her nervous system sustained from the concussion.

Mr. Brown and Mr. Whately expressed their full concurrence in the opinion given by Mr. Hilder.

Joseph Channel sworn.—I am a labourer, and about 12 o'clock on Thursday was at work on an embankment on the railroad, about 15 feet high. I saw a train coming up at about the regular pace. When the engine got within 100 yards of me, I saw it break down, and the first carriage fell over on one side, and the engine on the other. The engine fell off the embankment on the left side, while the carriages went on the right. Only one carriage went down the embankment, that was a second-class carriage. Two men were at work with me, and we ran towards the train immediately. The first man I saw hurt was Matthew Lowe. I then went to the carriage which had fallen over, and saw a man and woman; got through the door of the carriage and lifted the woman out. Others assisted the man out. His name is Tomlyn. The woman appeared to be dead. The carriage was lying on its side, and we opened the upper door. The locked doors were on the ground. The woman was lying in the carriage with her left leg doubled under her. She groaned when I pulled her leg straight. The man and woman were not in the same division of the carriage. She was alone in the compartment in which she sat. A gentleman, who said he was a surgeon, and who was a passenger by the train, assisted us to get the woman out of the carriage.

By a Juror—The woman's head was behind the seat. The carriage had been thrown across the down rails, and had fallen over the embankment. The flat of the railway is 15 feet wide, so that the carriage in which the woman was had been thrown about 30 feet.

By the Coroner—There was nothing on the line at the time of the accident.

Rev. Mr. Erle sworn.—I was a passenger in the carriage immediately following the one that was upset. It was a first-class carriage, and I was in the front compartment of it. We were proceeding in the most regular manner, between 20 and 30 miles an hour, when, passing the embankment near the tunnel, close by the village, I heard a dreadful crash, as loud as the fire of artillery. I was sitting with my back to the engine. The panel of the carriage was forced in and the flooring burst up. On looking out of the window I saw the wreck of the engine on the left side of the rail, and the engineer and stoker near it. I ran immediately towards them. Nothing could exceed the kindness of Callum, the engineer, severely wounded as he was, and I have much pleasure in bearing my testimony to his excellent conduct, and to the great care I have always observed to be taken by the engineers on this line of railway. I do not think that any fault attaches to the officers of the Company. Our carriage seemed to rise up. It was like a shipwreck, and we rolled upon the tender.

John Pemberton sworn.—I am an assistant engine-driver, and left Aylesbury on Thursday by the 11 o'clock train. The engine-driver's name was Charles Callum. He is a man of considerable experience. The engine had been running regularly every day for the last six months, and had never been repaired. When the train starts from Aylesbury the porters examine the wheels; the same at Tring.

By a Juror—The porters do not examine the engine. It is the driver's duty to do so.

[What follows is copied *verbatim* from the short-hand writer's notes.]

Frederick Parker *sworn and examined*:—

Coroner—You live at Wolverton?—Yes, sir.

And are foreman to the engineers there?—Yes, sir.

You are foreman under Mr. Bury?—Yes, sir.

By a Juror—Mr. Bury, who superintends the locomotive department?—Yes.

Coroner—How many years have you been Engineer?—I have been in Mr. Bury's employ for the last 10 years.

Practically employed all that time?—Practically employed on locomotives.

You construct the engines?—I superintend all the arrangements there.

Do you not construct them?—We renew all the parts as they wear out.

If an engine came in of this kind, you could tell whether it was well built or not?—Yes.

What is it; steel or iron?—The shaft, sir?

Yes.—Iron, sir.

Wrought or cast?—Wrought.

You know the engine No. 2, on the Aylesbury line?—Yes.

When did you last have it in your workshop?—She came in to be repaired on March 30, 1842.

What was the matter with it then?—Nothing particular: she came in to be generally repaired.

In March, 1842; March last. I see you have got your book there?—Yes: we put new tires on the driving wheels; repaired the pistons, cylinders, and steam valves. The axle boxes were repaired; some part of them were new, and those which were not new we repaired entirely, and made as good as the others.

A Juror—Which axle boxes?—All of them.

Coroner—Only the boxes?—We call it the box—the wheel.

The boxes, then, do not include the axletree?—No, sir. Repaired axle boxes, tires, framing round the firebox, starting gear, and fog signals put on her.

What is that?—A signal put on in case of fogs, to call the engineman's attention.

The engine was brought in, and you were desired to inspect and see to her, and make her right?—Yes.

Did you examine her directly?—Yes, sir.

Did you examine the axletree in particular?—Not more than the others. When these wheels are put on the lathe, we turn them with the shaft; we always examine the whole. When the shaft is in the lathe, as was the case with this, the engineer who attends the lathe has his attention particularly called to that.

Do you mean by the shaft, what is called the axletree?—Yes; we draw on this wheel, and turn it by the other, and if there is any defect at all, it is sure to show it there.

Did you detect any defect in the shaft?—No.

If there had been any, could you?—Yes.

Suppose you had been told it was hollow?—I cannot account for it.

It must have been a fault, I suppose?

A Juror—We have not had that before.

Coroner—I am only stating it suppositiously?—I suppose that it has been a fault in the first instance.

But I thought you said you could have detected it?—If the outside is good, that is all we can see.

In your judgment it was perfectly safe, then?—So far as we could see while it was in the lathe.

Would not ringing detect any such defect?—No, not unless the wheels were off.

But you had them off?—No, sir. We turn them on the shaft when we examine them.

A Juror—Are the wheels screwed on these shafts?—Why, they are put very nearly parallel and then keyed on.

Coroner—It appeared to you externally sound?—Yes; if there had been any fault we must have detected it.

If there was an internal defect you could not discover that?—No.

Not by any means?—No man could by any possible means see the inside of it.

A Juror—I thought I understood you to say, that if it was detached from the wheel you could detect it by hammering?—Why, we should have a better chance, because the shaft would be loose then.

But you did not?—No; we suppose it to be better to turn it on one wheel and drive it by the other. The strain put upon it by the wheel goes through the shaft, and if there be any defect at all, we should certainly detect it by the vibration and the exuding of the oil; we have detected faults in several shafts in that way.

Was that used six months ago with respect to this particular shaft?—Yes.

There were no repairs done to that part of the engine, according to your note book?—Oh, yes; the whole was repaired. We put two new tires on the driving wheels, and re-turned the front wheels. That is the first thing that was done.

Coroner—Was that done in March?—That was done in March.

New tires, were there in March?—New tires on the driving wheels and repaired.

Including all of them?—Yes.

A Juror—Then you did take off the fore wheels?—All the wheels were taken off from under the engine; we re-turned the driving wheels; the others were defective; we thought they had been worn long enough; we took them off and put new ones on, re-turning the first.

What did you do with the shaft?—Merely tried it and noticed it particularly while on the lathe, the same as we do all the rest.

What is the mode of constructing the shaft. Is it what they call "faggoting," or done in the same way as anchors?—Yes; they are faggoted or hammered of solid iron; bar iron welded together and wrought into shape. We put them in the furnace and exclude the air. We first have them in the rough; we then put them on the lathe, and turn them to exactly what shape we want.

Of how many pieces will the fore axle consist?—That depends on circumstances.

Where was this constructed?—At Bolton, in Lancashire.

Not by Mr. Bury?—No, sir; by Mr. Hick.

You do not know how this particular axle was constructed?—No.

It is much stronger, several pieces faggoted together, than one piece?—Oh, yes.

How many should it consist of?—Many of them would consist of about four or five.

If they were properly hammered together, and perfectly welded, would there have been interstices between them?—No; not if they were welded well together.

If there is any fault in this wheel it must have proceeded from insufficient welding or hammering?—Yes.

Could anything else have done it?—I should say not.

All the air would have been driven out by the hammering?—Yes; unless it had any catch on the edges there the air would get in; but to all appearance, so far as we could see, it was pretty sound and well united.

They work from the centre to the outside and drive out the air?—Yes.

If proper care is taken, there ought to be no interstices, no hollowing in it?—No.

In your experience, did you ever know a fore axle break in any engine in the kingdom?—Oh, yes,

Any axles are made subject to break, are they not?—Yes.

They are not so subject to danger?—No.

The axles are kept together by the machinery?—Yes.

So that experience has proved that part of the axle may be separated, and yet the wheel of the engine run on straight?—Yes.

That could not take place if it was not made thus?—No, sir.

This was a fore axle?—Yes, sir.

You know this by experience?—Yes.

It strengthens the engine, and the momentum ends?—Yes.

Experiments were made by making two wheels run round a single wheel?—Yes.

As this one broke, there was nothing to keep the engine up?—If it had broken anywhere else the engine would not have come down.

It is evidently an accident fraught with danger—the breaking of the fore axle—much more than breaking the hinder driving axle?—Yes.

You mean in these engines more especially?—Yes.

That is so with respect to the driving wheels?—We had a shaft some time ago which broke in the "journal," about 3 miles from where this was, and the engine was run carefully from Berkhamstead to Wolverton, when we had it off and examined it: the driver did not know the shaft had separated.

What do you call the "journal?"—The bearing part.

And that broke externally?—Yes.

Therefore there was nothing to keep the wheel on that?—Yes.

Have you since examined this fracture?—Yes.

What is your opinion as to the state of the iron—I cannot say exactly, because it is very dirty just now. It appeared to me good—more especially, the part

under the engine is not so bad as near the extremity.

The diameter is 4½ inches, is it not?—Four inches, *this part.*

I understand that the whole circle presents a fractured appearance there; only a small portion of bright *iron; but* there is a part of the iron that has the appearance of a recent fracture. How does all the rest appear?—As if it had been broken some time.

Is there any appearance of oxydation or rusting, like an old fracture, as if the air or moisture had got into the crack?—No; I did not see any appearance at all of oxydation.

CORONER—Do you find fault then with the wheel, or not?—No; there are layers of iron, just as if it had been solid; one layer of iron put on another in the manufacture of the shaft in the first instance.

Is that a right or a wrong way?—It is perfectly right.

What is the defect you now detect on examination?—I suppose the shaft having been cracked some time, the parts which were cracked got worse.

A Juror—With all your science you could not have detected it, although it was getting worse, excepting by ringing it with the wheel off?—No, we have no other means of testing it.

If this axle had been visible to you, you would have seen it then?—Yes; if there is a defect of that kind in the shaft, the parts show it if it be ever so sligh; the oil works into it. When it is put on the wheel, there is a strain throughout; when the workman turns the right hand wheel, he is driving that round the left; then the right hand wheel is driven through the whole length: if there is a tendency to fracture, or any defect at all in the iron, it is sure to show it. When there is any defect, I always examine them myself minutely. If there is any vibration, or if he sees any of the oil working out of any of the crevices, the man gives notice of it.

You are quite sure there was no crack six months ago?—The crack is in such a position I should not see if there had been any fracture without taking off the wheel.

In such a position that it was not visible to the eye of the engine driver or person who usually examines or looks after the engines?—No.

If there had been a crack at all during that time, he could not have seen it?—No.

If the engine had been taken to pieces and examined, you could not have seen it except by the usual mode of examination?—That is very doubtful.

How often is that examined?—Every time the engine comes in for repairs.

How often is that?—According to circumstances, depending on wear and tear.

Nothing requires more careful inspection than the fore axle of the engine?—Nothing more than the axles and the wheels. We take them out more frequently than anything else.

The fore axle more than the hinder axle, because it is more liable to danger?—The hinder axle is more likely to break than the fore axle; it frequently stops the engine.

Six months seems a long time for any one engine to go on working on a line without being seen?—Time does not matter so much, it is the distance of working that is the test. We have some that have worked less time that have done a great deal more work.

The Aylesbury engines do not work so much as the Birmingham?—No, sir.

It is not quite so far?—No.

It gives longer on the whole journey to the Aylesbury engines?—No.

What is the difference?—There is not much difference—the working is about the same.

Is there any difference of construction or capability between the Birmingham and Aylesbury engines?—No, none whatever. We have some engines from London to Birmingham which are heavier than the Aylesbury engines. The Aylesbury engines are the smallest kind of engines we have.

But for their size as efficient as any of the other?—Just the same, sir.

CORONER—What additional strength will you get by another half inch in the diameter. Some, you say, are made on 4½ inch, and others more?—None more than 4½.

A Juror—Was not this rather more than 4½?—No.

CORONER—Did I understand him rightly to say, that the Aylesbury engines were not worked so hard as the Birmingham?—About the same, sir; there is not a great difference; there may be a few miles. In round numbers a 4 inch shaft shows 16 inches. If I give them another half inch it will made 20½ to 16. It should be worked by decimals to bring it out properly.

A Juror—Your merchandise engines are larger?—No, not larger than some of the passenger engines.

CORONER—Now, Mr. Parker, I think we understand you distinctly, that in the daily survey of this engine by any person whose duty it is to do it, unless the fault was external it could not have been detected, unless you took it out and put it on the lathe?—Just so.

You yourself, if you had been at Aylesbury, could not have detected it?—No.

It was within the journal, was it?—Yes; not more than a quarter of an inch within was near where it broke.

Whose duty is it to go down to Aylesbury to survey them?—The engineman has to make a report every day at Camden Town.

Then you send down, or go and fetch the engine?—There is a man there who is sent down; if the defect is of any great extent, the engine is sent to Wolverton to be repaired. But every engineman reports his engine every day, and if there is nothing the matter he reports his engine "correct."

I am very anxious, indeed, that the jury should understand this. The man could not have seen it?—No; not unless the wheels had been taken to be repaired, then it must have been seen.

The fault did not exist in March last, because you must have seen it if it had?—We must have seen it; because in the state it is now, we could not possibly have driven the wheel—one wheel, the right hand wheel; we could not possibly have driven the wheel one turn without discovering it.

A Juror—It is an external fault all the way round?—Yes.

CORONER—So close to the box that you could not see it?—It was not visible.

A Juror—An external fault all the way round, and in short there was only a portion in the centre by which it was held?—Yes.

A Juror—How near was it from the end—what is the piece broken off the wheel?—Not more than three-eighths of an inch—the brass part close up by the wheel.

How far does the fracture take place—close by the shaft—near the short end?—I think you mean the wheel—the brass of the wheel is on the end of the shaft.

The end of the shaft itself, not the wheel: I want to know how much of that is broken?—Not much.

How much of that goes into the wheel?—Seven or eight inches.

Then you mean about 7 or 8 inches from the extreme end?—Yes.

Have you examined closely the state of the fracture?—Yes.

Perhaps you will look at that, and see whether you consider it is correct?—(handing a diagram of the wheel to the witness)—Yes; it gives you a notion of it.

Are the proportions all right?—Yes, very nearly.

Which is the sound and which the unsound part?—The white, sir.

A Juror—The round is 2½ inch one way?—In the centre; not quite so much at bottom.

CORONER—One more question, Mr. Parker. Do you know Charles Callum?—Yes.

He was your engine driver to Birmingham?—Yes; he had been there before I came on the line; he was on this line since the first commencement, between five and six years ago.

Driving the whole time?—Yes.

Was he a man of experience?—We always considered him about the best engineman we had.

There are two Callums, you know; Peter and Charles?—Yes; I know Peter and Charles both.

You are speaking of Charles?—Yes; we consider him the steadiest man, and the man most to be depended on.

A Juror—I do not think the jury have a question upon this point—about the propriety of the conduct of the driver, and all the officers of the railway; generally speaking, they are a brave and intrepid set of men—the drivers; but the state of the axle is the most important point of inquiry?—I am not aware that I can explain it any further. The journal is just by the inside of the nave of the wheel; when we turn the wheel, we have a bearing that takes them just where the bearing is now: if the man is turning this wheel on one end of the shaft, he drives it by this, and if there is any fault he always can tell.

The other end being fixed in the lathe?—Yes; he turns this so (describing to the jury), and if there is any defect at all through the length of this shaft, he is sure to perceive it. If a man finds it, he tells me "such and such a wheel is driving very much, I wish you would look at it," and I do so. If I cannot see the crack—if it is in any part of the wheel not exposed to the eye—if the outside of the wheel is good, and it is very bad inside, by putting it on the lathe, we soon detect it.

CORONER—When you saw this shaft on the lathe in March, I ask you as a practical man, was it then, according to your judgment, a sound, useful, working axletree?—I should say yes, sir.

CORONER—I think that will do, gentlemen: he is a man of science, and a practical man.

A Juror—I think the unsoundness to which Mr. Parker alludes was what he calls a crack transversely through the shaft?—Longitudinally.

It does not matter whether longitudinally or transversely, but was that all?—Yes.

Was it not immediately to be detected by the hollowness?—Yes.

There was a hollow within it?—Not to any serious extent.

The hollow would not go far in longitudinally?—I should say not. If it is a defect in any way whatever, driving it on one wheel and turning it on the other is sure to detect it.

The whole of the injury here is in the diameter of the shaft, and not in the direction of the axle?—Yes.

There is no hollowness in the direction of the axis?—No; there may be a little, but very little.

Is there not a very extensive weakness or unsoundness in the direction of the diameter of the cylinder?—Yes; that is the way the fracture is, (Referring to the diagram.)

It is surrounding it. A small portion of sound metal, a very small portion—in the centre?—In the middle of it, or very nearly the middle of it.

Now, what do you suppose was the cause of the unsoundness?—I cannot give you any opinion upon it.

Was it a fault in the original construction, or faggoting?—No.

Was it from some undue wrenching or strain on that particular wheel?—That is the only way in which I can account for it.

I have made inquiry if the engine has ever been off the road, and I am quite certain that it has?—If it has we examined it very minutely; if an engine does get off the road we examine it very sharply.

Would a strain on a sharp curve, with the engine pressing right on that side of the curve, produce it. There are sharp curves on that line?—No; there would be a strain.

CORONER—Do I understand you that there was a strain on one side, but on the other there was no strain?—No.

A Juror—This strain is throughout the wheel; there is on every curve a strain on the wheel?—Not sufficient, sir, to have produced this. There is the flange of the wheel on the curve; there is a cone on the wheel which compensates.

Another Juror—If there had been six wheels to this engine, the accident could not have happened?—It would have happened just the same with six wheels in my opinion; only the two front wheels will guide.

CORONER—This engine was made at Bolton?—Yes.

Whom by?—By Mr. Benjamin Hick.

Does he construct engines for the Company?—He has constructed some.

Is it a new thing to go to him?—No.

Have you had this long?—We have had these engines for some years.

Mr. Bury made a great many of the engines?—Yes; but not this. Mr. Hick has made 12 for the Company.

Mr. Creed—These engines are purchased of a contractor, on Mr. Bury's plan and specification.—There is no difference between them; they are all on the same plan.

CORONER—I think I have heard you say that there has not occurred a case of this sort before on the line?—No.

A Juror—Have you ever known such an extensive degree of unsoundness as this?—No.

CORONER—Have you ever had a fracture before?—Yes; one of the engineers observed his engine jump a little; that was first observed at Berkhampstead. He stopped and examined, and could find no fault. He thought it best to send the train on by another engine;

Digitized by Google

however, the man went on with it to Wolverton, and we did not know until we got it off the engine what it was.

Was that one of Mr. Hick's engines?—No, sir.

Was there so much indication of unsoundness in that as in this?—That was different; those were more longitudinal than this.

And not so short?—No.

This broke quite short, but in that case much longer?—Yes.

As the common expression is, as a carrot breaks—perfectly square, perfectly at right angles?—Yes.

Was there a jagged edge there?—Very little.

A Juror—This is a very important point.

CORONER—I think we need not have Callum now?

Several Jurors—Certainly not, now, sir.

A Juror—I think not. There is no doubt about Callum's good conduct. I think that the whole of the engine drivers, without any exception, are a very intelligent and a very brave set of men.

CORONER—I believe the Company have a very high opinion of this Charles Callum?

Witness—During all the time that Charles Callum has been with the Company this is the first time he has been late with his train; he has never been late with his train before.

CORONER—We have had that evidence before, I think?

Witness—This is the first time he has been late, and this is the first time an accident has occurred to him. The man has been so very fortunate, if any notice can be taken of that.

A Juror—Has he noticed any defect in the Aylesbury engines before, more than the Birmingham engines?—I believe not; I have not much knowledge of the Aylesbury engines. He never missed bringing in the train before.

I think there has. From my own experience I have found the 8 o'clock train had been detained waiting at Chillington for the Aylesbury train, which did not come in because something had happened to the engine.

Mr. Creed—The Aylesbury train has been stopped three times by cattle straying on the road.

CORONER—We must confine our attention to this particular engine, gentlemen.

Witness—If his train had been detained by any defect in the engine I should certainly have known of it, and I have no knowledge at all of it.

A Juror—How long do you consider there has been any defect in this shaft, because you think there was none in March?—I think so, sir. It may perhaps all have occurred within a few days past; but the fracture has been some time, I think, by the appearance of the shaft.

CORONER—Was it originally soundly made?—I have not the least doubt of it; otherwise it would not have stood the test it has.

The fracture was a little crack at first, and then increased gradually, little by little?—Yes.

A Juror—You know the appearance that iron would present at different times?—Yes.

Mr. Bury—That axle has run 40,000 miles since the engine was put on the road. It is the original axle that came from the maker that has run 40,000 miles.

CORONER—This is important; we had better have this on oath, Mr. Bury.

MR. EDWARD BURY, *sworn and examined.*

CORONER—Where do you live, Mr. Bury?—I live now at Wolverton.

An engineer, or what are you?—I have the charge of all the machinery.

A Juror—You are Superintendent of the Locomotive Department there, I think?—I have the charge of the locomotives, and all the machinery; the whole charge I have.

You know the engine No. 2?—Yes.

She has run—how long?—She started in January, 1840. She has run about 40,000 miles.

Another Juror—Never had any accident, except the one now under consideration?—No.

If there had, she would have come into you?—Yes.

Another Juror—When was she launched?—In January, 1840.

That is very nearly three years ago?—Yes.

CORONER—She is of the same calibre as the engines on the Birmingham line?—In every respect, rather better; because she was made after we had been at work two years, and we had the benefit of experience.

CORONER—The same, only that she is rather smaller in the bore.

A Juror—You have altered the scale of your engines within two years?—Yes.

But the Aylesbury engines were considered sufficient for your work previous to the time when you determined upon changing them?—They were made by Mr. Hick before the Company determined to change the size of them. I went down to Bolton for the purpose, but we were too late. If we could have changed them we should, but the order was too far advanced, and we could not change them.

A Juror—Is it your opinion that the engines were sufficient, the Aylesbury trains being lighter?—Yes.

CORONER—You work the trains much heavier now?—Yes.

Some have 20 carriages?—Yes; 20 carriages has been the ordinary load of an engine; with a 12-inch cylinder, it is but 12 carriages. We do not like them to go with more, because with a violent wind, or change of weather, they may possibly not keep their time.

A Juror—When the engine is proceeding along a curve is there not a pressure on the axle?—That will depend upon the nature of the curve.

There is a little?—Yes; but I cannot give you the calculation.

CORONER—Would there be a pound weight?—More than that; if you consider that one wheel has to run a greater distance than the other, there must be a portion.

A Juror—The whole is in one piece; the wheel and the box; not like a common cart wheel, which runs round an axle?—Yes; each pair of wheels is dependent upon its own axle only, independent of the other wheels; the front wheel, the axle of which is now broken, is nothing more than a roller, unconnected with the engine, except as rollers.

But the pressure produced by a curve would not be sufficient to break a sound axle?—We have run 40,000 journeys, and this is the only circumstance of the sort that has taken place. I should have said on Thursday morning that such an accident could not have taken place.

How long have the Company employed Mr. Hick?—He has made 12 engines for us; he made 6 in 1835, and then he had a subsequent order, and these engines were delivered in 1840.

He is not an inexperienced man?—Oh, no! He is now dead; he died since the beginning of this year. I should say there did not exist a more eminent man in his particular line of business in England.

Was the whole axle of the engine and the frame of the wheel one rolling mass?—Yes.

Not like an ordinary carriage where the wheel turns round on its axis?—No; the two wheels and the axle move together, as I have explained; therefore, if there is a curve, one of the two wheels is a little longer than the other in running round the curve, and the wheel must be forced back a little, imperceptibly. Consequently, there is a little sliding—there is a little torsion. As one cannot turn round faster than the other, there must be a little torsion—a little sliding motion. I should think it had received some sudden blow or jerk.

But that would not break a common axle, would it, sir?—I should say if it was sound no torsion would break it. We have never had an accident, except this one, and the one which broke inside the journal, where the engine came to Wolverton in safety. In that case, I should consider it was an original defect in the iron, but before we could discover that the engine had run 70,000 miles.

Was there any defect in the forging of the shaft that broke on Thursday morning?—Yes; I think that has been the cause of it. Some defect in the faggoting.

Which could not be detected until it broke?—No.

A Juror—It is very important that the jury should know that.

CORONER—But it is equally important to know that no man could have detected this; that no railway officer could have detected this.

Witness—No examination by any person under the engine could have discovered it, unless it had been taken to pieces, which must be done at the workshop, because it cannot be seen.

An engine cannot be taken to pieces in a common station so as to expose this piece?—No; we must have it taken off the wheels.

This examination cannot by possibility take place in the station?—No; if an engine comes in all right, we report it so.

As far as any examination will secure safety that examination always takes place?—Always takes place, daily.

It is too unwieldy to take them to pieces there?—It is impossible.

CORONER—You trust the reporting upon the state of the engine to others?—We do not trust them; we compel them to make a report; but they are examined afterwards. The engine which comes from Aylesbury would go to London to the Camden station, and there the person in charge would hear what Callum had to say; but if he did not make a report, the person would take care to see after the engine before it went out.

Daily, is that?—Daily. Callum was selected to go to Aylesbury, because of his experience, and because there was no person at Aylesbury to take the charge.

A Juror—Have the Birmingham Railway Company been in the habit of working with a luggage van between the engine and the carriages?—Never.

They never did?—No.

Were there not some regulations of that kind at one time?—The mail trains; not the other trains in the night.

Were not there some regulation of that kind after the accident on the Great Western Railway near Reading?—I do not know what has been done on the Great Western line.

I do not mean on the Great Western Railway, I mean on the Brighton line?—Yes.

CORONER—The Brighton line have done so, we saw yesterday, since the case of Mr. Carpue?—Yes.

May I ask you, Mr. Bury, why your Company do not adopt that plan. I believe you all admit it to be a safe one?—There are objections to it. The matter has been very much agitated in our Company whether it shall be done or not, and I believe now the Company will do it.

There is an objection to passengers being put into first carriages, is there not?—I believe it is so. The persons who have generally been hurt have been in those carriages. Experience points out the propriety of doing something of that sort; but I think there may be situations in which a carriage placed in that position will produce more serious accidents, indeed almost worse than we have ever yet known.

A Juror—The result of such a plan can only be proved by experience?—Of course.

CORONER—A carriage interposed between the engine and the first carriage would have been of service in this case?—Yes; it might.

A Juror—Yes; if there had been an empty carriage the woman would have been still alive. An empty carriage would have been knocked down the bank, and no other carriage damaged?—Yes; it might be damaged.

Mr. Erle—I happen to know, for I was in the next carriage to the one overturned, and it was a very singular thing that the wheels of the tender were in such a position that they locked the body of this second carriage. Such a thing might not happen once in a hundred times. Had it not been for this, all the carriages must have gone the bank.

A Juror—The first carriage that went over the bank I am told had four persons in it, three of whom were hurt. There was only one who escaped.

CORONER—Yes; there was this man here—(pointing to a person in the room)—he was one who escapsized.

A Juror—I am told there were 24 persons in that carriage.

Mr. Erle—Oh, no; only three.

A Juror—Then they were all hurt. If there had been 24 persons it would have been frightful to contemplate what the result might have been. It would indeed, in that case have been very serious.

Another Juror—The Aylesbury train is inverted when it comes to Cheddington on the Birmingham line; it is a very bad plan, and certainly very inconvenient?

Witness—We cannot help it; it must be so one way; whatever way it enters the London and Birmingham Railway this alteration must take place.

Not as the engine comes in towards London?—Whichever way the junction takes place, it must be so.

I thought it might be like the Grand Junction, between Manchester and Liverpool, where they go in a very short curve; they do not do it upon this plan. When the train comes from Liverpool, it comes on the line one way, and from Manchester the other, so as to avoid this change of engine?—Their arrangement is different from ours.

But I mean the train going from Liverpool turning off to Liverpool or Manchester at pleasure. The Grand Junction line comes on at right angles, and the train turns there; might not this plan be adopted in this case?—I think not.

There may be local difficulties which will produce great inconvenience, and which would almost defeat any arrangement you might make in that respect; but, could you not place an empty carriage?—We

could manage an empty carriage so as to interpose *that between* the engine and the train.

A portion of every journey you perform with the engine before the tender; must not it be so?—Yes.

Because the engine has to pass along and run and get behind the train and push it back, going after it, so that the tender is always before the engine either on *one* part of the journey or the other?—Yes.

CORONER—This is the first case of accident you have had, Mr. Bury?—Yes; it is the first case we have had.

A Juror—The probability is that this poor woman got into this particular carriage thinking it was the safest; hen they changed the engine, and that car*riage which* was last became fast.

CORONER—Gentlemen of the jury—I think we need not prolong the investigation; the evidence lies within *a nut-shell*. It is scarcely necessary that I should read the whole of this evidence over to you.

Several Jurors—Oh, no; it is not necessary, Mr. Coroner.

CORONER—It is hardly possible to doubt that the poor woman's death was the result of accident. I do not think any one who has heard the evidence can question it. The only question is the deodand—the amount of deodand. I must confess that personally I have a great objection to deodands. I consider them as relics of old Popish observances, and ancient absurdities. But it is the law, and while it is so, it will be your duty to observe it; we must take the law as we find it, which insists on putting on a deodand. The amount of that deodand is for your consideration. If you think the Company at all to blame, it will be your duty to impose a deodand to a considerable amount. I think myself that they are not at all to blame. If you think as I do upon the matter, of course the deodand will be only a nominal one. Your verdict, I presume, I may record as "Accidental Death."

Foreman of the Jury—Yes; I think we are agreed upon that.

CORONER—Gentlemen, you will be kind enough to consider your verdict. I shall record it as "Accidental Death," leaving the amount of deodand open. What is the value of the engine, Mr. Bury?

Mr. Bury—£1,250 was the original cost of the engine.

CORONER—But what is its worth at this moment?

Mr. Bury—Before I give an opinion upon that I should like to examine it. I could give you a rough guess.

Mr. Creed—What was it taken at at the last valuation, Mr. Bury, when we took our stock last?

Mr. Bury—I think 900*l*.; no, about 850*l*.

CORONER—About 850*l*.

Mr. Bury—Yes; about that.

CORONER (to the gentlemen of the jury)—You can retire, gentlemen, if you please.

A Juror—The only doubt we have is respecting the deodand.

CORONER—A deodand is a fine levied on the thing itself by which the accident has been caused.

A Juror—A deodand is a composition for the thing itself. The ancient doctrine of deodand is, that the thing itself should be dedicated to God.

CORONER—The origin of it was this—a fine was levied upon the thing to pay for prayers or masses for the repose of the souls of the persons killed.

A Juror—I daresay it had its origin in the Levitical Law, which says that the thing itself shall be dedicated to God.

CORONER—Oh, yes; I could find you the chapter and verse.

Foreman of the Jury—We wish to retire, sir.

CORONER—Very well, gentlemen.

After a short absence, the Jury returned to the inquest room.

CORONER—Well, gentlemen, have you agreed upon your verdict?

Foreman of the Jury—Yes, sir. The verdict of the Jury is, "Accidental Death; with a deodand upon the engine of 5*s*." The jury strongly recommend to the London and Birmingham Railway Company in future to work an empty carriage or luggage van between the engine and the passengers' carriages, as they consider in this case the accident would not have happened had this been done.

A Juror—At least that the death would not have happened; the accident would have happened all the same.

CORONER—Yes; certainly. I quite agree in your verdict, gentlemen, and I am sure the gentlemen of the Company will be very glad to attend to your suggestion.

Mr. Creed—I stated to the Coroner before your return, gentlemen, and I state again, that the Company have already been considering the expediency of it if it was only to satisfy the public mind. I have no doubt they will adopt your suggestion, and place an empty carriage between the engine and the passenger carriages.

A Juror—We consider the accident could not have been helped. There is no blame to be attributed to the servants of the Company, but the death might have been prevented by an arrangement like that proposed.

CORONER—Then your verdict, gentlemen, is "That the deceased, Mary Bye, was accidentally killed by the overturning of a carriage" (reading the finding to the jury, which they afterwards signed).

A Juror—The jury mentioned the cause of accident rather more explicitly than you have it there.

CORONER—I do not think we need add that; it will go in the short-hand writer's notes fully.

We believe we may state with confidence, that the Directors of the Birmingham Railway have for some time contemplated placing a carriage between the tender and the first passenger carriage of every train. Several experiments were made to ascertain the description of carriage best suited for the proposed object. A carriage truck was first tried, but experience proved that the only carriages suitable were either second-class carriages or parcels vans. A number of parcels vans was then ordered to be built to supply *advanced guards* for each of the trains, and until these carriages are completed an empty second-class carriage will be used as a substitute with every train. We are happy to hear that Tomlin, who was most hurt, is going on well.—*Times.*

THE LATE ACCIDENT ON THE PARIS AND VERSAILLES RAILWAY.

IT would seem that a short extract which we gave last week from a provincial contemporary, as to the result of the late inquiry, was erroneous. We subjoin the following particulars from the *Morning Post*:—

On Saturday, the 10th inst., the Seventh Chamber of Correctional Police was crowded to excess to hear the judgment. At a quarter-past 2 o'clock the President (M. Perrot de Chezelles) in the midst of profound silence, pronounced the following judgment:—

Seeing that, according to the indictment, the 8th of May catastrophe was owing to the following facts and circumstances—the getting off the rails and breaking of the right axletree, and one of the springs of the *Matthew Murray* engine; the insufficiency of the number of engines of the Company; the unfitness and bad state of the *Matthew Murray*; the placing it with another locomotive of unequal force; and finally, the excessive velocity of the convoy; all which facts and circumstances are to be imputed to the accused.

In respect to the getting off the rails and the breaking of the right axletree and springs:

Seeing that neither the judge-arbitrators (experts) nor the engineers, or the other witnesses, in their depositions, have been able to determine in a positive manner the order in which these various accidents took place; that even on this point, upon which scientific men were divided, only conjectural opinions have been given; from whence it follows that the tribunal remains in doubt in that respect, and cannot draw any inference against the accused; when it is, moreover, established by the unanimous evidence of the engineers and judge-arbitrators that the spring and axletree were made of good iron, well wrought, and are still susceptible of a long service.

In respect to the insufficiency of the material:

Seeing that this has not been proved, that even the engineer charged by the Government with the inspection of the railroads gives favourable testimony as to the number of engines, and the fitness and good state of the *Matthew Murray* machine;

Seeing that, according to the opinions of science, at the moment of the catastrophe, the fitness of this engine cannot be impugned, and that, in considering the particular construction of the *Matthew Murray*, the Tribunal has had no proof that the locomotive had the reputation of being bad and presenting signs of danger, nor that it had been remarked by the Company, or that it had exceeded, or even attained, on the 8th of May, the bounds of the ordinary service of an engine; that, finally, it had been purchased from a skilful and experienced manufacturer, who had made many others of precisely the same kind, against which no complaints nor protests had been raised, and the use of which is still allowed both in France and abroad;

Seeing, in respect to the manner of placing the *Matthew Murray*, that it was in strict accordance with custom, and that no blame can be imputed for this to the accused, inasmuch as scientific men are even now divided on this point.

In respect to the excessive speed:—Seeing that, on this point, the evidence is contradictory; that no sufficient proof results thereof, that the convoy went at a speed to cause or aggravate the accident; and that, for the rest, supposing even this last point proved, the fault must be brought home to the accused; and that in this respect, the accusation had not been borne out;

Seeing, in respect to the claims put in for damages, that the Courts of Correctional Police have not the power of deciding civil actions but accessorily for the public action, and that no offence having been established, the demands for damages could not be decided;

The Tribunal, for the above reasons, dismisses all the accused from the consequences of the indictment, and condemns the civil parties (demanding damages) in the costs!!

WANT OF ROADS IN CHINA.

COMPARED with the grand system of water communication, land carriage is little regarded; and Mr. Barrow believes that in the whole extent of the empire there is hardly a road that can be considered better than a footpath. The value of the ground, the scarcity of cattle for waggons, the almost exclusive use of chairs and litters for the convenience of travellers, and of coolies or porters for the transfer of goods, render any greater breadth unnecessary. They contrive, indeed, to employ in these narrow tracks a very peculiar species of conveyance. To loaded wheelbarrows they attach a sail, which, when the wind is favourable, materially aids their progress, and whole fleets of these vehicles may be seen moving along. Milton even alludes to the plains—

"Of Sericana, where Chineses drive
With sails, and wind their cany wagons light."

After all, where a road does become actually necessar to connect any of their points of intercourse, the inhabitants spare neither cost nor labour in making it complete. For example, the avenue leading from the capital to its port, is at once magnificent and commodious. The surface is perfectly level, and the middle part, for the breadth of 20 feet, is paved with flags of granite. Again, the road over the mountains of Tchekiang, though it be narrow, is covered with fine gravel from the neighbouring hills, and kept quite smooth. In the lofty barrier of Quang-tung, as has already been observed, a great part of the summit of the Mei-ling mountain has been excavated, in order to facilitate the passage.—*Liverpool Courier.*

[We would strongly recommend all who wish to have an accurate notion of Chinese habits and manners, to pay a visit to the Chinese Exhibition, at Hyde Park Corner. They will gain more information from a pleasant lounge of an hour there than from the perusal of a score of volumes of descriptive works. We would paticularly recommend the Exhibition to our country friends who may visit the metropolis at this festive season. It is in the highest degree interesting and instructive.—ED. R. T.]

NORTH MIDLAND RAILWAY.—We are happy to hear that the old and new Directors of this railway continue to act together with perfect harmony, and that there is every prospect of the reductions recommended by the Committee of Investigation being carried out, with one or two very trifling exceptions. It has been determined that the watchmen at the several stations on the line shall for the present be continued, and that two boys shall not be substituted for men as assistant flag-bearers at the junction with the Manchester and Leeds Railway. With these exceptions, all the reductions will be effected, and that with the concurrence of the old Directors who remain on the Board. We also understand that Mr. Marshall, the Superintendent of the Locomotive Department, who had resigned his office, will continue to fill it, being satisfied that the saving proposed in that department may be effected with perfect propriety. The question of the rate of toll for minerals is likewise arranged, the Board having resolved, with the concurrence of some of the principal coal-owners on the line, that the toll for conveying coal on the line shall be raised from 1d. to 1½d. per ton per mile, except where the coal is carried forward by some other railway to places south of Derby or north of Normanton, in which case it is thought the trade will not bear a higher rate than the present. The Board are also occupied with further arrangements, which it is hoped will increase the revenue.—*Leeds Mercury.*

CALEDONIAN RAILWAY—RIVAL LINES.

On Thursday last, the 8th instant, a meeting of the parties interested in the projected line of railway between Lancaster and Carlisle, by the valley of the Lune, and whose interests were affected by and who were friendly to the said line, was held at the Royal Hotel, Kirkby Lonsdale, for the purpose of taking into consideration the best means of promoting such line. The meeting was numerously and respectably attended. The Rev. J. H. Fisher, Vicar of Kirkby Lonsdale, was in the chair.

After a few words from W. W. Carus Wilson, Esq., of Casterton, in which he stated that he came there neither to encourage nor oppose, but merely to hear the discussions, in order to enable him to come to some definite conclusion,

Richard Atkinson, Esq., proceeded to address the meeting. There could be no doubt that the Lune line of the Caledonian Railway would prove, in the first place, a great advantage to the labouring population—their distress had been considerable, and it was a great object to relieve that distress. The present was a question whether the railway should come by the vale of Lune or by Kendal. The interests of the people of that valley had as much right to be attended to as the interests of the neighbouring vales. If the establishment of a railroad through Kendal would be to the interests of the Kendal folk, it must also be an advantage to the inhabitants of the vale of the Lune. View it in connection with the sources of profit, it would open up both to the tradesman, the landowner, and the farmer. As to the cost, none could doubt that that was the cheapest and the shortest line. The difference had been calculated at 126,008*l*. All the calculations of Engineers, that is, those employed in jobs of that nature, were generally as 3 to 1—300,000*l*. for 100,000*l*. If they said 126,000*l*. the cost was more likely to be 370,000*l*. There was also a question of a mile and a half extra cost. No railway in England was worked for less than 1,440*l*. per mile per annum. The London and Birmingham cost 2,200*l*. per mile per annum, and the Great Western Railway, which was the best in the kingdom, and for which Mr. Brunel was engineer, amounted to pretty much the same, viz. 2,200*l*. Mr. Locke constructed the Lancaster and Preston Railway, and his estimate was 200,000*l*., but the actual cost amounted to upwards of half a million. Whatever might be said of the practicability of the line from Kendal to Grayrigg, it did contain great difficulties. He had come along that line in order to form some idea of it, and he must say the difficulties were of a serious magnitude; they might be overcome, but it would be at a vast expense. What the Birmingham Company wanted was a cheap communication, and it did not matter to them whether Kendal or Kirkby Lonsdale were the line chosen; but which ever offered the best opportunities would, no doubt, be the one obtained. (Hear, hear.) Suppose the railway to be formed by Kendal to Grayrigg, the lowest estimate would be 176,000*l*. more than the Lune line, requiring an expenditure of 9,000*l*. per annum. Kendal could not raise that traffic, for it was burthened with a poors' rate of 7s. 6d. in the pound. All the traffic of Kendal was in a manner subject to the canal. It was well known that, in the case of the Preston and Lancaster Railway, the canal and railway were cutting each other's throats. In case the railway went by Kendal, the canal would do the same. No one would join a line in such circumstances; for until the canal was filled up it would always be so. Mr. Nicholson said that the population of Kendal was 31,000. The population of the vale of Lune, from Lancaster to Sedbergh, was, he could venture to say, 20,000. He took all these places in the immediate line. He did not embrace Giggleswick and Settle, and those branching from the main valley. Those 20,000, therefore, being in a direct line of communication, would necessarily be of greater weight than 31,000 straggled over the face of the country. It was well known that a considerable portion of the Kendal traffic was by sea; but the canal would continue to bring them cheaper, should the Company only realise 100*l*. per annum by it, and thus it would always have an interest adverse to that of the railroad. The traffic on the Lune line would be greater. The interests of a few individuals might be destroyed, and some would be benefited. Mr. Wilson of Casterton would be a considerable gainer, perhaps to the amount of 2,000*l*. per annum. Mr. Wilson of Rigmaden would be injured. But he trusted there was no one there who would put his private interests against the public good. He would ask what conduced to the interest of the community? Good roads and easy communication to markets. Here was a road made ready to their hands, without a penny's expense to them. There would be a relief of money spent in labour which would confer a lasting memorial to their advantage. He had endeavoured to find a reason for their opposition, but he could not. If the railway was an advantage, as represented, he called upon all to give him their support. If it would benefit the farmer and the landowner, let them give him their assistance. To the professional man and the man of pleasure it would be an undoubted advantage; and he called upon one and all to give him hand and heart in the cause. Mr. Atkinson then read a resolution in favour of the line by the valley of Lune, which was seconded by A. B. Tomlinson, Esq., and carried unanimously.

After some more addresses to the meeting by W. W. Carus Wilson, Esq., Mr. Suart of Sedbergh, and other gentlemen, the following declaration was proposed and adopted, viz.:—

That independently of an individual interest and the prosperity of that portion of the country with which we are more immediately connected, we view the projected railroad between Lancaster and Carlisle as a great work of national and public concernment. We are anxious, therefore, that that line be adopted which offers the fairest probability of being brought to a successful completion.

That the same line is the shortest; presents no material difficulties in its execution; is the one pointed out by the physical configuration of the country; which passes in its whole extent, through a district of high cultivation and great fertility; will most materially benefit an agricultural and manufacturing population of nearly 20,000 inhabitants; will call into existence sources of mineral wealth, which, whilst it will give employment to great numbers of persons, will very materially add to the general prosperity; will interfere with no rival interest whatever; will greatly benefit, and cannot possibly prejudice, the country through which it passes; which, finally, presents the fairest prospects to the shareholder, if once engaged in, of being brought to a successful conclusion.

That in contrast with these advantages, the Kendal line being more circuitous, will call for a larger outlay in its construction, and require a greater yearly expenditure if ever completed; that it will pass through a country generally inferior in fertility, and have to traverse in a portion of its length, a course presenting great natural impediments; that for fully one-third of its whole length between Lancaster and Carlisle it will have to compete with a rival well-established interest, which is not likely to be conciliated, and cannot easily be annihilated.

That as long as the Lancaster and Kendal Canal continues in existence, so long will the advantage offered by the traffic of the town of Kendal be illusory, and that, by consequence, the contemplated railroad, if carried by that course, must for full one-third of its whole extent be long worked under conditions the most unfavourable and unprofitable. That as these impediments and disadvantages can never be overcome except at a most serious sacrifice on the part of the public, we fear that those persons who are aware of them may be deterred from embarking capital in a project which, from requiring so considerable, and in our opinion so useless an expenditure, will necessarily offer so small a probability of a productive return.—*Westmorland Gazette*, Dec. 10.

We [*Westmorland Gazette*] have very great pleasure in laying before our readers the following copy of a letter from our excellent county member, Mr. Alderman Thompson, to Mr. Richard Atkinson, Kirkby Lonsdale, on the question of the lines of railway by Kendal or by Lune. It is fortunate for the county that it possesses a member with such influence, capable of resisting the impulses of self-interest and self-convenience, and at the same time of taking sound, discriminating views on a subject which ought to be decided on Bentham's principle of "the greatest benefit to the greatest numbers." But the letter will speak for itself:—

Pendarron House, 3rd Dec., 1842.

Dear Sir,—Your letter of the date of the 30th of November and directed to London, has reached me here, and I thank you for the courtesy you have shown me by informing me of the meeting which has been called for Thursday next, "to consider the best means of promoting the projected line of railway between Lancaster and Carlisle, by the valley of the Lune." I much regret that my engagements here will preclude me from attending the meeting, and personally explaining the grounds upon which I am bound to support the line by Kendal. As you have justly observed, the question at issue is not of a political character, yet it can hardly be said that it is one of secondary importance, for in my judgment by its decision will the agricultural and manufacturing interests of the country, as well as the general convenience of a great majority of the inhabitants of Westmorland be affected. I cannot therefore realize even your hope that "I may stand neuter in the conflict." My constituency have a right to demand my services on an occasion which deeply concerns their local interest, and I shall pursue that course which I have adopted under the like circumstances. It has been my fortune, in the course of a public life of nearly twenty-five year's duration, to have represented some of the largest constituencies in the kingdom, and it has not unfrequently happened that a diversity of opinion has prevailed concerning their local affairs when under the consideration of the legislature. My practice has been, under such circumstances, to apply my mind, and strive to ascertain what course was the best calculated to advance their general good, and upon this principle I purpose to act in respect to the Caledonian Railway. I believe the line by Kendal will be more beneficial to the general interests of my constituents than if it were formed by the valley of Lune. In this opinion I am supported by the Commissioners appointed by the Government to survey the two lines; the Kendal line traverses a district containing a population of 31,500, and the Lune line of only 2,700. I cannot conclude this letter without assuring you that I deeply regret a sense of my public duty requires me to adopt a course of conduct which appears to my neighbours and friends at Kirkby Lonsdale prejudicial to their local interests, and with which, as they must know, my own are materially identified.

I am, dear Sir, yours very faithfully,
W. THOMPSON.

To Richard Atkinson, Esq., Kirby Lonsdale.

The Central Committee for promoting this great national work, met in the Town Hall on Saturday last, to consider the progress already made in the preliminary arrangements. Col. Graham, of Mosknowe, presided; and there were also present, P. H. Howard, Esq., M.P.; George Dixon, Esq.; W. Wilde, Esq.; H. D. Maclean. Esq.; John Dixon, Esq.; Dr. Barnes, Captain Grant, and Mr. Larmer. Col. Graham stated the particulars of the important meeting held at Birmingham on the 8th ultimo, which have already appeared in our columns, and they seemed to give general satisfaction. After some conversation, as to the best means of securing the consent of the landed proprietors to the proposed railway, the following resolutions were unanimously adopted:—

I. That the Central Committee are much gratified to find that the projected Caledonian Railway was unanimously approved of by a highly influential meeting of Railway Directors held at Birmingham on the 8th of November last, and that the meeting resolved to recommend to their several Companies the support of the undertaking, and named a Committee for the purpose of taking steps towards the formation of section No. I. of the proposed line, namely, from Lancaster to Carlisle.

II. That the projected railway would be the means of greatly facilitating the intercourse of the north-west of England with all the leading commercial cities of Great Britain; and the Central Committee, in announcing this, do therefore now call upon the proprietors and inhabitants generally of the towns and landward parishes through (or near) which the line is proposed to pass, to render their best assistance to an undertaking calculated to be so vastly beneficial in its results to all classes of the community.

III. That as soon as the lists of proprietors on the line and the necessary notices are prepared, this Committee will be happy to adopt the most suitable means of communicating with the proprietors in this neighbourhood, and facilitating the procuring of their assent; and recommend to the other Committees on the line to assemble and adopt a similar course.

IV. That one hundred copies of these resolutions be printed, and that a copy be furnished to Captain Huish, for the information of the Committee appointed at the Birmingham meeting.

V. That the Mayor and Mr. John Dixon (who are present) be requested to communicate the present resolutions to the Town Council, and request their co-operation in a matter so important to the interests of the Borough.

The meeting then adjourned to Saturday, the 17th inst.—*Carlisle Patriot*, Dec. 8.

Railway Communication to Holyhead.—The *Chester Chronicle* says, "In the ensuing session we hope to see a Bill passed by the legislature to form a railway from the station at Chester, running through the coal and mineral district of North Wales to Wrexham, plans of which were lodged on the 30th ult. at the proper offices; and though this railway is principally intended for the local traffic of our neighbourhood, it will be an important step in advance of the route to Holyhead, as it will pass through the suburbs of Chester, crossing the river Dee, and run about four miles in the direct line to Holyhead; and we are happy to add, we have every reason to believe the parties engaged in this undertaking have the ability to accomplish their object, in which they have our good wishes."

—o—

Birmingham and Gloucester Railway.—We are glad to find that the traffic returns published weekly in the public journals has been steadily increasing in amount, compared with the returns of the corresponding periods of last year, for some time past. This circumstance, in the face of a continued depression of trade, and consequently of travelling, augurs well for the interests of the Company, and we sincerely hope will continue. The Directors, desirous of affording every possible accommodation to the public, have so arranged their plans, in connection with the London and Birmingham Company, as to enable passengers to book from Cheltenham to London direct by a train, which, leaving the Queen's-road station at 20 minutes past 1, arrives in London at 9; a down train leaving Euston-square at 15 minutes to 10, a.m., and reaching Cheltenham at 5 p.m.—*Cheltenham Looker-On.*

REAT NORTH OF ENGLAND RAILWAY—*MEE*TING OF PROPRIETORS.

MEETING of the proprietors of the Great North of gland Railway resident in Newcastle, Gateshead· ields, Sunderland, and the neighbourhood, was ld in the Clarendon Hotel, Grainger-street, New- *stle-on*-Tyne, on Saturday, and was pretty nume- usly attended. On the motion of Mr. Johnasson, r. Alderman POTTER was requested to occupy the *air.*

The CHAIRMAN, in opening the proceedings, said, e meeting had been convened in order to consider in *hat way they* could best promote the interests of that eat undertaking, in which they were all so largely ncerned. It was perfectly obvious to all of them *at the* management of the Company had hitherto t been such as could be approved of; but it was useless tempting to recriminate; so let what was past be nsidered as gone, not to be recalled, except as it ight conduce to the better management of the Com- ny in future. He believed, standing as this under- king did as a great trunk of railway communication, d with so many lines running into it, if the manage- ent were good, it could not but answer, and pay the areholders something like interest on their money. le hoped that some gentleman would be prepared to bmit a resolution that would tend to promote the ood they contemplated. He had wished that some der shareholder than himself had taken the chair on is occasion; for his information on the subject was xtremely limited. He knew that the concern was ad; but he knew little more than what had been tated by Mr. Watson at the last meeting of the hareholders.

Mr. JOSEPH WATSON said, it was only necessary or him to state, that since the last half-yearly meeting f the Company, it had become the opinion of many entlemen that it was desirable that the shareholders hould meet to consider, and take steps to prevent, he disastrous consequences which must ensue to his Company from the improper interference of the Directors of another Company, namely, the Stock- on and Darlington Railway Company, in its affairs The Great North of England Railway Company, n conjunction with the Brandling Junction and New- astle and Carlisle, had guaranteed a return of 6 per ent. to the shareholders in the Newcastle and Dar- ington Junction, and he observed that a competing ine had been projected, and plans deposited with the Clerk of the Peace to enable the parties to go to Par- iament for an Act This line, which originated with he Stockton and Darlington Company, some of the Directors in which were also Directors in the Great North of England Railway, which had joined in giving the guarantee of 6 per cent. to the sharehold- ers of the Junction line, would be highly injurious to the Junction line, and every means ought to be taken to prevent its being carried into execution. Per- haps the subject would be better understood by his reading from a draft Report, which he held in his hand, the whole of the circumstances connected with the project of forming a railway communication from York to Newcastle, of which the portion from York to Darlington had been completed, and that from Darlington to Newcastle, by the Junction line, was now in progress. [This document, which was rather lengthy, entered into a history of the formation of the Company and the completion of the line to Dar- lington, which absorbed the whole capital of the Com- pany, and was completed first in order to meet the views of certain influential individuals connected with the line. It was then found that, though surveys of the line north of Darlington had been made, and land purchased in some places, the Company had not the means of carrying it into execution. After matters had remained in this position some time, the Junc- tion line was projected, proceeding some distance from Darlington to Shincliffe, on the line originally surveyed. This plan was opposed by the Stockton and Darlington Railway Company, who were desirous that the line from Darlington should proceed so far upon the Stockton Railway, and they had petitioned the Lords to be heard by counsel against it. There could be no doubt that this was the fact, though the opposition was carried on in the names of some of the landowners on the line. The same Company had now projected a competing line, and it was necessary that the shareholders in the parent line should do everything in their power to prevent such competing line being carried into execution. It was proposed as a first step to re-model the Directory of the Great North of England Railway—that those holding office in both Companies, that is the North of Eng- land and the Stockton and Darlington, should with- draw; that the Board should consist of seven mem- bers, two being appointed from York, two from Dar- lington, one from Thirsk, and two from Newcastle, Shields, Sunderland, and the adjoining district. This, it was thought, would give a fair representation to the Company, and prevent its affairs falling into improper hands.] After reading the Report, of which the above is a mere abstract, Mr. Watson concluded by moving "That the draft of the address to the proprietors of the Great North of England Railway now read be referred to a Committee to be examined, and when approved of, that it be printed, and that copies be sent to each of the shareholders in this Company, and to the respective Boards of the Stockton and Darlington Railway, the Newcastle and Darlington Junction Railway, and the other Railway Companies who have united in the guarantee of 6 per cent. per annum for ten years to the shareholders in the Newcastle and Darlington Junction Company; and that such Com- mittee consist of the following gentlemen, with power toadd to their number:—Messrs. Eddowes, Johnasson, Kell, Beaumont, and Joseph Watson."

The motion was seconded by Wm. BEAUMONT, Esq., and carried unanimously.

Mr. JOHNASSON observed, that it was very easy to find fault with Directors in public Companies, and es- pecially when the railways did not pay; but he thought the shareholders in the present case were not complaining without very good reason. From the statements in the address which had been read, they had not only very good reason to complain, but strong grounds to suspect that they had not been fairly dealt with by a portion of the Directors in the Great North of England Railway. He disliked to make charges against gentlemen in a public capacity when they were not present, and therefore he would reserve what he had to say on this head till he had the pleasure of seeing them at the next annual meeting, when he pledged himself to bring the subject forward. Mr. Johnasson concluded by proposing, "That in the opi- nion of this meeting, the Directors should be free from any connection which can interfere with their in- dependent management of the affairs of the Company; and that therefore gentlemen who hold office in the Stockton and Darlington Railway Company ought to discontinue acting in a similar capacity in this Com- pany."

Mr. JAMES EDDOWES had great pleasure in se- conding the motion as it stood, though he considered it ought to be a little more stringent.

The CHAIRMAN observed that it ought to include all the officers of the Company as well as the Directors; and after a short conversation this alteration was adopted—the resolution, as amended, being, "That in the opinion of this meeting, the Directors and officers of the Company should be free," &c. In this shape it was ultimately carried

Mr. W. H. BROCKETT then moved "That the thanks of the shareholders in this Company, and the inhabi- tants of the district generally, are due to George Hudson, Esq., the Chairman, and to the Directors of the Newcastle and Darlington Junction Company, for the public spirit they had manifested in originating that Company, and for the integrity and firmness which they have displayed in resisting the attempts made to induce them to deviate on to the Stockton and Darlington Railway,"

Mr. JOYCE seconded the motion, which was also carried.

Mr. KELL moved that a vote of thanks be given to John Hodgson Hinde, Esq., Hedworth Lambton, Esq., and the other members of Parliament connected with the district, for their exertions during the last Session of Parliament, in having secured a direct line of railway communication from Darlington to Shin- cliffe; and that they be respectfully requested to give their best exertions in preventing the passing of the Act of which the Stockton and Darlington Company have given notice.

The motion was seconded by Mr. GEO BAINES, and carried unanimously.

The next resolution, moved by Mr. Henry Walker, and seconded by Mr. Glaholm, was to the effect that the shareholders present pledge themselves to use every exertion to prevent the formation of the com- peting line to the Newcastle and Darlington Junction Railway.

A vote of thanks was passed to Mr. Watson, and also to the Chairman, after which the meeting sepa- rated.

The mail from Worcester to Ludlow, after running for half a century, made its last journey on Tuesday se'nnight, thus leaving the public without any official conveyance for letters between Worcester and Ten- bury.

DEAN FOREST AND GLOUCESTER RAILWAY.

A MEETING of the mining and trading interests of the Dean Forest was held at the Speech House, on Wednesday, the 7th inst., to consider a proposition submitted to them by the Dean Forest Railway Com- pany, for extending the line of that railway to Glou- cester, constructed for locomotive power. The meet- ing was numerous and of great respectability. The Chairman (PETER TEAGUE, Esq.) opened the pro- ceedings of the day by expressing his satisfaction at the proposed highly important measure.

JOHN DISNEY, Esq., the Chairman of the Dean Forest Railway Company, addressed the meeting in a very eloquent speech. He said that the Company had responded to the call made upon them by the Govern- ment for an improved line of communication from the Forest, and that it was the wish and the intention of this Company, in promoting the measure, to grant every facility possible to the various interests likely to be affected by the undertaking. He read the Report made to her Majesty's Commissioners of Woods and Forests, by Messrs. Buddle and Sopwith, two of the Dean Forest Mining Commissioners, and also a letter from the Secretary of the Woods and Forests, approv- ing the line now proposed.

Mr. BALLARD reminded Mr. Disney that he had omitted to refer to the great outlet for Forest coal, which is now opened to an extensive district by the Herefordshire Canal; that the heavy charges now borne in the transmission of the coal to Gloucester was a prohibition to its use, and that a reduction in price would bring it into general consumption.

SAMUEL BAKER, Esq., said, he had listened with great satisfaction to the eloquent and perspicuous statement made by Mr. Disney, by whom the subject had been so fully and clearly explained as to leave little room for further comment, but he might be per- mitted to point to one great source which had been left untouched—the exportation trade from Gloucester. It will be evident to gentlemen connected with the mining interests, that notwithstanding the favourable position in which they were placed with respect to distance from the port of Gloucester, they have been isolated and shut out from the participation in the foreign export trade, by the expensive and inconve- nient mode of transit of their product, it will be evi- dent to them that unless they adopt similar improve- ments with other places which have followed up the discoveries made by science, and thus availed them- selves of those facilities which are now adopted in every other mining district, it will be impossible for the Forest interest to compete with their more enter- prising and successful rivals; and they must then be confined to the limited markets of their own localities. Even now the important town of Cheltenham is sup- plied with coals by railway conveyance from Derby, a distance of 106 miles, whilst the mines of the Forest are within 20 miles; but the riches of the Forest are not confined to coals alone,—iron ore of the richest quality, and stones of a superior kind, are within the reach of a great and populous neighbourhood, but its uses are debarred by their exorbitant transit charges, which are incurred in the absence of a cheap convey- ance. He rejoiced that the prospect was now before them for obtaining those advantages, and he con- gratulated the mining interest now present, and the humbler individuals dependent upon them, that the dawn of better days would break upon them. He re- joiced that the hardy Forest labourer, who has through a long period of great deprivation and distress borne his suffering and want with exemplary patience and loyalty, whilst rebellion stalked abroad in other min- ing districts, would now have the prospect of full and profitable employment, by the opening which is pro- mised for the product of their labours. Having said thus much he trusted that he should be acquitted from having any intention to offer the slightest opposition to the principle of the measure proposed by the gentle- men connected with the Dean Forest Railway, and if his humble endeavours could be servicable in forward- ing the measure, they would be given heartily, but it must be conditional; much as he desired so great and important an improvement, he must be assured that placing the power in the hands of the existing Com- pany would not injure the interests of the proprietors of mines, and that every advantage possible would be extended to the respective mining and trading inter- ests. He was aware that such subjects could not be calmly discussed at a public meeting like the present, and he should therefore propose that a Committee be appointed to be the representatives of this meeting, with power to arrange the protective classes with the Railway Company, and he should move a resolution to that effect. He confessed that at the first glance at the plans he felt considerable jealously at the terminus

Digitized by Google

being at Bilston. He thought that the line of edge rails should be laid down to the extreme point of the present tramway to the Churchway Engine, so that all the collieries might have the opportunity of running lines thereto. He concluded by moving a resolution to that effect, and appointing a Committee of Forest Miners to agree upon clauses to be introduced in the Act of Parliament.

EDWARD PROTHEROE, Esq., said that he rather wished to refrain from taking a prominent part in the proceedings of that meeting, but he could not help expressing his gratification at the very handsome and feeling manner in which his friends, Mr. Disney and Mr. Baker, had spoken of the services he had rendered to the Forest of Dean. He had expended his fortune in employing its population, and though he had not met with success for himself, owing to the very defect which they were now about to remedy, though, after bearing the heat and burthen of the day, others would now reap where he had sown; yet his heart was still in the Forest, and he wished his grave to be under its turf. He bore willing testimony to the exemplary conduct of the working miners of the Forest during a season of trying distress for want of regular employment, and he was delighted to think that they would now be rewarded by full work and fair wages, bringing comfort to themselves and their families. He had been somewhat alarmed by the doubtful manner in which Mr. Baker had signified his willingness to support the plan brought forward by the Forest of Dean Railway Company, but he was delighted to find that there was, in reality, no difference between them. It would indeed have been a calamity to have met with opposition, or only a qualified support, from a gentleman of his acuteness of intellect and weight of influence; but his requirements, when explained, were perfectly just and reasonable, and would be met by the ready assent of the promoters of this measure. It was natural enough to suspect, from the terminus of the new road being fixed at Bilston, that it was intended to give a partial and almost exclusive benefit to his (Mr. Protheroe's) Bilston Collieries; but he should be ashamed to ask the support of his brother foresters to any plan of improvement founded upon a selfish principle of monopoly. Captain Moorsom had chosen to fix his terminus at Bilson, as the most convenient spot in respect of elevation for extending branches to other collieries; but it was his (Mr. P.'s) desire that the improved railway should be extended to the utmost limit of the Company's line of road, and that express power should be given in their Bill for every proprietor of works to form a junction with it. He believed there would be trade enough for all, and he should rejoice to see new works opened to meet the enlarged demand. He was desirous even to invite an union with, he would not call it the rival, but the sister railway of the Severn and Wye, upon equal and liberal terms. He saw no possible objection to the appointment of a Committee from this meeting to confer with that of the Forest of Dean Railway Company, and to settle with them the claims and provisions of the intended Bill that were necessary to secure the rights and interests of the miners and traders in general, and he felt assured that there would be a satisfactory arrangement for their mutual advantage; in truth, their interests were one and the same, and, instead of quarrelling upon petty differences, he hoped to see all parties uniting in the one great object of improving their ways, and thus affording free openings for the development of the abundant resources of wealth and prosperity as yet hardly begun to be tried in the Forest of Dean.

Various resolutions were then passed unanimously, favourable to prosecuting the plan proposed, and also a resolution submitted by Mr. Baker, appointing a Committee composed of proprietors of mines, and pledging the Company to extend the rails for locomotive engine power to the Churchway Engine.—*Gloucester Paper.*

[*From our Correspondent.*]

On Tuesday last the scheme was submitted to one of the largest meetings that have assembled at Gloucester, for a purely mercantile purpose, for many years. The attendance of the promoters of the measure was numerous, including Mr. Disney, the Chairman of the present (Tram) Railway Company, and Mr. Protheroe, the extensive coal-mine proprietor. On the part of the City appeared Mr. Baker, Sir Matthew Wood, Mr. P. Price, Mr. Marten, and other leading merchants. The meeting was held at the Shire Hall.

The present communication betwixt the Forest and the outlets for its minerals, is carried on by means of a tram-road, a slow and expensive process, but, as appears, tolerably remunerative to the shareholders,—the dividends for some years past averaging more than 5 per cent. The Commissioners of Woods and Forests, with the view of drawing out the resources of the crown-lands, have offered encouragement to the Dean Forest Railway Company to construct a line adapted for locomotive power in the direction of Gloucester; and this, added to the representations and remonstrances of the traders and colliers of the Forest, led to the present movement. In 1841, a plan was lodged and application made for a Bill to Parliament, but the Standing Orders not having been fully complied with, the object was defeated. The present plan is almost the same, the only difference being the construction of a tunnel in one part. This explanation is necessary, as reference was often made in course of the proceedings to the two plans.

The distance is 12 miles, and the expense, according to Captain W. S. Moorsom, the Engineer, will be 120,000*l.* This is proposed to be raised by borrowing 60,000*l.* upon the security of 7,000*l.*, the net revenue of the present tram-road, and 13,000*l.*, the additional prospective income, and creating 1,200 new shares, at 50*l.* each. Engrafting these new shares upon the present concern, the capital stock stands thus:—

Present shares, 2,500, new shares, 1,200; 3,700; equal at 50*l.* to 185,000*l.*

It is proposed to appropriate the estimated net revenue of 20,000*l.* thus:—

1st. Interest on debentures, 60,000*l.* at 5 per cent.	£3,000
Interest on 3,700 shares, 185,000*l.*	9,250
	£12,250
2nd. An additional 2½ per cent. on the 1,200 new shares	1,500
3rd. Dividing the remainder equally, 1*l.* 13s 9d per share	6,250
	£20,000

The increase is calculated at the rate of 2s. 6d. per ton for carriage, upon an amount of 212,000 tons, including an allowance of 2,500*l.* expected to be derived from the present tramroad. The price of coal at Gloucester is 13s. per ton; at Cheltenham, 18s.; at Stroud, 16s. Should the scheme be carried into effect, it is expected that the price at Gloucester will be 9s. 6d.; and at Cheltenham and Stroud, 11s.

[Our correspondent furnishes us with a detailed account of the speeches delivered on Tuesday, but we cannot find room for them. Resolutions to the effect above stated were carried.]

RAILWAY ADJUDICATIONS.

DOGGETT *v.* EASTERN COUNTIES' RAILWAY COMPANY.

Vice-Chancellor Bruce's Court, December 12.—His HONOUR gave judgment in this cause. The question in the cause was, in substance, whether in June, 1838, the plaintiff, John Doggett, represented to Mr. Tite, the defendants' surveyor and one of their agents, that the property in Gloucester-court, adjoining and occupied by the plaintiff, together and in connection with John Doggett's freehold property in High-street, Shoreditch, was his part of the latter property, or otherwise the freehold property, or wholly as to five-sixths, of John Doggett, who in truth had only five-sixths of the High-street property. The plaintiff asserted, and the defendants denied this; the allegation of the defendants, contradicted by the plaintiff, being that through such a representation the defendants, believing themselves to be buying of John Doggett the fee-simple of five-sixths of the whole of what the plaintiff occupied, agreed to give a price upon that footing, which the plaintiff desired to apply to five-sixths of the High-street property only. The true was not always the proper, but to such benefit as belonged to the observation that what the defendants alleged in this respect was unlikely to have happened, the plaintiff was entitled. There was an absence of probability, certainly, in the defendants' case, it being clear, upon the evidence, that this Company, through their proper agent or agents, had, before June, 1838, distinct notice that that part of the property occupied by the plaintiff, which was in Gloucester-court, belonged to the plaintiff; that it was held by the plaintiff and Mr. Teel, Mr. Teel being the acting manager of the Gloucester-court property, and also being concerned, previously, as a manager for the plaintiff, in the dealings between him and the Company. The duty of the Directors required that Mr. Tite should, before he valued the property in question, be made acquainted with what the Company knew upon the subject; it must be considered extraordinary, in a high degree, if, in the month of June, 1838, John Doggett had, with any fraudulent or unfair design, represented to Mr. Tite a circumstance so notoriously untrue as that the Gloucester-court property, so occupied by the plaintiff, was, as to the whole or any part of it, the freehold estate of John Doggett. He could have had no rational hope of deceiving the Company; he did not appear to have had any ground for supposing that Mr. Tite was ignorant of the fact. Still if it were satisfactorily proved that John Doggett had committed the fraud imputed to him, the defendants would be entitled to his decision on that occasion, notwithstanding the conduct of their Directors or their agents. That conduct, however, formed only a part of the evidence upon which he considered that the case of fraud had failed. It was remarkable, considering what Mr. Oram and Mr. Wm. H. Doggett had deposed, that Mr. Teel, a witness in the cause, had not been examined as to anything which had taken place since June, 1838. Not forgetting what Mr. Tite had sworn, or having any reason to suppose him otherwise than respectable, he did not believe that the fraud alleged had been either committed or attempted; he did not believe that John Doggett had any dishonest or unfair intention, or that he had made any inaccurate representation to Mr. Tite; and if a case of error without fraud was open to the defendants, he was not satisfied that a case of error or mistake, which it was important to the defendants so to characterise, had been established. Being of opinion that upon the grounds before him a case for resisting the plaintiff's claims for specific performance had not been established, he had considered whether it would be proper to direct further inquiry before a jury or otherwise; and looking to all the circumstances, not excluding from his consideration that the amount in dispute was only 400*l.*, he was upon the whole of opinion that it was his duty to dispose of the cause, thereby decreeing specific performance of the agreement of September, 1838, with costs to the present time, against the defendants.

BRISTOL AND EXETER RAILWAY.—Although the goods traffic on many lines has shown a great falling off, compared to what they were doing 12 or 14 months ago, there is a great increase from Bristol to Taunton, and by the time the line is finished to Beam-bridge, 22 miles from Exeter, the receipts will, it is expected, be double what they are at present. Near Wellington, the works are proceeding with such rapidity that the contractors will finish their undertaking a considerable time before their engagement.—*Bath Journal.*

COACH TRAVELLING IN TIMES PAST AND PRESENT.—Though Salisbury may not, in these railway-days, reckon up the same goodly number of stage-coaches that even some ten years since added much to the general bustle of her highways and public thoroughfare, some few but excellent coaches are still left to us, and we cannot do better than contrast the present rate and mode of travelling that now affords such facilities to our communication with the metropolis, with those which prevailed in the year 1777, with respect especially to the *Salisbury Diligence*, which soon afterwards became so generally and popularly known as the *Light Salisbury* coach, and still continues its daily route, under the management of the Messrs. Weeks:—"The conveyance between Salisbury and London having been found very inconvenient, on account of the carriages travelling all night, it is presumed that a well-conducted plan, free from such inconvenience, will be generally approved. The ladies and gentlemen of the city, close, and neighbourhood of Salisbury are therefore most respectfully informed, that a *Salisbury Diligence* will set out every morning at 6 o'clock from the White Hart, at Salisbury, and the Angel, behind St. Clement's, London, by way of Stockbridge, and will arrive at each of those Inns early the same evening, as fresh horses will be taken at every stage, the same as with a post-chaise. To carry three passengers, at 3d. per mile each, and 14 lbs. luggage; all above, 1d. per lb. N.B. The proprietors will not be accountable for anything above 5*l.* value. The carriages are quite new, elegant, and commodious, and as the proprietors are determined to make this conveyance as agreeable as any method of travelling can be, they humbly hope for the favours of the public. Turnpikes and drivers will be paid by the proprietors."—*Salisbury Herald.*

MR. STEPHENSON, the Secretary of the proposed Evesham Railway, made a fool of himself yesterday in the Court of Exchequer, by bringing an action for libel against a person who had written certain doggrel verses to the Chairman in the Secretary's disparagement. The jury found for the defendant.

WEST CUMBERLAND RAILWAY.

To the Editor of the Railway Times.

SIR,—Observing, amongst the notices of intended *applications* to Parliament for new railways, one for the West Cumberland line, I am induced to trouble you with a few words, in the hope that the *subject may* be taken up and discussed, and that an undertaking which would be so highly beneficial to this side of the county may not be longer shelved—*as, although* such notices appear to have been given with *four lawyers'* signatures to the same, I cannot discover that any active steps are being taken for carrying it really forward. If these gentlemen do not intend to exert themselves, the sooner they resign their trust into other and abler hands the better.

The manly course you, Mr. Editor, take in exposing the mischievous attempts of engineers, lawyers, and the innumerable birds of prey which attack the "bodies corporate" of railways, and the system of economy in their construction which you so often have advocated, nduce me to believe that were you to examine the line of this proposed railway, and the economical mode that can be adopted in its construction, we should secure your aid in carrying it through, or at least in opening the eyes of the sleek sheep of the Grand Junction and North Union Railways, ere they are shorn, or their golden fleeces lost in the snow-drifts of the Penrith line.

First of all it is intended, I understand, to throw over Mr. Rastrick, whose obstinate determination to knock down half this town with a viaduct which would cut off the town from its harbour, regardless alike of expense and the wishes of the inhabitants (whilst a better line, at the back of the castle, is evident to the commonest tyro, by which not a building will be touched), would have turned every one here into an opponent, instead of being, as we now are, anxious for the railway to be made. And next, the line is to be a single one, with proper passing places, whilst in the face of engineers' and architects' commissions, instead of expensive viaducts and bridges, vallies and rivers are to be crossed by piles, a mode of construction at once rapid and economical, and, if properly looked to in its execution, perfectly lasting.

You will, Sir, no doubt recollect that this is the same line, for the most part, as originally laid down when the inclosure of Morecambe Bay was intended; and although that portion of the scheme is for the present suspended, yet, looking upon the present proposed railway as ultimately leading to that much-abused, but more misunderstood, inclosure, it appears to me that this railway will deserve the support of all who, like myself, consider that inclosure perfectly feasible and capable of execution; whilst in the meantime, as was before proposed, steamers would cross the Bay with regularity from Rampside in Furness to Fleetwood and the Preston and Wyre Railway, and so on to the south.

If such a line were thus made, there is no doubt that it would meet the support of the whole district through which it would pass, and a railway communication would be thus secured connecting Carlisle, Maryport, Workington, Harrington, Whitehaven, Ravenglass, and the whole West Cumberland district, with Preston, Lancashire, and the south, which towns and district would, from our local traffic, pay, even though the Penrith line were formed; for, taking into consideration that the Maryport and Carlisle Railway, which is proceeding rapidly to completion, forms 28 miles of the line, there remains only about 50 to 52 to construct, which, if formed on the economical plan proposed, would not cost more than about 400,000*l.*, —many competent parties say much less. But what is that in comparison with the present estimate of Mr. Locke for the Penrith line? Then look to the towns on the map, and the population returns of each line, and no one can doubt the superiority of the coast line over the other in this respect.

Let the shareholders in the Grand Junction, North Union, and other railways, who are by Act of Parliament going to be united with the wilds of Cumberland, and to have their dividends permanently "locked" up in the bowels of the primitive rocks there, look to these matters, and ponder over them! Let them singly, or by deputation, at any time during the next five months walk over the line, but particularly, on such occasions, let them see it after a heavy fall of snow!

Waiting the favour of their informing us of the result of one of these romantic walks,

I am, Sir, your obedient servant,

AN INHABITANT.

Whitehaven, 7th December, 1842.

LONDON AND CROYDON RAILWAY.

To the Shareholders.

GENTLEMEN,—You will shortly be called together to give your consent to relinquishing the traffic on your railway. This, I have no doubt, will meet with your ready approval, seeing that under present circumstances it is being carried on at a serious loss. A very important matter will also be brought under your consideration. The tactics of Railway Boards are now tolerably well known. When they wish to carry some favourite project they generally delude the meeting convened for the purpose, with the immense advantages that must ensue if it is adopted, and, as a matter of course, the perilous consequences that must follow its rejection. The proprietors present not having time to consider the merits of the question before them, and who hardly know whether they stand on their head or their heels, give a silent acquiescence to the scheme. Thus the Directors gain their object, and, by a *coup-de-main*, carry anything and everything they please.

In making these remarks, I wish it to be understood that I am not alluding to our Board in particular, who indeed deserve praise for the zeal and ability they have shown on the toll question; and though not successful in bringing it to a favourable issue, they nevertheless deserve (and I am sure have) the grateful thanks of the proprietors for their endeavours to do so. But our Board is not infallible, as I shall presently show. The Directors will endeavour to obtain your consent to *a further outlay* in forwarding the proposed extension to the Bricklayers' Arms. It will be proposed that you shall give *one-third* (what an indefinite term!) of the cost in making this new branch. I trust you will meet this proposal with an immediate rejection for the following reasons:—

1st. It cannot be expected in the present unfavourable position of our affairs (the shares being depressed to a point that is really frightful) that we should be dragged into a further expenditure of unknown amount. It ought not to be forgotten that our railway was originally estimated to cost only 150,000*l.*; it has now nearly reached 800,000*l.*, and our Directors appear to be trying hard to get it up to *one million!* It should be kept in mind, too, that a *large portion* of this money *has been spent with the sole view of accommodating the toll-paying Companies using the line.* Surely no one can then say that we have not done all that can reasonably be expected of us by them.

2ndly. I object to it because the scheme will be carried out by the South-Eastern Company, whether we join them in it or not. The proceedings at the late meeting of that Company are decisive on this point. They doubtless considered (whatever our Directors may think) it was not reasonable to expect that we could in our present precarious circumstances give them any pecuniary aid, and it remains to be seen if we shall be such ninnies as to do so.

3rdly. I object to the Company taking any part in it, on account of the unknown amount to which they will be liable. We were first told the Croydon share would be 30,000*l.*; at the next meeting it had risen to 50,000*l.*; it is now said it will be 70,000*l.*; and those who are at all conversant with railway matters will readily agree with me that the amount is more likely to reach 100,000*l.* or 150,000*l.*

I entreat you to profit by the instructive history of the London Bridge station, which has *only* exceeded the estimated cost by 120,000*l.* I know I shall be told that this was not an excess over the estimate, but arose from further accommodation being required. I wish to ask what guarantee have we that the same want of judgment will not be exhibited at the Bricklayers' Arms station, *and, when the convenient time arrives,* that we shall not be told that more accommodation, and with it more money, is wanted?

4thly. I also object to this further expenditure on the ground that we have recently made a great sacrifice of a portion of the toll payable to us by the South-Eastern Company, from which, while it must prove of immense benefit to them, it is very questionable if we derive any advantage; it is, however, gratifying to see that this concession on our part is duly appreciated by that Company. When we see that there is no *necessity* for our joining in this scheme—that it will add another to the many difficulties with which the Company is at present surrounded—that we are about engaging in a life-and-death struggle with the Brighton Company about their *fancy* line into London—that our income from tolls will never reach the amount expected—that we have already to pay 11,300*l.* per annum for interest on borrowed capital, which must be deducted from the profits of the concern before any dividend is divided—that we have had but one paltry dividend of 2½ per cent., though the line has been in operation three years—that our local traffic is destroyed—that our property is ruinously depreciated in value—I say, that in the face of these facts, our Directors must be mad to try to involve us in further and *needless* expenditure, the extent of which no one can foresee. To jobbers in shares—those who buy to-day and sell to-morrow—it may be of no consequence if the line never yields any profit; but *bona fide* holders, who have bought their shares with a view of permanent investment, have a right to demand of the Directors a course of conduct which shall bring the undertaking into steady and profitable operation. This desirable state of things will never be arrived at while they continue to involve us in further liabilities. Gentlemen, proprietors of the Croydon Railway, rally at the approaching meeting, and meet this proposition with an off-hand rejection which its merits richly deserve. Under whatever shape the proposition may be made, I for one am determined to put my hands in my pockets, and protest against any further expenditure.

I am, Gentlemen, yours, &c.,

A CROYDON SHAREHOLDER.

THE LONDON BRIDGE RAILWAYS—PROPOSED CONSOLIDATION.

To the Editor of the Railway Times.

SIR,—A great deal is said in your number of to-day of the South and South-Eastern Directorates being formed into one, but for the Companies to remain distinct, which in my opinion would produce disorder and confusion, while an incorporation of the four Companies into one would be a great benefit to all the shareholders.

The value of the different shares should be taken at the market price on a given day, to be fixed by arbitrators; 50*l.*, 25*l.*, and 12*l.* 10s. shares should be issued, and the proprietors supplied with them at the discount the old shares average on that day, any odd sum either being returned or taken on debenture.

If special meetings were called, and the proprietors of the four Companies approved of my plan, an Act of Parliament could be obtained (I imagine without difficulty) in the ensuing session to authorise its being carried into execution.

Your obedient servant,

A SHAREHOLDER IN ONE OF THE COMPANIES.

December 10, 1842.

Digitized by Google

LONDON AND GREENWICH RAILWAY.

To the Shareholders of the London and Greenwich Railway Company.

BROTHER SHAREHOLDERS,—If you do not wish the interest of the original shareholders to be a total loss, withdraw your proxies and attend the next meeting in January, and decide then on the question of reducing the toll and fares, as to your opposition to the Grange-road scheme of the South-Eastern Company, and on other matters of vital importance.

I am, Sir, your obedient servant,
WM. WAILES.

Leeds, December 9, 1842.

BRISTOL AND EXETER RAILWAY.

To the Editor of the Railway Times.

SIR,—Your correspondent, "Vigil," has made so false a presentment of the state and prospects of this undertaking, as to justify the inference either that he is *not* a shareholder, as he professes to be, or that, being such, he has wilfully distorted facts to serve a purpose of his own. What his object may be, I think it quite needless to inquire; but in either case his statements are worthless, and devoid of credit.

"Vigil" speaks more than once of the "branches" to be constructed. Every shareholder knows that *no* branch or branches remain to be made; that the Company is under no obligation to make any; that they have not *now* the power of making any.

"It is currently reported," he says, "in this city [Bristol], that new shares are to be created." "His wish," perhaps, "is father to the thought." I am assured that no such matter has once been under consideration by the Directors, and I believe that to every one "in this city" but himself the "report" is now made "current" for the first time.

"Vigil" asks, "how long the bridge by the cattle market over the river is to remain in its present disgraceful state?" Does he know what he is writing about? The bridge has never been otherwise than substantially sound, and such superficial repairs as were required have been completed for weeks past.

I now proceed to what he terms "the *vital* question for the consideration of the shareholders," namely, "the security of the capital invested in the undertaking." No doubt it is a vital question, and to many, I apprehend, much more so than to "Vigil." He purchased his interest in it, he says, when the shares were about par. I was not so fortunate, for the majority of my shares cost me a premium which, I admit, we may not see again for some time to come. But I shall not try, on this account, to put a false colouring on facts, or to encourage delusive hopes, any more than I can approve of the ill-founded attempt of "Vigil" to depreciate the property of his "fellow shareholders." The capital of the Company *is* secure; and this may be proved on data to which "Vigil," if a shareholder, has access as well as myself, though he has not chosen to refer to them.

By the two last Reports of the Company it appears, that the rent, &c., earned by the line to Bridgewater, for the *first* year, ending 14th June last, has been as follows:—

Rent for 33 miles	£30,000	0	0
Tollage on 206,421 passengers = 5,465,379 miles at ¼d.	5,693	2	1
Ditto on goods = 404,344 miles at ¼d.	421	11	4
Total	£36,114	13	5

which is *four* per cent. clear upon the sum of 902,866*l.* for the cost of the line to Bridgewater.

"Vigil," however, insinuates that the actual traffic of the line does not cover the rent, &c., paid by the Great Western Company; and he pretends to show, by certain figures from the last Great Western Report, that this Company suffered a loss of 4,410*l.* on the half-year, from the two lines under lease. Now it must be borne in mind that the Great Western Directors always *professed* that they should lose heavily on the first year or two of the Exeter lease, but that they looked to the profit during the remainder of the term to compensate for the rent, &c., payable from the first opening. I am not concerned to deny or confirm their alleged loss in respect to the Cheltenham line, but it is not difficult to show that they have not much reason to regret their lease of the Exeter. "Vigil's" apportionment of the loss between the two leased lines by a mileage proportion, is as preposterous as his assertion that "no one conversant with the two lines can doubt that the Cheltenham traffic is more in proportion than the Exeter." If he *really* believes this, the sooner he disposes of his Exeter shares the better; but perhaps he has never taken the trouble of examining the weekly traffic returns which are exhibited to shareholders at the Great Western offices. Be that as it may, he had no occasion to resort to any conjectural estimate, when he had figures before him which incontestably prove a very different result. He may impeach my calculations if he can; otherwise I think his "fellow-shareholders" will see that if the Exeter Company *should* attempt to work the line when completed (that is, after the expiry of the lease, 6 or 7 years hence), there is no reason to apprehend "the lamentable failure" which "Vigil" so fondly anticipates.

I should premise that in taking the average fare per passenger upon the Exeter line at 2¾d. per mile, and the tonnage for goods at 3d. per mile, I am probably in both items rather below the mark. The proportion of first-class passengers on this line is large, and the fares are somewhat higher than on the Great Western Railway itself. The average mileage of each passenger was also *two-thirds* of the whole distance when opened to Bridgewater, or 22 miles out of 33; whilst on the Birmingham and Gloucester it is only about 21 out of 55, and on the Great Western about 31 out of 118. From the Reports of the two Companies, and the weekly traffic returns of the Great Western Railway Company, I estimate the gross receipts for the *first* year from the line to Bridgewater, as follows:—

Passengers, mileage 5,465,379 at 2¾d. per mile		£48,391	7	6
Goods	,, 404,344 at 3d. ,,	5,054	6	0
*	Mails and parcels, one-*eighth* of the receipts, or 10*l.* per week	5,460	0	0
*	Carriages, horses, and dogs, at 20*l.* per week	1,040	0	0
*	Cattle, sheep, &c., say	1,000	0	0
Total		£60,945	13	6

Deducting 40 per cent. for working expenses, this would leave a net sum of 36,567*l.* against 36,114*l.*, payable under the lease to the Exeter Company. And when we see that the London and Birmingham, Edinburgh and Glasgow, and York and North Midland, are working below 40 per cent. expenses, it is reasonable to believe (whatever may be the case just now) that long before the working of the Exeter line can revert to the Company, it will be practicable to reduce the expenditure below this proportion. No line can be more economical than the Exeter for maintenance of way, whilst its position, the simplicity of its traffic, and other causes, enable it to be worked with a very moderate staff. "Vigil" talks of the necessity of a depreciation fund, in imitation of the Great Western. It will be time enough at any rate to form this when the Company have a carrying establishment, and the working of the line is in their own hands.

As to the ultimate cost of the line, "Vigil" speaks with all the assurance of a prophet, and nothing short of "another million," added to the Company's capital, will satisfy him. Luckily there are some "*false* prophets" as well as true, and as the future only will actually *prove* to which class he belongs, to the future I leave his predictions. This, however, may be said, that as the 33 miles to Bridgewater have cost about 900,000*l.*, constructed in the period of high prices and scanty competition, there remains upwards of a million to complete the remaining 42 miles to Exeter, without exceeding the amount authorised to be raised by the existing Act of Incorporation. It is known that the [illegible] sevenths of this remaining distance, the character of the works is most favourable; that all the [illegible] contracts have been let at very moderate prices compared with the past, that the whole of the timber and rails required for the permanent way have been secured at the present low rates, and that an engagement has been made with an active and responsible contractor for laying the upper ballast at a fixed and moderate sum per mile, including materials, &c. These are *facts* which are known to "Vigil," if a shareholder, but he has thought proper to take any notice of them. The readers will draw their own conclusions.

I am, Sir, yours, &c.,
CRITO.

Bristol, December 14, 1842.

P.S.—If the whole of the capital were raised by the shareholders, the rent, &c., under the lease would unquestionably pay 4½, or probably 5 per cent. to the *original* holders *at par*, but as the amounts taken on loan will all bear interest at 5 per cent., the dividend on the shares will perhaps not exceed 4 per cent. for some time to come. The shareholders, however, have the advantage that at the time of being called on for only 70*l.* per share, with the option of receiving 5 per cent. on 25*l.* remaining 30*l.*, if paid up; and to purchasers at the present market price the dividend is upwards of 5 per cent.

EDINBURGH, LEITH, AND NEWHAVEN RAILWAY.

To the Editor of the Railway Times.

SIR,—Although I am aware that this enterprise is no favourite of yours, yet perhaps you will not be unbefriend the shareholders as to inquire what the Directors are about. Some rumours were afloat that the railway was ready for the locomotive by the time of the Queen's visit; but, since that time, we have heard nothing whatever of it; even Mr. Dawson has been utterly mute. Be kind enough, Sir, to inquire for us whether the railway is to be lost or not, because, if such should be the case, the Directors were at least bound to advertise.

I am, Sir, your obedient servant,
[illegible]

Liverpool, 8th December, 1842.

LONDON AND BLACKWALL RAILWAY.

To the Editor of the Railway Times.

SIR,—I venture, through the medium of your valuable journal, to call upon the proprietors of this ill-fated railway to take some prompt and energetic measures to rescue their remaining property from destruction.

Surely the recent squabbles between the Directors and their former Engineer; the question of steam-boats, which I by no means condemn; the Directors in thinking of utility to the railway; the indecision of the Board in first raising and then lowering the fares; the enormous and almost total [illegible] dated legal charges; and the almost total loss of the goods' traffic, call for the strictest inquiry.

It is impossible to discuss these topics at a general meeting; but let a special meeting be called and a Committee appointed to inquire [illegible] into our affairs, and to infuse some new spirit into this drooping concern.

I am, Sir, your obedient servant,
[illegible]

SOUTH-EASTERN RAILWAY.—The works of the South-Eastern Railway are going on at a rapid rate from the west of the Shakspeare tunnel, to the Ashford. Great progress is making on the cutting and the cliffs above the latter are being thrown down by small blasts, thereby saving great labour. The Abbot's-cliff tunnel is no ways behind; it will be believed that so great a quantity of work could been done there within the last three or four [illegible] —*Maidstone Journal.*

* For these items the Exeter Company do not receive any *specific* toll, but a consideration for them is given in the fixed rent. The portion of the Exeter line to Bridgewater (33 miles) is very nearly *one-fifth* of the whole distance from London to Bridgewater, *including* the Cheltenham branch; and these items are probably understated.

LONDON AND DOVER (SOUTH-EASTERN) RAILWAY.

To the Editor of the Railway Times.

"Why are the termini now first brought forward? Has it just become clear that there must *be a* terminus at Dover? Have all estimates of expense been hitherto without a terminus?"—"DEVON," *Railway Times*, 10th December.

SIR,—Permit me to add to these just and pertinent questions one more. Has it just become evident that we must *enter Dover at all* to complete a London and Dover Railway? It would appear so, for I have been a constant and attentive (because very interested) attendant, and have taken part in the discussions at the periodical meetings of this Company, but not until the last was I aware that we had been listening to, and talking of, estimates, not for the *real*, but as the Chairman very aptly called it, "the Parliamentary line:" not a line to Dover, but to a fort on this side of Dover!—the Engineer himself, being uncertain whether to go under, round, or over this fort, *or stay there*, until "the Duke" very recently "admitted the principle" that a Dover Railway must enter the town!

I have always held, and still retain, a high opinion of the capabilities of this line. I *had* equal confidence in the business habits and *plain dealing* of the Directors, but I do *not* retain that. They appear determined to assert the undeniable prerogative of Railway Boards—that of telling proprietors the truth, *but not the whole of it*. I do not deny that the words "Archcliff Fort" occur in the proceedings at former periods, but that "Archcliff Fort" was NOT Dover I maintain could not be inferred from anything that transpired.

What is our practical lesson from this? That we must enter Dover is quite clear, and the proprietors very properly put their shoulders to the wheel to reach it; but we have learned this—to take for the future all our Directors say *cum grano salis*, and investigate personally, or by Committee, any measures of importance recommended by them—their Bricklayers' Arms project for instance. At a former meeting they had no doubt the Croydon Company (to whom it is of far more importance than to us) would heartily co-operate; and, on that promise, we have expended 36,000*l*. Our proportion would be one-half!—perhaps a third! Now, forsooth, we must go to Parliament by ourselves, although they all the time protest—backed by the energetic Chairman of the Croydon Company—that our co-partners are still eager for their share. Some of our Directors laud the thing as so good *per se*, that we had better retain the whole. For my part I earnestly advise the South-Eastern proprietors to admit all who may desire it to partake of the good things, both in cost and profit, it promises. At all events, before the special meeting is held, I trust the very rough and map-measured data, furnished by our Chairman in proposing this scheme, will be thoroughly investigated by local and other proprietors, that we may not wildly adopt a measure requiring an outlay of 200,000*l*., an additional maintenance of way, and a large additional station, with all the expensive et ceteras thereto belonging.

One redeeming measure the Chairman proposed, and I forgive the Directors much for the earnestness and determination of purpose with which it was introduced. I allude to consolidating the staff stations, and locomotive power of the three Companies. Can anything be more preposterous than to see one half-filled train running for miles at the heels of another; or 38 gentlemen, who for our mutual good should act in concert, pulling, like the bewildered man's two pigs, in opposite directions; and stations multiplied until the puzzled-wigged railer knows not which to choose for his destination; and a staff of engineers, with a host of subs and clerks, sufficiently formidable to half recruit the next brigade sent under General Evans to Spain? Surely—surely, Mr. Editor, if common sense does not remedy this, interest will. Proprietors must, however, remember we shall have this formidable phalanx not for allies, but foes—bitter, determined combatants. Deserters there will be from their ranks. Our own Board are pledged to join us when we unfurl our flag, but that is scarcely the light division of the brigade! But, seriously, proprietors in the three lines who value your property and anticipate even a moderate return from it, concert measures at once to *compel* your respective representatives to listen to the dictates of reason and common sense. If the present Board refuse, dismiss them.

Your obedient servant,

KENT.

SHAREBROKERS' CIRCULARS — MESSRS. R. B. WATSON AND CO.

To the Editor of the Railway Times.

SIR,—It has been lately stated by an authority, which you will not impugn (how justly or not will be shortly apparent), that "amongst the novelties of the day, is the custom arising of certain stockbrokers wishing to bring themselves from obscurity into notice, by the distinguished employment of throwing dirt!" (not of eating it, as the Persian proverb has it)—vide *Railway Times* of the 3rd December, page 1,244. Now, it strikes us very forcibly, that amongst your list of "novelties," you have omitted to mention one that should not be forgotten, viz.:—"the custom arising" of certain Editors of papers "travelling out of the record," by giving opinions on the propriety or impropriety of purchasing certain stocks of railway property, and of selling others. "Every one to his trade," as you justly say; and if parties are seeking investments for their unemployed capital, "*our* province it is," as public stockbrokers, to give such opinions as may lead them to place their capital where it is most likely to be beneficial to those who are seeking such investments. These remarks are fairly called for, in answer to the strictures in which you so amply indulged, on account of our having made some observations in our Circular of the 7th November, on the contract for maintenance of way of the Southampton Railway, and in which we brought in Mr. Locke's name, quite hypothetically. After mentioning the enormous rate at which the contract was made for 10 years, viz., 324*l*. a mile per year, we added, "What ought the shareholders to think of this, *if it be true*, that the Engineer participates in the profits of this bargain?" To this Circular, which had attracted the attention of Mr. Locke (drawn to it, most likely, by some "kind friend"), we had a most indignant disclaimer, and to which we gave as much circulation as our limited means enabled us to do, as much, in fact, as the Circular had previously given currency to the first *supposed* imputation. We also wrote a letter to Mr. L., telling him that as this notion had been long prevalent in the railway world, he had a fine opportunity of contradicting it through the medium of the railway press, now that it had been brought so immediately under his notice. This he has not deigned to do—perhaps, on the principle of the proverb, that says, "*en s'excusant on s'accuse*:" and instead of this he has set the Editor of the *Railway Times* to strike us "a heavy blow," which we regard as a proceeding displaying anything but good taste. If we possessed all that "envy, hatred, and malice" which you attribute to us (as we told Mr. L. in our letter) we should long since have mentioned the circumstance in one of our previous Circulars, having heard of it 12 or 18 months ago, but we thought the present time an appropriate one in which to broach it, when shareholders of different railways re making a decided stand against the lavish expenditure of Directors, and the general *mis*-management of railways. After all, we contend that Mr. Locke ought not to complain so loudly, through you, of what we have said, for we are disposed to agree with Junius, in one of his letters to Sir W. Draper, when he says—"Do you then really think that if I were to ask a most virtuous man, whether he ever committed theft or murder, it would disturb his peace of mind? Such a question might, perhaps, discompose the gravity of his muscles, but I believe it would little affect the tranquility of his conscience."

And now a word at parting. We have been constant readers of your paper ever since it was published, and there is hardly a doctrine you maintain that does not meet with our approbation. To your notions *of low fares* we most heartily subscribe; as also to your desire of seeing all railway accounts being, as far as is practicable, made out on a uniform plan. The want of accommodation in second-class carriages is as apparent to us as it possibly can be to you, for we are quite sure, if the accommodation is made inferior in second-class carriages, people are driven into the third-class, and *not into the first*, as many of the Managers of railways imagine, forgetting that the public must be led, *and not driven*. To all these notions, and to many others, we are willing to subscribe, in harmony with your own ideas on these subjects; but you must really excuse us for denying your right to dictate to us how we are to manage our business, and in what way we are to fill our future Circulars. Those who *employ us* ought to be the best judges, and to them we fearlessly appeal, and especially to those who have known us the longest, as their testimony we should the most covet; and when we tell you that during *the last thirty years* the writer has constantly been occupied in mercantile matters, employing the last seven as a share-broker, and the previous ten as a commercial broker, you will probably see we are not arrogating to ourselves an overweening share of self-confidence, when we assert that we *ought* to know the value of railway stock, as far as the *commercial part of the question is* concerned, better than any Editor of any newspaper in the kingdom.

Trusting that you will spare the use of the Editorial scissors as much as you can, and that you will give immediate insertion to this communication,

We remain, Sir, your obedient servants,

R. B. WATSON & CO.

Leeds, December 14, 1842.

RAILWAYS AND THE DAILY PRESS.

To the Editor of the Railway Times.

SIR,—I have observed with surprise during the last week some very undeserved strictures in one of the daily papers relative to the course of conduct which you have pursued in the recent "Investigation Committees," and as the remarks, from the dogmatic manner in which they are made, would almost seem to amount to an imputation, though an indirect one, on yourself, I conceive it is a matter which ought not to be wholly overlooked by railway shareholders, were it only out of a feeling of gratitude for the consistent and unwearied manner in which for years past you have advocated the rights of railways and their shareholders. To you, as a veteran in the cause, they may well confide the impartial discussion of every subject connected with their interests, whilst, upon the other hand, they and the public cannot be too much upon their guard against the invidious animadversions of those who are mere tyros in railways and their discipline. Unquestionably, railways have their weak points—points which require to be touched upon with impartiality and candour, and it is upon these that the press now fixes its fangs. It cannot be denied that newspaper strictures have done much to ameliorate our railway system, and to put Executives on their best behaviour, but at the same time it is not to be concealed that the daily press is not only lamentably ignorant of the first principles of railway management, but that it is very much actuated by party prejudice.

I leave the subject for the present, but not without a hope that the daily journals, before they again treat so superficially upon railway matters, will endeavour to acquire more solid information, even should they, for that purpose, have occasion to have recourse, as heretofore, to your columns.

I am, Sir, your constant reader,

C. M. A.

NOTES TO THE TRAFFIC TALBE
(on the opposite page.)

3. Main line, 53 miles; Tewkesbury branch, 2. — Total length, 55 miles.

4. The total length of line and branches is 25 miles:—15 miles of passenger and general traffic, and 10 miles of *coal traffic* alone. The Company are now before Parliament for power to raise the capital to 500,000*l.*

5. The total amount of stock on which dividends are payable is 750,000*l.*

8. Receipts include the Northern and Eastern toll, &c.

12. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the Liverpool and Manchester and Chester and Crewe lines, as also the toll from the Manchester and Birmingham Company. The divisor employed to ascertain the daily receipts per mile is 121 (85+15+21.) The Company do not now carry goods to Manchester.

14. The receipts include those derived from the Cheltenham and Exeter lines; the former opened for 18 miles, and the latter for 44¼. The divisor employed to ascertain the daily receipts per mile is therefore 180½ (118¼+18+44¼.) The *rent* of the branch lines is together about 1,163*l.* per week. There is likewise a *toll* payable to the Exeter Company of a farthing per passenger and per ton of goods per mile travelled.

15. The dividends have been hitherto (up to 31st December, 1841) appropriated to completing the line and works.

18. Ten per cent. is the maximum dividend allowed by the Company's Act.

19. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. The dividend is *nominally* at the rate of 10*l.* per cent., but to the original shareholders it is equal to upwards of 11*l.* per cent., as the dividend on the original shares is paid upon 100*l.*, although only 90*l.* has been called for. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.

20. At the last meeting no dividend was declared, the disposable balance from the previous six months' working being only 1,472*l.* 10s. 9d.

21. The length stated includes the Shoreham branch. The Croydon and Greenwich tolls are not deducted from the amount stated in the Table. The traffic of the six months produced 63,326*l.*, and there was a balance from the previous half-year of 12,479*l.* Out of these two amounts, combined, the dividend (after making certain deductions) was paid.

22. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company.

23. Capital of 993,300*l* includes new capital for widening the line, &c. The dividend of 7s. 6d. per cent. does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table includes the receipts from the footpath, but is exclusive of the Brighton, Croydon, and Dover toll.

24. The dividend is calculated on the money actually paid up, a portion of the shares having been issued at 50 per cent. discount.

25. Including Toll, &c., from Sheffield Company, and after deducting omnibus charges, &c., and subject to payments to the Grand Junction Company.

26. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

27 The 3,909*l.* 11s. 2d. are the receipts after deducting omnibus charges, and payments to other Companies.

28. The receipts for goods, &c., include, horses, 32*l.* 8s. 6d.; carriages, 28*l.* 19s. 0d.; dogs, 3*l.* 17s. 0d.; parcels, 220*l.* 10s. 8½d.; cattle, 58*l.* 2s. 6d.; corn, 9*l.* 13s. 10d.; heavy goods, 377*l.* 1s. 4d.; coal and lime, 183*l.* 1s. 4d. —Total, 913*l.* 14s. 2½d.

31. The amount of stock *created* is 3,000,000*l.*, on which dividends are payable; and the sum of 850,000*l.* is borrowed money at interest. The 3,000,000*l.*, however, is nominal, inasmuch as the shares were some of them issued at a discount, which reduced the actual amount to 2,589,500*l.*, viz.:—15,000 shares at 100*l.* = 1,500,000*l.*; 15,000 of 50*l.*, issued at 40*l.* = 600,000*l.*; 22,500 of 33*l.* 6s. 8d., issued at 21*l.* 13s. 4d. = 489,500*l.*; total 2,589,500*l.* The details of the receipts are as follows—Passengers, 2,145*l.* 11s. 0d.; carriages and horses, 88*l.* 11s. 9d.; parcels, 224*l.* 10s. 7d.; mails, 50*l.* 5s. 9d.; merchandise, 912*l.* 4s. 5d.; minerals, 354*l.* 19s. 5d.; cattle, 39*l.* 9s. 2d. — Total, 3,816*l.* 2s. 1d.; including North Midland proportion of Manchester and Leeds traffic, and amount received for Sheffield and Rotherham Company.

32. The receipts are after deduction of Liverpool and Manchester toll.

33. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 134*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway. The 32¼ miles stated as being open for traffic, include the portion of the Eastern Counties' line passed over by this Company.

34. The capital of 533,000*l.* includes that provided for harbour and works as well as railway. The dividend is for a year (since opening of line).

35. The returns are inclusive of Manchester an Birmingham toll.

37. The length stated includes branches.

39. The traffic stated does not include the Leeds and Selby.

TRAFFIC OMITTED.

Preston and Wyre Railway.—*For the week ending December 3.—Receipt from passengers (number of passengers 856¼) 63l. 14s. 4d.; goods, 7l. 4s. 11d.; total, 137l. 19s. 3d.*

TO CORRESPONDENTS.

Investments in Railways.—We are constantly receiving applications for advice with respect to the sale or purchase of particular shares. We have repeatedly stated, that we are very unwilling to offer any opinion upon such points, and, indeed, our readers have the same data as ourselves whereby to form a judgment. Nevertheless, as they *will* have our opinion, we cannot refuse to give it. We wish them, however, to bear distinctly in mind, that we do not, in any instance, hold ourselves answerable for the event. The course we recommend to our correspondents, is simply what we ourselves would follow, were we buyers or sellers under the circumstances detailed by them respectively. With this caution, which we shall take care to keep before parties who apply to us on such subjects, we proceed to notice the applications of the week. We may just add, that the figures and letters have no reference whatever to our traffic list, or to the initials of any railway. We cannot notice questions where this rule is violated. In order that we may not be subjected to needless questions, we must have the name and address of every inquirer, although the answers may be given under a fictitious designation:—Vindex. *Desirable in the following order, Nos. 6, 3, 5, for permanent investment. On no account purchase Nos. 1, 2 and 4. No. 2 will have a terrible fall, and that speedily. No. 8 will do ultimately, but not for some time. Do not buy No. 9.*—East-Anglian. *We would not sell either No. 1 or No. 2. Of the others, the best to purchase are Nos. 4, 6, and 3. Do not buy any of the others, particularly No. 7.*—G. F. *No. 1 we think good. Our correspondent is quite safe. If the shares are not apportioned, of course the money will be returned. Our opinion of No. 2 is not altered.*—A. W. *(Liverpool.) We would purchase in the following order: Nos. 16, 22, 14, 13, 11, 10, 1, 4. The following are very good to hold, but at* present *prices will not give more than 5 per cent. Nos. 7, 9, 19, and 23. If you hold either No. 5 or No. 18, get rid of the shares with all convenient speed. Avoid No. 2. The others are scarcely worth notice.*—C. *(Lancashire.) We would invest in Nos. 1 and 4, and to a small extent in No. 3. No 7 is likely to maintain its present price. We think the arrangement with No. 8 is likely to be effected, and perhaps also with No. 3.*—P. P. *(Cambridge.) We would not invest further in any of the three lines named, certainly not in No. 1.*—Bristolian.—*It will be some time before No. 1 returns the dividend specified, but we think it may ultimately. No. 2 we would not recommend. No. 3 we would not sell; they must improve. No. 4 we do not think will rise; No. 5 unquestionably will. We would invest in Nos. 5 and 6. No. 7 do not sell at present.*

Northern and Eastern Railway.—*We could not think of publishing the letter of* A Subscriber *with respect to certain subordinate officials upon this line, even if we had the writer's name and address. All that is stated with respect to the late prosecution at the Central Criminal Court, may be* true—*and if so, it is very disgraceful to the parties implicated—but it would not be safe to publish it. Why not apply to the Directors? We cannot believe they would connive at such practices.*

A Proprietor *(Newport Pagnel). All expenses hitherto incurred are merely preliminary Of course a meeting of the proprietors will speedily be called.*

Clericus.—*The* avr. *we have frequently explained. It is the average cost of each share to parties who have taken up their proportions of subsequent issues, some of these issues having been at a discount. This will account for the 38½l. You are not liable for the difference. The question as to dividend you will find answered on reference to the traffic* note.

Brighton.—*Whatever our excellent correspondent may say of or to ourselves shall be received in good part, but we cannot allow ourselves to be mixed up in any way with the paper to which he so frequently refers.*

J. S. W. W.—*We are sure our correspondent must, on reflection, see that because one man has imbibed a very groundless prejudice against a particular undertaking, it does not follow that his successor should tread in his steps. This would be carrying "consistency" somewhat too far. If our correspondent will look at* facts, *irrespective of the opinions of either party, we think he will have no difficulty in arriving at a right conclusion in* both *the cases referred to.*

A valued friend, whose letter was left at our publishing office on Thursday evening, cannot surely think that we ought to exclude from our columns every letter from the sentiments expressed in which we dissent. If we followed this course there would be an end to all free discussion. Nor is it to be supposed that we could find time to state in every instance the grounds of our dissent, even if we thought that *desirable. Our motto is "A fair field and no favour," to all parties. And we cannot help saying that our friend would have done better to refute,* seriatim, *the statements and opinions of which he complains, than denounce them in the gross. There are few persons better able to do so.*

"Aerial Travelling."—*If a* Timid Proprietor *be unconvinced by our prose, perhaps George Cruikshank's poetry (in his* Comic Almanac, *just issued) may have more effect:—*

> "The day of railways will be o'er
> And steam will be esteem'd no more,
> When the result is seen
> Of the experiment of Mr. Green,
> Who says he can, as a matter of course,
> In a balloon the Atlantic cross.
> And, by way of proving he can,
> He shows us a part of his plan,
> Which looked, in miniature, very neat,
> At the Polytechnic in Regent-street,
> And answered, the truth to tell,
> Uncommonly well,
> As far as it went; but, the fact to say,
> It went but a very little way.
> No one could doubt the success of the notion,
> If Hanover-square
> One might compare
> To the wide Atlantic Ocean,
> It's a very fine thing
> To take hold of a string,
> Attached to a pretty toy balloon,
> Guiding it easily, either way,
> And undertaking to say,
> The Atlantic may be traversed soon,
> *By similar means;*
> *Which will be credited by men*
> *When all the world are Greens,*
> *But not till then!"*

Nameless *has our best thanks. We shall at all times be glad to hear from him.*

A Pattern Maker *is too incorrect for publication. Besides, is he* quite *disinterested?*

Our thanks are due to the Editor of that spirited journal the Gateshead Observer, *for a full report of the Great North of England meeting. We had, however, been previously supplied with a report from another quarter.*

Haud Captus Oculis *advances nothing material, and the discussion has already gone far enough.*

A great many letters (several of which are in type) we have been reluctantly obliged to hold over. As we have a considerable quantity of arrears to get rid of in our next two numbers, we cannot promise insertion till the new year of any letters not already in hand, and we hope our correspondents (unless the matter be very pressing) will withhold their favours for a few weeks.

THE RAILWAY JOURNALS.

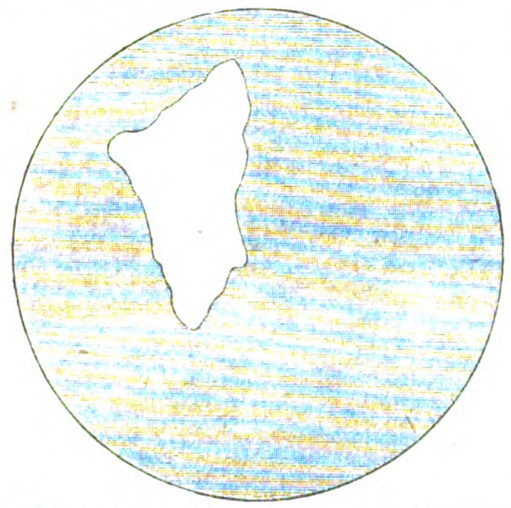
The Stamp Returns for April, May, and June, just published by Order of the House of Commons, enable us to complete the Returns for the year ending the 30th of June last. The results, as affecting the railway journals, are as follows:—

RAILWAY TIMES	**146,374**
Railway Magazine	68,500
Majority in favour of the RAILWAY TIMES	**77,874**

from which are to be deducted 10,874 Supplement stamps used for double numbers, still leaving the ordinary circulation of the *Railway Times* just about double that of its contemporary.—*September* 17, 1842.

THE RAILWAY TIMES.

SATURDAY, DECEMBER 17, 1842.



Elsewhere we give full details of the inquest held upon the body of the woman who fell a victim to the late accident on the London and Birmingham Railway, so far as these details bear upon the cause of the accident, which we take it for granted is the principal matter of interest with the readers of this journal.

It would appear from the evidence of Mr. Parker and Mr. Bury, that the fracture of the axle at the particular point which distinguished this occurrence was unprecedented. Mr. Bury even went so far as to say that up to the morning of the casualty he would not have believed that such a fracture could have taken place. If this be so, it is manifest that

the Railway Company are not open to animadversion for having neglected to adopt the usual precautions with respect to the soundness of their machines. Another point, however, and one of much greater importance, is the question whether or not the flaw which it seems for some time, and probably from the first, must have existed in the metal forming the axle, might not have been detected. Mr. PARKER maintains that with the wheel affixed it is impossible to discover the latent defects of an axle by the process commonly called *ringing*. We daresay the fact is as stated, but one naturally inquires why the axles are not tested previous to the putting on of the wheels, or why, when engines are brought in for the purpose of undergoing those repairs which from time to time become requisite, more especially to the wheels, means are not adopted to try the soundness of the axles *by themselves!* With a part of the machine so important, no test can be too stringent.

The following diagram represents exactly the appearance of the axle after the accident. The *light* part is that which broke last, as adverted to in Mr. PARKER's evidence :—

The verdict of the jury acquits the Company's servants of blame; and, indeed, the testimony borne to *their* good conduct, and to the admirable character of the arrangements made by the Executive of the Company, was very strong and extremely well deserved. The recommendation of the jury, that an empty waggon be interposed between the engine and the passenger carriages, has already been carried into effect, so far as circumstances will permit, and of course will be fully attended to at as early a period as is practicable. This measure of precaution has frequently been advocated in our columns, and looking at the fact, that almost invariably it is the *first* carriage in the train, and the first only, which suffers, we are surprised that the example set by the Brighton Company, subsequent to the melancholy accident on their line, has not been universally followed. If other Companies do not at once adopt the suggestion now emanating from at least two Coroners' juries, they cannot hope to escape a heavy deodand should an accident similar to that of the Brighton, Great Western, or Birmingham, befal one of their own trains. Opposed as we are to the interference of the Board of Trade in matters connected with the arrangements of the Companies, we think the adoption of the plan thus recommended ought to be rendered compulsory. Mr. BURY says there are objections to the measure. What these objections are he does not explain ; but it will be time enough to discard the precaution when an accident has occurred which can be as clearly traced to its observance as was the death of the poor woman last week to its omission. We are inclined to think that, upon a line like the London and Birmingham, a waggon such as would answer the purpose of a guard might be rendered otherwise beneficial. Why not, for instance, have it divided into compartments in which to "stow away" the luggage of passengers booked for the several stations—thus avoiding the delay and danger which must necessarily attend placing the luggage on the roofs of the carriages, exposed, to a certain extent, to the weather?

No doubt this London and Birmingham accident will revive the controversy which, in the early part of the year, occupied so large a portion of our space, on the comparative merits of four-wheeled and six-wheeled engines. *Such* a subject cannot be too fully discussed, and we shall feel much pleasure in being instrumental in bringing the *quæstio vexata* to a satisfactory decision. Already has a comparison been drawn between the two descriptions of machine in the following paragraph, which we copy from the *Morning Chronicle* of Monday, and which would appear to emanate "from authority :"—

"SOUTH-WESTERN RAILWAY.—On Saturday, the 11 o'clock train from Nine Elms was obliged to return to the station from near Wandsworth, in consequence of an accident which happily was unattended by any unpleasant consequences. As the train was proceeding at a very rapid rate, one of the axles of the engine suddenly broke across. The engine being, as those on this line are, *a six-wheel* engine, did not turn over, but was enabled to propel the train to Nine Elms, where another was substituted. Had the engine been one with *only four* wheels, it is very probable the accident must have been attended with the most serious consequences."

It will be manifest to every one that before a comparison can be fairly instituted between four-wheeled and six-wheeled engines in such an instance as this, the *position* and character of the fracture on the South-Western line must be more minutely described. Mr. PARKER stated at the inquest, most distinctly, that under the same circumstances a six-wheeled engine would have shared the fate of the Birmingham engine at Berkhampstead, and it will be in the recollection of our readers that not long since the division of the front axle of a four-wheeled engine was purposely effected on the same railway without any dangerous result.

AFTER a fortnight's preparation Messrs. R. B. WATSON and Co., of Leeds, have produced what they appear to look upon as a reply to our recent remarks on Sharebrokers' Circulars —which reply will be found in another column. So unwilling are we to bandy Mr. LOCKE's name with parties who have neither the courage to maintain a well-founded charge, nor candour to retract one of a contrary character—who, when branded as slanderers, plead the goodness of their intentions, yet reproduce the calumny in another form—so loth are we to enter into discussion with such personages on such a matter, that neither the sycophancy nor the insolence of this supplementary "Circular," as touching ourselves, shall tempt us to honour it with more than a passing notice.

Messrs. WATSON assert, that to Mr. LOCKE's indignant disclaimer they gave as much publicity as to the original calumny. Now this is not the fact, and Messrs. WATSON and Co. know that it is not. Why did they not publish Mr. LOCKE's letter in full? They dare not do so. And but that it would be giving too much importance to Messrs. WATSON's Circulars, and thus probably be effecting the very object for which the offensive remarks were penned, we could wish that Mr. LOCKE would supply the deficiency. Messrs. WATSON's impertinence, as to our being "set" on by Mr. LOCKE, is beneath contempt. The remarks which have made these Leeds brokers so sore, were neither directly nor indirectly instigated by Mr. LOCKE or any of his friends, nor seen by him or them previous to their publication; and we trust we shall never require to be "set" on when incapacity is to be exposed or presumption punished.

Messrs. WATSON and Co. appear to think that they have us on the hip when they refer to the advice which from week to week we give to investors. They forget that we do not *proffer* such advice, and what is more, that we do not make a charge for it. We have, and can have, no object to gain by misleading the public, for we have no per-centage to secure from either sale or purchase. The opinion that stock-brokers are the fittest parties to offer counsel to intending investors is worthy of Messrs. WATSON's *other* opinions. Heaven help the investors who place confidence in such quarters! The business of a broker is to buy or sell as he is instructed, and to do nothing else; albeit, he may have all the intelligence and all the experience which the Messrs. WATSON so modestly claim for themselves. And so, in taking leave for the present of this matter, we again recommend Messrs. WATSON and Co., to "stick to their *last*," leaving the giving of opinions, and the penning of Circulars, to others, even should the world be thereby unenlightened as to the erudition of parties so deeply conversant as are the Messrs. WATSON with French and Persian proverbs, and the letters of Junius!

A SOMEWHAT curious correspondence, between Mr. LAWRENCE HEYWORTH, a Director of the Midland Counties' Railway, and Mr. DICEY the Chairman, and Mr. BELL the Secretary, of the Company, will be found in another page. It would appear that Mr. HEYWORTH complains of an expression as applied at the late meeting by the Chairman to Mr. HEYWORTH's conduct, which, according to our report, was called "disreputably inconsistent," but which expression Mr. DICEY disclaims, although he admits that he applied the phrase "discreditable."* For our own parts we cannot see any distinction whatever between the two epithets; but as Mr. DICEY regrets, and has both privately and publicly apologised for having used even what he deems the milder term, it is not necessary to say more upon the subject, except that we, who witnessed the very "discreditable" bearing of the HEYWORTH party on the occasion referred to, should not have felt surprised had a much harsher word escaped the worthy Chairman's lips.

From the charge of inconsistency, nevertheless, however coarsely or however courteously expressed, Mr. DICEY does not shrink; and we are much mistaken if, on perusing the correspondence which has passed between the parties,

* With all deference to Mr. Dicey, we have reason to believe that the word "disreputable" *was* applied (although from the confusion which prevailed it was difficult to hear what was said), and we think the reports which appeared in other journals will bear us out. We remember well that during the time the votes were being recorded, a good deal of conversation took place among those remaining in the Hall as to the *precise* word employed—some asserting that it was "discreditable," others "disreputable," and others "disgraceful." It is not a matter of the slightest moment; and we are glad that neither party have any more serious fault to find with our record of the proceedings.

Digitized by Google

the railway public do not find a verdict of *"guilty."* "You came [says Mr. DICEY] to Derby to attend a Committee of Management (of which you are not a member), for the express purpose, as it was understood, of learning what the Directors were doing. We willingly admitted you into the Committee; we explained to you our plans, the appointment of our sub-Committee, and the course which *it was* pursuing with a view to the reduction of the Company's expenditure. *Not a word of disapprobation falls from you;* you suggest no step whatever, and you leave us under the impression that *you are thoroughly sasisfied with our proceedings.* The next thing we hear of you is, that you have given a proxy to be used in support of a motion *notoriously designed to express distinctly, though indirectly, an opinion that the Directors were not disposed to promote economy.* I cannot think that this is the course which one Director ought to pursue towards the other members of the Board." Inconsistency more glaring can hardly be imagined, and whatever, in Mr. LAWRENCE HEYWORTH's opinion, may be the importance of the Anti-Corn-Law agitation, we think it was due to all parties that he should have attended the meeting, and given a satisfactory explanation of the course he had deemed it fair to his colleagues and beneficial to his fellow proprietors to pursue.

But if inconsistency be apparent on the face of Mr. LAWRENCE HEYWORTH'S proceedings as regards the Committee of Directors and the Committee of proprietors, much more inconsistent, much more "discreditable," is his conduct with reference to the proposed resignation of the Board, as displayed in his letter to Mr. BELL. The circumstances under which the Committee of Investigation was appointed at the late meeting were such, that no body of gentlemen of common spirit could consent to remain in office one moment longer than a regard for the well-being of the undertaking, which amid all its difficulties they had firmly and zealously supported, rendered imperatively necessary. The nomination of a Committee of proprietors at a time when a Committee of *popular* Directors were investigating the affairs of the Company, and introducing very material improvements and reductions, was clearly tantamount to a declaration of a want of confidence, put forward in the most offensive form. It could not possibly be mistaken for anything else; and Mr. LAWRENCE HEYWORTH knew that it would be, and must be, so taken, even if it were not so intended. And yet, forsooth, he *now* "cannot help thinking that" the resignation of the Board "was a premature step, adopted with uncalled-for precipitancy!" Is this regret real or feigned? If real, it must be regarded as a proof that Mr. LAWRENCE HEYWORTH has discovered, on reflection, that the proprietors of the Midland Counties' Railway are not likely to be benefited by the installation of the Committee of Investigation in place of the existing Board. Mr. HEYWORTH does not give a plain answer to a plain question, namely, whether he is content to resign his office, in conjunction with the colleagues towards whom he has acted after the fashion so forcibly, though briefly, depicted in Mr. DICEY'S epistle. We think he might at once have said "Aye," since, under existing circumstances, his re-election is all but secure.

It is probable that many of the Midland Counties' proprietors will feel disposed to join in Mr. L. HEYWORTH'S wish that the present Board do *not* retire. Without knowing anything of their intentions beyond what has been publicly announced, we take it for granted that their continuance in office will depend entirely upon the spirit in which the Investigation Committee pursue their inquiries, and the results at which they arrive. Should the Committee recommend, and the proprietors approve of, any alteration which in the opinion of the Directors would be incompatible with the real and permanent advantage of the Company, we feel quite satisfied that Mr. DICEY and his colleagues would, as honourable and "consistent" men, at once relieve themselves from the responsibility of carrying such measures into effect.

We sincerely trust that out of all this agitation good will come to the proprietors; but we have our doubts. Of the conduct of the existing Board of the Midland Counties' Railway we have had occasion at times to speak in terms of wholesome severity, and we should be very glad indeed to see it weeded of several of its present members; but we question whether, by the wholesale substitution of Mr. JAMES HEYWORTH and his friends, the undertaking would be benefited: and partial as we are to a full investigation by shareholders who have so good a right to scrutinize the conduct of their representatives, we more than question whether in *this* case the proper time has been chosen, or the proper feeling displayed, by those who have taken upon themselves so onerous a task.

IN the *Manchester Courier* of last Saturday there is reported a very extraordinary case of "trespass" on the Liverpool and Manchester Railway—a case so extraordinary, as regards the conduct of the railway authorities, that we must give it a more than usual prominence in our columns. The offender was THOMAS DALE, late a porter in the service of the Company, and who had been discharged for misconduct. From the statement made by Mr. MILNE, who conducted the case for the Company, it appeared that some time about 11 o'clock on the night of the 19th ult., some maliciously disposed person having got upon the line near the Manchester station, had altered the position of the wedges which were placed to keep the rails in a certain position while carriages were being removed from one line to another, and had changed them from a horizontal to a vertical position; *the effect of which, if not discovered, upon a train in rapid motion, would have been to throw it completely off the line, and produce the most serious injury.* The prisoner had been seen about 11 o'clock on that night, passing down the line towards the station, from the Ordsall-lane gate, where there is a crossing for foot passengers. He was afterwards seen on the line, about 3 o'clock in the morning, and refused to quit the line on being ordered to do so. "This [said the counsel] was a distinct offence under the Company's Acts, as well as under the general Railway Act, and was punishable by a fine of 5*l.*, or two months' imprisonment; but as the Company were not in a situation to prove that the prisoner committed the mischief with his own hand, they would proceed against him for the latter offence, thinking it essential for the protection of the public, that the case should be strictly dealt with."

The evidence produced to prove the "trespass" was quite as complete in support of the more serious charge as was that upon which a man named MOOTON was committed for trial, on a charge of attempting to upset a train on the Chester and Birkenhead Railway, as described in our last number. And yet the major offence was abandoned by the Company, and the man for the "trespass" alone was sentenced to a month's imprisonment in default of paying a fine of 40*s.*! The amount of punishment awarded for the trespass is sufficient to prove that on the mind of the magistrate there was an impression that the prisoner was guilty of the heavier offence, and in our opinion it would have been much more satisfactory to the public had the Company, by pressing the graver charge against the prisoner, given time for inquiry into the conduct of a person against whom the suspicion of so malicious, so villanous an act, appears to have been very strong.

WE learn that there have been more changes in that most changeable of Companies, the Northern and Eastern. Mr. ROSKELL, who, it will be remembered, cut a rather equivocal figure in the matter of the proposed lease of the line, has *resigned* the Deputy-Chairmanship, as we more than anticipated would be the case in one of our articles a month or two ago. But we certainly did not then anticipate so speedy a *denouement* of change the *second*, which is, that the Managing Director, the *protegé* of *Chairs*, has also *resigned*—a fair proof, we think, that our strictures have done *some* good.

The above gentlemen have, as we have said, *resigned*—we hope voluntarily, and without any hurt to their feelings. But the third part of our intelligence is, or ought to be, equally consolatory to the proprietors in the present depressed condition of their affairs. The Directors have, it is pretty well known, for some time back been floundering on without any professional assistance, beyond what those in the menial capacity which it has been their delight to honour and trust, have been able to supply. The mistake of such policy was plain from the beginning to every one but those sapient Directors themselves; they have, it is to be hoped, seen the error of their way, and, taking as we do the *moves* now chronicled to be indicative of a wish to "*put their house in order*" before delivering up the *key*, which assuredly they must do in February at furthest, they most certainly could not, even *in articulo mortis*, have taken a wiser step than that of re-appointing Mr. ROBERT STEPHENSON their Engineer. We have not of late—and we are sincerely sorry for it—been able to offer much of either congratulation or consolation to the shareholders of this Company, and there are many points still open for comment; but we are unwilling to mar the gratification of the announcements we have above made, and therefore present them *simpliciter*.

Punch has issued "A shilling's-worth of Nonsense;" *Judy*, by advertisement, promises to do the same; while in a pamphlet, entitled "Railways; their Uses, and Management," a certain person, whose name we shall *sink*, has put forth a shilling's-worth of such nonsense and trash as must bring both *Punch* and *Judy* to shame.

It is really surprising to find how Editors of newspapers are gulled when they do not read for themselves, but let the authors of pamphlets write critiques upon their own crudities. The *Times* and *Morning Herald* must have been thus imposed upon, or asleep, when they could not see the sole object of the production alluded to, and could be induced to say one word in its praise. Every portion of the pamphlet, except the middle, is mere crust for the pie to be found in the centre, the sa-

Digitized by Google

vour of which attests beyond a doubt, that the cook is the eminent and accomplished Secretary of that splendid affair the Thames Haven scheme! Upon this point no person will entertain a doubt, who learns that having cursorily glanced at every railway in England and Scotland, and the expectations of each, the collector of shavings and scrapings (to change and mix our metaphors, which in writing of so versatile a personage as our Dutch friend may perhaps be allowed), the collector who has done the glue-work for this specimen of pamphleteering skill, announces that "there is no other such traffic as that open to the Thames Haven Dock and Railway; and every day, which adds to the numbers and wants of the community, must increase its value;" and again, "that the traffic that might be brought by means of this railway to London is so enormous and so various as to justify, *not only a distinct line, but four sets of rails.*" A magnificent project, truly—the merits of which we have frequently had the pleasure of expounding! Base world!—wicked contrivance—foul conspiracy, that pockets should lose the openness and innocence of boyhood, to be in manhood shut up tightly by a wretched button! Infatuated capitalists, who shut the eyes of your mental vision to pleasant prospects of *cent. per cent.*—nay, some of whom are so incorrigibly perverse as to look upon this stupendous scheme as one of the wildest and most visionary of the many wild and visionary speculations of 1836! The loss fall upon your own heads! What if to you it seem absurd to expect a traffic from coals which are to be stopped within twenty-six miles of the termination of their water journey—there and then unshipped, landed, put into waggons, and carried along a costly railway, twenty-six miles in length, into an inconvenient part of the metropolis—what if to *you* arrangements like these appear ridiculous in the extreme—has not the gallant gentleman whose hat covers the entire Executive of the Company—Directors, Secretary—(we were going to say Solicitor, but we recollect that he has a coadjutor, whose "unpaid labour" has heretofore received our meed of praise)—has not *he* said that the project will be profitable beyond precedent; and *who* will venture to gainsay it? It is true the public have hitherto fought shy of the project, but doubtless this literary effusion on the "Uses and Management of Railways" will open their eyes, and bring the Thames Haven shares to a premium. Pray, gentlemen, "don't all speak at once."

It is possible we may return to this notable pamphlet and its author.

THE case of the LONDON AND BIRMINGHAM RAILWAY COMPANY *v.* ELMORE, was decided yesterday at the Clerkenwell Sessions. We were the first to detail and to draw public attention to this very important matter, and to-day we present a full report of the result.

Mr. ELMORE, it will be seen, virtually pleaded *guilty*, and was dismissed on payment of a nominal fine. This is precisely as we could have wished. There was no desire on the part of the Company to press hard on the youthful offender; they were anxious only to warn the public. that the safety of the passengers using their line was not to be jeopardised with impunity; and after what fell from the Bench. this object will be fully attained. Now that the case has closed, and no prejudice can be raised against the defendant, we may mention that on at least one side of the railway there *were* cattle in the adjoining field, and that had the breaking of the locks taken place a quarter of an hour later, the chances are that the circumstance of the gates being left open would not have been discovered that night, except, perhaps, by the occurrence of some fearful accident.

The Directors of the Birmingham Company have done their duty in bringing this case before a legal tribunal, and we trust and believe that other Railway Managements will not be slow in following so good an example.

THE works on the Anglo-Belgian line for this first length from Paris, are proceeding rapidly under English contractors; and the next length to Creil will be put out to contract on the 23d instant. The French Government appear determined to press forward this very important line with all possible dispatch.

WE have already noticed the encouragement which the projected branch line from Peterborough to the Blisworth station of the London and Birmingham Railway has received from the inhabitants of Northampton and Peterborough. We are glad to find that other towns on the route have shown themselves equally favourable. At Wellingborough, Thrapston, Oundle, Stamford, and Boston, public meetings have been held, and in every instance resolutions in support of the project have been carried with enthusiasm. Under such circumstances we cannot for a moment doubt that, in the ensuing session, legislative sanction will be extended to the undertaking. We understand that the estimates of traffic show a very profitable result. Indeed the high character of the London and Birmingham Railway Management is a sufficient guarantee that the scheme is based upon a solid foundation, otherwise they would not have lent their countenance to it, either directly or indirectly.

The resolutions passed at the Boston meeting may be taken as a fair specimen of the whole. They were as follows (the Mayor being in the chair):—

"Resolved, that the formation of a railway from the London and Birmingham Railway near Blisworth, to the town of Peterborough, would be of essential convenience to the inhabitants of Boston and its vicinity, by facilitating their means of communication with the metropolis, with the midland and western counties, and with the manufacturing districts of the kingdom.

"Resolved, that the members for the borough of Boston, and for the different parts of the county of Lincoln, be therefore respectfully requested to give their support in Parliament to a Bill of which notices have been published under the auspices of the Directors of the London and Birmingham Railway, for carrying such project into effect; and that for this purpose the Mayor be requested to forward to those members a copy of this and the foregoing resolution.

"Resolved, that a copy of these resolutions be also officially communicated to the Directors of the London and Birmingham Railway Company."

AN official reply from the Directors of the London and Brighton Railway, to a letter of Mr. Penfold's which we published last week, will be found in another part of our present publication. A letter more *suggestive* of questions of the highest interest to the proprietors in the Brighton Railway we have rarely seen; but until Mr. Penfold has had an opportunity of placing his rejoinder before the public we shall refrain from comment. It is to be regretted that the Directors have so strong a horror of the "Anonymous" that nothing short of a name affixed to a grave charge of misconduct will "draw them out." We think a good deal might be said in behalf of the "Anonymous," but we have neither time nor space at present.

The agitation for the appointment of a Committee of Investigation is going forward most favourably, and we trust we shall soon have the gratification of announcing the formation of a *London* Committee; meantime, we give the resolutions passed unanimously, on Tuesday last, by the proprietors at Leeds, where, we believe, about 1,000 shares are held.

1. That this meeting has seen with satisfaction the proceedings of the shareholders of the Brighton Railway resident in York, and desires to co-operate with them in their endeavours to enforce a system of rigid economy in the management of the line.

2. That this meeting has observed with regret a notice to Parliament, of an extension of the Brighton Railway from Croydon to Vauxhall, which extension, if proposed by the Directors of the Brighton Company, this meeting pledges itself to oppose to the utmost of its power, and to resist any attempt to increase the capital of the Company at the present time.

3. Whilst this meeting regrets the great expenditure in the construction of the Brighton Railway, they must regard it as an additional reason why every effort should be made by the shareholders to enforce the strictest economy in the working of the traffic, and that the expenses should be reduced to the lowest limits compatible with a due regard to public safety, and the efficient working of the railway.

4. That the following gentlemen form a Committee, with power to add to their number, to carry out the views of the present meeting, and to take such steps as they think most conducive to protect and promote the interests of the shareholders of the Brighton Railway. [The names have not reached us.]

We again remind the shareholders, that to be successful they must be united. There is no time to lose.

WE are urged by several correspondents to continue our exposure of the abuses and anomalies of the system adopted by the Post-office authorities, and we believe that we could not do a more acceptable service to Railway Companies, seeing that upon *them*, and not upon the real offenders, public indignation too frequently falls, when the omissions and stupidities of the mail arrangements are the subject of conversation and complaint.

The Town Council of Manchester have again protested against the arrangements connected with the transmission of the Yorkshire mails. An excellent speech was made on the occasion by Mr. Alderman WILLERT, the object being, as he himself explained, "that the Council and the public generally might be aware of the very inefficient and careless manner in which the Postmaster-General seemed to treat the interests of this large community." Some time ago (he said) a memorial was presented to the Postmaster-General, praying that the dispatch of the London mail might be delayed till a later period by the conveyance of the letters *via* the Manchester and Birmingham Railway, in reference to which a polite communication was received. The Postmaster-General had, however, not paid attention to the memorial, because very soon after the receipt of it he discontinued the daily mail which ran from Manchester to York, and which left Manchester about 11 o'clock. That mail was discon-

tinued in November; therefore it was quite *clear* that no attention had been paid to the memorial of the Council. What was the consequence? Letters which arrived at Hull at *7 o'clock* at night had to lie over, and reached Manchester the following day! He had known instances in which letters arriving at 7 o'clock on the Friday night, by the Hamburgh packet, had not reached Manchester until Sunday *morning*; and letters which arrived on Monday evening did not reach Manchester till Wednesday morning, after the market, thus *probably* causing a delay of the business to which such letters related till the following Tuesday. As the steamer left on Friday, when the shipments were made and the bills of lading signed, it was too late to forward them by post; and the consequence was, that they lay over till Saturday, and were received at Manchester on Sunday morning. People did not do business in their offices on Sunday, and therefore the bills of lading had to lie over until Monday morning. The ship might have foundered, and all the property have been lost, before there was time to effect an insurance. This state of things ought not to exist any longer.

The same system of mismanagement is strikingly illustrated by a Manchester correspondent of the London *Standard*, in a letter dated December 9. He says—

"An odd illustration of the present working of the mails between Hull and Manchester occurred here yesterday. A steam-boat arrived at Hull from Hamburgh on Wednesday afternoon, with a very valuable cow for a gentleman in this town, the steamer bringing also at the same time her Majesty's mail-bags, containing a letter of advice to have some one on the spot to receive her. The mail-bags, in conformity with the new arrangements, remained at Hull all night; but the cow having been disembarked, was immediately forwarded by railway to Manchester, where she arrived at 10 o'clock the same night. No one, however, knowing to whom she belonged, she was sent to a stable, where she remained until near noon on Friday, at which time the letter of advice that arrived at Hull with the cow was received in Manchester *by the mail!* Her Majesty's mail was thus fairly outstripped by the cow by about 14 hours!* It should be added, that Hull is the port whence a whole third of all the manufactured cotton of Lancashire is exported."

Can any further proof be required of the necessity of a change of measures, if not of men, in the Post-office department? But it is not the north of England alone that the grievance affects; the southern parts of Cornwall are also suffering, as will be seen from the following extract from a letter written by the Town Clerk of Devonport:

"In lieu of the direct and speedy communication which existed at the time the *Quicksilver* mail proceeded on from this town to Falmouth, we are now obliged to submit to a loss of time, in some instances more than treble that which was formerly consumed, in the course of the western post. *Among the numerous anomalies which the recent alterations have occasioned, it may be remarked that the most rapid means of communicating from this place to the county town of Cornwall, distant* 28 *miles, is by a circuitous route exceeding* 100 *miles, through Exeter; and the only communication between Liskeard and Bodmin,* 12 *miles apart, is through Devonport, Tavistock, and Launceston.*

"It is understood that these alterations have been made for the purpose of forwarding the business of the foreign mails, in their arrival and dispatch at Falmouth; and the Council of this borough have no desire to call in question the propriety of arrangements tending to facilitate so important a branch of the public service, whatever may be the locality which the Post-office authorities deem best calculated for that service, provided other and scarcely less important interests are not sacrificed thereby.

"The Council of Devonport think that the large population of these towns, in conjunction with the South Hams and the southern parts of Cornwall, are entitled to demand from the Post-office the same facilities which were formerly possessed; and if the arrangements above alluded to respecting the foreign mails cannot otherwise be carried out, that the Post-office may justly be called on to make the necessary extra provision."

It is to be hoped that the local authorities will not allow the matter to drop.

Some weeks ago a correspondent of ours gave a *resume* of Post-office mismanagement, and we cannot do better than print it here:—

"The town of Newcastle, which employs 17,000 sail of ships per annum, is 100 miles nearer London than Edinburgh; yet the London letters and papers, under the new system, arrive at Edinburgh as soon as they do at Newcastle! The mercantile and shipping interests have memorialised the authorities, but up to the present time without success.

"Royal Brighton, too, after meetings and memorials without number, has had its mails taken off the railway; and that ancient and all but obsolete vehicle, a mail-cart, drawn by a single nag, and charioted by a solitary boy, carries all the correspondence of the town.

"The cities of Edinburgh and Glasgow, now so closely connected by railway as to be only about an hour's journey apart, have, through their leading merchants, formally and loudly complained of the Post-office arrangements. They assert that, though really so near, they are practically much further removed from each other than they were under the old horse-coach system.

"The town of Sheffield makes similar and even louder complaints. The mails have been taken off the railway, to be carried at a comparatively snail's pace by some cart or fly waggon; and all the memorials, petitions, &c., are treated as so much waste paper.

"I could enumerate some score other cases, but *ex uno disce omnes:* I will content myself with that of Manchester, already alluded to in your columns.

"The Manchester people, with more spirit than discretion, expended some two millions of money in constructing a new railway, in order to save about an hour and a quarter in time in the journey between Manchester and London. This railway has been in operation some time, but the Post-office has no notion of any such beggarly economy as the saving of an hour and a quarter, and therefore the mail is still forwarded by the old route. Then again the Manchester and Hull mails, carrying all the correspondence of Manchester with the northern continent of Europe, are carried by a circuitous route upwards of 100 miles out of the way; the consequence of which is, that the merchants are compelled to post their letters at half-past 5 in the afternoon, instead of at 8 or half-past 8, as formerly. Besides all this, the Manchester and Leeds night mail is taken off the railway altogether; and to a solitary postboy, with a nag and a cart, are entrusted all the valuable bags between the metropolis of Lancashire and Yorkshire, and Rochdale, Halifax, Bradford, Wakefield, Huddersfield, Leeds, &c. You know the road, I doubt not, Mr. Editor, and you will agree with me that it is the very one which at night any modern Dick Turpin would select as the scene of his grand illustrations of the art of 'illicit appropriation.'"

* Ought not this to be 38 hours'.—Ed. R. T.

As a proof of the efficiency of the audit on the London and Birmingham Railway we may state, that of 10,500 tickets issued by that Company, and by other Companies for the London and Birmingham Railway, in the week ending the 3rd instant, only 3 tickets were missing in the collection during the whole week. This is a very remarkable fact.

—o—

Almost all the cattle that gained prizes at the late Smithfield Show were conveyed to the metropolis by the Birmingham Railway.

—o—

The following very interesting statement we find in the *Elgin* (Scotch) *Courant*. Our readers will have no difficulty in recognizing the Railway Executive who acted with so much promptitude and decision. We have heard of repeated instances of a like kind:—

A gentleman from this town, lately in London, on the evening previous to leaving the metropolis, put up at an hotel in the city, from where it was advertised passengers for the railway would be conveyed at a quarter past five o'clock next morning, to be in time for the starting of the train for Darlington at six. The individual alluded to was in attendance at the appointed hour; but the usual conveyance (an omnibus) did not make its appearance. In consequence of this the person in charge of the office at the hotel called a cab, put the gentleman into it, saying the Railway Company would either pay the cabman his charge or deduct it from the railway fare. When he arrived at the railway station, this was not done, and he had to pay the cabman's charge (3s. 6d.) or be detained for another day to obtain justice. He of course paid, and went on. On arriving at Newcastle the same evening, he addressed the Secretary of the Railway Company, detailing the above facts, who immediately instituted an inquiry, recovered from the keeper of the omnibus the fare paid to the cabman, got him fined 5s. for neglect of duty, and remitted to the injured party both sums, with the thanks of the Company for having given information of the irregularity. The fine has been handed over to the poor of this parish, fulfilling the rule in practice had the fine been recovered before leaving London.

—o—

In the course of a speech recently delivered by Mr. Lawrence Heyworth, at a meeting of the Anti-Corn-Law League, that gentleman alluded to certain benefits which he thought a repeal of the Corn Laws would confer on railway proprietors. The non-political character of our journal prevents us from entering into a disquisition on the important question of these laws, but our readers will doubtless be glad to have the opinion of so large a railway shareholder as Mr. Lawrence Heyworth, upon a subject connected, however remotely, with railway interests:—

"He had previously, in stating his general views on the subject, observed that the concession of free trade would benefit all; but he had never stated, though he was not ashamed to do so now, that he had hopes that he should be promoting his own individual good, by promoting the adoption of free trade principles. He was of opinion that if their object was attained, the 100*l.* which he had given would bring back to him a hundred 100*l.* Some persons might fancy that it was merely a sanguine hope springing from some particular crotchet of his own. He could, however, make the matter very plain. He was a large railway proprietor, and if free trade principles were to prevail—if the differential duties on colonial produce were removed—if corn were permitted to be imported free of duty from abroad whenever we wanted it, and the vast masses of the people were allowed to satisfy their hunger with cheap food, and other necessary comforts of existence, he felt persuaded that a double quantity of sugar would be consumed, that a double quantity of coffee would be used, and he scarcely

Digitized by Google

doubted that a double quantity of wheat would be required for the sufficient sustenance of the people. These articles thus agmented in quantity, conveyed to and consumed in England, would require twice the amount of shipping now engaged in carrying them; and employ twice the number of hands to build, rig, and navigate the ships, and in numerous other ways extend the field of well-paid employment for labour; and when imported, would be transported from the sea-ports to the interior, and from town to town, by railway. Payment for them would be made in manufactures, which would be transmitted by the same conveyances; and commercial travellers, employed in the sale and purchase of these, would vastly augment the number of railway passengers, and could not but greatly increase the profits of the Railway Companies, and give a corresponding demand for labour in all departments of trade, from the operative to the highest grades of assistants and managers, to an amount far beyond what he would venture to predict; but if it amounted to one-half per cent. of net profit, which was so small that it would not be doubted, it would give an additional value of 10 per cent. to the capital, and that 10 per cent. would give him a hundred times 100*l*. (Cheers.)"

RAILWAY OFFENCES AND OFFENDERS.

Last week, Joshua Bowden, cotton-waste dealer, appeared at the Manchester Borough Court, to answer the complaint of Mr. Chew, of Oldham, to the effect that the defendant had assaulted complainant whilst travelling in one of the carriages of the Manchester and Leeds Railway. The complainant stated that he entered one of the open carriages at the railway station at Oldham on the previous night, and shortly afterwards the defendant got into the same carriage. Being at the time in a state of intoxication he began to be very disorderly, pushed against several persons, and at length pushed complainant against the side of the carriage, and threw him down. Complainant remonstrated with him on the impropriety of his conduct, when he threatened to throw him (complainant) out of the carriage. Just at that moment the guard entered the carriage, and removed the defendant to the opposite end of the compartment in which he was; whilst there he spat upon complainant twice. On the train arriving at Manchester he was given into custody. Mr. Hall, inspector at the Manchester station, stated, that although Mr. Chew was the prosecutor in this case, the Company were desirous that the defendant should be punished, as a warning to others, and as a protection to the public. The offence was punishable under the 5th bye-law of the Company, which was as follows:—"Any person found in the Company's carriages in a state of intoxication, or committing any nuisance, or otherwise wilfully interfering with the comfort of other passengers, and any person obstructing any of the Company's officers in the discharge of their duty, is hereby subjected to a penalty not exceeding 40s., and shall immediately, or, if travelling, at the first opportunity, be removed from the Company's premises, and forfeit his fare." The bye-laws had been duly confirmed by the Lords of the Committee of Privy Council for Trade. The defendant said he knew nothing of what was stated to have happened in the carriage, but acknowledged that he was in liquor. Mr. Maude ordered him to pay a fine of 20s. and costs 7s. Mr. Chew said, if the defendant would make an apology for his conduct, he would willingly give up the penalty. Mr. Maude—*I think that ought not to be done. It is a case in which the public are very much concerned, and some lives might have been lost through the conduct complained of.*

LONDON AND DOVER (SOUTH-EASTERN) RAILWAY.

Traffic Receipts for the Week ending December 13, 1842—*the Fifteenth Week of the Low Fares.*

Date.	First-Class.	Second-Class.	Third-Class.	Total.	Amount.
Dec. 7....	198	331	173	702	£177 1 7

Add total to the 6th December, from last week's *Railway Times*.....				17,796
Total loss to the Greenwich Company in *fifteen* weeks by their prohibitive toll.....				18,938

PREVENTION OF SLIPS ON RAILWAY EMBANKMENTS.

FROM A CORRESPONDENT.

The principal cause of embankments giving way is that the wet, or rain, filters through the porous, vegetable, or gravelly soil, until the water meets the clay, which not being of an absorbent nature, the water remains until it bursts through, and destroys the embankment.

To remedy such an evil, therefore, it is proposed to plant the whole line of the embankment of every railway with all descriptions of fruit trees usually grown in England—such as pear, apple, cherry, and plum trees; and against the walls of bridges and viaducts might be trained apricot, peach, &c. &c.

The roots of these trees would in the course of time unite under ground, and become mixed and entwined in one mass of great unity and strength.

The rain and dampness of the soil would be absorbed by the roots of the trees, as a nourishment indispensable for their fruitful existence or produce, and thus the water which is now injurious would become beneficial.

All experiments to drain the soil of embankments or sloping grounds are a mere waste of time and money, unless the drains are made in a zig-zag at the very bottom of the embankment, and even this course is so insufficient that it ill-repays the great labour and expense necessarily bestowed upon it.

Plantations of ferns, laurels, and firs in general, and other evergreens, are not only injurious to the slopes on account of keeping them damp, but exceedingly dangerous by reason of their height, and being sustained on the slopes by one strong side only of their roots, may be blown down. They also imbibe a great portion of their nourishment from the moisture of the atmosphere, and not by their roots from the earth, whereas fruit trees take their nourishment from their roots, and if planted in rows from the bottom of the embankment to the top, at a distance of 15 feet between each tree, and 5 feet between each row, would take root and absorb the water. The roots would expand underground in search of nourishment, and in the course of time produce a combination of roots on the slopes, so much intermixed that, even if there were any water between the porous soil and the clay, it would not have sufficient power to force its way through the embankment. Besides, the roots would unite porous or vegetable earth to the clay, clay being favourable and indispensable to the roots of fruit trees.

The full development of this experiment to remedy the evil of embankments giving way being a work of time, there might in the meantime be planted currant and gooseberry bushes, which, notwithstanding their small roots, would absorb the dampness of the soil at once, if they were planted in sufficient numbers, and the year after they were planted they would bear sufficient fruit to pay for the labour and expense bestowed on their plantation; and the embankments, no matter how perpendicular, might be made in benches or steps, at 5 feet slope by 2 or 1½ wide.

All fruit trees, particularly pear trees and apple trees, have tap-roots which grow perpendicularly to the depth of 4 feet, and expand to 7 and 8 or 10 feet each way horizontally. The trees being trained in Espalier, never can be blown down by high winds, and there being less wood, they must produce better fruit, the sap dividing equally into the fruit; and on embankments where the rail is on the top of the slope, the fruit trees might be allowed to grow to their natural height.

The advantages from thus planting fruit trees are as follows:—

1st. The embankments would be secured by means of the support given to them by the roots of the trees, in addition to the absorption of the wet.

2nd. The expense would be trifling, and at the end of 10 years would be repaid with interest, and an annual profit at the rate of (at least) a shilling per tree: 60,000 trees would produce 3,000*l*. against the wages of gardeners and others employed in their cultivation, which would not at the highest estimate amount to 600*l*. per annum.

3rd. The ground which now produces absolutely nothing, would be turned to advantage, and become a source of profit.

4th. The market in this commodity would be monopolised, and cheapness of fruit, together with a regular supply during the whole year, would be the result.

The competition of the ordinary market gardeners would be out of the question, they having to pay ground-rent, and find conveyances to carry their fruit to market, when the luggage trains of Railway Companies would be able to transport their own fruit from one extremity of the country to the other without very great additional expenses.

The first outlay may be estimated thus:—

60,000 trees at 2s. per tree, capital	£6,000 0 0
5 per cent. thereon during the 10 years 300*l*. yearly.....	3,000 0 0
Total.....	£9,000 0 0

60,000 trees producing at the end of 10 years but 3s. 6d. per tree of fruit, would amount to the sum of 9,150*l*., and an annual income of 3,000*l*. supposing each tree to produce 1s. worth of fruit on an average; and again, 60,000 trees producing 2d. worth of fruit per tree would realise 500*l*. yearly, and in fact more than is required to pay the interest of 6,000*l*. laid out at 5 per cent.

It must be observed that some fruit trees bear full crops at the end of 5 or 6 years after they are planted.

London and South-Western Railway.—As a proof of what the railway has done for Southampton, we copy the following paragraph from the *Globe* of Wednesday:—"Southampton, Dec. 13.—The *Oriental*, Captain Joy, arrived here from the Motherbank this morning, and landed between sixty and seventy passengers from the Mediterranean, Egypt, and India. Additional tide surveyors have been appointed at the Southampton Port on account of the increase of duties at the Custom-House. Southampton is about also to be made a second-class port by the Board of Customs, on account of its magnitude and importance as a railway and packet station.

MIDLAND COUNTIES' RAILWAY—THE LATE MEETING.

No. I.

From Lawrence Heyworth, Esq., to Thomas Edward Dicey, Esq., Claybrook Hall, Leicestershire.

My dear Sir,—On reading over the proceedings of the public meeting of the proprietors of the Midland Counties' Railway, on Friday, the 18th instant, in the *Railway Times* publication of the 19th instant, I observe you express yourself in reference to me, that on a point to which you allude, I was "*disreputably inconsistent.*" I presumed my not having volunteered to express at the Board of Directors an immature opinion of dissatisfaction with the progress made in the retrenchment of expenses made by the Directors, and, notwithstanding this prudential silence, my having afterwards given my proxy to the gentlemen proprietors who by means of a Committee of Investigation were willing to sacrifice their own time and labour in behalf of the Company, in seeking for yet greater economy of management, is that point in the character of my conduct in this business for which you have—I sincerely believe hastily—applied those harsh, and, I think, wholly unmerited terms, and which, I trust, you will do me the justice to say I have not deserved.

I do not know that you notified to the meeting the immediate cause of my non-attendance at that meeting, by reading the letter I addressed to you on the subject, dated the 15th instant, in which I stated that I should not be present in consequence of my having to attend a very important public meeting for promoting the extension of Free Trade principles, in which I take great interest, as connected with the best interests of every class of the community—and not the least so as bearing on the prosperity of railways, which, depending on the prosperous condition of the external and internal trade and commerce of the country, must be productive of profitable advantage, or otherwise, just in proportion as legislation withdraws those absurd commercial restrictions which at present intercept the bounty of Providence, and prevent us from exchanging the surplus production of our manufactures for the surplus production of the raw articles obtainable from other countries. The greater the quantity of corn, of coffee, and of sugar, &c., as well as of manufactures which may be in the country, the greater would be the quantity of all those commodities carried over our railways, and the greater number of mercantile travellers would be required to be transmitted over our lines. And although I think much may be saved by economical management, yet I feel persuaded, that as regards greater usefulness to the country and greater profits to the proprietors of railways, these are mainly to be looked for by an increase of the traffic running over them. And if so, I was not out of place, as a Midland Counties' Director, nor neglecting my duty to promote the best interests of my fellow-shareholders, though I was absent from a meeting in which circumstances scarcely warranted nor required my taking any prominent part.

I remain, my dear Sir,
Yours, very respectfully,
(Signed) Lawrence Heyworth.

Yewtree, near Liverpool, November 23, 1842.

P.S. Perhaps you will have no objection to my publishing this, and your reply, in the *Railway Times*.

No. II.

From T. E. Dicey, Esq., to Lawrence Heyworth, Esq., Liverpool.

My dear Sir,—I have just been favoured with your letter. In reply I beg to state, that the report of the part of my speech to which you allude, though substantially correct, is not verbally so. The word used by me in reference to what I consider the inconsistency of your conduct, was not "disreputable," but "discreditable." The difference between the two words is not quite immaterial. But even the latter epithet I regret having used. Words that can imply an imputation upon an opponent's *motives* are neither wise nor right. I told your brother, Mr. Ormerod Heyworth, after the meeting, that I regretted the use of the term; and I readily avail myself of this opportunity to express my regret directly to you, for having employed a word which might be understood as casting a reflection upon your motives. Except in the excitement of a warm discussion, I would have avoided any term which could bear such a construction. But whilst I am most willing to disavow any imputation of improper motives, I cannot change my opinion of the actual inconsistency of your conduct. You came to Derby to attend a Committee of Management (of which you are not a member), for the express purpose, as it was understood, of learning what the Directors were doing. We willingly admitted you into the Committee; we explained to you our plans, the appointment of our sub-Committee, and the course which it was pursuing with a view to the reduction of the Company's expenditure. Not a word of disapprobation falls from you; you suggest no step whatever; and you leave us under the impression that you are thoroughly satisfied with our proceedings. The next thing we hear of you is, that you have given a proxy to be used in support of a motion notoriously designed to express distinctly, though indirectly, an opinion that the Directors were not disposed to promote economy. I cannot think that this is the course which one Director ought to pursue towards the other members of the Board.

I explained the cause of your absence from the Derby meeting to my brother Directors. I was not aware that you wished me to read your letter to the meeting, otherwise I should certainly have done so.

I remain, my dear Sir, yours, very faithfully,
(Signed) T. E. Dicey.

Claybrook Hall, November 23, 1842

No. III.

From L. Heyworth, Esq., to J. F. Bell, Esq., Secretary of the Midland Counties' Railway Company.

Dear Sir,—I am duly in receipt of your letter of the 3rd inst., inquiring of me if it is my wish to join the Directors in a resolution passed recently by the whole of the Board, to tender their resignation at the next general meeting of the Midland Counties' Railway Company in February next, to which I beg leave, in reply, to state, that though my brother James, actuated by the most honest intentions of benefiting the proprietors of our railway (being himself a very large holder of shares in the line), has taken a prominent part in carrying a resolution for inquiry into the best means of economising the management, and increasing or improving the traffic, I have not hitherto, nor do I intend, to *interfere* with what, I confess, appears to me a laudable effort in behalf of himself, and others acting with him, to satisfy themselves that their property, and the property of all the proprietors, is rendered as productive of honest profit, as circumstances will admit, further than giving to him my proxy, which I did on general grounds because I am more largely interested in other railways than in the Midland Counties'; and I think the benefit which will result to railway proprietors generally from such investigation into their own affairs will be very considerable, that it will strengthen the hands of the Directors, and be creditable to the Directors of all well-managed concerns; whilst it will correct abuses and stimulate to active exertion, where the Board had from incorrect judgment, or from want of zeal, failed to promote to the utmost a profitable return on the property entrusted by the shareholders to their fostering care.

Imbued with these sentiments, which had the benefit of having had more time to reflect upon the passing events than the Board had at the time of passing the resolution in question, I cannot help thinking that it was a premature step adopted with uncalled-for precipitancy, which it will greatly gratify me to learn that the Board have rescinded.

I remain, dear Sir, yours, very respectfully,
(Signed) Lawrence Heyworth.

Yewtree, Liverpool, December 6, 1842.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

Sir,—The Directors of the London and Brighton Railway Company have had their attention called to a letter in your last week's publication signed "Charles Penfold," in which he states as follows:—

"I have an outstanding account with the Company to the amount of 3,000*l.*, and I can neither obtain a statement of how they consider the account stands, an agreement to refer the matter to honest men, nor in fact any answer at all, except a verbal one from the Company's Solicitor to my solicitor, 'that I may get what I can, for they do not owe me anything,' although he knows well, that under the contract 10 per cent. has been kept back, and that even that sum I could not recover at common law without the certificate of the Engineer."

Now, the fact is, that in addition to a Chancery suit, Mr. C. Penfold has brought two actions at common law against the Company, to recover the amount he claims, in one of which actions the Company have paid the sum of 600*l.* into court, which Mr. C. Penfold has since received out of it; and these actions are still pending.

Mr. C. Penfold forgets to state that the Company's defence to these actions is, that some of the works for which he claims to be paid were not done, and that others were imperfectly executed, and that in a letter to the Chairman he stated "that it was always his intention to present a compliment of 100*l.* to him if he met with no trouble on the settlement of his accounts." Under these circumstances, and more particularly after the receipt of this letter, the Board of Directors unanimously resolved to leave him to his remedy.

The Solicitors deny any such communication as that alleged by Mr. C. Penfold to have been made to his solicitor, although they admit having told him their mind upon the subject, and the course adopted by Mr. C. Penfold.

The Directors feeling that if the statements contained in Mr. C. Penfold's letter were allowed to remain unanswered, they might appear to be acting unjustly towards him, have considered it to be their duty to reply to it, more particularly as they believe he is the first person who has written otherwise than anonymously against the Company in your journal.

I have the honour to be, Sir,
Your very obedient servant,
CHAS. R. MACKENZIE, Sec.

10, Angel-court, Throgmorton-street,
December 15, 1842.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

Sir,—It would be rather a difficult matter for an individual to touch upon any new subject relative to the London and Brighton Railway, which has not been broached and discussed through the medium of your valuable periodical; and although several of the shareholders have been suggesting and recommending another "Committee of Investigation," to ascertain the real position in which they are placed, and to report on the management, or *rather mismanagement*, of the executive body, I think the proprietary at large have lost sight of the great advantages of *individual exertion*. A noble example

Digitized by Google

has been set them by the shareholders of the Midland Counties' Railway. They were not satisfied with the manner in which the affairs of that Company were conducted, and they called a general meeting of the proprietors, and appointed a Committee to manage the affairs of the Company, (which Committee was chosen by a majority of above 700 votes), and who now have the sole management of that railway under their cognizance, to the no small mortification of the late Board of Directors. Now this was effected, not by writing their sentiments, and having them expressed in this or that periodical, but by *acting*; it was not enough for them *to see* that things *went wrong*, their object was to *set them right*, and their efforts were crowned with success as the majority of their votes testify. Now, could not such a step be taken with respect to the Brighton Company? Surely there is a "needs be," and the sooner the better, if the shareholders wish to see their property realise its legitimate value. The only regret that I can conceive of would be that they had not adopted such a step at an earlier period. Yours, respectfully,

A SUFFERER.

EASTERN COUNTIES' RAILWAY.

To the Editor of the Railway Times.

SIR,—Your occasional correspondent ("Westminster," November 12) appears anxious to have the film removed from his vision respecting the prospects of the Eastern Counties' line of railway, I therefore submit this reply to his letter.

Your own remarks in explanation and confutation of the erroneous idea, that a manufacturing district only affords traffic to a railway are so clear and explict, that I shall not enlarge upon that part of his communication, but merely remark that the present immense existing traffic by coaches and other conveyances, both for passengers and goods, is quite sufficient evidence against his estimate of the probable amount of traffic when the line is opened through to Colchester. I shall, therefore, merely give an outline of a calculation made at the last meeting of the Company, in October last, from which I was induced to purchase a considerable number of shares for investment; but should any part be found incorrect, I shall esteem it a favour to have such corrected. At the time I refer to, debentures and new shares could be purchased for 10*l.* per share, upon which this calculation is made.

1st. The capital of the Company consists of—

64,000 original shares, of which 56,000 only are issued, at 25*l.*	
64,000 convertible debentures, of which 56,000 only are issued, at 8*l.* 6s. 6d.	
36,000 new shares, issued at 8*l.* 6s. 8d.	
First loan (see Report, 4th July, 1842)	£207,000
Second loan authorised to be raised (meeting, August 22, 1842)	200,000
	£407,000
Making a total capital of about	£2,573,000

The par issue being about 14*l.* 12s.

If, therefore, the capital was purchased at the named price, 10*l.* per share, it would stand thus:—

56,000 original shares issued (supposing the remaining call of 2*l.* paid)	
56,000 convertible debentures.	
36,000 new shares.	
148,000 shares at 10*l.* per share	£1,480,000
Authorised loans, say	400,000
	£1,880,000
1,880,000*l.* at 5 per cent. per annum	£94,000
Deduct actual receipt of Northern and Eastern toll	15,000
	£79,000

Avoiding the fallacious mode of calculating the working expenses of a line by a per-centage on the receipts, I have taken the actual working expenses of the Birmingham and Gloucester line (which is about the same length) from the last Report in August, of course deducting the three last items, consisting of branch coaching, interest, &c., leaving 54,172*l.* 18s. 2d. for the year. And also from the last Report, in August, of the Brighton line, also about the same length, and of course deducting the Croydon toll, leaving 64,936*l.* per annum.

A gross receipt per annum of	£133,380	
Deduct working expenses, about the same as the Gloucester, and which is at the rate of 42 per cent.	54,380	£79,000
Being a weekly receipt of 2,565*l.*		
Or, a gross receipt of, per annum	£144,950	
Deducting working expenses about the same as the Brighton, which is at the rate of 45 per cent.	64,960	£79,090
Being a weekly receipt of 2,760*l.*		

Presuming, however, the shares get up to par, or 14*l.* 12s., the capital would then stand thus:—

148,000 shares at 14*l.* 12s.	£2,156,800
Authorised loans, part of which could be paid off by the 16,000 shares created in trust for Company	407,000
	£2,563,800
Say, 2,570,000*l.* at 5 per cent.	£125,000
Deduct actual receipts at present of Northern and Eastern toll	15,000
	£110,000
A gross receipt of	£176,000
Deduct for working expenses, about the Brighton, equal to 45 per cent.	66,000
	£110,000
Being a weekly receipt of 3,400*l.*	

The above calculations I believe to be quite correct, showing that the shares at 10*l.* require only an average weekly receipt of about 2,600*l.* to pay 5 per cent.; or if the shares are at par issue, or 14*l.* 12s., an average weekly receipt of 3,400*l.* would pay 5 per cent.; and from the knowledge I have of the simple and substantial construction of the works on the line (not so with Gloucester or Brighton), and from the well-known talent and experience of the Manager, who is known to be using every exertion to concentrate the traffic and economise the working expenses, I have no doubt, as the traffic increases, 40 per cent. will cover those expenses.

I therefore leave your correspondent to judge for himself of the probability of realising the average receipts stated when the line is opened to Colchester, reminding him that the present average *weekly receipts*, over 17½ miles amount to about 900*l.* for the last 12 months, including Northern and Eastern toll.

I am, Sir, yours, &c.,
A PROPRIETOR.

London, December 7, 1842.

THE LATE TRESPASS ON THE LONDON AND BIRMINGHAM RAILWAY.

MIDDLESEX DECEMBER GENERAL SESSION,
(YESTERDAY.)

Before Mr. Serjeant Adams and a full Bench of Magistrates.

THE LONDON AND BIRMINGHAM COMPANY *v.* ELMORE.

IN this case, the particulars of which appeared in the *Railway Times* a fortnight back, George Elmore the younger was charged with having, on the 17th day of October last, wantonly, wilfully, and unlawfully broken and injured two locks upon two of the gates of the London and Birmingham Railway, whereby the use and passage on the said railway became and was liable to be obstructed, and impeded, &c. The indictment contained other counts which varied the offence.

The court was much crowed by parties interested in the case, and amongst them were several sporting characters.

Mr. Bodkin and Mr. Doane appeared in behalf of the Railway Company, and Mr. Clarkson for the defence.

Defendant pleaded not guilty.

Mr. BODKIN in addressing the jury said, he had reason to believe, from an intimation which he had received from his learned friend Mr. Clarkson, that the present was a case which would not occupy a great portion of their time. The indictment was certainly one of a very novel kind, arising out of an altered state of circumstances in the communications of the country by means of railway transit. The indictment had been preferred at the instance of the Directors, not out of any vindictive feeling, but in the exercise of that which they felt to be an almost sacred trust reposed in them—the preservation and safety of the public who were traversing in such large masses, and at all hours of the day and night, the Birmingham line of railway. The facts of the case were briefly these:—The defendant, a young man he believed of unquestioned respectability, was out hunting, and in the eagerness of the chase followed up the hounds until they approached the railway at Harrow. Defendant, then, perhaps thoughtlessly and in the excitement of the moment, proceeded with another person to open the gates which secured the railway, by knocking off the locks, and, leaving the gates open, proceeded with the hounds. He, the learned counsel, was perfectly sure that Mr. Elmore himself, on a moment's reflection, would well see the extreme danger and liability to accident to which such a proceeding must have exposed the railway. Had a cow or any other animal, eluding the vigilance of those whose duty it was to watch these public highways, but whose vigilance could not be expected to extend over all hours of the day to all portions of the line—had a cow or any other animal strayed upon the line, perhaps after dark, or while the trains were traversing the railway, the accidents which might have occurred would have been most fearful and disastrous—the jeopardy to human life incalculable. It was, therefore, for the great end of protecting the public that the Directors had moved in this matter, and for the purpose of showing, that however inconsiderately these things might be done, they could not be done with impunity. The offence charged was laid under the 114th section of the Company's Act, clause 205, by which it was enacted, "that if any person shall wilfully, and to the detriment of the said undertaking, or of the said Company, injure, break, throw down, destroy, steal, or take away any part of the said railway, or other works erected or made by virtue of this Act, or any part of the materials of any such works, so that the use of any passage on the said railway shall be liable to be obstructed, impeded, or otherwise interrupted, every person being convicted of any such offence shall be subject and liable to pay the penalties to which persons shall be liable in case of simple larceny."—That was to say, it exposed any person, who had so acted, to a punishment equivalent to that which is passed upon a person who has committed the offence of larceny. Not that, according to his (the learned counsel's) interpretation, it amounted to an offence of felony, but only that it subjected a person to the same punishment who might have been guilty of any species of felony. The section certainly was not very clearly drawn, but that appeared to him, from the common sense view which he had taken of it, to be the proper construction, and in which he believed he was corroborated by the opinion of the Chairman in his recent charge to the Grand Jury. There could be no question, however, as to the propriety of that part of the indictment which charged the defendant with a misdemeanour, in wilfully leaving open the gates, and in exposing the traffic upon the line to interruption and danger. This was clearly an indictable offence at common law. The same arguments would apply as in the case where a public sewer was being repaired, and where a party wilfully removed any fence or protection placed there with a view to the safety of the public. No one would for a moment doubt that such was an indictable offence at common law, and how much more so was it in the case of a railway, where such an act might endanger the life, not merely of an individual, but of multitudes of our fellow-subjects! He believed, from what he had heard from his learned friend Mr. Clarkson, that Mr. Elmore regretted the inconsiderate act. He (the speaker) had nothing to say affecting the moral character of the defendant, nor were the Directors of the London and Birmingham Railway desirous that defendant should be visited by any punishment whatever;

but the Directors of that Company were most anxious that the public should be acquainted, through the medium of a court of competent jurisdiction, that such rash acts were not to be committed without, in some form or other, being liable to punishment.

The learned counsel was then about to put the facts of the case in evidence, but

Mr. CLARKSON, after intimating to the Bench that it would not be necessary to enter into evidence, said he appeared for the defendant, Mr. Elmore, who he believed was about sixteen years of age. The indictment in relation to defendant's plea of "not guilty," up to the present period, and as far as that plea had gone, was in his (the learned counsel's) judgment, founded on a mistaken notion of the law as to any fact against the defendant, inasmuch as defendant was in a position to show that he was not the party by whom the lock in question was broken, and therefore that he did not come within the meaning either of the statute or common law in respect of the offence—if offence it were. According to his (the learned counsel's) instructions, young Elmore was in company with another person by whom the locks of these gates were broken—but nevertheless this rendered him responsible, as *particeps criminis*, for the act against the law, as though defendant had done it himself. Mr. Elmore, it appeared—whom his learned friend had spoken of in terms which reflected credit, not only on himself but on the Railway Company whom he represented—was out with some horses belonging to his father, and in company with a young friend. Defendant's father, seeing the hounds cross the rails, pulled up, or he might himself have been a party to the action, had he crossed over the railway. Defendant and his companion were unable to restrain that ardour which actuates sportsmen in the chase, and he need got appeal to the gentlemen he saw before him, whether they in like manner had not broken many a gate, though perhaps of a different description, whilst following their fox-hounds! In the present instance, however, it was quite a mistake in alleging that defendant did the act, and it was equally a mistake to allege that his companion left the gates open, and the railway thereby unprotected. The fact was, that they lifted up the gate after they had broken the *D* lock—put it on its hasp and shut it fast before they again followed up the hounds. For his own part, speaking as a lawyer, he thought that the section of the Act of Parliament did not meet the case. He felt confident it did not. He also thought that the count at common law, which was the 5th count in the indictment, attributed to the defendant nothing more than trespass. That was what it appeared to his mind, but after the suggestion of his learned friend on the part of the Company, a most important and highly respectable public body of gentlemen, whose interests were most unquestionably deeply involved in an inquiry of this sort, where very great danger might have arisen from such an act, peradventure, if done as here represented—after such a suggestion, seeing that defendant came forward as he then did, and said he was sorry that while engaged in the ardour of the chase, either he or his companion had been induced to forget there was a possibility of mischief arising from such an imprudent act, he (the learned counsel) treating the matter as a civil trespass, would accept what the Directors of the railway offered. Under these circumstances, if his learned friend insisted upon the plea in the 5th count of the indictment, he (Mr. Clarkson) had no objection to it, and then he thought defendant would plead guilty to the trespass.

Mr. BODKIN having signified his assent,

The CHAIRMAN said, he thought the learned counsel had come to a very proper conclusion. There was no one who entertained the old honest feelings of an Englishman about him who would not look with a lenient feeling upon the spectacle of a young fellow riding at full pace after the hounds, even at the risk of breaking down a gate in his headlong gallop. Nobody would blame him were this to be done upon a common high way. But here was a new species of property, upon which the commission of such an act became doubly indefensible, the consequences of which might prove most serious, and involve the lives of hundreds of people. It was therefore of the greatest possible importance that in the very first case which occurred the Railway Company should have an opportunity of bringing it before the public. No doubt the case was one which had excited considerable interest. It would appear in the newspapers, and he hoped it would act as a public warning throughout the whole of the kingdom—as a common ordinary lesson both to youth and to age—that English fox-hunters must curb themselves on the chase when they come near the borders of a railway. He (the learned Chairman) remembered a case on the Great Western Railway in which the whole party very narrowly escaped being run over by a train upon the railway; in fact he believed one of the horses was killed. These were cases which the law must meet with serious punishment hereafter; and in which a heavy fine or imprisonment only would suffice. But as this was the first case—as the defendant was young, and as there were other mitigating circumstances—his father having shown that he felt the impropriety of it by his good sense in coming to a stop—he (the Chairman) thought it would furnish a cheap lesson to defendant for the future, when he came within sight of a railway, not only to rein in his horse and dismount, but to keep his hands off the property of that railway—a property which must be protected.

Defendant's counsel here intimated that he would take the plea of guilty on the 5th count.

The CHAIRMAN—What is the fine?

CLERK of the COURT—One Shilling.

Mr. ROTCH remarked, that in his younger days, when good old English feeling prevailed, it was the custom for horses to leap gates, and not for their riders to dismount. (Laughter.)

The CHAIRMAN—This plea cannot be accepted a second time. The Company, I think, will have succeeded in attaining their object, namely, that it should be known to the public that the property of the railway must be protected. It is a property of too serious a nature to be tampered with even by an old English fox-hunter.

Mr. CLARKSON said he thought the London and Birmingham Railway Company had met the case in a manner which reflected the greatest credit on themselves, and upon their attention to the interests of the public.

The fine having been paid, defendant was discharged.

RAILWAY AUDITING.

To the Editor of the Railway Times.

SIR,—May I beg a small space in your columns for a few remarks upon the much-canvassed subject of railway auditing, concerning which there are such widely differing opinions afloat.

I will take it for granted that the object sought to be obtained by the appointment of an Auditor is the protection of the interests of shareholders, and the question to be settled is, *how* the office is to be made conducive to the end.

I should say generally, by ensuring that all the revenue which the line produces finds its way into the exchequer, and that everything which goes out of it is for legitimate purposes, and passed to the proper accounts. To come to particulars, an Auditor should require from the check office a weekly return of the traffic; it will then be his duty to see that the cashier has paid into the bank all the money received, and that the accountant has debited every party who has monthly accounts with the Company in the proper amounts, it being another branch of his duty to see that the said monthly accounts are regularly paid. Where the capital account is not closed, it will also devolve upon him to see that all receipts on that account appear to the credit of the Company.

The first department of his duties is thus completed. *All* the receipts are in the bank or in the books. And now for disbursements. The Auditor will of course require a voucher for every payment made, and further, that every such payment shall have been ordered by the Committee corresponding with the nature of the payment; and yet further, that these payments are for legitimate purposes, and placed under their proper heads in either capital or revenue account. His duties should likewise extend to a supervision of the accounts connected with stores and locomotive expenditure, and to a frequent testing of the general cash account with the several accounts of each of the Company's bankers.

The regular performance of these duties will fully qualify him for the half-yearly one of auditing the general balance sheet, and make that document something more than the mere formality, which it must be where the Auditor does only that which some Acts of Parliament require or empower him to do, viz., inspect the accounts 10 or 12 days before the meeting of proprietors. This it is obvious can give little, if any, of the security which I set out by saying was the object of the office. On the other hand, I conceive that the several points on which I have briefly touched comprise all the legitimate duties of an Auditor; if he is to do more, if the decisions of the Directors must receive his sanction before they can be acted upon, *he* becomes Director, and those who are called so are merely agents under him; and we have then this anomaly, the judgment and the honesty of one man are preferred for our security to the judgment and the honesty of 10 or 12 men, each a check upon the others, and all, be it remembered, *elected by the proprietors*, because of their talents, their knowledge, and their integrity.

The relative duties of Directors and Auditors may be thus stated in a few words:—Directors, as the name imports, are to *direct* what is to be received and paid for the general good by the servants of the Company. It is the province of the Auditor to see that what they so direct *is* so received and appropriated.

If any exception can be taken to these views, I shall be glad to be made acquainted with it; and if the soundness of the principle be admitted, I shall be equally glad to see any suggestions from yourself, or from your correspondents, by which it can be more efficiently carried out. The subject is important, and it should be discussed fully and calmly.

I am, Sir, yours, obediently,

A.

RAILWAY ACCOUNTS.

To the Editor of the Railway Times.

SIR,—The more simply accounts are stated, the more are they likely to be correct and understood by the parties having an interest in them. Railway accounts, especially, should be rendered plain to the most uninitiated of the numerous subscribers to such undertakings; with this view, I would recommend the adoption of the well-tried, straightforward, and simple system of double entry. This would afford complete uniformity, destroy mystery, and embody material for as much statistical information as might be required. Each department should have its own cash-book, journal, and ledger, and produce half-yearly its own separate balance sheet; these respective sheets handed to the Secretary's office, and there embodied in one final balance, showing the net proceeds of earnings, the only legitimate source of dividend. In the Secretary's office should be kept the "Capital Account," comprising the permanent way, buildings, unappropriated land, borrowed money, interest, &c., showing the actual cost of the undertaking in full operation; and the "Permanent Way Account," showing the amount of contract for each division of the line, and to whom let, together with the amount of rates and taxes, and extra charges for repairs of slips,

Digitized by Google

subsidences, and engineering charges, &c.; the total of which would be charged out in the proper proportions to the coaching and carrying traffic, and the account would thus balance. The "Engineering Account" would be chargeable with its salaries, wages, &c., and balanced by respective amounts to the permanent way, and coaching and carrying traffic. The "Locomotive Account" would be chargeable with stock, salaries, wages, and consumption of coke, stores, stationery, &c., the total of which, together with depreciation of stock, would be debited in respective proportions to the coaching and carrying traffic, and the value of stock on hand would balance the account. The "Coke Account" would be charged with coal, salaries, wages, and its consumption of stores, stationery, &c., and have credit for the quantity of coke at the cost of production, delivered out to the locomotive department and stock remaining. The "Stores' Account" would be debtor for stock, salaries and wages, and for the stores supplied during the half year, including stationery, and for its proportion of audit charges, and its own consumption of stores, &c.; this total would show the cost of the stores, and the distribution to the several stations at the gross cost, and the stock on hand would credit and balance the account. The "Police Account" would be debtor to salaries, wages and clothing, and be credited by proportionate divisions of its total to the coaching and carrying traffic. The "Secretary's Office Account" would comprise allowances to Directors, salaries to Secretary and clerks, with wages to messengers and porters, together with cost of clothing to police, ticket-collectors, guards, brakesmen, and porters; for gas, advertisements, printing, and its portion of stores and stationery, the total of which would be balanced by due proportions being carried to the debit of the coaching and carrying traffic, and police establishment. The "Superintendent's Office Account" would comprise his salary and those of his clerks, together with its consumption of stores, stationery, &c., to be charged out to the coaching and carrying traffic. The "Audit Account" would show its amount of salaries, wages, and its consumption of stores and stationery, which would be charged out to the coaching and carrying traffic. The "Clearing-house Account" would be credited by charging the coaching department with the amounts due from each Company availing itself of its services. The "Coaching Account" would be debtor to stock and repairs, compensation for losses and damages; for salaries, wages, clothing; for ticket-collectors, guards, and porters; and its portion of stores, printing, stationery, permanent way; charges—locomotive and engineering; Secretary's office, audit, and Clearing-house; and credited by the earnings paid over daily to the cashier stationed in the Secretary's office, and thence handed to the bank; taking credit also for money due from the several Companies for the use of the Clearing-house, and the proceeds of the sale of lost property, and for the stock on hand. The "Carrying Account" would be chargeable with the entire of the brakesmen's clothing, and its proportion of other matters as stated under the last head.

Accounts thus arranged would show the shareholders the COST and STOCK of each department, and enable them, without the aid of a Committee, to judge whether or not the pruning-knife could be applied with propriety to one or more of them; and they would also see the net proceeds of their traffic, upon which they could form their opinion as to the amount of dividend to be divided.

These arrangements would not affect the safety of cash transactions, as payments would be made by cheque, signed by the Directors as now. Having stated my views touching the important matter of railway accounts, I leave them to the consideration and discussion of yourself and correspondents, should you deem them worthy of a place in your columns.

Remaining respectfully,

A WELL-WISHER TO RAILWAYS.

December 7, 1842.

GERMAN RAILWAY REGULATIONS.

ON the railway from Vienna to Baden no tickets are given out within the quarter of an hour preceding the starting of the train. We presented ourselves at the office at Baden half an hour previous. It had begun to rain heavily, and crowds of disappointed pleasure-seekers stood at the window waiting for tickets. Only one man delivered them; and he, with most ominous coolness, every few minutes turned his eye on the office clock. At the moment that the finger reached the quarter, he stopped, declared the time up, and refused to deliver another ticket. It was in vain that the indignant throng declared that they had already, many of them, been waiting half an hour: he only answered, "that was the rule—he did not make it;" and the poor people must wait, not only the quarter till this train went, but another hour or two for the next. The quarter passed, and the train set out not half filled, leaving the wretched crowd in the rain! Never was the beauty of German formality so beautifully carried out. But at Berlin came the climax. At the railway office, on accompanying our luggage, a list of *five-and-twenty* regulations was put into my hand, and which now lies before me. Several of these rules consisted of two or three great sentences, and none of the clearest. There was a good hour's work to explore the whole extent of this bill of pains and penalties, to see into what liabilities you run yourself, and in default of what formalities you could not go at all. If you were sickly, you could not travel home, though it were to save your life; if you were not in your place in the carriage 10 minutes before the starting time, or at the *first* ringing of the bell, you would be locked out. Then, if you had not a right ticket, or had an undated ticket, or had by accident changed your ticket with a fellow traveller, or had not delivered your luggage at the luggage-office half an hour before starting time—all was full of penalties and losses, till we could not help exclaiming—

"Alas, what perils do environ
The man who travels on the iron."

And how was a foreigner, ignorant of the language, to avoid running his head against all these provisos? As soon as my packages were in the office, the clerk cast his eyes on them—"Only 40 pounds weight is allowed!" "These belong to three persons." "Good; but here are more than 120 pounds." "Very well; throw out that box. It can go direct to Heidelberg by the Frachtwagen"—the stage. "What is the weight of it?" It was weighed. "It cannot go by the stage, nothing is allowed to go by the stage under 40 pounds weight: it must go by the Fahrende-post"—the packet-post—at a great price. "Well, then, clap on that carpet-bag; I don't want it." A man was sent for a canvass and string. The package was made heavy enough for the stage waggon; and I imagined we had come to plain sailing. The man put one trunk into the scales. "We are three; weigh them all together." "No," said he, "that is against the regulations," and he laid his finger on the 12th rule of my list. "Every passenger is allowed to take 40 pounds free luggage with him; but if two persons pack their luggage in one case, and it exceeds 40 pounds, it must pay just the same as if it belonged to one." All above 40 pounds pays as 100 pounds; that is, if you have 41 pounds, you pay for 60 pounds overweight—half a silver groschen per mile.—*Howitt's Rural and Domestic Life of Germany.*

AN ELEGANT AND USEFUL PRESENT.

Just Published, in One Volume, price 5s. 6d., handsomely bound, with gilt leaves, sides, and back, and illustrated by FOUR HUNDRED ENGRAVINGS,

MIDLAND COUNTIES' RAILWAY.—TO THE DIRECTORS OF THE "MIDLAND COUNTIES' RAILWAY COMPANY."—GENTLEMEN,—It is with feelings of deep regret that we (the Workmen *employed* at the "Midland Counties' Railway") feel ourselves called upon to address you on the present occasion, in consequence of our wages having been reduced in October last, to the amount, in many instances, of 12½ per cent., *which is* a very serious sum to be taken from the weekly pittance of a working man. This we quietly submitted to without opposition, after duly considering the depressed state of trade, and the effect it had on the resources of the line (which must be borne in mind is no fault of ours). The reduction itself was the greatest ever offered, at one time, to any of our respective trades; and which we feel confident would not have been offered us had trade been in a prosperous state; thus resolving itself into a matter of POLICY instead of JUSTICE.

We are sorry to find that another notice has appeared, *stating* that a further reduction will take place, to the amount, in many instances, of 10 per cent. We deem it right to inform you, that we feel ourselves justified in resisting to the utmost of our power any further alteration (except for the better) in our hard earned wages. We have had a general meeting of the workmen, at which we carefully and dispassionately considered the matter over, and amongst a many reasons adduced, the following are a few why we should not accede to your propositions:—

1st. The formation of the line was a speculative affair of the capitalist, and if the speculation proved a failure, he alone ought to suffer, and not the hard working and industrious operative, whose labour alone is his only property. Common observation and past experience have taught us, that had the line yielded 15 per cent. instead of 3 per cent., our wages would not have increased in the same proportion.

2nd. If, through the loss of the Nottingham mail and a portion of the goods traffic, the revenue of the line has decreased, we do not consider that our wages ought to suffer any diminution through any such causes.

3rd At the late special general meeting of shareholders, when the question of wages was introduced, an "honourable" proprietor stated, that the wages ought to have been reduced two years ago. "No," said Mr. Ellis, "nor they could not one year since, but Edward Bury is present, ask him." Mr. Bury said, they could not have been reduced 12 months since, but that they might now. Thus the discussion on this important subject ended, without even once asking whether the men did not deserve every farthing that they received; and why? Because they all knew that the men were not overpaid according to the labour performed.

4th. It must be observed that Mr. Kearsley has selected his men from some of the principal shops in the kingdom. They consist of men whom he has previously known as good workmen, or recommended as such by parties on whom he could rely, a many having left good situations to work for him; but owing to the reduction we have already suffered, these individuals are placed in a worse position than they were in previously to coming here.

5th. The proposed reduction in the Locomotive Department, at Derby, affects 36 persons, including Smiths, Fitters, and Turners, on an average of 2s. per week, being £187 4s. per year, making a saving of 3¾d. per share per annum. In the same department there are 48 Strikers, Labourers, and Cleaners, each of which you propose reducing 6d. per week, being £62 8s. per year, making a saving to the shareholder to the amount of very nearly 1¼d. per share per annum; thus entailing (in addition to the former reduction) a very considerable amount of distress on the poor labouring man, with, very probably, a large family, without yielding a proportionate benefit to the rich share holder. We desire to tell you that with this unfortunate class of men we are perhaps more interested than in our own case; for we daily witness the suffering and privations they undergo.

Once more, Gentlemen, you are doubtless aware, that in August last, a call was made upon your men to serve as special constables for the protection of your property, which call was cheerfully responded to, a promise being held out that our wages should be protected also.

In conclusion, Gentlemen, we hope on reflection, you will consent to withdraw the notice complained of; then we shall have great pleasure in continuing your

Most obliged and obedient Servants,

THE WORKMEN.

P.S.—Gentlemen, it may be urged, that we ought to have stated our grievance to our immediate employer, Mr. Kearsley. With all due respect to that gentleman, and feeling confident that the reduction has not emanated from him, the Directors signature being appended to the Notice, we deemed it the proper course to address ourselves at once to you.

MIDLAND COUNTIES' RAILWAY—UNCLAIMED £20 SHARES.—The Directors of this Company have resolved to Dispose of the Unclaimed 5th or £20 Shares by Tender.

£2 only is at present called up, and no further Call is intended to be made before the 1st of October, 1844. Interest after the rate of £6 per cent. per annum, from the time of payment, is guaranteed upon the paid-up Calls on these Shares.

Tenders to be sent to the Secretary, at Leicester, on or before Saturday, the 17th instant.

By order,

J. F. BELL, Secretary.

Leicester, 9th December, 1842.

ALLIANCE BRITISH AND FOREIGN LIFE AND FIRE ASSURANCE COMPANY, 1, Bartholomew lane, London.—Established by Act of Parliament.—Capital, £5,000,000 Sterling.

PRESIDENTS.

James Irving, Esq., M.P.; Samuel Gurney, Esq.; Sir Moses Montefiore, F.R.S.

DIRECTORS.

James Alexander, Esq.	William Jardine, Esq.

LIFE ASSURANCE.

The Premiums of the Company for the greater duration of life are lower than those charged by *most* respectable offices.

ASSURANCES are undertaken *abroad* as well as at *home*.

The ASSURED PARTICIPATE IN THE PROFITS, which are divided at the expiration of every successive period of five years. The *next* division will be declared in April, 1844.

The assured may *proceed* TO ANY PART OF EUROPE without previously communicating with the Directors, on the payment of an additional Premium. No entrance money or other fee is charged.

The large capital, and nearly 1,000 Shareholders composing the Company, render the security it offers to the public undoubted.

FIRE ASSURANCE.

Fire Assurances are accepted AT HOME at the usual rates. The Company prosecute both *Fire* and *Life* Assurances ABROAD on reasonable terms.

The receipts for the *Renewal Premiums* due at *Christmas* are ready for delivery at the Office in Town, and at the Agencies throughout the Country.

A. HAMILTON, Secretary.

LONDON—THE LAWS, CUSTOMS, AND REGULATIONS OF THE CITY AND PORT OF.

Medical Adviser—Marshall Hall, M.D, F.R.S., L. and E.
Secretary—F. Edgell, Esq.
Solicitors—Messrs. Palmer, France, and Palmer.

All the advantages peculiar to Mutual Life Assurance, arising from a division amongst the assured of the whole of the mutual profits, and that security and freedom from responsibility which proprietary Companies can alone afford, are combined by the constitution of this, the only guaranteed Mutual Society. For the non participating, and for assurances for temporary purposes, or debtor and creditor transactions, tables have been prepared, by which a *less immediate payment is required than by any other plan.*

By a half premium credit system one half of the premiums may be retained for the first 7 years, and repaid at the convenience of the assured; and by the ascending scale a diminished rate of premium is required for the first 12 years, combining the advantages of an assurance for the whole duration of life with the economy of a temporary policy.

Specimen of Ascending Table.

Age.	First Three Years.	Second Three Years.	Third Three Years.	Fourth Three Years.	Remainder of Life.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
20	0 19 1	1 5 6	1 11 11	1 18 4	2 4 9

60	4 8 11	5 17 4	7 5 9	8 14 2	10 2 7

By the Deed of Constitution of the Company all Policies issued by them are declared to be indefeasible and indisputable, unless obtained by fraudulent misrepresentation.

Prospectuses, schedules, and every information requisite to enable parties to effect assurances, will be forwarded, free of expense, by the Agents or Manager.

ALEX. ROBERTSON, Manager.

THE TWELFTH THOUSAND.

Just published, *in a Sealed Envelope*, price 3s., and sent free, on receipt of a Post office Order, for 3s. 6d.,

MANHOOD: the Causes of its Premature Decline, with plain Directions for its Perfect Restoration; addressed to those suffering from the destructive effects of excessive indulgence, solitary habits, or infection; followed by observations on the treatment of Syphilis, Gonorrhœa, Gleet, &c., illustrated with cases, &c.:
By J. L. CURTIS and Co., Consulting Surgeons, London.

TENTH EDITION—Published by the Authors, and sold by Burgess, Medical Bookseller, 28, Coventry-street, Hay Market; Mann, 39, Cornhill; Strange, 21, Paternoster-row, London; Guest, 51, Bull-street, Birmingham; T. Sowler, No. 4, St. Ann's-square, Manchester; G. Philip, South Castle-street, Liverpool; Fannin and Co., 41, Grafton street, Dublin; Drummond, 114, High-street, Edinburgh; and sold in a *sealed envelope*, by all Booksellers.

OPINIONS OF THE PRESS.

"This work, *a tenth edition* of which is now presented to the public, *ten thousand copies having been exhausted since its first appearance*, has been very much improved and enlarged by the addition of a more extended and clear detail of general principles, as also by the insertion of several new highly interesting cases. We feel no hesitation in saying that there is no member of society by whom the book will not be found useful, whether such person hold the relation of a *parent*, a *preceptor*, or a *clergyman*."—*Sun*, evening paper.

"This is a work that we fear there exists too much need for to cause us to hesitate to recommend it for general perusal. Every branch of those frightful maladies, whether the result of immoral habits or secret vices, is here succinctly treated, and divested of all medical technicality, plain and easy directions are given for the best mode to be pursued in all cases, however complicated or apparently hopeless. To the married, as well as the unmarried, this little work alike affords consolation and cure in peculiar cases, and we are doing a service to society in recommending it to general notice."—*Essex and Herts Mercury.*

"Messrs Curtis's work, entitled MANHOOD, is one of the few books now coming before the public on such a subject which can lay claim to the character of being strictly professional, at the same time that it is fully intelligible to all who read it. The moral and medical precepts given in it, render it invaluable."—*Magnet.*

Messrs. Curtis and Company are to be consulted daily at their residence, No. 7, Frith-street, Soho-square, London.

Country Patients are requested to be as minute as possible in the detail of their cases. The communication must be accompanied by the usual consultation fee of £1, and in all cases the most inviolable secrecy may be relied on.

BRISTOL AND EXETER RAILWAY.—Notice is hereby given, That in pursuance of a Resolution of the last General Meeting of Proprietors, the Directors of this Company are ready to receive Tenders of Loans of Money, in sums of not less than £200, and for terms of not less than three, nor more than seven years, on security of Loan Notes under the corporate seal of the Company, bearing Interest at the rate of 5 per cent. per annum, payable Half-yearly.

Tenders expressing the sum, the term of years, and the residence of the lender, to be addressed to the Secretary.

By order of the Board of Directors,

J. B. BADHAM, Secretary.

Bristol, Office, 30, Broad street, 14th Oct., 1842.

Interest Warrants will accompany the Loan Notes.

BOLTON AND PRESTON RAILWAY COMPANY—TENDERS FOR LOANS ON MORTGAGE.—The Directors of this Company are prepared under the powers of their Acts of Parliament, to receive Tenders for the Loan of Money, in sums of not less than £200, and for terms of 3, 5, 7, or 10 years, and to grant Mortgages of the said undertaking, and of the Rates, Tolls, or monies arising therefrom, as securities for such Loans, bearing interest at the rate of £5 per cent. per annum.

Interest Warrants, for the whole term for which the Loan shall be made, will be delivered to the Lenders along with the Mortgages, and be made payable half-yearly, at the Company's Bankers in London or Bolton, as may be preferred.

The Tenders are to express the sums, and the term of years for which the same are proposed to be lent, and to be addressed to the Secretary, at the Company's Office, Bolton.

By order of the Board of Directors,

PETER SINCLAIR, Secretary.

Bolton, 24th May, 1842.

GREAT WESTERN RAILWAY — Call for Second Instalment of Eight Pounds per Fifth Share.—The Directors of the Great Western Railway having Resolved, at a meeting held this day, to call, under the provisions of the Act 2nd Victoria, for an Instalment of Eight Pounds per Fifth Share, Notice is hereby given, That the Proprietors of Fifth Shares are requested to pay, on or before the 12th of January next, to any of the undermentioned Bankers, the sum of Eight Pounds on each of their respective Fifth Shares, viz:—

London—Messrs. Glyn, Halifax, Mills, and Co., at the Great Western Railway Office, Princes-street, Bank.

Bristol—Messrs. Miles, Hartord, and Co.; Messrs. Elton, Baillie, Ames, and Co.; Stuckey's Banking Company; the West of England and South Wales District Bank.

Liverpool—The Bank of Liverpool.

Cheltenham—The County of Gloucester Bank.

Reading—Messrs. J. and C. Simonds.

By order of the Board of Directors,

CHARLES A. SAUNDERS, THOMAS OSLER, } Secretaries.

Offices, Princes-street, London, and Temple Mead, Bristol.

December 1, 1842.

PROPOSED RAILWAY COMMUNICATION BETWEEN BERLIN AND HAMBURG, on the right bank of the Elbe, passing through the Danish and Mecklenburg territory, situated on the lower Elbe.

By an Advertisement of the undersigned Committee, constituted at Berlin for the above undertaking, the public is apprised that the result of the preliminary works, combined with the most careful calculations of the probable traffic, leave no doubt of the practicability and rentability of the undertaking. A more ample notice has appeared in the *Hamburg and Leipsic Gazette*, accompanied by an invitation for parties desirous to become Subscribers, a list of which will be opened on the 1st January, 1843, and with a notice that the following mercantile firms have been authorised to receive such subscriptions, viz.:—

London—Messrs. B. Hebeler and Co.

Copenhagen—Messrs. Fr. Tutein and Co.

Hamburg—Messrs. Lutteroth and Co.; Mr. Salomon Heine; Mr. Paul Mendelsohn Bartholdy.

Regarding other particulars, and the Conditions for the Shareholders, information may be had of the above-named firms after 20th December, 1842.

Berlin, 25th November, 1842.

Committee of a Company by Shares for the Construction of a Railway between Berlin and Hamburg:—

Anhalt and Wagener.	Mendelsohn and Co.
Conrad and Klemme.	Von Moltke.
S. Herz.	M Oppenheim Sons.
Jung.	M. Robert.
Kunowski.	F. A. Von Witzleben.

SIR W. BURNETT'S PATENT PRESERVATIVE FOR TIMBER, CANVASS, CORDAGE WOOLLEN, &c.—This process is a very cheap one. It effectually protects even the commonest domestic or Colonial Timber and Deals from Dry rot, and other causes of premature decay; and it renders them equal to the best Timber from the Baltic. No doubt can exist of its efficacy in the preservation of all the above-named articles, after the Official Reports from the heads of various Government Departments, which may be seen, together with the specimens, at the Company's Office, No. 4, Castle-court, Birchin-lane, Cornhill, London.

SOUTH-WESTERN, GREAT-WESTERN, CIRENCESTER, BRISTOL and BRIDGEWATER, and BRIGHTON RAILWAYS.—In connexion with the above lines of Railway, places can be secured by Mails and Coaches to

Falmouth	Farnham
Devonport	Milford Haven
Plymouth	Carmarthen
Exeter	Brecon
Taunton	Aberguvenny
Weymouth	Ross
Dorchester	Monmouth
Bridport	Hereford
Poole	Aberystwith
Honiton	Cheltenham
Ilminster	Gloucester
Salisbury	Abingdon
Andover	Oxford
Portsmouth	Lewes
Petersfield	Worthing
Godalming	Horsham
Guildford

First-Class Carriages of this Company will be attached to the quarter to 10 Morning Mail Train from Euston Square, and to the 4 o'Clock Afternoon Train from Birmingham.

Both these Trains call only at First-Class Stations.

From London at a quarter to 10 in the Morning, and 4 in the Afternoon, at Worcester at half-past 4, at Cheltenham at 5, and at Gloucester at a quarter past 5.

From Gloucester at 1; from Cheltenham at 9 minutes past 1; from Worcester at 25 minutes to 2 in the afternoon; arriving in London at 9 in the Evening.

By order,

GEORGE KING, Secretary.

PATRONISED by all the principal Architects and Builders in this Country and Abroad—SEYSSEL ASPHALTE.—In consequence of the daily attempts made to imitate this valuable mineral production, under the name of "Asphalte" being given to most of the various and "cheap" materials, the Directors of the Company particularly recommend Architects, Builders, and others (for the purpose of securing the use of the genuine article), to insert in their Specifications "The Seyssel Asphalte, Claridge's Patent," and not merely "Asphalte" or "Bitumen," as, in many cases where these latter have been used, gas-tar and other worthless and clandestine compositions have been introduced. For the information of those residing at a distance from London, and of those who, having employed the spurious compositions, and from its failure, have become prejudiced against the use of Asphalte, the following are mentioned as some of the distinguishing qualities of the genuine material. The asphalte of Seyssel is of a light colour, closely resembling Yorkshire stone, has a smooth surface (without loose stones), and joints almost imperceptible; it is also free from smell, is not acted upon by change of temperature, and is at all times dry and warm, and remarkably pleasant to walk upon, and, from its elasticity, never cracks. The bitumen material, on the contrary, has a dark and dirty looking appearance, presents a rough and coarse surface, and, from its brittleness, is liable to crack, particularly in hot weather. In consequence of the above qualities of the genuine material (being perfectly impervious to rain), it has been used with great advantage for roofing. It can be laid down to any extent, presenting one uniform surface, and is far superior to lead, as it is not liable to expansion or contraction in consequence of any change in the temperature. For covering of arches (to prevent the percolation of wet) it is invaluable; the Greenwich Railway Company alone having covered upwards of 400,000 superficial feet. It has also been used on the Great Western, Birmingham and Midland Counties', South-Western, Brighton, Eastern, and other Railways; at the joint Stations, London Bridge, and at the South Metropolitan, Highgate, and Kensal Green Cemeteries. As proof of the great durability of the material executed in this country with this material (upwards of 3,952 feet), was at Whitehall, opposite the Horse Guards, in the month of April, 1838, and which, although only half an inch in thickness, has remained up to the present period of four years and eight months in the most perfect condition. Books of Testimonials, with Specifications, may be obtained on application to

J. FARRELL, Secretary.

Seyssel Asphalte Company's Depot, Stangate, Lambeth.

Note.—Neither the pavement in Parliament-street, London, nor the works at the Model Prison, at the Penitentiary Cemetery (which, from its failure, has since been removed), or at the Hotel at the Slough Station of the Great Western Railway, were executed by this Company.

SCOTTISH (WIDOWS' FUND) LIFE ASSURANCE. Founded A. D. 1815.—Constituted by Act of Parliament.

Capital accumulated and invested—Upwards of One Million Two Hundred Thousand Pounds.

Annual Revenue nearly Two Hundred Thousand Pounds.

Head Office, Edinburgh, No. 5, St. Andrew's Square.

Assurances effected previous to the 31st December will have the advantage of a Full Year's Share of the Profits, and be entitled to participate in the profits for the current year. In order that this may be done, all proposals must be lodged at the Head Office before 31st December, or with the Society's Agent in time to enable him to forward them to the Head Office before that date.

JOHN MACKENZIE, Manager.

December, 1842.

London Office, 7, Pall Mall.—HUGH M'KEAN, Agent.

LOCOMOTIVE ENGINE FOR SALE.—A New Six-wheeled Coupled Engine, having 12 inch cylinders, 18 inch stroke, copper fire box, [illegible] Stephenson's patent hollow-spoked wheels, driving wheels 5 feet diameter, bind wheels 3 feet diameter. The Engine weighs 12¾ tons, (is of the best materials and workmanship) and may be seen at Messrs. Thompson and Co.'s Hope Foundry, Bolton, to whom applications must be made.

ANGLO-FRENCH RAILWAYS—SOUTH-EASTERN RAILWAY.

MR. STEPHENSON'S REPORT.

(Concluded from page 1204.)

After bestowing the utmost attention upon the comparison between the country over which these three lines pass, and that which I have just examined, I can with confidence assure you, that the application of the data furnished by this table will elicit a total cost that may be relied upon; and I can state most positively, that, if the deviations which I have proposed in the mode of laying out the line be acceded to by the French Government, the average contents of excavation and embankment will not exceed that upon the railways comprised in this table—on the other hand, if the suggestions I have thrown out be not acted upon, the cost of a very large proportion of the main line between Paris and Lille will fall little short of some of the most costly lines in this country, and thus prevent the undertaking ever becoming a profitable investment of capital, even though the present liberal assistance of the State were considerably extended beyond what is now contemplated.

In considering this mode of estimating the cost of the work, it will doubtless occur to you, gentlemen, that its accuracy may be much affected by the differences which exist in the prices of labour and material in England and France.

This had my attention, and after consulting various French engineers, and making comparisons between their estimates and my own, I found that the differences between the two countries were exceedingly small.

In earthwork and masonry the prices of the two countries may be regarded as almost identically the same, whilst the cost of iron is much higher in France than in England. The price of labour is certainly rather lower than in England, but this, from the extent of the undertakings now projected, will be likely to increase, and the cost of work even when finished shows that this difference is really nominal.

As I proceeded in the analysis of the cost of the lines of railway in this country I felt that it was very satisfactory, and by some it might be considered more conclusive, to contrast them with a similar analysis of the Belgian Railways.

In this I fortunately met with great success, merely from having had access to the last Report of the Minister of Public Works, but also the assistance and advice of Messrs Simons and Dieudonné, the engineers who designed and successfully carried out the present system of railways in Belgium.

The annexed table is drawn up from the official Report laid before the Chamber by the Minister of Public Works.

Analysis of the Cost of Railways in Belgium.

Belgian Railways.		Expenses for which a sum is proposed to be granted by Government.				Expenses proposed to be defrayed by Government.				Expenses to be borne by the negociating Company.			Law

		21,555,359	86,527	1,488,446	96,358	10,216,643	139,257	2,719,358	57,051	13,989,755	60,960	7,[illegible]	[illegible]
				Per English mile ..	£6,216	..	..	..	£3,689	..	£3,93[illegible]	£[illegible]	[illegible]

The arrangement, it will be perceived, is precisely the same as that preceding of the English lines; an easy comparison may therefore be made between the different items of cost.

They will be found to stand thus:—

	English	Belgian
	£	£
Excavation and embankment, bridges, &c. &c.	9,337	6,216
Land compensation and stations, &c. ..	7,362	3,680
Permanent way	6,757	3,953
Carrying establishment	1,994	2,356
Total	25,450	16,185

This comparison of course cannot be considered as instituted between English and Belgian Railways generally, but for the sake of showing the difference in the amount of the several items of expenditure as incurred on the railways in Belgium, and such of the English railways as I have thought justly comparable.

In examining this comparison it may at the first glance present some inconsistency as regards the permanent road, an item on which no great difference should exist between the Belgian and English lines; but the disparity is immediately reconciled by the circumstance, that the ballast in the Belgian accounts is placed in the first item with the earthwork, bridges, &c.; whereas in the English lines it is comprised in the cost of permanent way.

In the latter lines also the rails are heavier than any that are laid down in Belgium.

This explanation satisfactorily accounts for the difference.

I might have made the alteration with the view of giving the comparison greater consistency, but I preferred stating the results which were derived from the accounts as they stood in the Minister's Report, and writing the needful explanation just as I have done.

The cost of the permanent road, as shown by the English lines, is probably under the truth when applied to the case now before us; for if the French Government do not permit the importation of iron free, or under a modified duty, this item of cost will be increased fully 1,200*l.* per mile, the price of English and French rails being nearly as 10 to 15.

The only other item in this comparative table which calls for further remark is, the greater amount for the carrying establishment on the Belgian lines; but this is explained by the fact, that while this department upon the Belgian railways is rather lavishly supplied, on the English lines which I have quoted the carrying establishments are not so complete as they must eventually be; at least such is the case upon the two out of the three railways I have named.

The aggregate cost of the Belgian railways, as shown by the table at about 16,000*l.* per mile, is somewhat below the truth, as the expensive portion of the Prussian frontier is not yet complete.

I have now explained the data upon which I propose to base the estimate of cost; to some I fear that they will appear to possess more the character of vague generalizations than that precision which should mark an estimate where measurement and valuation are invariably brought to bear; but I have already pointed out the errors to which the ordinary plan of estimating inevitably leads, and the tabular statements, I think, demonstrate beyond all question the correctness of this view; and so thoroughly am I convinced of the propriety of pursuing the course I have explained, that I cannot refrain from at once stating, that had I adopted any other, and affected to give my calculations an air of detail and accuracy which the present condition of the plans and sections do not admit of, I should in the first place have deceived myself, and in the next perhaps have led others to disappointment.

Would not the application of such tables as those which I have given (drawn, of course, from one or two of the earliest public railways) have avoided almost entirely the discrepancy which recently constructed lines unfortunately have developed? The infinity of contingencies quite out of the sphere of engineering work, which no one can by any possibility forsee, but which, although not admitting definition, we are certain must arise,—would they not have been brought within the estimate of cost and error nearly eliminated?

An adherence to the system of making the Engineer's estimate of works cover every species of contingency, must cause the future construction of railways to be attended by the same results as the past, but both the capitalist and engineer are equally interested in discontinuing it, and this, I trust, will be deemed a sufficient apology for my having apparently left the immediate subject of the Report, and taken up what may be regarded as in some degree a defence of the profession; although I trust it will not be looked upon in this light, as my chief object has been to explain the existing sources of error, and to point out the means I proposed to remove them.

Throughout the investigation of this matter, I have, as I progressed, become more and more impressed with the importance of arriving at conclusions as free from doubt as the nature of the subject admitted. I felt, therefore, imperatively called upon to adopt the course I have described, and mature consideration leads me to believe that it is one which will produce satisfactory results.

Having well weigh[illegible] pre[illegible]ceding tables of the analysis of cost, and [illegible]ntrasted the sections of those lines with the physical character of the districts through which the Paris and Lille line and its branches pass, at the same time bearing in the influence of all the circumstances which have presented themselves to me at the different stages of my enquiry into the subject, I am led to estimate the gross expense per mile as follows:—

Earthwork, culverts, bridges &c	£
Land compensation, &c., stations	
Permanent road	
Carrying establishment	
Total	£

With respect to the first item I have selected proximately to the average arising out of the [illegible] lines, as I conceived that a larger portion of [illegible] try is traversed by the Belgian railways [illegible] between Paris and Lille, including the [illegible] branches, whereas on those railways I have [illegible] in England, I regard the proportion of [illegible] easy work very similar, and consequently [illegible] calculated for our guide.

In the second item, including the purchase [illegible] and houses, compensation, stations, and [illegible] for procuring Acts of Incorporation, law, &c., I [illegible] ceive the result of the Belgian table as [illegible] nearly the truth, for many of the expenses [illegible] included in the English Table under the [illegible] no existence whatever in France and Belgium [illegible] instance, I need only refer to the large [illegible] which the costs of the Act of Incorporation [illegible] quently bears to the total capital in France [illegible] whereas both in France and Belgium [illegible] significant.

The third item, that is, the estimate for the [illegible] nent road, as I have already explained, does [illegible] clude in the Belgian accounts the cost of [illegible] way, which it is intended this head of the [illegible] should comprise; the average cost of the English [illegible] has therefore been taken, with an additional [illegible] increased price of iron in France, and [illegible] prehended, should be calculated upon.

The last item is for the carrying establishment, notwithstanding the knowledge I have of [illegible] nature of the stock which the railways [illegible] possess, I think the traffic will be so much [illegible] the Paris and Lille line as to demand nearly [illegible] amount per mile.

The result thus obtained, as the average [illegible] be 23,000*l.* per mile, while that of the [illegible] railways is little above 25,000*l.*, and the [illegible] exceeding 16,000*l.*

This excess of my estimate above the [illegible] is, however, very consistent with all the [illegible]

preliminary remarks, I will now proceed
consideration of the nature of the traffic,
ent of such as must inevitably accrue to

already be familiar, Gentlemen, with the
rces of this railway, which characterise it,
not only as an important link in European communication, but as a source of local benefit and convenience. You will have recognised in it the main route for three distinct and considerable lines of European travellers, namely, from England to Paris, and thence to the south of France, Spain, and the Mediterranean; from England to Belgium, Holland, and the northern part of the Rhine and Germany; and thirdly, from Paris to Belgium, Germany and Holland. While in following my description of the route taken by the line, and its engineering character, you could not fail to observe the many considerable towns with which it either directly or collaterally communicates in France, and have thus become impressed with a conviction of its immediate local importance in connecting them with their capital, the Belgian frontier and the northern ports.

In the accomplishment of these objects it leaves the capital and the department of the "Seine," and passes through the five departments of the "Seine and Oise," "Oise," "Somme," "Nord," and the "Pas de Calais." The united population of these two departments form an aggregate amount of 3,092,000 persons, the greater portion of whom in this railway will possess the means of rapid inter-communication amongst themselves, and with their capital; while the manufacturing, agricultural, and fishing interests will be advanced by the establishment of a speedier transit for their goods and produce.

A brief study of the statistics of the above departments will testify the existence, to a very great extent, of these several sources of wealth; the consideration, therefore, of the influence which the introduction of railways has invariably had upon trade, and upon the intercourse of large existing populations, will naturally suggest the inference that an important traffic will be accommodated by this railway. This inference has been fully borne out by the Government returns; for the official documents for the collection of taxes and duties along the line parallel channel of the railway invariably evince that more than average character of the traffic over the greater portion of its route.

These tables, in fact, have furnished data so extensive and ample for proving the existence of sufficient sources of revenue, to ensure the success and profit of this undertaking, that I have excluded from my statement any account of the impulse which has invariably attended the establishment of a railway in districts where none previously existed, although experience would have justified me in calculating upon the passenger traffic a prospective increase of three-fold its present amount, while in my estimate of the goods traffic I have well weighed the comparative convenience and economy of the present means of conveyance by road and that offered by the proposed railway, and given a full consideration of the scarcity of local markets, and the difficulty of overcoming the prejudices they involve. Thus actuated, my statement may be received as in its most material points already verified. All questionable collateral traffic has been omitted. The quantity of fish now conveyed from the coast to the inland towns has been fairly apportioned to the competing routes. The canals of the inland districts have been still credited with such an amount of goods as their cheap transit will command; in fact, the proportion calculated as likely to accrue to the railway is far below what English experience would have dictated. Cattle, of which large quantities now pass along the roads, have been almost entirely omitted, since in England it has ever been found so difficult to divert, and only calves and pigs, or such as require absolute conveyance, have been taken. No private horses have been calculated, and but a small proportion of the carriages.

For a more detailed description, however, of the real amount and character of the traffic now upon the road, I beg to refer you to the Appendix, when I hope the substantial basis of the following calculations, and my scrupulous avoidance of any speculative items, will be at once apparent.

With respect to the tariff proposed to be granted by the French Government, I would call your attention to the extremely low tolls as compared with those in England. This, it must be borne in mind, emanates from the spirit in which the Government has associated itself in these projects, namely, the desire of affording public accommodation; and in this case the sum which it sinks for so long a term of years without interest, most fully justifies it in thus reducing the public tolls.

In connection with it, I have well considered the wants and the habits of the people, the cheap and common modes of transit, which in France are so generally used. I have called to mind the experience in England, which by the early establishment of low fares has accomplished the prosperity of the railway in the diversion of existing channels of traffic, and I cannot but again express my conviction, that the means which Government adopts to the public good, must equally tend to the profit of the negociating Company, and the low fares in the extension of public accommodation, be the most profitable system for the railway. In some cases, where the road carriage is exceedingly cheap, and the traffic worth gaining, I have even reduced the toll below the average tariff, but this has of course been for the temporary design of diverting it, rather than the establishment of a lower scale of permanent charges, which it would be found profitable to maintain when the advantage and facilities of the railway were tested by experience.

With the earnest desire to lay before you an unbiassed statement of the traffic, which my data show as already awaiting the facilities of this railway, and anxious approximately to define the amount of revenue which will attend the early operations of this railway, rather than anticipate its prospective influence, I have framed the following tables.

The classifications are as concise and comprehensive as I could devise, and their several amounts have been accurately deduced from the elaborate tables in the appendix.

STATEMENT OF TRAFFIC.

PASSENGERS AND CARRIAGES.

Description.	Number of passengers.	Number per kilometre of passengers.	Average fare by existing conveyance.	Proposed average fare by railway.	Total in francs per annum.

After the estimate of cost and revenue we necessarily approach the question of expense of working.

In railway statistics there is perhaps no element less correctly appreciated beforehand than this; arising, no doubt, from the multitude of varying influences which come into play, depending in their operation upon circumstances peculiar to each locality.

Amongst the most direct of these might be enumerated the maintenance of the works, which is greatly governed by the extent and character of their original construction; the description and amount of traffic, and if of a mixed kind, the proportion existing between the passengers and goods; the mode in which the latter are collected and disposed of, whether at the termini or at intermediate places; whether they are distributed or simply transferred in mass from one line to another; whether it exists in one or in both directions, and if the latter in what rates.

These and many others of minor importance are essentially involved in the cost of working the line of railway, and since many of them are incapable of being accurately defined before the test of experience is applied, it is not surprising that we find inconsistencies in comparing the relative cost of working different lines of railway, which appear inexplicable or incapable of being brought within any general rules.

There is a method however now very prevalent, by which comparisons are instituted between the expenses incurred in working different lines of railway, and used for the purpose of detecting improper current expenditure, which is so absurd, and yet so frequently insisted upon, that I think it necessary to mention it in connection with this part of my Report, and to give my reason for discarding it. I allude to the conversion of the total expenditure incurred in working the line into a per-centage upon its gross receipts, without any reference to the amount of the latter—without any reference to the scale of tariff, to the length of the line, or to the number of miles travelled by the trains in its acquisition.

This process simply amounts to the employment of two elements, which bear a continually varying relation to each other, and have nothing strictly in common; this must, I think, be apparent when such causes of disparity as I have pointed out are in operation; it is obvious, in short, that, in practice, the expenses, or a very large proportion of them, may, and indeed in almost every instance do remain nearly constant, while the receipts vary within very wide limits.

For the purpose of elucidating this from practical data I subjoin two tables; one showing the receipts of various lines in England, with the expenses reduced to a per-centage upon the gross receipts, and the other extracted from the official Report on the Belgian railways from their commencement in 1835.

BELGIAN RAILWAYS.

During years.	Receipts.	Expenses.	Per-centage of expenses on receipts.
	Fr.	Fr.	
1835	268,9.7	16[illegible],732	62
1836	825,1.2	4[illegible],1[illegible]	52
1837	1,416 982	1,189,863	84
1838	3,097,8.5	2,748,649	88
1839	4,249,825	3,078,578	72
1840	5,335,107	3,254,511	61
1841	6,226,353	4,273,000	68

The first of these tables shows the wide range taken by the rates of the working expenses to the gross receipts, and clearly proves the utter futility and danger of basing any calculation upon the supposition that such a standard can be appealed to in the consideration of this part of railway statistics. A slight examination, as might indeed be anticipated, evinces, that the proportion of the gross receipts required for working charges is rapidly reduced as those receipts per mile become augmented.

The principal object I had in view in collecting the data of the tables was, if possible, to ascertain whether this relative per-centage of revenue and expenditure approached the truth within even moderate limits when the cases were tolerably similar.

To a certain extent this method of comparing one line with another reconciles some of the most glaring anomalies, but it leaves many unexplained.

The only satisfactory conclusion which can be drawn from the English table is, that where the annual receipts per mile are decidedly not low, though much below what the amount of traffic is proved to be in this case, and the characters of the lines are not marked by any other features calculated to affect their expenses, an allowance of 50 per cent. upon the gross revenue is more than sufficient to cover the working expenditure.

This is the allowance very generally made in considering the traffic case in this country, and it would appear to be a safe one in by far the majority of instances, for where such a calculation has failed to be adequate, the circumstances have been such as are inapplicable to the railway under our more immediate consideration.

Before deciding upon this course, as offering a tolerably approximate, at least a sufficient result, let us refer to the experience on the Belgian lines, where, by the tables showing the receipts and disbursements, it would appear that the latter absorb 68 per cent. of the gross income.

With this bare fact before me I hesitated in the application of a lower per-centage, for, recollecting that the tariff of Belgium is much more analogous to that proposed by the French Government than to the English, it appeared scarcely justifiable to adopt the results drawn from English railways, and reject those indicated by an extensive and well-conducted experiment in Belgium. This doubt I sought to remove by an examination of the Belgian official Report, in which I endeavoured to separate the receipts and expenses of particular sections, that I might thus be enabled to select the results from such sections as were really similar to the present case.

In this I failed, for the expenses of the different lines are given in the shape of an average from the general total.

The accounts, however, furnish both the average receipts per kilometre, and the average expenses of working per kilometre, which will be found quite sufficient for our present purpose, and are as follows:—

ACCOUNTS.

Years.	Receipts per kilometre of railway.	Expenses per kilometre of railway.	Per centage.
1840	16,167	9,82[illegible]	[illegible]
1841	18.047	12,38[illegible]	6[illegible]

Here we find in 1841 the cost of working [illegible] 12,385 francs per kilometre, or 68 per cent. upon the receipts, which were only 18,047 per kilometre.

Now it has already been mentioned that [illegible] expenses of a railway remain nearly [illegible] receipts may be most materially augmented; and those acquainted with the Belgian railways, and the important amounts which are received upon [illegible] their branches, it will be evident that the [illegible] stated might be doubled without in any [illegible] creasing the cost of working. To assume [illegible] an increase is quite unnecessary, for in [illegible] the proportion of receipts and expenses [illegible] to 50 per cent. within the maximum [illegible] the working of English railways, the [illegible] even one-third to the existing traffic would [illegible] the object.

To apply then these facts to our case, [illegible] is only necessary to compare the average [illegible] kilometre, shown by the preceding [illegible] with those of the Belgian sections, from [illegible] find that they are considerably more [illegible] Belgian, being 18,000, and the other [illegible]

Such a contrast between the receipts [illegible] remove every doubt entertained as to the [illegible] 50 per cent. from the gross receipts [illegible] quate in the estimate of the Parkside [illegible] especially as an examination of these [illegible] with the Belgian lines, which might [illegible] first sight to militate against the [illegible] end fully and clearly substantiate it.

I have now, gentlemen, I believe, [illegible] all the various features of the proposed [illegible] have considered in a detailed manner the [illegible] racter of the project; I have traced [illegible] every district, and endeavoured to [illegible] bility of its easy and rapid execution; I have [illegible] proceeded to frame an estimate on which [illegible] justly invite your reliance; and lastly, I have [illegible] elaborate statement of the traffic case, [illegible] tive traffic, but one based, as I have [illegible] authentic official documents, with the [illegible] so small an increase above that [illegible] seemed to me to admit of no question. I [illegible] therefore, in conclusion, proceed [illegible] tinctly, to place before you this [illegible] aspect which it presents after my [illegible] somewhat lengthy investigation.

I have stated, that if the concession [illegible] the present proposed terms, a sum of £[illegible] required for the completion of the [illegible] branches. Yet I should here observe, [illegible] struction of these lines must necessarily [illegible] a term of say four years, and as the [illegible] and the carrying establishments, [illegible] portion of this amount, its investment [illegible] rily not be demanded until within a [illegible] of the working of the line, or, at least, [illegible] of it.

Having thus before us what I would call [illegible] the Company, let me at once enter upon [illegible] of revenue and annual expenditure. [illegible] mated receipts have been [illegible] per annum; upon this I have calculated [illegible] as fully adequate to defray the [illegible] the entire lines.

The [illegible]

Deduct 50 per cent. [illegible]

£[illegible]

Or 14 per cent. upon the required [illegible]

This extremely large per-centage, [illegible] be considered as applicable solely to [illegible] be remembered that the concession [illegible] ve rument is limited; that the term [illegible] posed for the lease is confined to 55 [illegible] at least must have elapsed ere [illegible] be in profitable operation to the [illegible] the necessary, therefore, to deduct [illegible] surplus a sufficient reserve, [illegible] lease shall be calculated to return [illegible]

This deduction I have estimated at [illegible] the gross capital, which, invested [illegible] cent. interest, will more than [illegible] who, during its gradual augmentation, [illegible] led to believe, be in the enjoyment of a [illegible]

Digitized by Google

nd of 12 per cent.; and, moreover, ere they re-shed the railway and its dependencies, at the dis-n of the agreement, would be claimants upon ench Government for the fair estimated value of tock, including the more valuable materials of rmanent way. This property, which in my te I have calculated at 2 656.220*l.*, could not be valued at less than 40 per cent. of its original tor, during the working of the line the annual liture of the Company would have continually ed and retained in efficiency this portion of their ty.

sum, therefore, to be refunded would amount 2 488*l.*, which I cannot consider applicable to rpose but a dividend of 34 per cent. upon the bed capital. With this statement of what I to be the fair nature of the undertaking I may ose my Report; yet I cannot do so without ex-g my thorough conviction of the profitable in-which the construction of this line must infal ave upon the best interests of the South-East-ailway Company, and my firm belief that its shment will not only complete the channel of unication by Dover for existing traffic between and London, but will, by its facilities, daily nt this international association; and I would pe, that those whose interests may hereafter be ed in the undertaking, upon its independent may find in its development the confirmation views. ROBERT STEPHENSON.

eorge-street, Westminster,
8th October, 1842.

WAYS AND THEIR MANAGEMENT' ONDON AND BRIGHTON RAILWAY.

vidence produced on the trial of the action t by Mr Carpue against the Brighton Railway ny, is of the most convincing character in sup-our previous statement respecting the ignorance persons engaged in the construction of railways, e frauds on the shareholders of this line; who een cajoled out of two millions and a half ster-r 47 miles of very questionable works, a portion h are formed with sand for a surface on a clay although the shareholders are charged for or what should be laid to form a hard and t body to bear the pressure of the rails, and to off the water which may fall in rainy weather les together is this line so made that in summer sengers are annoyed with dust, and in the the rails are sinking in the same material in a id state. Our readers who understand anything he requisite hard surface for a parish road or will be much amused when we inform them er heavy rains or strong winds (for either have ct of shifting the sand), the principal tool in et matters to rights is a GARDENER'S RAKE!

re have before observed, the whole railway is bad, and the Government Railway Board as unfortunate in their selection of persons to o them. How else is Sir Frederic Smith, in t instance, found, after parading of the Direc-spitality, giving a flaming Report on the works the previous to its being opened to the public, fiance of the manifest defects? An accident ost serious nature immediately happens, and lway Board sends down a Professor Barlow, w very candidly admits he is not a practical nd thus is the public and the shareholders mis-deceived.

, if the Railway Board is to be of any use, or the protection of the lives of the public, or kets of the shareholders and the public, why e sent some competent road surveyor, like Sir M'Adam, who would at once have detected the as manner in which the earthworks of this as well other lines are constructed? Can any man who onest surveyor give one valid reason why the tments of a railway should not be made in the und manner as for turnpike roads, particularly eir height, in many instances, is nearly double? not be on account of price, because a much one is charged and paid; but the truth is, an tment, formed railway fashion, is doubly favour-the contractor, being formed at less cost, and of settlement, which will create extra work for ter, for which the most extortionate charges are

however, a source of satisfaction to know that posure of the railway system is working its The shareholders appear to be roused from lumbers, and have commenced reforming the

A meeting of shareholders in the Brighton Railway has been held at York, and a Committee formed. The Directors are preparing (with the assistance of an accountant) a rigmarole set of accounts, which will be read to such as can spare a moment at a meeting of shareholders; but like the particulars of the purchases of land produced at the last meeting, it will be held up by the Chairman as a proof of the desire of the Directors to give every explanation *(except the right one)* to the shareholders. To the latter, then, we offer this piece of sound advice, viz:—Pay no attention to any documents prepared by an accountant relating to receipts and expenditure, but appoint a Committee of shareholders, with power to call in assistance qualified to ascertain the correct *quantities* of the respective works, lands, &c.; the prices at which the works were contracted for; compare the charges with those usually paid for similar works; have a schedule of the engines, carriages, &c.; the cost price of each article, &c.

This mode of proceeding is the common-sense one, and the only way to detect fraudulent charges for works of that kind. If the Committee take this course (and we are correctly informed by a correspondent, who pledges himself to the fact), they will not be many hours before a comparison with the sections of the line, and an examination of the works, will enable them to satisfy themselves that some persons connected with the management have been guilty of the grossest errors ever committed in this or any other commercial country; and time will prove that such errors are not confined to this line.—*John Bull.*

MIDLAND COUNTIES' RAILWAY.

IT is with feelings of very great pleasure we notice that the Midland Counties' Railway Company have at last begun to study the comforts of the public. This week they have commenced running second-class carriages *glazed*, in place of the miserably cold and disgracefully open ones, which we believe are not only used on this but on all other lines in the kingdom for day traffic.

We have no doubt this act of tardy justice will be duly appreciated, and the Company's receipts considerably benefited by it. Railway Directors have been strangely remiss in their duties, and consequently blind to their interests, in not rendering all the advantages in their power for the convenience of their customers, instead of which they have done all they could *apparently* to annoy them. Nothing can be lost, but much may and will be gained, by making the carriages as convenient and comfortable as possible; and we do hope that this Company will follow up the sensible example now set by other lines (which will be copied sooner or later), and put seats in all their third-class carriages, and thereby take away the stigma of having it said they can find nothing better than *tubs* for a large body of travellers. We would also recommend the running of third-class carriages to all the trains (at any rate it would be wise to do so, so long as there is a coach opposition to them, and which is the case at the present time) between Nottingham, Derby, and Loughborough. The Midland Counties' Railway is very differently situated to such a line as the Grand Junction, where there are a many of the higher classes travelling; here by far the most numerous part of the travellers are persons in the middle and lower ranks of society, and were proper and cheap accommodation afforded to them, they would avail themselves of this mode of conveyance in a much greater degree than has hitherto been the case; but it is vain and foolish to endeavour to drive them into first-classes, or even seconds, if they are not *well able to bear it*, or attempt to make a feeble individual pay a large fare to ride in a third, for he would rather walk or probably stay at home than give what he can so very ill spare."—*Nottingham Review.*

ACCIDENT ON THE MANCHESTER AND BIRMINGHAM RAILWAY.—On Wednesday night week, a singular occurrence took place on the Manchester and Birmingham Railway, near Alderley. A goods train, which left Manchester in the night, at that part of the line passed over some obstructing bodies on the rails, but without being thrown off, or even receiving any considerable shock. It was found that a flock of sheep had by some accident got upon the line, and that the train had slaughtered four of them, with much greater expedition than the butcher could have done. It is somewhat singular that all the fences are very good there, and no gap could be found, or gate open; so that, in all probability, one adventurous sheep had leaped the fence, and with their usual gregarious habits, the rest had followed their leader, and had chosen the rails as a high and dry part of the road for their place of repose.—*Manchester Courier.*

RAILWAY ADJUDICATIONS.

CURTIS *v.* THE DIRECTORS OF THE BLACKWALL RAILWAY COMPANY.

Court of Queen's Bench, Dec. 19.—Mr. GALE, Mr. PLATT, Mr. CHILTON, and Mr. HAYWARD, appeared for the plaintiff; and the SOLICITOR-GENERAL, Mr. M. D. HILL, Mr. RICHARDS, and Mr. BIGG for the defendants.

This was an action for the alleged infringement of a patent which had been taken out by the plaintiff for connecting and disconnecting the draught or ground rope of a railway with railway carriages, when the rope was in motion. The plan was specially applicable to railways where the carriages were moved, as on the Blackwall Railway, by means of a rope moved by an engine placed at the spot towards which the carriages were desired to be drawn. The defendants had adopted a plan for effecting this purpose, which it was alleged was essentially the same as that invented by the plaintiff.

The defence was, that the plans were not the same, and that that which was in use on the Blackwall Railway had been suggested to the Directors some time before the specification of the plaintiff was published. There was a good deal of evidence given as to the practicability of ever attaching a rope to a railway carriage when the rope was in motion, and much doubt was thrown upon the possibility of such a performance, but a person named Barn stated that he had twice done it when in the service of the Blackwall Railway Company, once when in coming up to London the rope accidentally got detached, and once at the Limehouse station, when no passengers were in the carriage, for the purpose of an experiment. He, however, said that it required "a good man" to do it, and the appearance of the witness showed that he came within this expression, in the particular manner he attached to it. Witnesses being examined on both sides, the cause, which had occupied the whole of the day, was terminated by the jury interfering, and after some intimation of opinion on their part, the plaintiff consented to be nonsuited.

RAILWAY COMMUNICATION WITH ENGLAND.—We understand that a deputation of the Glasgow and Ayrshire Railway Directors, were in this neighbourhood last week, and went the length of Cumnock, for the purpose of seeing some of the influential proprietors on the line from Glasgow to Carlisle, by way of Nithsdale and Dumfries. We formerly stated our opinion in favour of this line over the Mid or Clydesdale line, as the one more likely to be taken up by the public; and when we look at the question as regards the interest of Scotland, there cannot be a doubt that the west and west lines—the former from Newcastle to Edinburgh, and the latter from Carlisle to Glasgow, are those that ought to receive the support of the public, because they possess the elements of remuneration, passing as they do through the richest parts of the south of Scotland, abounding in fertility, population, and wealth.—*Ayr Advertiser.*

ACCIDENT ON A RAILWAY.—On Saturday morning an accident, which proved fatal to Wm. M'Lymont, one of the guards on the Glasgow and Ayr Railway, took place at the Irvine station. A goods train left Ayr at 4 o'clock in the morning, for Glasgow, the train consisting of 11 trucks, the last of which was to be left at Irvine, while several additional trucks, which were lying at that station on the opposite line, were to be attached, and taken on to Glasgow. The rule in all such cases is, to detach the truck to be left at the distance of a considerable number of yards from the crossing which connects the two lines together; but in this instance the deceased, contrary to the express caution of his brother guard, as well as in opposition to the standing orders of the manager, allowed the truck to be taken close to the crossing before he took off the chain. While doing so, a towing rope from the train was fastened to the trucks lying on the opposite line, and they were drawn across very quickly, all but touching the truck which had been left behind. M'Lymont was at the moment standing beside it, and was jammed betwixt the two in such a manner as to cause instant death. He has left a widow and two children. In this case, as has been already observed, no blame attaches to any one but the unfortunate deceased. On the Glasgow and Ayr, as indeed on all the railways in this neighbourhood, every precaution that can be thought of is adopted to preserve the lives of the servants; and it almost invariably happens that when an accident does occur, it is caused by a neglect of the rules laid down for their guidance.—*Scottish Guardian.*

THE THAMES HAVEN SCHEME MEETING EXTRAORDINARY.

We have just received the following from an "Ear Witness," and cannot account for its not having reached us previously:—

Report of a Special General Meeting of Shareholders of the Thames Haven Railway Company, held on the 16th of August, 1842, on the Company's Ground, at Shell Haven, mouth of the River Thames, under the apprehension of Injury to the Company's Works during the insurrectionary movements now prevalent throughout England.

In consequence of Shell Haven being exposed to the sea, and open to foreign invasion, and also to the landing of an immense body of disaffected colliers coming by sea from Newcastle, and bent upon destroying a position destined to annihilate the monopoly of the coal trade, the Directors thought fit, for the protection of their intended works and of the vessels purposing to use the harbour, to consult "a man of war," in the person of their talented Secretary, who advised that a meeting of shareholders should take place this day, upon the site of the Great Collier Docks to be constructed at Shell Haven. The Directors in vain recommended the George and Vulture Tavern as the most appropriate place of meeting, where they would be close to luncheon. The Secretary, in reply, told one that his opinion was VAUX *et pretera nihil*. He was peremptory with the others; and calling in the Solicitor, who gave it as his decided opinion that the Secretary's words announced sound doctrine, and offering to prove it out of his book on "Adventures in search of a Horse," all further discussion terminated, and the meeting was summoned accordingly by private circular as follows:—

"Thames Haven Railway Office,
"London, August 13, 1842.

"Sir,—I have desired such of the Directors as have the least intelligence to understand my comprehensive views and policy, to inform you that a special general meeting of this Company will be held in their largest tool-shed, at Shell Haven, on the 16th instant at 12 o'clock precisely, to consider the propriety of adopting measures for the protection of the Company's intended railway and docks during the present alarming crisis of the country, when it may be truly said, that the detestable schoolmaster, with a mad dog and loaded gun, is abroad. As no coach travels to the spot, and as there is not a vestige of a house within five miles of it, you can get down as you best can. At the urgent and respectful request made to me of those Directors whom I drive in my team, I have made myself the medium of this communication. Sir George Stephen, Knight, the Company's Solicitor, will do the meeting the honour of partaking in its important deliberations, and in the contents of the snuff-boxes of the proprietors.

"Accept the assurances of my distinguished consideration, and attend the meeting.

"I remain, Sir, your obedient servant,
"AMSINCK"

Accordingly at the hour of 12 o'clock, several proprietors, with the Chairman, arrived in a waggon, and the latter incidentally called their attention to the fact, that before the place could be densely populated, a good deal had to be done in propagating extensively and nurturing judiciously the scheme.

Shortly after the Chairman's arrival, a small boat was observed making its gallant approach from the open sea, amidst the turbulent waves, which were pitching the tars who guided the rudder and sails, and as the Chairman viewed them through a lithographic plan of the Thames Haven Docks, rolled up as a telescope, he truly observed, "Here come men of daring and undaunted courage. If such peril can be braved, our great undertaking will speedily be accomplished. To day must the contracts be given out for the whole works, if anybody will take them."

The boat having reached the shore, out stepped the Secretary of the Company, in his naval costume. He was greeted as a lieutenant in the Royal Navy—as Secretary to the Railway Commission for examining the best line of railway into Scotland and as the Secretary of a Bitumen Company, and as the indefatigable promoter of the Thames Haven Railway and Docks for six years, having accomplished nothing; and he made suitable acknowledgments in each character; and it was observed that his breast swelled so much with conscious pride, under this fire of compliments, that the buttons of his waistcoat gave way. Shortly afterwards the boatmen brought a smuffy blue cloak, containing, apparently, a long block of timber on shore, and placed it on dry ground; and the cloak being unfolded, it was found indeed to contain a near approximation to timber, being a large sleeper in the person of the knight-errant Solicitor, who evidently looked much upset, by the disregard of the sea towards any cargo which consists of masticated food.

Sir George was roused from slumber, and having had some "soda-water and —," proceeded to the meeting.

The Chairman took his seat, and offering the learned Solicitor snuff, saying jocularly, that with his cigit he might dig it, requested to have his legal opinion, if the proprietors might be counted by the number of noses present. Sir George Stephen said, that there were contradictory circumstances, and the question was a difficult one; but he thought that, in law, each nose might be considered as one person, but in the assembly of St. Stephen's Chapel, to which he begged to say he was not related, unless he were a saint, the term "nose," covered several persons, and in the Latin "*dirige nose*," included everybody.

The Secretary stopped the Chairman, who was about to speak, desiring the latter to sit down and not make a fool of himself, and remarked, that as a naval man, he would suggest that all difficulties might be removed by counting the vertebral, instead of the nasal, promontories of the proprietors present; but as he liked short work, and was never prosy, he would beg the shareholders, without being counted, to bring themselves to an anchor, and allow the business to proceed.

The SECRETARY then read the Report, for which, see the advertisements.*

It opened as follows, with a pathos which caused the deepest sensation:—

"In the present alarming crisis of affairs, when the realities of existing circumstances being developed prevent the intoxicating influence of deluded fancy and chimerical vision, while the disaffected are perambulating the peaceable districts of England with fire and sword, and pealing public works and private property in imminent jeopardy, it becomes the solemn and imperative duty of the Directors of this important company to call the proprietors together to consult on the best means of preserving their intended works from utter destruction or intimate injury; and in thus doing not to exaggerate the evil which is at every man's door, but to furnish a prominent and gratifying specimen of that prudent caution, which has ever been found to proceed from the active and indefatigable attention of the disinterested public officer, whom the Directors are eminently happy to possess as presiding over their councils in the Secretary of this undertaking."

Strong resolutions were then passed for preserving the Company from danger, and an advertisement received the unanimous sanction of the shareholders, to hire a watchman by day and night, not to exceed 70 years of age, with preference to any descendant of the renowned Dogberry; and also to hire an errand-boy to carry a message to Tilbury Fort, for guns, in case of invasion from insurgents during a moonlight night, walking across Neptune's green carpet with silver spangles. There was some talk of a call for money, but a call for mercy prevailed. The conversation then became desultory, and was chiefly as follows:—

Mr. SCRIP (a proprietor)—I think, Mr. Chairman, the greatest danger to be expected is from runaway convicts. Our land is washed with the same salt water that exists at Botany Bay. It is all one pond. The distance, it is true, is considerable, but in the depth of dark winter, Jack Frost and his attendants might return, and come on shore and bite as keenly as he did at Newport.

The SECRETARY—Should Jack Frost come, our ammunition will be red-hot balls, which, particularly when red-hot, will hit very hard. I dare that ex—emdary—I mean, Justice of the Peace, to single combat. He shall not take hold of my coat, I assure him. My brother shareholders need not be afraid.

Mr. DISCOUNT (a shareholder)—I beg, Chairman, quite at ease after these expressions of the Secretary, whatever force upon our land. Indeed, I have always Secretary called a great gun, and I have therefore, that he alone could defend the pany's property from attack.

A PROPRIETOR—Mr. Chairman, it is to have a gun, but have you any?

Several PROPRIETORS—Order! order! not a finance meeting.

The CHAIRMAN—If the honourable means by shot, not cash, but cannot purchased a dozen this morning. As legs I would beg to mention, for the the meeting, that the Company will any expense for wadding, as we have use the unissued shares—not for you have at the office in London a large for the eyes rolled up in the prospectus Company, and sooner or later this explode, and therefore it is very suitable We have also in our stores a very formidable pon, called a long-bow, which we shall hands of one of our officers should quire, although it is dreadful to contemplate shed or the burning of this shed.

Mr. SCRIP—The explanation is very May I ask the Secretary what are the undertaking?

The SECRETARY—Of the most brilliant tion. We shall have an independent London, and a terminus of our own. have either; and if the docks be ships constantly fill them—if the ships coal—and if all that coal comes on pays a remunerating toll, the success cern is certain, and will be gigantic. plause.)

A SHAREHOLDER—May I ask the who are the largest proprietors?

The CHAIRMAN, in rising to reply, of his trowsers on a nail, at which pressed sympathy, but he with great remarked, "Never mind, gentlemen, you that this is the first rent the perty has ever produced. The largest are Mr. David Nincompoop, and Mr. dler. Mr. Nincompoop has paid in calls on his own 100 shares, and on 200 shares. That is Mr. Nincompoop the cask by the door. He is very generous." (Great sensation, during proprietors unbuttoned their pockets invitingly their pendant pocket-flaps Nincompoop, which appeared endued gasped.)

Mr. DISCOUNT—I beg pardon for Mr. Chairman, but I wish to put question. Until the docks are made be proper for the Company to employ frontage and take in washing?

The SECRETARY—I am better that question than the Chairman. is valuable, and shall have my best haps the honourable proprietor few shirts on trial. If they be we can hang them up and throw

A PROPRIETOR—You would plant of a washing establishment. ask Sir George Stephen, on that he has mentioned in his equestrian procure the best clothes-horse.

Sir GEORGE STEPHEN—I will make the honourable proprietor, for make known to the public his late most excellent Majesty. have you any paper?

The SECRETARY—No, indeed. only came to the meeting with wind.

Paper was then provided for Sir George wrote as follows:—

* The Report has not reached us. When sent, it must be accompanied with cash. We do not give credit to the Thames Haven Railway Reports.—ED.

Digitized by Google

"Sir,—The best clothes-horse is to be had at Mr. Carpenter's, Timber street. Examine the feet, that they are *not* rotten, and try if the joints be all right. It ought not to exceed 14 hands high. I recommend your obtaining a warranty that he can stand 12 hours under wet, without injury.

"I am, Sir, your obedient servant,
"Sir George Stephen."

Mr. Scrip—May I ask the worthy Secretary if *the* balance at the banker's remains?

The Secretary—I can assure the honourable proprietor that the banker's balance is an extraordinary phenomenon, for it is running away the faster the more it is checked. On this subject I should remark, that the question of embankments of *money* has had my grave consideration, and I find that they are liable to extensive slips, and I think that the proximate cause is the wet that flows from *the pens* of two Directors and a Secretary, and I have also observed that the prevalent season for this humidity is while the shareholders are asleep.

Mr. Green, of Gravesend, (market gardener, proprietor of three shares)—I hope sincerely that the Chairman will not allow the proper season to pass without the cuttings being made—I shall be most happy to lend him my pruning knife.

The Chairman—I must be excused for saying the observation is a most ignorant one. I recommend the honourable proprietor to climb the Tree of Knowledge. My anxiety in reference to cutting is in regard to the shareholders, who almost to a man have cut and run. I am getting devilish tired, gentlemen, and I would suggest that it is now time to close the meeting, and I beg to move a vote of thanks to the Secretary for his unwearied exertions.

This was agreed to *nem. con.*, and the Secretary returned thanks with Demosthenian eloquence, speaking like a printed book, and enumerated what he had done, could do, and would do, and would not do, and the meeting dispersed.

Several proprietors complained of having had to stand, and hoped it would not be the case again, and that the Engineer would take care to provide them with railway chairs.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

Sir,—I beg the favour of you to allow room for my rejoinder to the letter addressed to you in your last number by the Secretary to this Company.

My object in writing my first letter was to apprise the shareholders that I was *driven* into Chancery by the conduct of the Directors—they having refused either to tell me what they considered due to me, to refer the question to arbitration, or indeed to take any notice whatever of my demand. Now, any one would suppose, from the Secretary's reply, that I was very much enamoured with the occupation of going to law with the Directors of a powerful Company, who of course will not personally feel the consequences of defeat, as I should. The letter says, "Now the fact is, that in addition to a Chancery suit, Mr. C. Penfold has brought two actions at Common Law against the Company, to recover the amount he claims, in one of which actions the Company have paid the sum of 600*l.* into court, which Mr. C. Penfold has since received out of it." Sir, I was compelled to bring two actions, because one of the contracts was under seal, and the others not. I cannot get the merits of my demand under the sealed contract heard in a Common Law Court at present, because the Engineer, Mr. Rastrick, withholds the certificate, whether righteously or unrighteously time will show; and with respect to the others, I was unable to go on, because I have no means of showing whether the money I had from time to time received on account was paid in respect of work done under one contract or the other—the Company never furnishing me with any statement. I applied, through my solicitor, for a statement, but no answer pwas returned; and, therefore, I repeat again, that owing to the conduct of the Directors, I must either go without my rights, or apply to the laws of my country to obtain them.

I tried an application to the Investigation Committee, of which Mr. Parsons was Chairman, stating the situation I was in, and offering to refer the matter to arbitration; and received for answer that the Committee regretted that they had no power to interfere, but had forwarded my statement to the Chairman of the Company.

The Secretary's letter further says, "Mr. C. Penfold forgets to state that the Company's defence to these actions is, that some of the works for which he claims to be paid were not done, and that others were imperfectly executed." It is true that when I pressed for my balance the Company sent me a notice of various matters which they required me to do, and all of which, with one exception (which I could not accede to), I complied with, thinking that by doing all the matters they required, whether liable to do them or not, I should avoid litigation; but I am as far off as ever. I am afraid I am trespassing upon your space too much, but I feel assured that you will at all times afford assistance to the weak against the strong; and I declare to you that this is a case of great persecution, and if it were possible for me to put you in possession of all that has occurred, you and the public would so consider it.

Sir, these contracts were for making the diversions in the Reigate turnpike-road at Merstham, which the Company found it necessary to make for their own purposes, and of which road I am the surveyor. They engaged with the Trustees to execute the work according to certain plans, sections, and specifications, and gave me the contract. When the Trustees found that I had the contract, they very properly appointed another person surveyor to superintend the works. He consequently directed the operations throughout, and when finished, he certified to the Trustees that the diversions were made much to his satisfaction, whereupon the Trustees gave a *release* to the Company from any further responsibility. One would imagine that under these circumstances—the Company having agreed to give me a fixed sum for doing that which procured them a release from any further responsibility—that under these circumstances the balance would have been immediately paid; but no, they say, "We will leave him to his remedy." I feel that it is only from pique that I am deprived of my rights. I was obliged, for instance, upon one occasion to apprise the Trustees that the old road was shut up by the Company, and the public driven upon the new one before it was fit or safe for them, and before they had fulfilled their other engagements; and the Trustees were obliged to re-open the road by a body of police. The Company had agreed to improve the road at Merstham village by pulling down the corner of the Feathers public-house, belonging to Mr. J. Harman's father, but this was delayed from time to time, until the Company at length agreed to give Mr. Harman, sen., a considerable sum of money for this corner. Mr. J. Harman afterwards attended a meeting of the Trustees, and made a motion that they should accept an offer made by Mr. Harman, sen., of 400*l.*, to let the house remain untouched. I need hardly add, that if the motion had been carried Mr. Harman, sen., would have been greatly benefited, and the road have remained unimproved; but the motion was not seconded. I was acting also for the parish of Croydon, professionally, with reference to the Company's interference with their roads, which caused me to incur the Company's further displeasure, but the particulars of which I cannot enter into here.

Sir, with respect to that part of the letter which alludes to my offer of 100*l.* to the Chairman, I must say I venture upon it with feelings of sorrow rather than of anger—not of sorrow on my own account, but on account of Mr. J. Harman. Surely Mr. J. Harman should have let that theme alone. I was in expectation that he had used that letter until it was threadbare, until it was quite worn out, until indeed every line had become obliterated. I never thought it displayed much taste or feeling to exhibit the offer I made him, in the quarters and in the manner he has done, as *he imagined* to his honour and to my dishonour, but I said nothing. Sir, the offer I made him was—to do what?—to help me to rob the Company? No; it was to induce him to do that which long before he ought to have done, to meet the gentleman I had named to go over the works, and see if any and what remained to be done, and if there were any trifling matters which he might require of me, I might forthwith do them, and obtain my money. He had told me that my account was left by the Directors to him to settle. Month after month, for eight long months, did Mr. Ledger on my behalf endeavour to get Mr. J. Harman to attend to the subject, but he could obtain no appointment, and I was left in the greatest anxiety waiting for my money—others to whom some of it was due urging me for payment. I certainly did conceive, therefore, from this conduct of Mr. J. Harman, that something was expected of me, and if I have been wrong, he must blame himself, and he has no right for one moment to suppose that I made him the offer referred to for any other purpose than to induce him to attend to the subject without so much delay. For observe, Sir, the amounts for my work could not be altered, they all having been named in the contract, and agreed upon, and the works themselves had been certified by the surveyor to the Trustees to have been completed, and the Company released from further responsibility.

The Directors have inserted this offer of mine, thinking that it will justify their harsh conduct towards me in the eyes of the proprietors and the public. But can the occurrence which took place between Mr. J. Harman and myself be a valid reason for the Board refusing to enter into the consideration of my account, and coming to some conclusion as to the amount they ought to pay me? Is it reasonable to run the proprietors into lawsuits, when I was willing to refer my claim to honest men, because a circumstance of the nature described took place out of doors between one member of the Board and the party making the claim? I should not have thought it necessary to enter so much at length into this explanation, had not Mr. J. Harman thought it right to make use for the thousandth time of the offer I was induced, by his own conduct, to make him.

I am, Sir, your most obedient servant,
CHAS. PENFOLD.

Croydon, December 20, 1842.

P. S. I take this opportunity of asking the members of the Provisional Committee of Sir John Rennie's direct line, whether, when they brought their accounts to a close, after the Bill passed, there was money enough to pay the demands against them *in full?*

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

Sir,—Having read in your paper of the 17th instant a letter from the Secretary to the above-named Company, wherein it is denied that the Solicitor to the Company ever made to Mr. Charles Penfold's attorney any such communication as that alleged in his letter in your journal of the 10th inst., I think it due to Mr. Charles Penfold to say that the allegation in his letter is correct.

I have the honour to be, Sir,
Your most obedient servant,
G. W. PENFOLD, Solicitor.

Croydon, December 20, 1842.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

Sir,—I am a shareholder in the London and Brighton Railway, and amongst the number of those who feel the necessity of appointing a Committee of Inquiry, to ascertain in what manner our affairs are conducted. My attention having been drawn to a letter signed "Charles Penfold," in your paper of the 10th of December, I waited with some

Digitized by Google

anxiety to see what reply would be given to it by our Directors, and a more unsatisfactory one than that which the Secretary has forwarded to you I have never met with. It distinctly confirms Mr Penfold's assertion that he has been compelled to have recourse to legal proceedings in order to obtain a settlement of his account; in other words, the Directors resolved "to leave him to his remedy," regardless of the heavy law expences which must be borne by myself and my brother proprietors, and by which, as far as I can see, our Solicitor will be the only person benefited.

Sir, this appears to be a case which requires rigid investigation. Mr. Penfold states that he has been ineffectually endeavouring, for more than two years, to obtain a settlement of his account; and one of the reasons assigned by our Secretary for this apparent injustice is, that some of the work was badly executed. Surely if that be the case, it augers great neglect on the part of our Engineer, who, during so long a period, ought to have taken means to ensure the better performance of the undertaking.

With regard to the offer of 100*l.*, said to have been made by Mr. Penfold to the Chairman, I consider *that* a personal matter between the parties, and a very insufficient plea for making us incur the risk of a Chancery suit. Mr. Harman must consider the tenure of the office which he holds most insecure, if it be necessary to resort to such an expedient to vindicate his character.

I most heartily concur with my brother shareholders in York and Leeds in their praiseworthy exertion to obtain an efficient scrutiny into every transaction connected with the management of the Brighton Railway, and feel that we are greatly indebted to you for the able and independent manner in which you lend your powerful assistance to our cause.

I am, Sir, yours, very obediently,
A BRIGHTON SHAREHOLDER.

Stock Exchange, December 20, 1842.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

Sir,—At last, principally through your valuable labours in the first instance, there is an immediate prospect of reform in the management of the London and Brighton Railway, if the shareholders, in imitation of those in York and Leeds, concentrate their exertions to the appointment of a Committee of Investigation. Now that a reform is dawning upon the railway hemisphere, shareholders may safely look for a consummation in part of the original prospectuses; in the meantime, these Committees of Investigation are working wonders, for they no sooner get within the precincts of the board-room, than off goes some 20,000*l.* in the expences, and from their aptitude for business, the traffic is increased by their exertions.

If this economy, now forced upon Railway Boards, had been introduced into their management, there would not be a depreciation of nearly ten millions in railway property, all in the short space of seven years.

But I have digressed from my object in commencing this letter, which was merely to say, that having 50 shares in the London and Brighton Railway, and desirous of assisting to carry the proposed motion for a Committee at the next meeting, I would be happy to give my proxy to any gentleman deputed for that purpose. Could you name any?

I am, Sir, yours, &c.

G.

Liverpool, December 18, 1842.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

Sir,—I have recently made, for my own guidance, a calculation of the rate of interest an investment in this railway may be expected to yield; and as the calculation may be of service to some of your numerous readers, I submit it for their perusal.

The first consideration is what rate of interest ought to content an investor. This may be partly a matter of conscience; but as a more visible and certain guide I refer to the London and Birmingham, Great Western, South-Western, and other leading lines, and find that at their present prices, they all give upwards of 5 per cent. on capital invested in them, and till the recent rise many of them as much as 5½ per cent. Now, I cannot consent to place the Brighton line on equality with these lines, which, if not all well-managed lines, are all well-paying lines, possessing a certain mercantile traffic which must support them—an advantage the Brighton line has not. The Brighton traffic being principally pleasurable will be more affected by bad weather than the mercantile lines, and what is still worse, more subject to the caprice of fashion; therefore, as the risk is greater than in the first-rate lines, a larger return for capital should be expected, precisely on the principle that capitalists look for a higher rate of interest on foreign bonds than on home securities. I have before said, that until the very recent rise in the high-priced shares, they could have been bought to yield 5½ per cent. interest, and that, it must be borne in mind, at a time when money is almost unemployable. Assuming, therefore, 5½ per cent. will remunerate an investor in Brighton shares, and fix the price of the share at 75*l.*, 5½ per cent. on this would yield 1*l.* 18*s.* 6*d.* per share per annum.

The next consideration is, whether the profits will amount to this sum per share. Calculations show an opposite conclusion. I do not positively assert their correctness, yet I believe they contain no essential errors:—

The receipts from all sources, for the present half-year, will average [illegible] per week.

Total for six months	£104,000
Deduct—	
Omnibus toll and Government mileage duty—one-eighth of the whole	£13,000
Working expences [illegible] interest, and I think fairly so, at 1,250*l.* per week, for six months	32,000
Maintenance of way, 5*l.* per mile per week	[illegible]
Interest on bonds, 30,000*l.*	15,000
	64,500
Balance divisible among 36,000 shares	£39,500

a very little more than 1*l.* 1*s.* per share.

It may be observed, only 25,000 shares will participate in the forthcoming dividend. True; but the remaining 1,000 shares must be issued, and it would therefore be unfair to leave them out of the calculation.

This, then, being the result of my calculation for the present and last half-year, what may be expected from the ensuing half-year, the traffic of which must show a material diminution?

I take the average receipts at 3,000*l.* per week, although I believe they will not amount to the sum. And I may here observe, I allow, in comparison with the corresponding period of last year, an average increase of 600*l.* per week:—

Total for six months	£78,000
Deduct—	
Toll, &c.—one-eighth	£9,750
Working expenses, interest on bonds, and maintenance of way—see previous statement	51,500
	61,250
Balance divisible among 36,000 shares	£16,750

about 9*s.* per share, or 1*l.* 16*s.* per share per annum.

The shares, consequently, at the present market price, are much above their real value.

It will be perceived I have not included in my calculation the 300,000*l.* to be paid by the South-Eastern Company. I give the Brighton Company full credit for the amount, and let it pass as a set-off against the loan notes. I also assume what is far from certain, that the capital will not be increased. I have allowed nothing for contingencies, and nothing for depreciation of stock, for each of which a sum should be set apart at the periodical meetings. The present half-year is also chargeable with interest on the loan notes; or at least, allowing the interest on the money invested by the South-Eastern Company in 3 per cent. consols, the balance of interest, which is about 2,500*l.*

It is therefore evident, that to make this railway a remunerative investment, the expenses must diminish, and the traffic materially increase; and as each of these results are prospective, for present investment the leading lines are certainly preferred.

I am, Sir, your very obedient servant,
EDGAR.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

Sir,—I read with great pleasure in your journal of the 10th instant that the gentlemen of York are alive to their own interest, and have intend taking proper measures, prior to the meeting of the Brighton Railway Directors, a Committee may be formed of the same with proper powers to look over all the accounts and that they may be requested to employ further assistance as they may find necessary to endeavour to unravel the mysterious and intricate accounts of that Company; and with a view to improve and lay down a proper effective plan, that the shareholders may understand how their money has been laid out. If this is properly done, I have no doubt whatever that it will lead to great improvement in the finances of the Company, as well as practical useful suggestions for future management of the line that at one time I had a good opinion of.

There is a great deal now to be done, and must be up and stirring. I hope the Leeds and men of Manchester, who in general are a spirited race, will call a meeting there for the good purpose, and not quietly suffer their property to be rendered valueless by the extravagant expenditure of the Directors, their Engineer and underlings.

I hope we shall not think of extending our line or in any way increasing our shares, till we have a Report from the proposed Committee, which we hope to see soon laid before the shareholders.

I am, Sir, yours, &c.

C.

Chester, December 16, 1842.

THE CHURNET VALLEY RAILWAY.

To the Editor of the Railway Times.

Sir,—I think this a very favourable time to again bringing this railway before the public, as a line that must be made sooner or later, and the intention of my friends and myself should be to get it made for many reasons.

1st. As a shareholder in the Manchester and Birmingham Railway, I would make it appear that the way of the Grand Junction Company appears they are endeavouring by every means to squeeze the last farthing out of us, therefore I would be independent of them, and throw do their worst.

2nd. I would make a [illegible] Midland north of Derby, and to [illegible] Hull traffic, which would be a great advantage ment to the Churnet Railway.

3rd. I would make it, as a Manchester for the purpose of getting the letters sooner than do, as they are now sent round by Warrington the great loss of time of Manchester, Oldham, Stockport, Rochdale and Bury Yorkshire letters, which are now sent Birmingham.

4th. As a friend to Macclesfield [illegible] as there would be a great traffic between and Manchester and London, which now pointed Macclesfield people send by coaches, at a great loss to themselves and money.

5th. I believe, if this were made, tion of the Liverpool and [illegible] come this way, and by the proposed Manchester.

6th. It would be the nearest way Glasgow and all parts of the north the west coast.

7th. I would make it because good interest, even if the Manchester ham Railway shareholders should I think they would not. I am, Sir, PLAN.

FFIELD AND MANCHESTER AND NCHESTER AND LEEDS RAILWAYS.

To the Editor of the Railway Times.

,—I am a considerable shareholder in the hester and Leeds Railway Company, and I be obliged by your allowing me a short space ir paper to notice a subject which very nearly our interests.

are threatened with great injury from the g of the Sheffield and Manchester line which r in progress, and I want to prevent further ding of the public, or the shareholders of Company, by bringing on a full interest iscussion of their rival claims. I will state se, as it appears to me, fairly to our own any, and leave to others with further or better ation (if they have it) either to corroborate to tradict my views and arguments. The Leeds as constructed for the trade of the district immediately around the valley through which it as well as that of Leeds, York, Hull, and the unication with the continental ports. A very portion of the trade now carried by our line d, as has been repeatedly shown in the Parlia Papers, *i. e.* becoming to such places as from vicinity to our line cannot possibly be in- ed with by any other railway either in pro- or in contemplation. The remainder leaves ine at Normanton, and for the most part s northward and eastward to Leeds, York, or

How then stands the question of competi- it this point of our line? The distance to anton from Manchester by our route is 51 and to arrive at the same point by the Shef ne, when completed according to their pres nt mentary powers, there will be 60 miles, viz., nester to Sheffield, 10 miles; Sheffield to o', 4 miles; and Sheffield to Normanton, 22 with a break at Sheffield, unless a junction se d through that town, which is not at present led. But there is a shorter cut a new line, g the Sheffield route at Penistone, and passing by Barnsley to the North Midland line about 0 miles south of Normanton, the total dis being by this line 50 miles, or more correctly, ve, 49½ miles, from Manchester to Normanton n apparent advantage of 1½ miles. But the danger lurks in the rear, and is now more likely to be the cause of success, somewhat Sheffield line and the Barnsley line to be com- , in spite of the present fury and opposition of the former, and the most determined opp n of our Company to the grant of Parliamen ry powers to the latter. Passengers and from Manchester must *then* proceed along Sheffield line (after paying a heavy toll to the nester and Birmingham Company), and would o ascend an average inclination of about 1 in r 20 miles, the corresponding inclination on eeds line being 1 in 132 for 8 miles. They then pass through a tunnel 3 miles long, is to be made for only one line of rails in the nstance, the formation of a second line de g upon the amount of traffic (I suppose), for rge quantity of which two lines would be es- to safety. The proposed new line then ds abruptly down by Barnsley, avoiding ld altogether, and joins the North Midland a point about 400 feet lower than the mouth tunnel, where a junction of trains would take

Will any man say that this passage over es of four different Companies can be effected time, or at less cost of power, &c., than the e to Normanton by the Leeds line? If the tion that an ascent of 16 feet is equal to 1 f horizontal distance be correct, or at all ap- nating to correctness, the practical advantage distance is considerably on the other side. o this that our Company can conduct this together with their local business, giving eight e opportunities for passengers each day, while her Company must run trains on purpose for affic alone. At present there are five trains ay on the North Midland, and they could make it convenient to meet every one of these, so that probably three trains a day would be as much as could be expected. Moreover, the present rates from Sheffield to London offer very little inducement for a traffic to subscribe to a new Company for the purpose of constructing another parallel. Without going into details, I do not see much to fear from the projected line of the engineers, which would, even if all clauses could be obtained for a speedy completing line, as it should be, cost at all events 3*l.* per share, and I have not the least expectation that any of the efforts of competition in the case of the Grand Junction and Manchester and Birmingham lines, which are shown to the public as proofs of success by a reduction of fares for the support of two lines where one would have served all their purposes, the fares between, from Liverpool and Manchester, having been raised immediately after the opening of the shorter route and not to its last upon the difficulty of finding subscribers to any scheme, however well it may know that all those Companies whose depressed state is so fully exposed in your share-list must have their support only by some means or other. I shall conclude with one more remark; difficulty to the Company in getting new lines sanctioned, or, in the case of those now in progress, deriving from obstruction. Should the Shareholders concur in this object by obtaining a loan from the Government, of which their noble ex-Chairman is a distinguished member, I sincerely congratulate them on the very advantageous terms which they will have for such loan, and, of course, the usual good will of the Government as creditor would be extended to them. For instance, the Government would be fully secured by the Company's receipts, and the Company would be relieved from the payment of the interest on the debentures, which, in the case of Sheffield, would be a very heavy item, and the Government would receive the interest at 5 per cent. on the money lent, which is more than they are quite safe from all competition in that trade for which the line has been expressly constructed. The bulk of the traffic between Liverpool, and *vice versâ*, consisting of corn, produce of Liverpool, and the supply of manufactures, coal, &c., from that part to the town of Sheffield—for the passenger traffic is so small as to be unworthy of any detailed notice; consequently our Company, by the completion of the junction with the Liverpool line, being able to offer superior advantages of an unbroken line of railway, will offer a saving both of time and money, as compared with the expense and delay of transhipping, &c., at Normanton, in the town of Manchester. The same advantages exist to all other stations for trade south of Sheffield, that Sheffield has in connection with the North Midland line, for the setting at the opposite side of the town from the Sheffield and Rotherham line, so that these advantages would be increased as in the case of Sheffield. To conclude this part of the subject, I would say, and I say it carefully, that the whole trade south of Normanton, as now conveyed over the Manchester and Leeds Railway, could not pay 1 per cent. on the capital of the Sheffield Company. So much for the *treasonable bosh* with which we are threatened by your indefatigable correspondent, "Hand Captus Oculis."

And now, Sir, I will come to another chapter of our trade antagonists, and ask whether it is not even with the very unusual aid which they are said to have out-lined from the Government quite out of the question that the main line to Sheffield itself will ever be completed?

In the first place, their money is notoriously exhausted. What their liabilities may be we know not, but about half their shareholders seem to have taken flight, as their late application to Parliament was for the purpose of enabling them to borrow on mortgage, although the condition annexed by Parliament to such a power in every Railway Act, "that *half the capital should be* PAID UP," had not been fulfilled. How that dignified body was induced to rescind their deliberate judgment, in the only case in which their caution seemed likely to be of any service in protecting the mortgagees, it would not become me to inquire—(N.B. I do not want to be "sheriffised")—but they certainly have some very extraordinary influence somewhere, or else the appeal *ad misericordiam* must be more powerful in the case of public bodies than of individuals; for not only did they obtain full power to borrow on mortgage (provided they can find any lenders), but they received Government, in defiance of all their solemn declarations of their determination to leave private undertakings to the energy of private speculation, to support them with a loan worthy at once the object in view and the dignity of the representatives of the nation. They have actually obtained a loan of 500,000*l.*, which, according to the present Parliamentary return, will add a length of 1 mile to the 7 already open. There will then remain only 30 miles, and a few Chinese dollars will readily finish the trifling distance, though I think that the Directors and a few other times might have been taken before the Government to spend money in making a railway which can only live by abstracting the traffic of its poor hard-working and much-calumniated neighbour. Seriously, however, they are paying interest at 5 per cent. not only on the amount borrowed, but on the money paid up by the shareholders, so that they are consuming 20,000*l.* per annum of their capital, the revenue of 180*l.* to 200*l.* per mile being just about sufficient to pay toll to the Birmingham Company and working expenses on 7 miles. The 3 miles tunnel is yet untouched, though the 5 shafts and driftway are nearly completed, and the remainder of the works (except some 4 miles beyond Godley, which are to be opened as soon as the cuttings will stand) are yet quietly reposing in the imagination of their Engineer.

With one or two other little particulars I will close my already lengthy epistle.

Until the opening of the Manchester and Birmingham line the Leeds Railway has, for a year and a half, carried nearly the whole of the London goods' traffic from this town, and even now it is well known here that this former Company has been obliged to *purchase* its restoration—on what terms it is useless to inquire.

It needs no Seer to foresee the terms on which the Sheffield Company will enjoy the use of the line and station of the Birmingham Company, which constitutes their only access to the principal source of their expected traffic, unless the latter Company have any peculiar fancy for paying their money twice for the same article.

In the meantime I think you will agree with me that the public will not suffer much inconvenience from the procrastination of the new route to London, when you consider that there are three already in operation—for the Grand Junction still carries the mails by Warrington, and report says that such are the attractions of the Yorkshire route, that a portion of the trade still finds its way *via* Normanton and Derby to London.

I am, Sir, your obedient servant,

BEACON.

Manchester, December 7.

BRISTOL AND EXETER RAILWAY.

To the Editor of the Railway Times.

Sir,—It was with much surprise that I noticed in your last journal a contradiction to your correspondent "Vigil's" statement, that the bridge by the Cattle-market, on the above railway, is in a disgraceful state. Surely "Crito" has made some mistake, or he would not give utterance to so extraordinary an assertion. The true facts are these:—the centering was removed when the bridge was completed; but in a short time it sunk so frightfully, that the centering was again erected, to save it from falling, and workmen were constantly employed in packing the rails, to keep them at the proper level till the bridge fairly rested again on the centering, and it has never been removed to this day. Any one who has seen it will bear testimony to "Vigil's" statement as to its disgraceful state."

I am, Sir, your very obedient servant,

H. T. K.

December 21, 1842.

GLASGOW AND GREENOCK RAILWAY.

To the Editor of the Railway Times.

SIR,—In the month of May, 1841, I addressed you a few lines on the state and prospects of the Glasgow and Greenock Railway Company; and, as was to be expected from the unfavourable view which I took of the merits of the line as an investment, I was answered by several correspondents, who charged me with ignorance and misrepresentation. To these I never replied, as I was quite satisfied that time alone could prove whose assertions were correct. As the railway has now been opened for upwards of 18 months, some idea may be formed of what remuneration the shareholders are likely to receive for the capital expended on the line, and likewise how far the principal parties connected with the undertaking were correct in the very flattering prospects held out by them to the public, and whether they were justified in charging those who thought and spoke otherwise as being actuated by unworthy motives.

My principal object, at this time, is not only to examine how far my opponents and myself may have been correct in our calculations, but also to put some of my English friends on their guard, so that they may be ready, at the half-yearly meeting which takes place in a few weeks, to prevent their property from being sacrificed for the benefit of the people of the district in which the line is situated, and which it is likely to be unless prompt measures are taken by the proprietors, as I shall hereafter show.

My first statement, in the letter above referred to, was, that at *least* the whole of the capital, 666,666*l.*, would be required to finish the line; but the late Secretary said no—that I was 50,000*l.* above the mark; and in justice to him I must say, that in looking into the Report of July, 1841, I find the Directors there telling the shareholders—

"*The works on the railway have been some time out of hand*, and are in admirable order.

"*The cost of construction is also nearly ascertained* * * * and is about the sum expected at last half-yearly meeting.

"That the first cost should have exceeded the estimate is scarcely to be wondered at, when the localities are considered; but the Directors *now, when the works are finished*, cannot discover that hasty or ill-considered decisions have caused an injudicious expenditure."

Again, the Chairman in his address says—"*The completion of the works* brought us close to the termination of our engagement with Mr. Locke," &c.; but in July, 1842, one twelvemonth later, we find the same gentleman thus reported:—

"He wished he could say that the capital had been found adequate to meet all the expenditure. Had he not been a Director, he had no doubt he should have thought that the Directors ought to have calculated better at first, because only those in the Direction could at all appreciate the difficulty, nay, the impossibility, of estimating with any degree of accuracy the expense of a work of this magnitude," &c.

Now will it be believed that, notwithstanding the official contradiction of my statement, and the Directors giving out that the line was finished, my estimate was nearly 100,000*l.* too little, and consequently the Managers' one not far short of 150,000*l.*? Well might the Chairman mourn over "the impossibility of estimating works of such magnitude;" and it is certainly to be deplored that this "impossibility" had not been sooner discovered, as it might have saved the public some of their spare cash. I am of opinion that a history of railway estimates might be made a very entertaining and useful work; and I am sure if some writer, well versed in the subject, were to take it in hand, under the title of "Curiosities of Railway Estimates and Extravagances," that he would be well remunerated.

The first estimate for this line was 250,000*l.*; then 300,000*l.*, with a dividend of 10 per cent. In Parliament it rose to 533,000*l.* After about half the capital was paid up the Directors announced, at the half-yearly meeting in January, 1839, amidst long and continued cheering, that only 80 per cent., or 20*l.* per share, would be required—making, in addition to the debenture money, 453,000*l.* In November, 1840, a circular announced that the works having been extended more money would be required, to the extent of 18 per cent. Power was however got to raise an additional 25 per cent.—making in all 666,666*l.*; and now in November, 1842, Parliamentary notices have been given for an extra supply of the needful. How much is not stated, but I suppose that some means have been fallen on to get estimates of what the line is likely to cost.

I next put down—

Receipts from passengers, at.....		£41,500 800*l.* per week.
Do. goods		12,000
		£53,200
Expenses, 65 per cent.		34,775
		£18,725
Interest on debentures— 166,000*l.*, at 5 per cent.	£8,333	
Dividend on capital— 500,000*l.*, at 2 per cent.	10,000	
		18,333
Balance.....		£392

Here was another malicious statement, made for the purpose of depreciating the railway stock; and I am glad to say it checked speculation in the shares, and brought down on my head the blessings of many an honest broker and stock-jobber; but after all I overrated the income by about 25 per cent., and I must acknowledge that I am greatly at a loss to name how much I have overvalued the dividend. But more of that anon. However, I may as well mention that the Company only divided 2 per cent. for the first half-year, and only one-half per cent. for second ditto; the amount of the third ditto is matter of great speculation at present in this quarter.

What are the state and prospects of the Company at the present time? This I will attempt to answer, although I may be liable to be charged with more misrepresentation. In comparing the revenue accounts for the half-years ending November, 1841 and 1842, I find them to stand as follows. The last account is made up from the weekly returns, and may not be quite correct, but is sufficiently near the truth for our present purpose:—

	1841.	1842.		
Passengers..	£22,280	£19,236	decrease 1842,	£3,044
Goods.....	2,925	5,546	increase 1842.	2,621
Total ..	£25,205	£24,782		

From this it appears that the passenger revenue is 3,044*l.* less in the half-year just ended than in the same period last year; and this fact should be particularly noticed, as the number of passengers carried is nearly 40 per cent. greater this year than last—the numbers being, in 1841, 402,000, and in 1842, 550,000. This has arisen from putting on third-class carriages to Greenock, and reducing the fares between that city and Paisley. The goods' traffic shows an increase, and is to be accounted for from the Company's arrangements in that department not being completed in 1841. If I might hazard a guess of what dividend is likely to be paid at this time, and the probable statement of expenses, &c., as will be shown by the Report, I would say—

Revenue	£24,782
Expenses	14,000
	£10,782
Interest on debentures 150,000 ..... £3,782	
Dividend on 460,000*l.*, 1½ per cent..... 6,900	
	10,682

But will that show a true state of affairs, when upwards of 700,000*l.* has been already expended (up to May last 709,000*l.*), and the interest above is paid on only 610,000*l.*, the balance must be borrowed from some one who must be paid 5 per cent.? The fact is, that this robbing Peter to pay Paul, by charging stock with the interest of borrowed money, cannot last for ever; and as the cost of the line may be put down at 750,000*l.*, of which 550,000*l.* will be raised in shares, and 200,000*l.* borrowed on debentures, whereby 10,000*l.* per annum of the revenue will be mortgaged to pay the interest, I will try how the account will look, supposing the money raised as above:—

Revenue for half-year ending November	£
Expenses.....	
	£
Interest on 200,000*l.* at 5 per cent.	£
Dividend on 550,000*l.* at 1 per cent.	
To pay 1 per cent. there is a deficiency of.....	£

And nothing allowed for a sinking fund to meet the wear and tear of the railway plant.

I believe that the above will be considered favourable, and it is certainly high time that the interest paid on the borrowed money were put to the debit of the revenue account; for in placing it to the debit of stock it is nothing more or less than a round-about way of paying dividends out of the capital stock. That the present prospects of the railway are far from being bright cannot be denied by the most sanguine of the projectors, but I am of opinion that mismanagement has much to do with the unfavourable position of the Company; and I think that by exertion, and attention to the charges, 3 if not 4 per cent. might be given to the proprietors. As I have a better opinion of the capabilities of the line than I had in 1841. In then, the present Management have a greater task to do a large business than a profitable one, as this is borne out by what the Chairman said at a meeting in July last—"The guiding principle of this line has always been to consider the interest of the railway and that of the public as one and the same; and that it is to the numbers carried rather than by high fares, we are to look for our revenue." I suppose that the Directors are now convinced that their principle is incorrect, when they find that they have carried nearly 40 per cent. more passengers, or about 9,000 tons of extra dead weight, with a decrease on their money receipts of about 4 per cent. during the half-year just ended, than they did in the same period of last year; and I have no doubt that the public would find their interest also further benefited by a further reduction of the fares; but I leave it to the Directors to judge how far the dividend would be assisted by such reduction. In railway traffic there is a certain level or profitable point; and if fares are raised above that point or scale of rates a check is given to travelling, and consequently a decrease of the receipts. If the fares are lowered an increase of passengers takes place, but not sufficient to cover the original income. What the profitable scale may be it is impossible to tell, as they may vary in different localities; and I would strongly urge the Greenock Directors, now that they have tried reduction and found that wanting, to make a experiment upon a higher scale of fares.

Another sentence of mine that brought down ire of some folks was where I said "I am that the line will be managed wholly for the modation of Greenock, now that they have of their stock." This may not appear very to strangers, and I must say I did not expect when I came here. I will endeavour to The Trustees of the River Clyde have much during the last 10 or 15 years in the channel of the river, so that many vessels direct to Glasgow to discharge and load, remaining at Greenock as they formerly as much as be supposed, annoyed and hurt chants, brokers, &c., of the latter they are going all in their power to vessels from passing Greenock, by offering the cargoes to Glasgow at ships' expense, should rather be said, at the expense of proprietors; for the Directors seem to into their views at once, by reducing goods 20 to 30 per cent. below what by the river carriers. At the present the Railway Company report a profit of cent. So far so good, if correct; but much if all tear and wear has been taken count. Besides, even allowing 4 per cent. the Directors were not justified in making

Digitized by Google

reduction until they had some idea of what *profit on the capital was to be.* That the Company raise their rates there is no doubt, as I learned from many conversant with the trade; interest, and not profit, seems however to be the motto. The passenger fares are in most instances ridiculously low. From this city to Paisley 7 miles, the fares for the first year or so were 1s., and 6d., three classes; now they are 9d., 6d., and 2d., same accommodation. The canal fares are running against them, and although the railway saves passengers one hour of time, still the boats are crowded at 1½d., and it will be well to see what rate of profit the railway can get from their low fares (this part of the line cost 300,000*l.* if it paid by the Ayrshire Company), and how long they intend to run at such fares? They say, they say, to run the canal boats off, and then raise their fares; but I tell them that, not only the determination to get a monopoly of a district, but the same determination on the part of other companies, has attracted the attention of those in authority, and that in applying for further powers at the next session of Parliament they will find themselves tied down to a certain rate which will affect not only them, but several other lines. To Greenock, 22 miles, the rates are 2s. 6d., 1s., and 6d., three classes; and they carry passengers between Greenock, to some of the watering-places, without any additional charge. Well may one say that these rates are at all remunerative, and such like proprietors should expect the public to pay? But they wish to lose their property they may once try the effect of raising the scale of fares and never mind their opponents; for they may depend upon it that their hostility towards the other modes of conveyance has called up a spirit of opposition in the public against them, and the sooner such a spirit is calmed the better, for I believe that much of the opposition they have met with arises from the high-flown language in which they were wont to tell the public of how easily they could clear off all opposition on the river and canal. A great source of expense, both to the Ayrshire and Greenock Companies, is the double, and in some instances treble, set of servants kept on the same line. The Directors of both the Companies should attempt some kind of junction, and get the same men to do the work of the three lines at Ayr and Paisley; and it would be a great saving if they could get some Engineer to contract for the locomotive power, as in such a case only one workman would be necessary instead of three. After the sooner the two lines, Ayrshire and Greenock, belong to one Company, the better for all parties. Until all connection with the steamers beyond Ayr be put an end to, unless it can clearly be shown that the Company derive a profit from them, Greenock is the head quarters of the Company, the Act of Parliament requiring 7 of the 12 Directors to be domiciled near that town, some might be made as to the amount of stock held at Greenock, and also how much each of the Directors hold. Some months since they reduced the allowance one-tenth, or 200*l.*, and the dividend of their servants 10 per cent. This may be very well, but I am far from having those who have the conducting of such a work under-

[illegible]ly apology for interfering with the affairs of the Company is, that I was induced by the proceeds of a fast week, and specious prospectus put out by interested parties, to purchase a few shares; but being put on my guard, I came down here and made personal inquiries, and found that I had been duped. By good luck the railway fever was still going on in Liverpool, I got clear of the concern, after incurring the expense for showing up the hollow pretensions of the vendicates. Shortly afterwards I removed my stock and all, and have since watched the affairs of the Company closely.

I am, Sir your obedient servant,

ANTI-HUMBUG FROM LIVERPOOL.

December 10, 1842.

The estimates of 250,000*l.*, 300,000*l.*, and 533,000*l.* were to complete the railway from Glasgow to Greenock, 22 miles, at the rate of from 10,000*l.* to 24,000*l.* per mile. The shareholders of the Ayrshire line of railway, which is one half of the joint line, would have been benefited, or 40,900*l.* per mile, nearly 70 per cent. above the Parliamentary estimate!! I perceive that the shares have taken a start in Liverpool within these few days, and risen about 2*l.* per share. Can you give any reason for the movement? Is there an *agency* at work to raise the shares to a nominal value, for the purpose of putting the shareholders off their guard?

RAILWAY LABOURERS.

To the Editor of the Railway Times.

SIR,—In your paper, ten days since, you published a letter signed "A Citizen," on the condition of "Railway Labourers." I believe there are very many persons who enjoy the luxuries of railway travelling with a frequent sigh for the sad condition of those by whose toil these gigantic monuments have been reared. One of this number has endeavoured to alleviate some, at least, of the evils to which this class of men has been subjected by the proposal contained in the enclosed paper, which, if you would kindly afford space for it in your far-spread journal, would greatly, I think, the feelings of many "a citizen," and benefit that body of ill-requited men for whom your sympathies, I am sure, are not less deeply than those of your

CONSTANT READER.

December 6, 1842.

The following is the paper alluded to:—

"A WORD FOR THE POOR LABOURERS ON THE RAILWAYS.

"Travelling! Which at the call of business, pleasure, or affection, you enter the commodious carriage of a well-appointed train, and with a motion swift, yet almost imperceptible, are wafted onwards to earth's your destined home, listen to the monitor who whispers in your ear, '*A word for the poor labourers on the railways.*'

"Rejoicing in your own facilities of journeying, you are not perhaps aware of the price which has been paid for your convenience. Those vast embankments, those lengthened tunnels, have not been completed except by the protracted labours of congregated masses of your countrymen; and it is a mournful fact, too notorious for denial, that wherever they have laboured, they have *deteriorated*. Many an abiding root of bitterness is planted in villages and neighbourhoods through which a line of railway has passed:—Here, a parent mourns a child lost to virtue—there, a child a parent, and worse than motherless little ones, look in vain for her who *should* have 'taught them good, and not evil, all the days of her life.' Our agricultural labourers, tempted by the hope of higher wages, are sometimes induced to seek employment on the road; but of such it may almost universally be said, 'The last state of that man is worse than the first.' Village boys who had previously borne a fair moral character, speedily become corrupted, while every serious impression made in our schools is soon obliterated. To those thus removed from the restraints of home, withdrawn from the regular influence of the parochial clergy, with little or the fear of God nor of man before their eyes, the misery of associating with the navvies is inconceivably great. Employed upon works continually progressing, they are specially carried beyond the reach of friendly visits, or pastoral exhortations, from the local clergy. No church could accommodate their numbers in addition to its own parishioners, even were desires after better things awakened in their minds. No clergyman, without neglecting his more especial charge, can devote his energies to the instruction of these benighted wanderers.

"Our object, then, is the employment of clergymen of our national church, who shall devote themselves exclusively to the religious instruction of these men. Neglected, they are moral pests wherever they go; while, cared for and instructed, they may be restrained from desolating our quiet villages with licentious habits, and eventually become themselves subjects of the grace of God. The attempt is not altogether new. Chaplains *have* been found willing to labour in this uninviting sphere, and navigators *have* leant a ready ear to their exhortations. *Funds, funds*, alone are wanting. A sum amply sufficient to maintain as many curates as are needed for the especial care of railway men might be raised, if all to whom this appeal may come would simply pledge themselves to give *sixpence* every time they travel by railway, and to induce their friends to do the same.

Who grudges a sixpence? Who will miss a sixpence? Who will not rather rejoice to contribute this trifling sum towards relieving the urgent spiritual wants of a large body of men whose profligate habits now contaminate every parish into which they come?

"You will feel it a blessed privilege to support Christian missions in foreign lands, will you not feel doubly bound to pity and to care for those who are perishing before your eyes? You, whose hearts are not yet touched by the wants of the heathen, will you not at once be roused to feel for your *own* countrymen? You, who desire to fulfil the sacred command, 'Owe no man anything, but to love one another,' will you not consider yourselves in debt here, and hasten to pay willingly, nay joyfully, this self-imposed tax, dating it from the very day on which the suggestion falls into your hands?

"This object you may also effectually and easily promote by circulating this, or any suitable appeal, and by offering to receive the contributions of the many who might be willing to *give*, without liking the trouble of *collecting*. Many sixpences have already been received from Scotland, and various other parts of the kingdom. It is for us to use the means, humbly relying on the Divine assistance for a blessing,

"'With good
Still overcoming evil, and by *small*
Accomplishing *great* things.'"

THE LONDON BRIDGE RAILWAYS.

To the Editor of the Railway Times.

SIR,—In your last number a letter appeared under the signature of "A Shareholder in One of the Companies," on which I beg to offer a few remarks.

The mode your correspondent proposes for consolidating the four Companies would undoubtedly be satisfactory to the shareholders of one line, and of one only, namely, the Brighton; and for this reason, that the market value of the Brighton shares is very much nearer their true value than the shares of either of the other Companies.

The Croydon and South-Eastern especially are selling at prices far below their real value, as may be easily demonstrated by any one who will take the trouble to make a calculation on the subject. It is, therefore, absurd to suppose that the proprietors of the two last-mentioned lines would submit to such a wanton sacrifice of their property as the execution of the scheme of your correspondent would involve. Instead of such a wild *attempt* at an immediate incorporation, I would suggest that one of the Companies should for the present undertake, entirely, the conveyance of the traffic of the Croydon, Brighton, and Dover lines, the expenses and profits being apportioned by *disinterested* arbitrators, chosen by the three Boards of Directors. I imagine this would effect a saving in the aggregate expense of working equal to four-fifths of the whole amount which could be saved by an entire amalgamation of the three Companies, and would at the same time pave the way for an amalgamation at a future period. In the meantime, the resources of the South-Eastern and Croydon lines would have time for development; and their real value be, in consequence, more correctly appreciated.

I remain, Sir, your most obedient servant,

A DOVER SHAREHOLDER.

December 19, 1842.

NOTES TO THE TRAFFIC TABLE
(on the opposite page.)

Main line, 53 miles; Tewkesbury branch, 2. — Total ngth, 55 miles.

The total length of line and branches is 25 miles:—15 iles of passenger and general traffic, and 10 miles of al traffic alone. The Company are now before Parlia- ent for power to raise the capital to 500,000*l.*

The total amount of stock on which dividends are pay- le is 750,000*l.*

Receipts include the Northern and Eastern toll, &c.

Capital of 1,057,800*l.* is exclusive of the Chester and ewe line, which cost 458,238*l.* The receipts include ose derived from the use of the Liverpool and Man- ester and Chester and Crewe lines, as also the toll om the Manchester and Birmingham Company. The isor employed to ascertain the daily receipts per mile 121 (85+15+21.) The Company do not now carry ods to Manchester.

The receipts include those derived from the Chel- ham and Exeter lines; the former opened for 18 les, and the latter for 44½. The divisor employed to certain the daily receipts per mile is therefore 180½ 81+18+44½.) The *rent* of the branch lines is together out 2,165*l.* per week. There is likewise a *toll* payable the Exeter Company of a farthing per passenger and r ton of goods per mile travelled.

The dividends have been hitherto (up to 31st Decem- r, 1841) appropriated to completing the line and works.

Ten per cent. is the maximum dividend allowed by e Company's Act.

Deduct from receipts 487. 1s. 6d. for weekly rent of lesbury line. The dividend is *nominally* at the rate 10*l.* per cent., but to the original shareholders it is ual to upwards of 11*l.* per cent., as the dividend on the iginal shares is ; and, on 100*l.*, although only 90*l.* nes is called for. In calculating the receipts per mile, the en miles of the Aylesbury line are included.

At the last meeting no dividend was declared, the posable balance from the previous six months' work- ng being only 1,472*l.* 10s. 9d.

The length stated includes the Shoreham branch. e Croydon and Greenwich tolls are not deducted from amount stated in the Table. The traffic of the six nths produced 63,526*l.*, and there was a balance from previous half-year of 12,472*l.* Out of these two ounts combined, the dividend (after making certain uctions) was paid.

The capital of 741,000*l.* includes the new capital for ndon and Brighton station. The amount in the ble does not include the Toll from the Brighton Com- y.

Capital of 933,000*l.* includes new capital for widening line, &c. The dividend of 7*s.* 6*d.* per cent. does not er to the preference shares on which 5 per cent. is reated. The amount in the Table includes the re- pts from the footpath, but is exclusive of the Brigh- , Croydon, and Dover toll.

e dividend is calculated on the money actually paid up thon of the shares having been issued at par in ts. onat.

Including Toll, &c., from Sheffield Company, and deducting omnibus charges, &c., and subject to pay- nts to the Grand Junction Company.

Canal cost, 169,000*l.*; railway, 672,165*l.* 16s. 1d. The pts given are however those from the railway only.

The 2,660*l.* 2s. 11d. are the receipts after deductin nibus charges, and payments to other Companies.

The receipts for goods, &c., include, horses, 2,... s. carriages, 53*l.* 11s. 0d.; dogs, 24*l.* 19s. 0d.; parcels, 19s. 6d.; cattle, 427*l.* 11s. 0d.; corn, 27*l.* 4s. 6d.; ... goods, 50*l.* 3s. 8s.; coal and lime, 2,...*l.* 14s. 0d. ...*l.*, 960*l.* 6s. 2½*l.*

The amount of stock *created* is 3,000,000*l.*, on which ends are payable; and the sum of 800,000*l.* is bor- ed money at interest. The 3,000,000*l.*, however, is final, inasmuch as the shares were some of them is- ed at a discount which reduced the actual amount to 4,500*l.*, viz.:—15,000 shares at 100*l.* = 1,500,000*l.*; 90 of 50*l.*, issued at 40*l.* = 600,000*l.*; 22,500 of 20*l.* 8*l.*, issued at 21*l.* 1*s.* 4*d.* = 480,000*l.*; total 4,500*l.* The details of the receipts are as follows— engers, 1,936*l.* 11s. 7d.; carriages and horses, 86*l.* d.; parcels, 235*l.* 9s. 1d.; mails, 50*l.* 5s. 9d.; handise, 992*l.* 17s. 9d.; minerals, 22*l.* 6s. 2d.; e, 24*l.* 8s. 8d.— Total, 3,654*l.* 4s. 1d., including h Midland proportion of Manchester and Leeds , and amount received for Sheffield and Rother- Company.

The receipts are after deduction of Liverpool and chester toll.

The returns are subject to the deduction of rent to astern Counties' Company (about 134*l.* weekly), and oll of 4*d.* on such portion of the passengers as pass their railway. The 32½ miles stated as being open for include the portion of the Eastern Counties' line d over by this Company.

The capital of 531,000*l.* includes that provided for ur and works as well as railway. The dividend a year (since opening of line).

The returns are inclusive of Manchester an Birming oll.

The length stated includes branches.

The traffic stated does not include the Leeds and

TO CORRESPONDENTS.

Investments in Railways.—We are constantly receiving applications for advice with respect to the sale or purchase of particular shares. We have repeatedly stated, that we are very unwilling to offer any opinion upon such points, and, indeed, our readers have the same data as ourselves to refer to for a just judgment. Nevertheless, as they *will* have our opinion, we cannot refuse to give it. We wish them, however, to bear constantly in mind, that we do not, in any instance, hold ourselves answerable for the event. The course we recommend to our correspondents, is simply what we ourselves would follow, were we buyers or sellers under the circumstances detailed by them respectively. With this caution, which we shall take care to keep before parties who apply to us on such subjects, we proceed to notice the applications of the week. We may just add, that the firmness and letters have no reference whatever to our trade list, or to the affairs of any railway. We cannot notice questions where this rule is violated. In order that we may not be subjected to needless questions, we must have the name and address of every inquirer, although the answers may be given under a fictitious designation.—Ajax. *We would not sell at present, but wait for better times.*—Z. (*Wigan*) *None of the numbers fall under the remark referred to, but we do not think that No. 6 will be sufficient to maintain the present price.*—Ardent. *Then such we would sell would be Nos. 5, 6, and 11, particularly 6. We would purchase Nos. 3, 17, and 1.*—W. *We would not sell either No. 1, or No. 2. The other lines best for investment are Nos. 5, 14, 6. Nos. 3, 6, and 12, are also good fair. Nos. 7, 8, and 9, especially 8.*—Stella (*Leicester*). *We would not hold No. 1. The prospects of Nos. 2 and 3 are good: No. 4 will go down: No. 5 will not be injured; No. 6, about 5 per cent. We do not know anything as to the call.* P.P. (*Cambridge*) *must write a few lines, and we will give our judgment as to the test.*—X. A. (*Bath.*) *We would invest further. The shares will not, we think, be lower Ultimately, the line will pay. We have written for the map, also in the P.S., but there are strong objections to its adoption.*—H. B. (*Cheapside*) *We would purchase further, at least to the extent named. Ultimately the investment will pay.*—B. S. (*Pimlico*) *Nos. 3 pay very well, even at present prices, but we have not a doubt that Nos. 6 and 7, if bought low, will in two or three years return a larger profit to investors. We do not know much of No. 1. Do not purchase No. 5. We think most of the lines named will remain stationary for some time.*—A Subscriber. (*New road.*) *We would not invest further in any of the lines named in the P.S. of the letter, but assuredly we would not sell at present prices. Of the others, buy Nos. 3 and 17, if you have money to space for a year or two. Next to these, we would recommend Nos. 15, 2, and 1. Do not meddle with the others.*—West-cha. *If no answer was returned before, it must have been because then, as now, the name and address of the applicant was not given.*—A B. (*Carnforth*) *The only new question to buy is No. 3; next to that No. 1. Whether you do pay them No. 4 and No 2.*—C. D. E. (*Lancaster.*) *Nos. 1 and 3 will ultimately pay well; and Nos. 5, 7, and 18, in a less degree. No. 4 will give about 5 per cent. No. 6 is too high. The others it is not necessary to mention.*—M. A. *The best is No. 6; next best 4 and 1. Do not attempt the others.*—Spes. *We would sell at once. We think there is very small "chance" of the "arrangement" referred to, at least for some considerable time.*—Mr. J. T. (*Ashburne.*) *We would buy more.*—Suspicious. *The shares for purchase in the following order: Nos. 5, 16, 9. Do not buy the others. Most certainly we should sell No. 2, and perhaps No. 4, but none of the rest.*

A Subscriber (*Leeds*) *would appear as if paying the gentleman referred to, and would probably do him mischief instead of good.*

Kent.—*In the letter under this signature in our last, the words "undeniable notoriety," should have been "unenviable notoriety."*

P. V. D.—*We will make inquiries.*

There is no mistake on our part in the matter alluded to by our Lawton correspondent.

A Leeds Acti... *thanked for his attention, but the parties themselves have forwarded their last "Circular." It is not worth while, however, to attack further such "small fry" with which we confess we are not at all sorry to find they have dealt with what we said last week. If they "keep civil tongue in their heads" they may pursue their course without molestation from us. We rise then, however, to have a cast. Our correspondent's laugh at some affectation of learning is very natural. To say nothing of Junius, even in their last Circular they quote not only Sir Robert Peel and Adam Smith, but Lord Bacon! Bacon and Brokers! The association is truly Whittington.*

Eastern Counties' Railway.—*The letter forwarded last week by Cave would be inadmissible, were it solely because it was sent simultaneously to another journal. There is another and further and more serious objection to it, namely, that it is replete with mis-statements, and misrepresentations. We should be loth to believe that Justus had any official connection with the Company, but really, we feel very anxious on this point, when we see allusions to matters which none but such parties ought to know, to say nothing of a vast deal of compliment to certain persons, at the expense of others.*

Blackwall Railway.—*We received the letter of* A Suffering Shareholder *last Friday, alleging and complaining that Captain Routh, son of the Chairman, was in the receipt of a large salary as Managing Director. We did not time to make the necessary inquiries previous to our last publication, but have since ascertained that there is no truth whatever in our correspondent's allegation—that, in fact, Captain Routh, although extremely active and useful in the management of the line, never received one farthing beyond his quota of the allowance unanimously voted to the Board by the proprietors, and which allowance, it will be remembered, was voluntarily given up by the Directors nearly a year ago.*

E. D. C. (*Stratford*) *We shall probably take the matter in hand ourselves shortly. We are obliged to our correspondent nevertheless.*

A Friend to Publicity *must be in error. We are assured that the fact is as was stated, but if he will give place and date, we shall make further inquiries.*

A Constant Subscriber *is very foolish to be frightened by such statements. We know that the party referred to is a shareholder, and we believe a very large one.*

An Old Reader *is thanked. With respect to the matter of his present note, we can only say that the proprietors may "go further and fare worse."*

A Friend in Secret *was noticed in this department of the paper at the time the first letter reached us. That letter has, according to our custom, been destroyed.*

T. P., *who writes on the subject of the North Midland Railway, should give his name and address, otherwise what is the use of his writing to us "confidentially," as he calls it?*

A Croydon Proprietor *should attend the meeting on Tuesday and put his question, when he will without doubt receive an answer.*

Northern and Eastern Railway.—"*Is it true,*" *inquires a correspondent, "that the Directors of this Company recently gave 20l. towards a prize fight, for the purpose of securing the presence of the 'gentlemen of the ring' along their railway?" We give it not.*

We have to curtail our Colonial notices for the purpose of completing in the present volume Mr. R. Stephenson's very interesting Report on Anglo-French Railways, and of getting rid of other arrears. Next week we shall have room for very little matter sent after this date.

THE RAILWAY JOURNALS.

The Stamp Returns for April, May, and June, just published by Order of the House of Commons, enable us to complete the Returns for the year ending the 30th of June last. The results, as affecting the railway journals, are as follows:—

RAILWAY TIMES.....	146,374
Railway Magazine	68,500
Majority in favour of the RAILWAY TIMES ..	77,874

from which are to be deducted 10,874 Supplement stamps used for double numbers, still leaving the ordinary circulation of the *Railway Times* just about double that of its contemporary.—*November* 17, 1842.

THE RAILWAY TIMES.

SATURDAY, DECEMBER 24, 1842.

IMPROVIDENCE is the peculiar characteristic of the London and Brighton Railway. In improvidence was it conceived—for what could be more reckless than to propose to carry a railway over high mountains and deep valleys, when by a *detour* of some four or five miles they might have been avoided; in improvidence was the Act for the railway obtained—for where shall we find another such instance of profuse and profligate expenditure as the

Digitized by Google

Parliamentary proceedings of this contest exhibit; in improvidence was the line laid down—as witness the four lines of rails with their extra switches and switchmen for some ten or a dozen stations, which altogether hardly produce a net receipt equal to the pay of one single switchman; witness also the embankments formed of "slush," to carry the rails, and the acres upon acres of solid embankments formed of the chalk carried to spoil; and witness, moreover, and above all, the singular anomaly of side cutting, without limit, to form the embankments—and spoil, without end, carried from the cuttings. With improvidence is the traffic conducted, as would most glaringly appear upon a searching examination of the various items of expenditure; but improvident beyond all past and present improvidence is the proposition to carry a new line of railway from Croydon to Nine Elms. What! expend some 700,000*l.* or 800,000*l.*, when there is the Croydon Railway ready made, of which the Brighton Company have the use, by agreement, upon terms so favourable that they are enabled to travel over it more cheaply than they can on their own line—so cheaply, indeed, as to compete with and undersell the Croydon Company on their own line! What! expend, or seriously propose to expend, so vast a sum of money, not to accommodate and divert *all* the traffic which now passes over the Croydon Railway to and from London Bridge, because, with all their improvidence, they never contemplate anything so suicidal as running only to Nine Elms, but to accommodate and divert that small modicum which would prefer a terminus in that distant region—and that too at the additional constant expense of double trains for 10 miles, or, in other words, of 10 miles increased distance each journey, equal at least to one-fifth increased working expenses! My Lord Huntingtower, in all the wildness of thy extravagance, thou wert a prince of prudence compared with those who seriously contemplated this most improvident scheme!

But to what is all this improvidence to lead? Not to dividends, most assuredly—at least not to dividends *out of profits*; to dividends *out of capital* it may, so long as the construction account is unclosed, and that convenient receptacle is open for inconvenient items of traffic expenditure. Once close that comfortable seat and cover for extravagance, so that the *true* amount of the current expenses and interest on borrowed capital must be placed in juxta-position with the current traffic receipts, and the infallible result of all this improvidence will become most painfully apparent. Shareholders, will you wait that happy moment? or will you not now exert yourselves? A strenuous effort *now* may effect some good, but let the reign of improvidence continue a little longer and all your labour will be in vain!

We call attention to Mr. C. PENFOLD'S letter in another page, and to other communications on the same subject.

It were in vain, we suppose, to expect that police magistrates should exercise their important functions otherwise than as the caprice of the moment may incline them. The records of the inferior courts, as registered in the columns of the daily press, supply instances without number of the most monstrous violation, not only of every rule of law, but of every principle of justice, as practised by the stipendary magistrates of the metropolis, between whom, indeed, and the Great Unpaid of the provinces, there appears to be but a faint line of distinction. The former are kept very considerably in check by the vigilance of an independent press; but, nevertheless, their peculiarities will frequently break forth, and at no time more conspicuously than when railways are directly or indirectly concerned. Take as an example the following cases which have occurred at the Marylebone office in the course of the week:—

"On Tuesday Charles Martin, a private in the 3rd Battalion of Grenadier Guards, was placed at the bar of Marylebone Police Court, before Mr. Rawlinson, charged with having, under the following circumstances, defrauded the London and Birmingham Railway Company of 10s. 6d.

"William Penson, ticket-collector, stated, that on the arrival of the third-class train at the Camden station, at 10 on the previous night, the prisoner amongst other passengers alighted, and when asked for his ticket he replied that he had lost it. His fare was then demanded; and as he said he had no money, he was taken on to the Euston-square terminus, and given into custody.

"Mr. RAWLINSON (to the prisoner)—What is your answer to this?

"Prisoner—I paid my fare, Sir, from Rugby to London, and put the ticket in my cap. I took my cap off once or twice, and I imagine the ticket must have blown away.

"Mr. RAWLINSON, to whom one of the Company's tickets was handed, examined it, and remarked, that if cards were used instead of such thin pieces of paper, it would, he thought, be much better.

"Penson said, he believed it was in contemplation to have cards very shortly.

"The prisoner produced his "furlough," and said he was in a hurry to get back to Winchester, where his regiment was now staying, his time having expired.

"The MAGISTRATE considering it very probable that the prisoner's story, as to the loss of his ticket, was correct, discharged him."

"Immediately after the former case was disposed of an Irishman, who gave his name Edward Manning, was charged with defrauding the same Company of 5s. 6d.

"Penson stated that the prisoner came up by the same train that Martin travelled by, and on being asked for his ticket by witness, he presented one for which he had paid 2s. 6d., and which entitled him to ride no further than from Blisworth to Leighton Buzzard; he was questioned as to why he omitted to alight at the latter place, and his reply was that he 'fell asleep, and was brought on to London without being aware of it.'

"Inspector Wilkinson said, that on the arrival of the trains at the different stations, the names of the places were loudly called out, so that passengers might know when they reached their destination.

"Mr. RAWLINSON—Very true; but this man says he fell asleep, and if that is really the case what crime can he have committed?

"The Inspector observed, that the plea of being 'asleep' was very frequently set up by parties who were desirous of having a cheap ride.

"The prisoner repeated his former statement, and alleged that he had never travelled by railway before.

"Mr. RAWLINSON said, that under all the circumstances, he could not impute any guilty intention on the part of the prisoner, and discharged him."

With such magistrates as this Mr. RAWLINSON occupying the seat of justice, travelling may be indulged in at a very cheap rate, by those who are not particular as to the means whereby a desirable object may be attained. It is but adding to a fraud upon the Railway Company a lie before the magistrate, and lo! they are dismissed. For what can be easier than to say that a ticket has been lost, so as to secure a passage throughout the whole length of the line, or to fall asleep at a convenient time, so as to go over a portion of the route? In neither case will the RAWLINSONS think of "imputing any guilty intention," and no doubt a frequent repetition of these ingenious devices, backed by a magisterial certificate of "mistake," will go far to tire out the Companies so as to disincline them from going through the farce of an inquiry at a police court. We recommend the experiment to all travellers by railway within Mr. RAWLINSON'S jurisdiction. We believe the Great Western Company are fortunate enough to come under his worship's protection.

Really, it is "too bad" that these magistrates should so constantly lean to the side of delinquents when Railway Companies bring complaints before them. In both the cases noticed above, the presumption was strong against the accused; in both there was, on the parties' own showing, great negligence, if nothing more. With regard to the "sleeper," the magistrate should at least have empowered the Company to take him back to the place which he *said* he wished to alight. If not more, this would have been a liberal act; and if guilty, a very appropriate punishment. But no! Although the Company's representative assured the magistrate "that the plea of asleep was *very frequently* set up by parties who were desirous of having a cheap ride," Mr. Justice RAWLINSON was in a merciful mood. "Under all the circumstances *he* could not impute any guilty intention on the part of the prisoner, and discharged him." Of course he did; but we wager a trifle that the next case that came before him, if it were that of a famishing wretch begging a loaf of bread, or a poor woman violating the provisions of the Act by attempting to earn a scanty pittance for herself and children by the sale of fruit in the street, was not so leniently dealt with. We take it for granted, that in future the Birmingham Company will not trouble his worship in cases similar to the present.

It appears from a statement put forth in the local newspapers that a deputation, consisting of the most influential gentlemen connected with Dublin, having waited upon the Lord Lieutenant "for the purpose of communicating him the resolutions adopted at a public meeting of the citizens of Dublin, which was held a short time since [on the subject of railway communication through North Wales between London and Dublin], and of calling his excellency's attention to the vast importance of all points of view of this great national and upon the considerations of which a Select Committee of the House of Commons had been for some months engaged during the course of the session," his Excellency received them most courteously, and expressed a strong interest in the undertaking.

We sincerely trust that no further steps will take place in bringing to a practical issue this very important matter. So much has been discussed, that little remains to be said upon *that* head. Action, not deliberation, is now to be the motto of all interested in the question.

Very truly does the *Dublin Evening Mail* remark, that "the proposed railway communication should not be viewed as merely relating to the advantages of the citizens and merchants of Dublin, nor the expense to be incurred effect same be thrown or looked

Digitized by Google

charge exclusively falling upon the Post-office revenues, but in the same manner that the Holyhead-road—one of the first roads in England, but now in a great degree rendered useless by the invention of railways—was made and maintained at the expense of the state generally. * * * Any plan which tends so closely to unite the capitals of the two countries, and to make them better known to each other, must afford the best and strongest arguments and means of putting down for ever the mad project of repealing the union. On this ground [adds our contemporary] we hail with pleasure the lively interest with which his Excellency was pleased to enter into the views of the deputation; and hope, through his powerful influence, to succeed in impressing upon the Government in England the vast importance of this communication."

SOME parties connected with the Birmingham and Gloucester Railway Company held a meeting in London the other day, for the purpose of organising an opposition to the present Board of Directors, but they took especial care that no person who was likely to give to the public fair account of what might transpire should be present. This will account for the non-appearance of a report of the proceedings in our columns. The *character* of the opposition may be gathered from the fact that the prime mover in it (and who was we are told the principal speaker at the meeting) is Mr. HUMPHREY BROWN, a discharged servant of the Company, who has an anxious longing to return to office. We take some blame to ourselves for having some time since allowed this person to occupy our pages, under the guise of "A shareholder." At that period we really believed him to be *bona fide* what he represented himself, but the moment we ascertained his true position, and that he was "a shareholder" only by the friendly transfer of one share or two shares (we forget which) into his name, we at once put an extinguisher on his effusions. We are not the apologists of the Gloucester Board, nor do we seek to stifle inquiry into their conduct, but we cannot suffer the HUMPHREY BROWNS of Railway Companies to come up as Reformers, without exposing and denouncing the indecency of such a proceeding.

A VALUED correspondent calls our attention to the necessity of a junction between the Dundee and Arbroath and the Arbroath and Forfar Railways. We are not minutely acquainted with the locality, but it would appear from all that we can learn, that such a junction would be very desirable.

The two lines, it seems, run into each other; but the stations being about one-third of a mile apart, the passage between the two is a species of purgatory, as luggage has to be removed and put into a carriage which is dragged by horse-power between the two points, as the rails pass through the streets of the town, many of the passengers walk, rather than get into the conveyance. The junction presents no difficulties; but the Boards are hostile, and it is said, have individual interests at variance with those of the shareholders at large. Those connected with Arbroath and its neighbour are interested in having the concerns of the two connect; those connected with Dundee and *its* neighbour, in forming a junction. The Dundee Board was much as a means of directing the current of shipment to themselves, from Arbroath; and now, owing to the double expense of maintenance, both are embarrassed. The cost and market-price of the two lines are much the same, and a blending or leasing would give, we firmly believe, a dividend which (except on the preferred shares) was not forthcoming last year. The saving in Direction, staff, engines, carriages, &c., is too obvious to require notice. We trust the shareholders in both lines will take the matter seriously into their consideration.

WE are pleased to have *any*-thing to say in favour of the Post-office authorities, and consequently to announce that, in compliance with the request of the inhabitants of the district, a morning mail is forthwith to run to Newcastle-on-Tyne, *via* Carlisle, from London.

Against this we have to set the grievance of which, in a memorial to the Postmaster-General, the people of Kendal so justly complain. It seems that the benefits of railway transit are in their case, as in others, entirely neutralised by slovenly arrangements at the local office. "The London morning mail arriving at 10 o'clock, is [they say] immediately attended to, and the letters most promptly delivered; but those by the Whitehaven, Glasgow, and Edinburgh mails, arriving at 2 and half-past 2 o'clock, p.m., are not delivered that day at all, but remain in the office until the following morning. A delay is thereby caused to some parts of the town of 24 hours from the time of their arrival before delivery to the parties addressed, from which great inconvenience is felt by the inhabitants, and the commercial class more particularly." One feels surprised, not only that such glaring anomalies are not at once rectified, but that they should by possibility ever have occurred.

We are sorry to see that the *Standard* is treating the defects of the Post-office management as a question of party politics. Nothing surely can be further removed from party or politics, or assuredly *we* should have had nothing to do with it.

A MISUNDERSTANDING (or perhaps we ought to give it a harsher name) has sprung up among the Directors or proprietors of the Great North of England and the Stockton and Darlington Railways, and in our advertising columns will be found a paper put forth by the latter Board. At present we are scarcely competent to give an opinion on the subject; but we would fain hope that it will not be long before harmony is restored. Should, unfortunately, the contrary be the case, we shall inquire further, and bring the offenders forward.

THE propriety of the course taken by the London and Birmingham Railway Directors, in proceeding against a young gentleman whom the "ardour of the chase," as it is termed, led to commit an act which might have been attended with most serious consequences, is proved by an occurrence which is thus noticed in the *Cheltenham Looker-On* of Saturday:—

"The Cheltenham stag-hounds, on Tuesday, had a narrow escape of adding another 'item' to the long catalogue of 'dreadful railway accidents' so carefully registered by the newspapers in the absence of debates in Parliament and overland despatches. The meet had been the *Rising Sun*, and the stag having given its pursuers a smart run thence in a circuit round the town, crossed the railway near Badgeworth, just as one of the Gloucester trains came up. The foremost dog was instantly crushed beneath the carriages; and had the train been a few seconds later the whole of the pack must have shared the same fate, as the hounds were at the moment coming full speed down the bank; but the engine being at full speed also, the train had passed before they crossed in pursuit, followed by such of the field as were up at the time. The stag was captured all safe at Badgeworth."

If "the whole of the pack" *had* "shared the same fate" as the foremost of the number, the loss would have been well deserved by those to whom they belonged, and who pursued their "sport" in so dangerous a neighbourhood; but had the train thus been upset, and the destruction of one or more passengers followed, it would have been unquestionably a very serious matter to the Railway Company. *They* would have been blamed, however unjustly; and this additional "'item' to the long catalogue of 'dreadful railway accidents' so carefully registered by the newspapers," would without doubt have exerted a baneful influence on other Companies also.

Have a Railway Company no remedy in such a case against the sportsmen? If they have *not*, it is the more requisite that they should strictly exercise their powers when men, not dogs, are the trespassers.

THE following has been sent to us with a request that we will support the proposition. The *principle* of the "proposal," of course, cannot fail to commend itself to every person connected with railways; but so much will depend upon the means by which, and the persons by whom, it is brought into practice, that at present we can only place the paper before our readers, reserving further observations till the plan is more fully before us. We shall have great pleasure in opening our columns to the discussion of the matter:—

"*Proposal for the Formation of a Society under the Title of 'The Railway Officers' Fund.'*

"One of the most marked features of modern society in England, is the great and increasing diffusion of the co-operative and mutual-assisting principle: and the (at present) most mighty result of the operation of this principle is the institution of Railway Companies.

"From the peculiar nature of their business, Railway Companies require the constant attendance and vigilant attention of officers and servants, of various grades, to a much larger number than almost any other institutions; and it is of the utmost importance to the safety and comfort of society, and greatly conducive to the interests of the various Companies, that the different parties employed by the latter should work harmoniously together.

"Next to the receipt of good and constant wages, nothing tends in so high a degree to produce faithful and efficient servants as the certainty of their wants being provided for in those times of sickness or infirmity incident to human nature, and in those scenes of adversity which frequently baffle the calculations of the most prudent.

"Provident Societies are established on some of the lines of railway, but they all have one great defect, they are local societies: and another defect is, the limited amount of benefits for which parties are allowed to subscribe, which causes the clerks and other officers to stand aloof.

"To remove these and numerous other objections, it is proposed to form a society, to be denominated 'The Railway Officers' Fund,' to be supported by the voluntary contributions of members, who at the time of entrance shall be in the employment of some Railway Company. The management to be confided to a Central Committee in London, with branches or agencies in all the chief towns having a railway passing near them. The objects of the society to embrace an allowance of a fixed sum to members during sickness, in old age, or infirmity, and to their families or nominees at their decease, upon a predetermined scale; endowments for children, and annuities for widows of members, might be added.

Digitized by Google

"In addition to the amount raised by the members, applicable to the above purposes, it is intended to form an 'Auxiliary Fund,' for the purpose of affording temporary or permanent assistance to distressed members and their families; and also to railway employés, not being members, who may have been prevented from making provision for themselves. This branch of the society will, it is presumed, be strongly supported by railway proprietors when the society shall be fairly set on foot; and the benefits afforded by it will be in proportion to the state of the fund. The Auxiliary Fund would also obviate the necessity for a Guarantee Fund, as it might be applied to the payment of any deficiencies arising in the 'Railway Officers' Fund' during the early stages of the society—an event, however, by no means likely to occur.

"So general a desire exists for the establishment of a society of this nature, of a comprehensive character, that no difficulty will, it is presumed, be experienced in forming a Provisional Central Committee in London, to draw up a prospectus, frame rules, and take other steps necessary for the formation of a society on the above principles.

"Communications from parties desirous of forwarding the above object are requested to be addressed, free, to Mr. A. H. Clarke, 15, Victoria-place, Stapleton-road, Bristol."

—o—

In our advertising columns appears a statement from the proprietor of an inn near the railway station at Derby, complaining of certain conduct on the part of the railway authorities. The statement being *ex parte*, we refrain from commenting upon it until the Secretary has had an opportunity of explaining; and that it may come before the parties affected, we notice it thus prominently.

—o—

A correspondent informs us that Mr. George Ross, of Duke of Cornwall Harbour and Railway notoriety, has been safely lodged in Whitecross-street prison under the late award. Assuredly, *we* have no reason to regret the occurrence.

—o—

A correspondent of the *Sheffield Mercury* suggests that some mark of respect should be offered by the proprietors of the North Midland Railway to Mr. Carr, of Sheffield, by whose exertions, he says, the late Committee of Inquiry was appointed. We should be glad to see honour given to whom honour is due, and for anything we know to the contrary Mr. Carr may have been principally instrumental in setting on foot the recent investigation; but would it not be as well to wait till it is seen what results that investigation will produce?

—o—

The following appears in a letter addressed to the Editor of the *Sun*. Can it be true? If so, it affords *another* illustration of the strange sort of management by which some Boards seem desirous to gain and retain public patronage:—

"When at Walsall, a few days ago, I wished to go to Wolverhampton, by the evening train, which leaves Birmingham about 7 o'clock, but was informed if I did so I should have to pay the fare all the way to Stafford, which by the second-class train would be 4s., and if I waited until the morning I might go by either first or second-class for 1s. I therefore waited until the following morning, and went by the first class, and paid only 1s. I was told this incongruity occurred twice a-day regularly."

—o—

Eastern Counties' Railway.—We understand that the Eastern Counties' Railway Company have given notice of an appeal to the Quarter Sessions against an order of the magistrates, by which they some months since were adjudged to pay 420*l.* as a penalty for stopping the road through Rowley-lane, Kelvedon.—*Essex Mercury.*

LONDON AND DOVER (SOUTH-EASTERN) RAILWAY.

Traffic Receipts for the week ending December 20, 1842—the Sixteenth Week of the Low Fares.

Date.	First Class.	Second Class.	Third Class.	Total.	Amount.

Add total to the 13th December, from last week's *Railway Times*				18,938
Total loss to the Greenwich Company in *sixteen* weeks by their prohibitive toll.....				20,127

RAILWAY MANAGEMENT AND SALARIES.

To the Editor of the Railway Times.

Sir,—The first railways being those in the great thoroughfares and populous districts of the kingdom, such as the Liverpool and Manchester, Grand Junction, and London and Birmingham, were opened to the public under very favourable circumstances. Large receipts left no doubt of a golden harvest—hence the Directors as well as the shareholders became intoxicated with the success of their efforts, and in their generosity bestowed salaries and emoluments of the most extravagant kind on the officials, and every one else connected in any way with the concerns. After a while, however, more sober views of the capabilities of railways began to be entertained. It became evident that excellent as the system was in itself, it had, by mismanagement and total want of everything like economy, become very unprofitable to those who had contributed the capital laid out in the construction of this wonderful means of locomotion. Hence a host of writers in your journal brought forward each his own project for checking in some degree the enormity of the evil; but, unfortunately, altogether without effect, for up to the present time railway salaries and railway emoluments *remain unchanged, untouched*—nay, the later constructed lines even, so far from profiting by the deplorable errors of the Companies which preceded them, actually adopted the same extravagant scale of remuneration, and are in consequence now in the most pitiable condition that can be conceived, several of the lines being worked, it may be truly said, for the sole benefit of bondholders and officials!

Now, as it is very well known that a very inconsiderable saving in expenditure makes a very great addition to the per-centage of the dividend, and as we have at last sufficient evidence that railway engineers have from 1,000*l.* to 1,200*l.* per annum for *the portion* of their services they dole out to the several Companies, whilst other officials are in receipt of sums proportionably enormous, I beg leave to be allowed, through the medium of the *Railway Times*, to call upon the shareholders in the United Kingdom, if they have not wholly given up all care for the remnant of their property, to come prepared at the next half-yearly meetings to vote fearlessly for the appointment of Committees of Investigation, whereby the expenditure and management of the several railway lines may be thoroughly overhauled and properly regulated.

I am, Sir, your most obedient servant,
A SUFFERER BY RAILWAY.

HULL AND SELBY RAILWAY.

To the Editor of the Railway Times.

Sir,—I want to know, through your journal, how far the Directors of this line will be justified in taxing their almost exhausted treasury by pursuing an expensive opposition to the Dock Company, in a dispute as to the best site for a new dock at that place.

It appears, by the newspaper reports, that the Dock Company have arranged to make the cut; that the site they choose is not in accordance with the views and interests of certain members of the Municipal Corporation; and that unless the railway shareholders bestir themselves, their whole immediate investment may be wasted in disputes between the Dock Company and the municipal body. Now, I trust, will be averted, either by the wisdom of the Directors voluntarily withdrawing their suit (which can only be a loss to their Solicitor) or being compelled to do so by *pressure from without* of shareholders. In the meantime, perhaps Mr. Editor, you will procure an answer to my query.

I am, Sir, yours, &c.
AN ORIGINAL SHAREHOLDER.

ACCIDENTS ON THE BLACKWALL RAILWAY.

To the Editor of the Railway Times.

Sir,—It is strange to me, as a constant reader of your journal, that I did not see a notice of an accident that happened on the Blackwall Railway in your paper of the 17th instant. On Saturday night, the 10th instant, a most serious collision took place between the coaches at the West India Dock station, and at Stepney station, on the return. The Poplar coach run into the coach at the West India Dock station—the Limehouse coach into Stepney, and smashed them to pieces: the traffic was stopped for the night. About six o'clock the Managers at Blackwall thought proper to start again without giving notice to all the stations; and some of them took their grip of the rope, and some did not. That was the second case of the kind that happened that week. The damage estimated at about 3,000*l.* sterling. Fortunately there were no lives lost.

If I see this in your journal of next Saturday I will give you every information in my power.

I am, Sir, yours, &c.,
THOMAS GOODFELLOW
A SHAREHOLDER.

December 18, 1842.

[We feel obliged to our correspondent for the first we have heard of the occurrence referred to.—Ed. R. T.]

Railway Accident in Belgium.—The *Courrier du Nord* of the 15th instant, announces the occurrence of a dreadful accident on the Quarouble and Valenciennes Railway. "About three o'clock in the afternoon of yesterday," it says, "a train coming from Brussels had just crossed the frontier, and reached the first houses of the village of Quaroube, when the engine, followed by a waggon carrying the baggage, and two others with passengers, left the rail and upset. The first waggon with the baggage was broken to pieces, and two others struck with violence against it. The stoker was killed, one of the guards had his shoulder shattered, and a brigadier of customs had a leg broken. The travellers escaped with a few bruises; two of them leaped out at the moment of the catastrophe, and were slightly wounded."

SUNDAY TRAVELLING ON RAILWAYS.

To the Editor of the Railway Times.

SIR,—I scarcely expected a reply from your correspondent "Christian," as I did not pen my remarks for the purpose of eliciting one, but more to show him that his view was not so incontrovertible *as he seemed* to suppose, than to commence a discussion on a subject upon which, from the mass of evidence, it is impossible to be brief and at the same time sufficiently clear and full, and which has been already treated at considerable length in your columns. However, as your correspondent has brought forward some new as well as very exceptionable matter in support of his views, I feel myself bound to reply to him, but shall do so as concisely as I can.

In the face of the Apostolical precept, "Let every man be fully persuaded in his own mind," which was referred to by your correspondent in his first letter, I do not wish to turn casuist, and settle cases of *conscience* for other people, more particufor the eminent individual to whom your correspondent alludes; and besides, as the conduct of others (even though they be its supporters) has nothing whatsoever to do with the original question started, which I take to be—*Is the Sabbath an ordinance of God, or is it not?* I shall confine myself to replying to that part of his letter which relates to this question.

Your correspondent states, that it would be incumbent on us to observe the Sabbath if Our Lord had sanctioned that part of the law relating to it, and then asserts that "the Sabbath did not receive his sanction." Upon what he grounds this assertion he does not say, but I presume he hazards it on the strength of the fact, that Our Lord did not openly command the observance of the Sabbath; or perhaps because he performed miracles on that day, and said that it was "lawful to do well on the Sabbath-day." From the first of these, however, (which is the only plausible one among them) I cannot at all consent to the drawing of such a conclusion; for if I did, I must also allow that his *never openly forbidding the worship of images* proves that the Second Commandment is abbrogated and justifies idolatry. In neither case, then, can we draw any conclusion from such negative data, particularly in the face of Our Lord's positive declaration, that he was "not come to destroy the law."

Our Lord clearly only reproved for those sins prevalent amongst the Jews at that time, and as idolatry and Sabbath-breaking were not among these, of course we do not find him enforcing the corresponding commandments. The Fourth Commandment, however, was only observed by the Pharisees formally in the outward ceremonies, these being carried to an unwarranted extent; and accordingly we find Our Lord reproving their hypocrisy, and showing that it was lawful to heal or do good on the Sabbath-day. That this was not, however, so great a charge as "Christian" seems to suppose, he will see by turning to the charges regarding the Sabbath and fast days given by Isaiah (chap. LVIII.)

> "Is it such a fast that I have chosen? a day for a man to afflict his soul? Is it to bow down his head as a bulrush, and to spread sackcloth and ashes under him? wilt thou call this a fast, and an acceptable day to the Lord? Is not this the fast that I have chosen? to loose the bands of wickedness, to undo heavy burdens, and to let the oppressed go free, and that ye break every yoke? Is it not to deal thy bread to the hungry?" &c.

Also—

> "If thou turn away thy foot from the Sabbath, from doing thy pleasure on my holy day; and call the Sabbath a delight, the holy of the Lord, honourable; and shalt honour him, not doing thine own ways, not finding thine own pleasure, nor speaking thine own words, then," &c.

Your correspondent then denies that the Fourth Commandment is part of the moral law, and, without showing us on what authority he separates it from the other moral laws in the Decalogue, gives us as a reason, that a man might "observe the Sabbath with the utmost rigour, and yet be at that very time planning the most dreadful immoralities!" This would indeed be a curious way of keeping the Sabbath *holy*; and I can hardly think "Christian" was serious in bringing forward such a proof; for we are told that *the intent* to commit a crime is a breach of God's law, and surely the breaking his laws on the Sabbath is a breach of the Sabbath. The verses quoted above also show this to be the case, and that the keeping of the Sabbath is not to be looked on as a mere *ceremony*, which seems to be your correspondent's idea of it.

I am sorry to find your correspondent bringing forward an objection which I cannot but consider as of an infidel tendency, it being against the *truth* of the passage I referred to in Genesis. He tells us that it is not *reasonable* to suppose that the Great Creator could have "rested from all his work." I might remark in answer to this, that totally above the comprehension of a child (for instance) as is a deep mathematical investigation, infinitely more so is the nature of the Creator above ours; so that to reason about it, on the data of *our own experience*, which forms the only data we can possibly have, were absurd. But there is no need, Sir, of enlarging on this topic, for I need only refer your correspondent to his dictionary to show him that when the Creator *ceased* from his work he of necessity *rested* from that work; *resting* literally meaning only stopping or ceasing from an occupation, and not at all necessarily implying a recovery from fatigue, as your correspondent seems to understand it. By us, indeed, who cannot work without being weary, rest, being always *simultaneous* with recovery from weariness, is often considered as synonimous with it; but this is not its real meaning. So that, after all, I am inclined to think that among his "many arguments" in favour of a day of rest, your correspondent will scarcely find one so likely to convince mankind as the precept alluded to, "And God blessed the Seventh-day and sanctified it; because that in it he had rested from all his work."

Your correspondent now broaches an objection which he did not bring forward before, viz., the change from the seventh to the first day of the week; but as he only mentions it, without replying to the arguments alluded to in my last, I shall not enlarge upon this branch of the subject, but shall just mention the following, rather novel perhaps, view of it, which tends to show that the Jews at the present day tacitly, though perhaps unintentionally, acknowledge that setting apart one day in seven is obeying the Fourth Commandment; for none of them that I have ever heard of think it necessary to make the 24 hours of their Sabbath agree exactly with those of a Jewish Sabbath *at Jerusalem*. And accordingly, the Sabbath of the Jews at Calcutta coincides with the time from the Friday morning till the Saturday morning of the Jews in the United States, so that the American Jews are at their usual employments during part of the Sabbath of the Calcutta Jews; yet surely the most Pharisaical among the latter could not accuse the former of breaking the commandment, which says, "Six days shalt thou labour and do all thy work; but the Seventh-day is the Sabbath of the Lord." Indeed, if we examine this expression, and suppose the case of a person similarly circumstanced to Robinson Crusoe when he had lost his reckoning, setting apart one day in seven, we must allow that, if he did all his work *in six days and kept the seventh holy*, he literally and fully obeyed the Fourth Commandment. I do not mean to suppose that such a case could occur, but only give it to show the literal meaning of the words of the command ment.

I am inclined to think that your correspondent would find it difficult to *prove* his assertion, that St. Paul classed the Sabbath among the "shadows and beggarly elements;" although every one will allow that he then alluded, among other rites, to *the Sabbaths* mentioned *only* in the ceremonial law. I remain, Sir, your obedient servant,

November 30, 1842. R. W. T.

SUNDAY TRAVELLING ON RAILWAYS.

To the Editor of the Railway Times.

SIR,—However decided my opinion on the question of Sunday travelling, it is not my intention on the present occasion to discuss the subject, but, by your permission, to offer some observations on "Christian's" communication in your paper of the 19th ult.

He says, "Whatever of the moral law of the Old Testament received the sanction of the Founder of Christianity, the followers of Jesus are bound to observe; the Sabbath did not receive his sanction, therefore the observance of the Sabbath is not incumbent on the followers of Jesus."

How does it appear that the Sabbath did not receive the sanction of the "Founder of Christianity?" At the period of the Incarnation, the observance of the Sabbath was a standing ordinance (the seventh day, no doubt). The Redeemer commenced his ministry in observing it. "As his custom was, he entered into the synagogue on the Sabbath-day." .. "And it came to pass also on another Sabbath-day." .. "And it came to pass also on another Sabbath, that he entered into the synagogue and taught." .. "Jesus went about all Galilee teaching in their synagogues and preaching the gospel of the kingdom." .. "Straightway on the Sabbath day he entered into the synagogue and taught." .. "And he entered again into the synagogue, &c., and they watched him, whether he would heal on the Sabbath-day." .. "And when the Sabbath-day was come, he began to teach in the synagogue."

These passages are more than sufficient to prove that the Saviour *did* sanction the observance of the Sabbath; and to prove that its observance is not obligatory under the New Testament dispensation "Christian" should be prepared with evidence that it has been abrogated, and consequently the neglect sanctioned which he appears so anxious to inculcate. In the absence of such evidence, it is clear that it was to be continued; nor was a special command necessary to enforce that which then existed, and had continued from the time of the Jewish legislator.

When the Redeemer was charged with a breach of the Sabbath by his enemies, his reply more than sanctioned its observance, "Wherefore it is lawful to do well on the Sabbath-day." If this was not intended to distinguish between acts of mercy and necessity, in contradistinction to the general avocations of life, there could be no force in the declaration, none whatever, because it is lawful to do well on *any* and *every* day; and, I submit, equally demonstrative of our Lord's opinion, as though he had given a direct command. He came to fulfil "the Law and the Prophets," and why it should be assumed that the Fourth Commandment of the Decalogue was no longer to be binding, is difficult to understand.

It might be urged that the Jewish Sabbath is not the question in dispute. True, but proof of the observance of a Sabbath-day is equally conclusive from the earliest ages of the Christian Church; the first of the week—the day of the resurrection—having been substituted for the seventh.

We read that the Apostles "went into the synagogue on the Sabbath-day." "The Gentiles besought that these words might be preached to them the next Sabbath." "And the next Sabbath-day came almost all the whole city together to hear the Word of God." "And on the Sabbath-day we went out of the city by a river side, where prayer was wont to be made." "And Paul, as his manner was, went in unto them—and three Sabbath-days," &c. "And he reasoned in the synagogue every Sabbath;" thus far the Acts of the Apostles.

In Romans we read, "And upon the first day of the week when the disciples came together to break bread, Paul preached to them." In the Revelations, 30 years after the Ascension, "I was in the spirit on the Lord's-day."

The practice of the Apostles of our Lord will admit of no contradiction, and that the observance of the Sabbath-day has continued from their time to the present I will assume is not questioned.

There is an inconsistency in your correspondent's avowal, and the signature under which he writes. It is extraordinary, professing to be a Christian, he should be emulous of the unenviable distinction of calling in question one of the most sacred and valuable privileges which, as Christians, we possess; to be consistent, he should either abandon his present position, or adopt a signature more in accordance with his sentiments.

I am, Sir, your obedient servant,

G. J.

Bristol, December 6, 1842.

FOUR-WHEELED AND SIX-WHEELED ENGINES.

To the Editor of the Railway Times:

SIR,—Loss of life has again occurred in connection with the use of a four-wheeled engine; and, as you observe in your last week's paper, requires the question to be well examined as to the safety of four-wheel in comparison with six-wheel engines.

Mr. Parker's evidence proves that no negligence or want of foresight can be attributed to the London and Birmingham Company or their servants; consequently, that only on the doctrine of chances can they guarantee the safety of any engine on their line under the present arrangement, and that an accident with the same result may happen to-morrow, with this difference to the passengers, not the driver, that the distance is lengthened between them and the engine by the introduction of a luggage van.

The experiment of the London and Birmingham Railway Company, reported in your paper some time back, proves, that on the present plan of engines no danger is to be feared from the fracture of an axle in the centre; but should the breakage occur outside the bearings, as in the late accident, the engine must turn over, as the wheel necessarily comes off; and it is plain no four-wheeled engine can run on three wheels without the fourth. Mr. Bury has issued a circular to prove the superior safety of inside over outside bearings. The four-wheeled engines are mostly made with inside bearings, the six-wheeled with outside. The diagram in the circular proves clearly, that, should an axle break in the centre on a four-wheeled engine with inside bearings, no accident will occur, and *vice versâ* with outside; but he has not mooted the point as regards a fracture outside the bearing between the wheel and bearing, as in the late accident; with outside bearings the wheel would not, however, have left the engine, though the axle were broken in several places. But this is a minor point.

I think from the foregoing, that the fact will be admitted, that as present science and practice stand it is impossible to warrant an axle as perfectly sound, and that fractures must and will occasionally take place. The case will then stand thus—that the machine requires to be constructed in such a manner that the breakage of an axle or wheel may be immaterial to its safety. The using of inside bearings will, as clearly proved by the experiment of the London and Birmingham Company, prevent an accident from the fracture of an axle between the bearings. This past, how obviate the danger in a four-wheeled engine, if the breakage occur outside the bearings, and the wheel comes away, leaving it standing for rather running, on three wheels? For this case there is no remedy, except doing as was done after with the four-wheeled engine that caused—or, I will put it happened to be in—the sad affair on the Brighton line, the putting an additional pair of wheels to the hind part. Had the engine in the late instance on the Birmingham line had a pair of wheels behind, as well as in front of the driving-wheels, the accident would not have occurred. Questions ought to have been put by the Coroner or Jury, to cross-examine Mr. Parker and Mr. Bury, to elucidate the matter more fully of four or six-wheeled engines in the case in point.

This question of four or six wheels extends itself further: if requisite for engines, it is equally so for carriages—the greater the length ("in moderation") of carriages or engines, the greater the steadiness.

Mr. Bury has of late increased the length of his four-wheeled engines considerably, to prevent the uneasy, and unsafe, and jumping motion.

The length of a carriage or engine being an advantage, why are the public to be denied the superior safety of the six wheels?

When Mr. Stephenson made, or caused to be made, carriages for the Liverpool and Manchester Railway, they were four wheeled, and the wheels very close together—distance of centres of axles, I believe, not more than 6 feet 6 inches; about 9 feet is the length apart of the majority of the four-wheeled carriages built in the present day.

Many railways prefer still longer, and resort to six-wheeled, probably not so much from the conviction of their safety, as daily experience of reduction of wear and tear in carriages and rails, and consequent freedom of oscillation to the passengers.

When once the question is settled by the majority of the practical and scientific men of this country, that carriages and engines on less than six wheels are objectionable, it will be for the Government to prevent their further building, and order the present stock to be gradually consumed.

I remain, Sir, yours truly,

A. A. A.

CHESTER AND BIRKENHEAD RAILWAY.

To the Editor of the Railway Times.

SIR,—I hope you will give this note a place in your useful paper, to rouse from their lethargy the shareholders in the Chester and Birkenhead Railway.

I am one of the original unfortunates; my shares which cost 50*l.* cannot now be sold for more than 18*l.* 10*s.*, and lately the number of shares was doubled, and the new issue made at 17*l.* This shows a degree of depression altogether unaccountable.

I beg, therefore, to suggest to the shareholders, the propriety of following the example of the North Midland people. Let a Committee be formed to inquire into, and report upon, every matter relating to our railway.

It may be answered, that a Committee was formed last year and made a Report. 'Tis very true; but the labours of that Committee stopped just as they were beginning to be useful. I will, however, refer to one of the paragraphs in their Report, which even now may not be out of place; it is as follows:—

"Your Committee also strenuously recommend, that the present opportunity should be taken of making some changes in the Board of Direction, some of the present names on the list of Directors are those of persons who have shown so little confidence in the undertaking as to have reduced their shares to the smallest number which would qualify them to hold their places at the Board, whilst others have been most irregular in their attendance. Judgment, energy, and attention on the part of the Directors, coupled with the support and confidence of the proprietors, are imperatively required at this present critical juncture of the Company's affairs; if these are obtained and properly directed, they would, in the opinion of your Committee, soon place your railway amongst the most flourishing in the kingdom; whilst, on the other hand, apathy, irregularity, and indifference on the part of the Directors, and want of perfect confidence on the part of the proprietors, would prove fatal to its present interests and future welfare."

I want not a Committee to rip up old sores, from which nothing good can be got; but I wish that the shareholders and the public should become acquainted with all the bearings and interests of our concern as it now is—that the errors of our Direction (of which the public entertain a very contemptible opinion), if any, shall be pointed out—that there shall be no *mysteries* or concealments about selling our land, and that the facilities we can afford to the Grand Junction Company be pointed out for the interest of both concerns; and further, that our Direction shall be in the best hands—as until these things take place, the value of our property cannot be known and appreciated.

I also recommend that a list of our shareholders be printed and circulated, showing the number and nature of the shares held by each, for the purpose of guiding towards the election of those men as Directors who have most interest in the railway, and who will probably give their services without *payment*. I am, Sir, yours, &c.

A SUFFERER FROM MISMANAGEMENT.

Chester, December 13, 1842.

NORTHERN AND EASTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—The Directors of this railway, in a Report read to the meeting of proprietors held on the 5th October last, after referring to "the temper and *obvious want of confidence*" manifested by the proprietors at a previous meeting, conclude by stating that "it is their intention, *so soon* as they are released from their present personal liabilities by the appropriation of the forfeited shares, to resign their trust into the hands of the proprietors, that they may determine upon such mode of management as they may think best, and place that management in the hands of those *who* they may think best entitled to their confidence."

The shares in question *are* now appropriated, and I presume therefore the resignation of the Directors must immediately follow, and that many weeks will not elapse before a special meeting of the proprietors will be convened on the subject. What then are the proprietors to do? They ought in the first place to be *sure they are right* in withdrawing their confidence from the present Directors, and if assured of that, they ought then to "determine upon such mode of management as they may think best, and to place that management in the hands of those who they may think best entitled to their confidence." But how can the proprietors do this; how can they do justice either to the Directors, or to themselves, *without a strict inquiry into the past proceedings, expenditure, and management of the Company?* The first step, then, is to *appoint a Committee of Inquiry*—some four or five business-like men from amongst the proprietors, and men who have each a large stake in the undertaking, to examine carefully into its affairs, and into the mode in which it *has been* managed, and report thereon to another meeting of the general body of proprietors, with recommendations also as to the mode of its *future* management. This is the only practical and sure mode of proceeding which we, the proprietors, can now adopt. With this information before us, we shall, when we meet again, know what we are doing, and be able to act with confidence and efficiency; without it we, the scattered proprietors, attending a meeting (if we all can attend) with little previous information, and no union or concert amongst ourselves, shall occupy two or three hours with an aimless discussion, and separate after passing an unsatisfied perhaps, but still perhaps an inefficient resolution!

It is desirable for all parties, but especially for the present Directors, that we should inquire before we resolve. I will not suppose that there can be anything to hide, and therefore will not suppose that there can be any opposition to such a Committee. He can be no true friend to the present Directors who would seek to screen them from such an inquiry; and still less can the welfare of the proprietors at large be his object, who would wish them under present circumstances to meet and act without having before them the evidence of such a Committee.

This, then, should be the first point upon which the proprietors must be determined when we come together, to appoint a Committee of Inquiry, and *not to do anything respecting the future management of the Company until that Committee has made its Report.*

I am Sir, your obedient servant,

A SHAREHOLDER.

P. S. Since the above was written, I observe by your last number that the Deputy-Chairman, Mr. Roskell, and the Managing Director, Captain

Digitized by Google

Dolphin, have resigned. *So far* so good. But all the Directors are, by the Report which I quoted, *pledged* now to resign, in order that the proprietors may determine in whom they place confidence. Mr. Robert Stephenson may be the best person whom *it can* be possible to appoint as our Engineer, but a Board of Directors *on the very eve of resigning* ought not to make *any* new appointments whatever. *They* should leave all their arrangements free and open, and unfettered to their successors.

NORTHERN AND EASTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—I question very much the prudence of your article of exultation, in your journal of last Saturday, on the retirement of two gentlemen from the Direction of the Northern and Eastern Railway Company.

No doubt you have done very much service to this, as well as other Companies, but be careful you do not, as I am sure you do not intend to do, inflict deep injury.

I believe, as regards one of them (the late Deputy-Chairman) you are in error; he has only retreated from the position of Deputy; if he has resigned altogether, the Company have lost the services of an able and industrious member of its Board. He has been most undeservedly maligned, and you have taken strong ground against him; if by your so doing he is disgusted out of the service, you do a deep injury to it. Sir, I am a simple shareholder, and know not what is going on at the Board, but I should deem his retirement as a great loss; he has not the gift of oratory (all are not fortunate in that science) but he possesses great natural talent, more knowledge than most men in railway matters; he is wealthy, and, having no other pursuit, he devotes a good portion of his time to this railway, without caring for remuneration.

Now, Sir, is not such a man in the Direction valuable? Do him a little justice; be assured you have adopted a wrong impression, by your belief that he was averse to, or did anything to obstruct, the late proposed leasing of the line. It is all very fine in words, to turn out a Board of Direction; but, Sir, can a new one be formed of strangers? Let us look before we leap.

I am, Sir, yours, &c.

A SHAREHOLDER.

AERIAL STEAM NAVIGATION.

To the Editor of the Railway Times.

SIR,—In your last number I observed some remarks relative to an invention which I think destined at some future day to affect considerably the interests of railway shareholders. I allude to the patent recently sealed by Mr. Henson for a mode of propelling carriages through the air. I agree with you as to the difficulty which all persons must feel in considering so extraordinary a mode of transit, but I well recollect the period when it would have appeared equally visionary to have talked of travelling at the rate of 40 miles an hour by railway. Such, however, is now a common rate of speed, and it has ceased to excite any astonishment.

In this age of ingenuity, why should we hold the navigation of the air to be an impossibility? Have we not at our command that all-powerful agent, steam; and does not each succeeding year bring to light some further improvement in the structure and management of the steam-engine?

I am informed by a gentleman upon whose judgment and veracity I can fully rely, that Mr. Henson's aerial carriage will be capable of conveying a party with safety and certainty at a rate varying from 15 to 60 miles an hour, and that it will be under the most perfect control of the conductor. It is also said that the patentee has so far provided against any danger which may arise from the possible derangement of the machinery, that the carriage would in that case descend gradually to the earth.

The principle of the invention will shortly be made known to the public, and I am assured that the friends of the patentee are prepared to enter into a contract with the Government for the conveyance of the mails at a charge greatly below that for which the railway conveyances perform this service.

That they may well afford to do this, and still derive a very considerable profit, will be evident from the fact that the sole expense of working the aerial carriage will be the propelling power, whereas the Railway Companies have to bear (in addition to this item) the enormous burden of a debt which in some of our leading lines exceeds the sum of 50,000*l.* per mile.

I am, Sir, your obedient servant,

A RAILWAY SHAREHOLDER.

Liverpool, December 13, 1842.

ECONOMICAL MANAGEMENT OF RAILWAYS.

To the Editor of the Railway Times.

SIR,—To add 1*l.* per cent. to the annual dividend, and 20*l.* to the market value of each of the shares of the following railways, it requires but *a half-yearly saving in the working expenses* of about—

£2,164	on the York and North Midland	This amount of saving assuredly might be made without difficulty, whereby comparative prosperity would be restored to many of the *non* paying lines & the railway system generally be saved from further degradation.
4,247	Birmingham and Derby	
4,350	Edinburgh and Glasgow	
6,045	Liverpool and Manchester	
6,255	Midland Counties'	
6,835	Manchester and Leeds	
8,967	London & South Western	
9,084	London and Brighton	
11,016	Grand Junction	
12,629	North Midland	
15,125	Great Western	
24,229 *	London and Birmingham	

When, therefore, we see railway Engineers receiving 1,000*l.*† to 1,200*l.* per annum, as is the case on the North Midland Railway, and clerks and Superintendents with equally exorbitant salaries, is it any wonder that the long-suffering and far too credulous shareholders should at last have shaken off their lethargy; being bent now upon thorough reform! The fact is, railway officials of every grade had *originally* their salaries fixed much too high—higher, indeed, than even in Government offices—the fault being altogether in the golden dreams of the Directors and proprietors at the commencement of the railway system. Magnificence, profuse expenditure, and engineering pride, were then the order of the day, whilst economy was never for a moment thought of!

I am, Sir, your most obedient servant,

ŒCONOMICUS.

BRISTOL AND GLOUCESTER RAILWAY.

To the Editor of the Railway Times.

SIR,—I have great reason to fear that the apprehensions expressed by your correspondent in last week's *Railway Times* are well founded, and that unless the shareholders be upon their guard, an attempt will be made to substitute Mr. Brunel's 7 feet gauge for the gauge now in use on all the lines to the north with which our railway is to communicate, and thereby, in my humble opinion, to ruin the property now invested in this undertaking.

Now, I am not aware that one single man of science supports Mr. Brunel's gauge. Many of them say that the ordinary railway width (4 feet 8 inches and a half) is too narrow, but no one, so far as I can learn, contends for 7 feet but Mr. Brunel himself.

Be that, however, as it may, our railway, the moment it is finished, will complete a line of communication from Bristol to Manchester, Liverpool, Leeds, Sheffield, and Birmingham, if it be of the same gauge with the lines now existing from Gloucester to all these places; but if the Branel, or any other gauge, be taken, it becomes merely a railway from Bristol to Gloucester, and the latter town must be the centre from which all the traffic is to emanate. A more thoroughly suicidal plan cannot be adopted by the Bristol and Gloucester Company.

Mr. Brunel is undoubtedly a man of genius, but unless mercantile prudence is used to control and regulate the flights of such a man, the chances are, that the shareholders may contribute to his undying reputation, but never touch a shilling of dividend.

To conclude, I hope we have, in the Bristol and Gloucester Company, a sufficient number of men of common sense and common prudence to enable us to adhere to that gauge by which we can run into all those lines from which our traffic is to be derived. Unless mercantile caution be called forth to our aid, some of our number at Bristol, who think themselves geniuses (which they are not), will blend their own frolicking fancies with the supposed inspiration of the Engineer, and then it will be time for us to sell our shares, if we can get anything for them.

I remain, Sir, your obedient servant,

B. & G.

December 12, 1842.

* The expenditure of the London and Birmingham Railway Company is about 200,000*l.* per annum, exclusive of parish rates, mileage duty, reserve fund, interest to loan creditors, and rent of Aylesbury Railway. The expenditure of the Great Western Company is 220,000*l* per annum, exclusive of parish rates, mileage, reserve fund, loan creditors, rent of Cheltenham and Great Western and Bristol and Exeter Railways. Out of such immense sums, surely a few thousands might be saved!

† Mr. Swanwick's salary is now 1,000*l*, but was 1,200*l.* per annum. It would be of great service, if some correspondent would furnish a list of the salaries of the Engineers and higher officials of other railways.

PARIS AND ROUEN RAILWAY.

To the Editor of the Railway Times.

SIR,—I have been given to understand that the following are expected to be the results of this railway, and should be glad if any of your correspondents can furnish any further information, or correct whatever may be wrong in this statement.

I am, Sir, yours, &c.

AN OLD SUBSCRIBER.

72,000 shares at 20*l.* is		£1,440,000
Government loan at 3 per cent.		560,000
Capital		£2,000,000
Traffic *existing*, 12,500*l.* per week		650,000
Less 40 per cent. expenses		260,000
Net profit		£390,000
5 per cent. to shareholders	£72,000	
3 per cent. on loan	16,800	88,800
Balance		301,200
Of which 3-17ths goes to the projectors, = 17 per cent. to shareholders.		53,153
Leaving		£248,047
Or 22 per cent. together.		

LONDON AND BIRMINGHAM RAILWAY —THE AUDIT.

To the Editor of the Railway Times.

SIR,—In your last number, you mention as a proof of the efficiency of the London and Birmingham Railway Company's audit, that only 3 tickets were deficient in one week out of a collection of 10,500.

I am really quite at a loss to know how this can be adduced in praise of the audit, because I am not aware that the clerks in that office have anything to do with the tickets beyond checking them *after they have been collected*. It appears to me that the praise is due to the ticket-collectors, the parties who collected the tickets, and by whose vigilance so desirable a result has been obtained. These men hold very confidential situations, and I am sure you would not wish to deprive them of any of their honours for the sake of benefiting others.

I am, Sir, your obedient servant,

Z.

Birmingham, Dec. 20, 1842.

NORTH MIDLAND RAILWAY.

To the Editor of the Railway Times.

SIR,—Permit me, through the medium of your next publication, to offer a few remarks on the present position of, and the many and various attacks made upon, the North Midland Railway by its most determined enemies, and its friends too. In many of the letters which have appeared in some of your late numbers, the Committee of Inquiry have been roughly and most unwarrantably ill-treated, to say the least of it, denouncing their late investigation as most "outrageous and unsafe," and as "calling for the interference of the Board of Trade," because some choose to represent the public weal in danger! That the economising influence of the Committee has been great in amount, is true, and no doubt is as gratifying to the proprietary now as a means of redemption; and that the result will be *bona fide* there can be no reason to doubt. There is not only to be a new Board of Directors, but a new Manager, "of practical knowledge and experience in railway management;" and if they succeed in meeting with one of "experience" (and no doubt they may), and the Board give him their utmost assistance and co-operation, and he towards them his most active and strenuous exertions in the discharge of his duties, every obstacle real and assumed will shortly disappear, and the public safety duly and properly protected, and the line well and efficiently worked. It is true there should be no "boys" at any of the "points" (as shown in some of the letters alluded to), but there should be steady, sober, and efficient men at every "point," both in and out of doors; "boys" are only fit for assistants, and not principals.

In the letter of "Medicus," 10th instant, he states that the Committee of Inquiry have "already gone too far," and quotes a paragraph from the *Times* of Friday last, which shows that they have been endeavouring to instil into the minds of the public terror and alarm, &c. The *Times* might have saved itself from such an effusion, and needless trouble, for it is as unsuitable to the *times* as it is uncalled for; nor do I believe it will "be a revival of railway accidents," or "will lose the Company any traffic;" and as to the "North Midland" Railway commanding "a monopoly in its traffic," it is perfect absurdity. What command has it? It may compete for traffic, but cannot command it; or what "suspicion" there can be of the Midland Counties' Railway towards the North Midland, I know not, but will leave the Birmingham and Derby Railway Company to answer. As to the "Sheffield line" making any great difference to the interests of the Grand Junction Railway Company, or any other, Mr. "Medicus" may save himself and others from any alarm on this subject for many years to come; and if there be a little manœuvreing to get an accession of traffic by the Grand Junction Board (at which they are clever no doubt), what call is there for the "interference of the Board of Trade?" The "Derby meeting" and its "hypocritical allusions" I pass over, as unworthy of further notice. In conclusion I beg to say, that all that the North Midland Company have now to do is, to carry out their work with resolution and spirit, at the same time with every (and the utmost) care and judgment; and should it really appear in practice that they have gone too far in the reduction of the hands, the remedy is in their own power, without sacrificing either honour or principle; for although the Committee have achieved much, it must be borne in mind the Board is not infallible. But I am still fully persuaded that they will accomplish to the letter the task before them, without impairing its efficiency so as to be seen or felt by the public.

I am, Sir, yours, obediently,

REKAB.

Manchester, December 14, 1842.

NORTH MIDLAND RAILWAY.

To the Editor of the Railway Times.

SIR,—As the North Midland Railway and its management is the general topic of conversation, it strikes me that a few remarks from a resident shareholder may tend to put the proprietors of this railway on their guard.

It is currently reported at Derby that the rates, tolls, and fares are likely to be raised on the first of next month and what for? Is it because they are lower on this than on neighbouring lines? No, it is not; for the rates on this are equal to those of *all* the neighbouring ones, and in some instances *higher*. They are *higher* than the Manchester and Leeds, they are *higher* than the Hull and Selby, and are fully equal to, if not higher, than the York and North Midland. I will tell you what it is for. We will suppose I am a proprietor in the two latter lines, and also in the North Midland; but the stake I have in the North Midland is nothing in comparison with what it is in the other two; would it not be to my advantage to sacrifice my North Midland shares if I could get, by doing so, a good dividend from the other two? Should the rates, &c. be raised on the North Midland, depend upon it it will not be for the benefit of the North Midland proprietors alone, but will be done to answer the end I have named. There may be another reason for this movement, and one which is strengthened materially by a paragraph which has gone the round of the papers, viz., that Mr. Hudson, Chairman of the York and North Midland, has offered to the proprietors of the North Midland, on behalf of the York and North Midland, 4½ per cent. for their money if they will lease the North Midland to them;* would it not, then, be gaining a point if *parties interested* in these *three lines*, viz., Hull and Selby, York and North Midland, and North Midland, could bring the North Midland shares down to the lowest possible ebb, and thereby dishearten the proprietors, that they may the more easily attain their object? But instead of letting the line, I hope every shareholder will show that he has a *stake in the North Midland*, as well as others have in the *York and North Midland* and *Hull and Selby*. The members of the Committee of Inquiry may not be influenced by any selfish motives, but I fear the worst, and I think you will allow my fears are not groundless; the very circumstance of their raising the rates and tolls, which are already *equal* to any neighbouring railway, and in some instances *higher*, must carry the impression with it that it is done, not to benefit the North Midland, but some of its neighbours—*the two lines above quoted*. Take, for instance, the traffic between Manchester and London; instead of its going from Manchester to Normanton and from Normanton to Derby by the North Mid and, it will not go on the North Midland at all; by raising the rates they will be drawn to Hull, and thence by water to London, being the cheapest and, in the summer months, equally pleasant route; consequently, the North Midland will be entirely excluded from any participation in the profits arising therefrom. Should the Directors carry out these measures they will, I am confident, counteract any good effect their reductions might have had.

I could adduce many more instances of the effect these changes are likely to have upon the working of the line, but as I fear I have already encroached upon your space, shall reserve them for a future occasion.

I am, Sir, your obedient servant,

A NORTH MIDLAND SHAREHOLDER.

Derby, December 14, 1842.

* This has been contradicted by the *Yorkshire Gazette* "on authority."—ED. R. T.

LONDON AND CROYDON RAILWAY.

To the Editor of the Railway Times.

SIR,—Will you allow me space for a word or two with my brother shareholders, before we meet on Tuesday next to sanction our Directors "in relinquishing the carrying trade," and in their schemes for the future.

According to the published accounts, the carrying trade for the year ending July last produced 25,882*l.*, and was conducted at a cost, including Greenwich toll, of 20,278*l.*, leaving a clear profit of 5,602*l.*, applicable towards maintenance of way, repair of works, police, rates, and Direction. These expenses amounted, during the same period, to 8,926*l.*, and this outlay, or nearly this, must be annually incurred, whether we relinquish the carrying trade or not.

However, to economise your valuable space, I will assume that it will be explained to our conviction, if not satisfaction, that this profit is ideal—that, in fact, a remunerative traffic cannot be maintained without low fares—that low fares cannot be maintained without proportionably low toll, and that notwithstanding all the zeal and ability displayed by our ardent Chairman, and by yourself, the Greenwich Board remain impracticable, and that no modification of the toll can be had.

Our position, then, is simply this: we possess three years experience, valuable no doubt; sundry engines and carriages, and 8 miles of railway, commencing at the terminus of the joint line of the Brighton and Dover, and running into 2 miles of railway belonging to the Greenwich Company.

A mere statement of our position suggests the course we ought to adopt. We must sell our plant and our 8 miles of railway to the Brighton and Dover Companies. They will thus have a line in common of 20 miles, from Merstham to the Greenwich; they may maintain our 8 miles, and take the cream of the Croydon traffic, at comparatively trifling cost; they would get one-third more station room at London Bridge, and become free from the danger and annoyance of working over a line encumbered with local traffic.

It would, therefore, be well worth their while to pay us for the use of the line, 25,000*l.*, and for the local traffic and station room, 10,000*l.* No money need be raised for the purchase; our stock might be merged in that of the two Companies, and a minimum dividend guaranteed to us of from 5 to 6 per cent.

Look at the other side of our position: we shall be called upon for a large outlay towards the branch to the Bricklayers' Arms. To us this branch is all but valueless; our short passengers will not stop 3 miles from London to get on by omnibus, or walk, and we carry neither cattle nor merchandise. We only listen to the plan at all from virtuous indignation at the conduct of the Greenwich Board, and from the hope that it may prevent the necessity, or at least diminish the inducements, for an independent line into London. But the Brighton Company stand aloof from this branch—it is their fixed determination at no distant day to have a line of their own: and long before a tollage, after deducting expenses, could pay us 3 per cent., they will leave us, or cut down our toll by the threat of it.

Even could the tollage be raised to an amount exceeding all expectation or hope, its insecurity would necessarily keep low the value of our stock. No Company will long pay a heavy toll for the use of another's line, and the course I have suggested seems to me our only safe one.

I am, Sir, your obedient servant,

A PROPRIETOR OF CROYDON STOCK.

December 20, 1842.

P.S. Since writing the above the Directors' Report for the meeting on Tuesday has reached me, and confirms my view of the absolute necessity for our adopting the course above suggested. Let the shareholders refer to Appendix No. 2, and calculate for themselves the chance of a *fair* income upon the traffic of the larger lines, *after paying establishment expenses and interest on loans.* Is there the chance of any? Let them further calcu-

Digitized by Google

late what *possible* modification of toll would leave "a fair income" for dividend. A reduction of one-half the toll, and half a million passengers carried without increase of establishment expenses, would only give 5,200*l.* a year—little more than 1 per cent.

I repeat, Sir, we must merge our S miles of railway in the larger lines before they are in a condition to "emancipate" themselves, alike from Croydon and Greenwich toll, by an independent line of their own. To lease the line is objectionable, for it necessitates a larger establishment, and trammels the lessees. By the plan suggested, our stock would be turned into *preferred shares in the Brighton and Dover lines.* The amount of dividend to be guaranteed, and the details of the plan, might be easily arranged by the present Directors, or a Special Committee.

LONDON AND DOVER (SOUTH-EASTERN) RAILWAY.

To the Editor of the Railway Times.

SIR,—In the letter of "Idem," contained in your last number, the writer, either ignorantly or mischievously, defends his prophecy that a very large sum would be further required to complete this railway, in a manner totally at variance with the facts.

He ought to have known that of the alleged additional outlay of 620,000*l.*, the sum of 220,000*l.* forms part of the means provided by former Acts, for the raising of which the Directors *now* only ask for authority in the usual way.

Of the remaining 400,000*l.*, the projected terminus at the Bricklayers' Arms would require one-half. This 200,000*l.*, if ever called for at all, is not likely to be needed at present, for Parliament will not, I fully believe, grant the South-Eastern a west-end terminus till the necessity of it is shown, not by calculations, but by the test of facts. If wanted at all, it can only be in consequence of the traffic proving *very* considerable.

The remaining 200,000*l.* is applied for to form the terminus at Dover, which Mr. Cubitt estimates at about 100,000*l.*, but double the sum is properly enough taken by way of precaution only, and to cover any possible deficiencies.

It results that the only sum really demanded by the Directors is 100,000*l.* instead of 620,000*l.*, as represented by your correspondent.

How easy it is to misguide the public by such rash or prejudicial statements! The explanation which your correspondent "Devon" asks for is easily given, by informing him (as he ought to have seen) that the Chairman's statement of our funds at 778,000*l.*, refers to the 1st October, and Mr. Cubitt's calculation of 596,000*l.* is taken from the 1st December, the difference, or thereabouts, having been expended on the road in the two intervening months, so that the statements are perfectly consistent.

I am, Sir, your obedient servant,

A SOUTH-EASTERN.

Finchley, December 12, 1842.

MIDLAND COUNTIES' AND GREAT NORTH OF ENGLAND RAILWAYS.

To the Editor of the Railway Times.

SIR,—For a long time after the Grand Junction Railway was first open it had the monopoly of the traffic from London to Ireland and Scotland, but since the Great Western has been open on the one side, and the eastern line down to Scotland is being extended further and further on the other, of course these things must assist in a great measure to draw off the traffic from the Grand Junction. This is clearly shown by comparing the weekly traffic with what it was a year ago (as returned in your paper), for whilst other lines have increased, notwithstanding the present depressed state of trade, the traffic on this has very much fallen off. This leads me to the remark, that I am rejoiced to see by your paper that the proprietors of the Great North of England are beginning to stir themselves, because I am convinced that the Directors of this line have been the cause of the loss of thousands a year to the Midland Counties' and North Midland—because they have been apparently indifferent to the encouragement of the through traffic, whilst their trains have stopped at every second-class station to take up or put down every old farmer who pays 1s. or 1s. 6d. Railway proprietors have paid so much attention of late to cutting down the expenses of working their lines, that the more important consideration of increasing the traffic appears to have been almost overlooked. I think you will agree with me, Sir, that there ought at least to be one fast train from London to Darlington in the day, and *that* not a train that leaves London at such a barbarous hour as 6 in the morning, and it might very well accomplish the journey in 11½, or at the most, 12 hours. The night mail train is a tolerably good train; considering the prejudice that Lord Lowther has to the eastern line of railway, and also that they stop about 1½ hours on the road, I do not think there is any time lost whilst they are moving.

But the chief object that I had in writing this letter, was to remind the proprietors of the Midland Counties, that the Darlington and Newcastle line will be open in a year and a half or two years; and this I am convinced will so greatly increase the traffic by the eastern route down to Scotland, that I hope the proprietors will not take fright at the present small dividends that they receive, so as to be induced on the one hand to agree to lease their line to the London and Birmingham upon unfavourable terms; or on the other hand to elect to be Directors, men who are notoriously large holders in the Grand Junction line, which has an opposing interest.

I am, Sir, yours, &c.

A PROPRIETOR IN THREE OF THE EASTERN LINE COMPANIES.

GREAT NORTH OF ENGLAND RAILWAY, &c.

To the Shareholders of the Great North of England and the North Junction Railways.

GENTLEMEN,—The results developed at the late Newcastle meeting, will now, it is to be hoped, have sufficiently enlightened you to the staring fact, that that portion of your Directory having interests in the Stockton and Darlington, are now no longer worthy of further confidence. For it is now as clear as noon-day, that their policy has been fully as crooked as their would-be way!

Who would have believed that men so respectably situated in life would have so committed themselves! How many point blank denials and shuffling evasions of now-proved facts might have been saved, had plain and simple truth, or had straightforward, honest, and disinterested intentions been their guide, or the characterizing feature of their general procedure? How disreputably inconsistent for men holding responsible situations to plead ignorance of the well-known intentions of their fellow-colleagues in office. If really ignorant, how grossly negligent of their professed duties! But those who accuse any part or portion of the Stockton and Darlington Directory of ignorance, thereby prove their own stollidity, for, in their generation, our Darlington bretheren are as wise as serpents, without the harmlessness of doves.

Who made the late opposition in Parliament against the proposed change? "Oh!" says one sleek-faced friend, "thee knows that we are not the opposers; thee should know that the landowners were them!!" Yes, shareholders, the landowners certainly were the public opposers of your measures! But who privately instigated them? Whose solicitor attended the opposing landowners when the matter was discussed in the last Session of Parliament? Who were the men that gave orders to the lawyer? Who paid him his fees? For whose intended benefit were lawyer's services, &c., required? And why so? Because, shareholders—there was a because!—and this because, you will by this time have no doubt discovered, was part of the same because that hoodwinked certain of your Directors, that on certain divers occasions with reference to certain sundry matters, they had, or rather they were, "*pro. tem.*" *sans* eyes, *sans* ears, and *sans* everything, excepting self-interest!

In railway affairs, as in other common sublunary matters, "if men will not look after their own business," so neither will others, excepting for some gain or advantage, direct or indirectly; although *pro bono publico* may be the clap-trap cry, yet the real mainspring and pivot of motive action is still the same, and continues so, no matter what guise may be plausibly and conveniently assumed, and that is "self," all the world over! On many occasions, no doubt, benefits are performed from a really charitable and benevolent principle; but the case assumes a totally different hue and caste, when a mere business matter of pounds and pence. In the general scramble "'tis self, self" that stimulates men to be ever on the watch as a bird of prey—no benevolence, no charity there, saving and excepting for number one. Wherefore, then, I would say, brother shareholders, let us look to ourselves and to our own business, in order that the birds of prey may not surprise us asleep on duty! Let the watchwords be "Croft Branch," "Shildon Tunnel," "200,000*l.*," &c.!! Since your strenuous victorious bearing in Committee, and the schemers' defeat there, great has been their wrath. What nice snug pickings for them, had they frightened or tickled you into their scheme, and had you foolishly hearkened! The Croft Branch affair or the "Durham Farm," would have been mere flea-bites; and yet the former was slided upon you for 20,000*l.* and the other cost you 50,000*l.* They that could pick 20,000*l.* for what they had in reality no further use, would not content themselves with ten times the amount for companionship with them! And now, forsooth, since you would not be guided, you must needs throw away your 5 per cent. guarantee, because your *protege* (the North Junction) is to have forced near to him a kind of bastard brother, whose paternity proceeds from an accidental *faux pas* of the Stockton and Darlington Board. Brother shareholders, be advised, and all come that can come to the next half-yearly meeting, and think and decide promptly for yourselves. No half-and-half measures will do, but a clean sweep of the colleagues of the schemes from our Managing Directory! Remember that, only at the last August meeting, the want of two mere votes was a defeat to your then propositions. But, this time muster strong and stout, and be resolved to have the reins of action in your own hands, and then in a little time there may be a fair chance of getting something better than the last paltry 2½. What a pleasant consolation and sweet reward that was for six long years of anxious expectation and proportionate inconvenience!

How many straightened their circumstances to meet the payment of calls, or else had 5 per cent. interest to pay, for what they have lately received only 2½! And even this trifle will soon be made less and less—and beautifully less—until from a small something there will only be a seeming nothing, unless you attend in time, and oppose, with all your might, the encroachings of avaricious and over-grown monopoly-mongers. Remember the watchwords are "Croft Branch," "Durham Farm," "Shildon Tunnel," (that *was* to pick you), and a clean swamp of the schemers' colleagues from the Managing Directory.

Yours, respectfully,

A BROTHER SHAREHOLDER.

Stockton and Darlington Railway Office,
Darlington, December 16, 1842.

TO THE SHAREHOLDERS IN THE STOCKTON AND DARLINGTON RAILWAY.—GENTLEMEN,—The public newspapers of the above date having been laid before the Board of the Stockton and Darlington Railway Company, at their ordinary sitting this day, and an address to the shareholders in the Great North of England Railway Company, issued at Newcastle, having been pointed out and read, the same was considered to contain matter of grave and unfounded accusation against the Board, unitedly and individually; and it appearing that the mis-statements of facts and the misapprehensions which have led to the issuing of such an address may, if unrefuted, not only prejudice their character, but occasion great and irretrievable injury to the Great North of England Railway Company, in whose prosperity many of you are involved in every possible way, I was directed without delay to put you in possession of the views entertained and expressed by the Board, on the perusal of that document.

During the present autumn, remarks have appeared in the public press upon the connection which has subsisted between the Great North of England Railway Company and this Company, alleging an injurious interference on the part of your Company with the interests and proceedings of the Great North of England Railway Company, and evidently intended to produce a dissolution of that friendship which has hitherto subsisted between these Companies and the Boards of Direction respectively. As these observations were generally anonymous and betrayed an unconciliatory spirit, your Board did not feel themselves called upon to notice them. The Directors of the Stockton and Darlington Railway Company now feel it their bounden duty to appear before you in explanation of the measures adopted on your behalf.

The statement that much of the movement towards the making of the Great North of England Railway between York and Newcastle, was in the beginning at this place, and that the gentlemen then upon this Board materially assisted in introducing that measure to the notice of the public, is freely admitted; its various bearings were repeatedly discussed, when it was finally agreed that, notwithstanding one necessary consequence of the construction of such a line would be the opening of fresh coalfields to the north of Darlington for the supply of the North Riding of Yorkshire, and thus introduce competition with the produce of the Auckland district, from whence that supply had previously been almost exclusively drawn, the formation of such a railway ought, upon public as well as private grounds, to be supported, and have the cordial assistance of the Stockton and Darlington Railway Company.

The Croft Branch Railway, about four miles in extent, and then an important and valuable part of your concern, appearing to interfere with the line selected by Mr. Storey, and afterwards sanctioned by names of the first consideration as engineers, it was agreed that that branch should be taken from this Company, and its value made the subject of an impartial reference. The several Acts authorising the construction of the Great North of England Railway were successively obtained. Its Directors wisely concluded to devote their energies to the southern end, and thus continue with the least possible delay the railway communication between London and Newcastle, then provided for as far as York. A treaty was opened for the Croft Branch: from this treaty every Director of the two Companies, the Treasurer, and the Solicitor, (though the latter were without votes at the Great North of England Board,) were all excluded. The sum of £20,000 (being one-third less than the cost) was amicably settled as the price to be paid. The negociation received the full assent of the general meeting of the proprietors in the Great North of England Railway Company, and it was subsequently confirmed as satisfactory at another general meeting of the proprietors. The Stockton and Darlington Railway Company thus (by a large concession in their view), obviated the necessity of an expensive reference; and on every subsequent occasion, when it has appeared to the gentlemen in the confidence of both Boards that a question of conflicting interests was involved, the like delicacy and honourable feeling has been observed. It may safely be asserted, that during the whole period occupied in the execution of the Great North of England Railway, a perfect and entire independence has marked the transactions of the respective Boards. When the line was completed to Darlington, the rates of tonnage on both lines were adjusted and equalised, at the request of the Great North of England Board; every subsequent proposition made on their behalf was cheerfully responded to; in their zeal to serve their respective interests differences might arise between the Directors, but they were always amicably arranged. If it is attempted to be insinuated that during the progress of the works any influence, direct or indirect, was exercised, or attempted to be exercised, by the Stockton and Darlington Railway Company or its Directors, at the Great North of England Railway Board, let those gentlemen, wholly independent of the Stockton and Darlington Railway Company, and who constituted five-sixths of that Board, speak to the facts; never have more than four gentlemen had seats at both Boards. The Directors of the Stockton and Darlington Railway were to those members of the Great North of England Railway Board, during the greater portion of this period, as 3 out of 18. It has been insinuated that not only an unjustifiable expenditure of the funds of the Great North of England Railway Company was allowed by those gentlemen, but that the Stockton and Darlington Railway Company were, for certain sinister and selfish reasons, interested in the alleged extravagance. That the Board of the Great North of England Railway Company, on their part, will be prepared boldly to meet these allegations, the Stockton and Darlington Railway Company do not for one moment doubt. The charge against themselves, if preferred, is utterly and indignantly denied; it is unfounded, and incapable of the shadow of proof, and must fall to the ground. The Board never had the slightest control over, or cognizance of, the expenditure of the Great North of England Railway Company; hence, whilst they disclaim any share in the merit which must be attached to the construction of nearly 50 miles of the best railway in existence, they must leave any alleged demerits to those gentlemen who have long and sedulously endeavoured faithfully to discharge their trust. It is thought right to append to this document a list of the gentlemen who have served upon the respective Boards during the discussion of the subject referred to in the Address; the deductions to be drawn from these lists I shall not attempt to mention.

It will be perfectly obvious to every candid mind, that up to a period subsequent to the opening of the railway, when a mutual interchange of good offices took place, and have since continued, (the Great North of England Railway enjoying no feeder or auxiliary to its traffic comparable to the Stockton and Darlington Railway, and hence the opportunity for cordial co-operation and reciprocity,) to that period at least, the connection between the two Companies was productive of mutual benefit; and the Stockton and Darlington Railway Company are prepared to express a most decided opinion, that to the extent to which a cordial co-operation, as promoted by the representation of both parties at their respective Boards, existed, the interests of the two Companies have been most essentially served; the declared incompatibility of the offices in those Companies being held by the same individuals, (as already described,) is a proposition from which all past experience and all matured views of the future, lead this Board wholly to dissent. The state of things already alluded to continued for some months in the year 1841, when it was found that the resources of the Great North of England Railway Company were to a great extent exhausted, and a proposition was made by the association of other Railway Companies, to carry the line forward from Darlington to Newcastle—a measure which could never be long out of sight. Mr. Storey's line, as sanctioned by the Act of Parliament, was a straight and direct line; the levels or gradients were of a superior description; in fact, it carried with it (irrespective of expense) every recommendation which could possibly be conceived—it certainly had the approbation of the Stockton and Darlington Railway Company; and as regards the estimates, your Committee considered them ample—the amount per mile was much greater than had been expended by themselves or any other Company in the North of England—so far as they were then aware, and so long as this line in all its features, approved as it had been by the most eminent engineers, was adhered to, the Board never entertained a doubt as to the eligibility of its construction, assuming the funds were forthcoming. If disappointment is expressed by the inhabitants of Newcastle, or any other district, that that line was not successfully prosecuted to its termination, as originally intended and estimated, no party need enter more largely into their feelings than your Board.

The tenor of the Address issued from Newcastle must lead the reader to suppose Mr. Storey's line (the line which had received the approbation of your Company and the public) identical, to no inconsiderable degree, with that about to be executed by the Newcastle and Darlington Junction Railway Company. The distance between Darlington and Newcastle, by the line just named, is stated to be about 39 miles, of which there are not 5 miles pursuing the same precise line of country. The gradients throughout are varied; the worst gradient in Mr. Storey's line was 16 feet per mile, whilst the line adopted has for upwards of 14 miles a gradient of 42 feet per mile; it is compounded in its progress north of Darlington of about 4 miles similar to Mr. Storey's in direction, but differing in its gradients—then of 7 miles apart from his survey. Local circumstances compel a return to Mr. Storey's line, after a considerable circuit, for about another mile, when Mr. Storey's line is entirely abandoned; 9 or 10 miles have to be constructed through a new country. The Durham Junction Railway, the Stanhope and Tyne Railway, and the Brandling Junction Railway, each subsequently contributes its quota of the remaining 16 miles of the route. These startling facts, in connection with the modified views which are acknowledged to have taken place within the last seven years in the minds of eminent engineers, with reference to allowable variations in gradients, and the introduction of curves of easy radii, as compatible with the science of railway engineering, first attracted the notice of your Engineer, Mr. John Harris, and left no room in his mind to doubt that a practical demonstration of the use which might be made of about five miles of the Stockton and Darlington Railway line, at no point much beyond one mile distant, would be hailed at once as advantageous to you, and a great benefit to the Great North of England Railway Company, or the Newcastle and Darlington Junction Railway Company. His investigations were undertaken without the slightest intimation to your Board or any of its members, and the results were communicated to the Engineer (Mr. Robert Stephenson) immediately, and at his request further levels were taken—these operations occupied Mr. Harris till the latter end of January, 1842. No sooner had he submitted his views to the Board, namely, on the 15th of December, 1841, than no time was lost in bringing it before the proprietors in these railways and the public; in these proceedings there was no spirit of rivalry or hostility—the sole design being to bring facts of great moment fairly before the parties interested. The arrangements between the Great North of England Railway Company and the Newcastle and Darlington Junction Railway Company had then, it appeared, assumed a definite shape; and when the Directors of the Great North of England Railway Company were seen by a deputation of the Stockton and Darlington Railway Company's Parliamentary Committee, the importance of the suggestion made by Mr. Harris was admitted, but the Deputation were referred to the Provisional Committee of the newly-formed Company—that Committee was waited upon, and the matter explained to them; answer was received that the subject should have a mature and calm consideration—that the steps taken by the Parliamentary Committee were justifiable and eligible, and that prior to the Parliamentary session of 1843, when it was intended to substitute a new survey for portions of Mr. Storey's line, and obtain the sanction of the legislature thereto, the merits of the said proposition must be decided upon. The Deputation were led to expect a further early communication on the subject, but no such communication was made.

There is no reason to believe that the matter ever did obtain any adequate consideration; indeed, whilst the Bill was pending in the House of Commons, a clause was introduced, intended no doubt entirely to frustrate any further consideration of this question, of such great importance to the Great North of England Railway Company. On the contrary, the free exercise of the judgment of all parties was taken away by the insertion of that clause. The immediate promoters of the Bill disclaimed, in the strongest manner, any interest in its adoption or insertion; an application was made to the House of Lords, in order to its removal, but accompanied by the express personal assurances of the gentleman representing your wishes to the parties then in London on behalf of the Newcastle and Darlington Junction Railway Company, their Solicitor, Parliamentary Agent, and Engineer, that no opposition whatever to the measure itself was intended.

Subsequent to the passing of the Newcastle and Darlington Junction Company's Act, all inquiry and investigation, with the opinions of impartial men, deeply experienced in railway measures, having established in the judgment of your Committee the soundness and accuracy of the views they had adopted, the public mind becoming more open to their correctness, and the repeal of the clause in question being no impossibility, the Board of the Junction Company was waited upon at one of its earliest meetings, when it was evident to the gentlemen who attended that no proposal would then be listened to. The reasons given by the Chairman for the conclusions arrived at, were understood to be these:—that the adoption of any other railway must needs be ineligible—in answer to which was urged the unrestricted use offered of the Stockton and Darlington Railway line, and the appropriation of part of three other lines of railway already as constituent parts of their scheme; next it was urged, that one of the gradients on the Stockton and Darlington Railway line, for about 2 miles, was objectionable, though it is demonstrable that that Board has sanctioned upwards of 1¼ miles of a steeper inclination; afterwards, that the route would be circuitous—to which it was replied, that the proposition did not involve a circuit of more than 780 yards, and that it ought to be remembered that the original length of line proposed by Mr. Storey being but 39¼ miles, would now be about 39 miles; and finally, to the remark that the cost of about 5 miles of Railway might be entirely avoided—the reply was, to accomplish the end in view, such saving is not an object—any observations on that interview seem scarcely required. After 20 years' experience of the principles and practice which best serve the interest of proprietaries and the public, the Stockton and Darlington Railway Company's Parliamentary Committee could scarcely persuade themselves that the Board of the Junction Railway Company were in earnest; they felt that the interests of the Great North of England Railway Company, as well as the interests of the Newcastle and Darlington Junction Railway Company, and especially the large amount of capital subscribed by you in various shapes towards the Great North of England Railway Company's line, and originally at their suggestion, were all affected by a prudent issue in this matter, and they again authorised the insertion of the necessary Parliamentary notices, with the view of affording to the Junction Company another opportunity, should they be so minded or advised, of carrying out their plans in the manner suggested. Subsequent events have shown, that from misapprehension, misunderstanding, or unfounded prejudice, as your Board conceive, their views are not likely to be now entertained, the Stockton and Darlington Railway Company have no intention of proceeding in any course which would involve their shareholders, as amongst the largest proprietors in the Great North of England Railway Company, in an injurious competition. In resigning any expectation of the adoption of what they consider just views, they do not retract one iota of their declared sentiments upon the impolicy of the course now pursued by the Newcastle and Darlington Junction Railway Company, that Railway, as now delineated, appears to them to present many temptations to, and opportunities for, the construction of competing lines and connections—which Mr. Storey's and not some of them might affect the Great North of England Railway Company, and they think these facts should have claimed the most serious consideration. They cast no reflections upon others who cannot see as they see, they are conscious of the integrity of their own purpose, and are still willing to hope that such arrangements may hereafter be made as may prevent that route or any other becoming a competing line; they never intended to become parties to its execution as such; the terms offered for its completion as an integral part of the line northward, it may be remarked, were repeatedly admitted to be fair; the equity upon which they were founded was never once impeached. Stubborn facts appeared to them to be opposed by ill-founded assertion; and if reasons were urged, they were answered by the reiteration of previous conclusions, the motives for which had never been explained.

The Directors beg your especial notice of the fact that they have endeavoured to abstain from tedious agreement—or the production of proofs and plans. With them they are supplied, and they are at your command. They have

desired studiously to avoid any animadversions upon that which they can neither understand nor explain; they have to the best of their knowledge brought that information before you which will enable you to enter into the bearings of this question.

In conclusion, the Board instruct me to express a hope that what I have been enabled to state will be accepted by *you as a proof* that they have not been unmindful of the trust reposed in them, as regards the interests of this Company, whilst they are prepared to declare their conviction, that in a day to come it will be clearly seen that the best interests of the Great North of England Railway Company, the Newcastle and Darlington Junction Railway Company, and of the public at large, have been most materially concerned in the carrying out of those modifications of the intended communication between Darlington and Newcastle which have received the most mature deliberation, and have no foundation in those sordid, selfish, and most unjustifiable motives, which the Address before me so unhesitatingly attributes.

I am, very respectfully,

SAMUEL BARNARD, Secretary.

NOTE.—The only avowed object of the formation of the Newcastle and Darlington Junction Railway Company being to obtain an eligible continuation of the railway from Darlington to Newcastle, the Stockton and Darlington Railway Company proposed to the Great North of England Railway Company, that that Company, with the concurrence of the Newcastle and Darlington Junction Railway Company, and the assistance of the Stockton and Darlington Railway Company, should continue their works to Thrislington or Shincliffe.

That the Great North of England Railway Company should have the free and unrestricted use of the Stockton and Darlington Railway for about five miles, as a component part thereof, with their own engines, coaches, and waggons, both for goods and passengers, without any payment to the Stockton and Darlington Railway Company for 10 years. The Stockton and Darlington Railway Company guaranteeing 6 per cent. per annum, as the minimum to be received on the money expended by the Great North of England Railway Company for ever: and that at the expiration of the said 10 years, the same use and enjoyment, on payment of the like rates, on all description of traffic, as those levied by the Great North of England Railway Company south of Darlington.

APPENDIX.

THE STOCKTON AND DARLINGTON RAILWAY BOARD.

Thomas Meynell, Esq., Kilvington House, near Thirsk.
Thomas Meynell, jun., Esq., York.
Henry Stobart, Esq., Etherley House.
Mr. John Pease, East Mount, near Darlington.
L. Raisbeck, Esq., Stockton.
Mr. Edward Pease, jun., late of Darlington.
Mr. Jonathan Backhouse, late of Polam Hall, near Darlington.
Mr. John Flintoff, late of Witton-le-Wenr.
Mr. Thomas Richardson, of Stamford Hill, London, and Ayton House, Yorkshire.
J. Pease, jun., Esq., South End, near Darlington.
Mr. William Kitching, Darlington.
John C. Hopkins, Esq., Woodside, near Darlington.
Mr. Alfred Kitching, Darlington.
Mr. Henry Pease, of Blackwell, near Darlington.

Note.—From death or resignation, Messrs. Jonathan Backhouse, E. Pease, jun., John Flintoff, John Pease, and J. C. Hopkins, have ceased to be in the Direction.

Messrs. Thomas Meynell, jun., Henry Pease, and, till within a few weeks, Messrs. J. C. Hopkins and R. Stobart, have been members of both Boards; and Messrs. Meynell and Henry Pease retire at the next general meeting of the Great North of England Railway Company, by rotation.

GREAT NORTH OF ENGLAND RAILWAY BOARD.

J. C. Hopkins, Esq., Woodside, near Darlington.
Henry Pease, Esq., Blackwall, ditto.
Nathaniel Plews, Esq., ditto.
Edward Oxley, Esq, ditto.
D. O'Brien, Esq., ditto.
J. Church Backhouse, Esq., Beechwood, ditto.
* Robert Botcherby, Esq., Woodlands, ditto
C. H. Elsley, Esq., York.
Thomas Backhouse, Esq., ditto.
Thomas Meynell, jun., Esq., ditto.
H. Smales, Esq., ditto.
Thomas Cargill, Esq., Newcastle-on-Tyne.
† I. M. Chapman, Esq., ditto.
† George Wall, Esq., ditto.
†Wm. Losh, Esq., Newcastle-on-Tyne.
†Jonathan Priestman, Esq. do.
†William Shields, Esq., Durham.
Thomas Smith, Esq., Thirsk.
John Humphries, Esq., Ripon.
G. H. Wilkinson, Esq., Harperley Park, near Bishop Auckland.
†R. A. D. Gresley, Esq., near Bishop Auckland.
*John Flintoff, Esq., Witton-le Wear.
*Josiah Smitheon, Esq., Redworth House.
†H. Stobart, Esq., Etherley House.
H. P. Smith, Esq., Coatham Hall Garth, Darlington.
†W. Rutson, Esq., Newby Hall, near Northallerton.

Those marked thus * are deceased.
Those marked thus † have resigned.

Southend, Darlington, 12th mo. (Dec.) 19th, 1842.

TO THE SHAREHOLDERS OF THE GREAT NORTH OF ENGLAND RAILWAY.—I am made acquainted, through the medium of the local press, with the Address issued on the 16th instant, by a number of gentlemen assembled at Newcastle, as Shareholders in the Great North of England Railway.

One object of that Address appears to be to prejudice my character as an individual, and as a member of the Stockton and Darlington Railway Board. At the Great North of England Railway Board I never had a seat, save by special invitation, as the Treasurer of the Company, on business in hand, *and never a vote.*

I can scarcely suppose that any one of the parties to the issuing of the Address would have made this attack upon gentlemen of the first consideration, or upon an humble individual like myself, had he been better informed.

To displace me from my office as Treasurer of the Company, on the ground of my being a party to proceedings deemed injurious to the interests of your undertaking, and on other charges which are at variance with facts, is another object of the Address. Should the next General Meeting, upon an impartial and wise hearing and consideration of the case, be of the opinion that I have in any way justly forfeited your confidence, and that my removal will tend to lessen the difficulties of the Company and increase its prosperity, I trust I shall be found cheerfully concurring.

Having, however, determined to meet my brother Shareholders openly and fairly, whenever the General Meeting may in due course be convened, and then to challenge a scrutiny into my conduct, I may be allowed to ask that in the interim you will not prejudge me, and that proxies may not be given to my prejudice, however plausible the pretexts upon which they are solicited. I must think that I shall not appeal in vain to the good feeling of the proprietors individually, being assured that no candid mind can permit me to suffer from misrepresentation, and statements of an entirely *ex parte* character.

If the principal object of the Address is to destroy that friendship and communication which have hitherto existed on the basis of strict honour and independence between the Great North of England Railway Company and the Stockton and Darlington Railway Company, I greatly regret it. Success in such an attempt, I have no hesitation in saying, will be found to be attended by consequences most detrimental to the interests of both Companies.

I earnestly beg the personal attendance of every share holder when these subjects come under discussion. I have nothing to conceal, but rather will it be my place to prove, that however painful the duties which may have devolved upon me, those duties have been discharged with the utmost fidelity; that I have served you and lent you my energies for the promotion of your interests, with zeal and integrity; and that during times and under circumstances of unprecedented exigency, I have borne my burden and incurred anxieties and responsibilities on your behalf, wholly unknown, save to a few.

I am, very respectfully,

J. PEASE, Jun.

BANKS'S PATENT.—TO RAILWAY DIRECTORS AND ENGINEERS.—T. Banks has great pleasure in announcing, that, by the application of his patent improvement to the repairs of the Tires of Carriage and Engine Wheels, a working surface is restored of several times greater durability than any before used.

The Testimonials already received, of the efficiency and economy of this plan, are too numerous to be placed in an advertisement.

Licences will be granted to Railway Companies, or other suitable parties.

For further particulars, address Thomas Banks, Engineer Bengall-street, Manchester.

N.B. Patents are obtained for Foreign Countries, as well as for Great Britain and Ireland.

EQUITABLE GAS-LIGHT COMPANY DEBENTURES.—NOTICE is hereby given. That the Directors of this Company, under the provisions of the Act of Parliament, 5th Victoria, cap. 36, are ready to receive Tenders for £60,000 upon Debentures at 5 per cent., to be payable at periods of 5, 7, or 10 years, at the option of the lenders, in sums of from £100 to £1,000 each. Persons desirous of tendering are requested to send in their Proposals in writing, specifying the number of Debentures and their amounts, addressed to the Secretary, Mr. G. J. Gregory, at the Company's Office, 21, John-street, Adelphi.

Dated this 15th day of November, 1842.

By order of the Board of Directors,

G. J. GREGORY, Secretary.

A considerable portion of the above sum is directed by the Act of Parliament to be applied in payment of the Company's mortgage debt, the interest upon which, at 5 per cent., has been regularly paid half yearly.

BRANCH RAILWAY FROM THE SOUTH-EASTERN TO RYE AND HASTINGS, to join the South-Eastern Line on a level near Staplehurst, and pass over it to Maidstone.—The Provisional Committee of Directors are desirous of receiving Proposals from Engineers or Surveyors, for the requisite Survey and Sections for the best line, agreeable to instructions that will be given. Correct Estimates of the quantities of the respective works and cost will be required.

Applications, stating terms, and references as to qualification, to be addressed to the Honorary Secretary, E. A. Lamb, Esq., Barrister-at-Law, Hastings, Sussex.

NORTH MIDLAND RAILWAY.—WANTED, a Person of practical knowledge and experience in Railway Management; to undertake the joint office of Secretary and Superintendent of the North Midland Railway, at a salary of £500 per annum.

Applications with Testimonials to be sent in, on or before the 3rd day of January next, to

R. FROST, Secretary.

Secretary's Office, Derby, 30th November, 1842.

EASTERN COUNTIES' RAILWAY COMPANY.—The Directors are ready to receive Tenders for Loans of Money, to be secured by the Loan Notes of the Company, bearing Interest at 5 per cent. per annum, payable half-yearly. The Tenders to be for sums of not less than £500, and for periods not exceeding three years.

By order of the Board,

A. BULKELEY, Secretary.

Offices, Shoreditch Station, December 7, 1842.

TEN HORSES, TWO SUPERIOR LIGHT OMNIBUSES, PAIR HARNESS, CLOTHING, &c. —To be Sold by AUCTION, by Mr. ROBINSON, at his Repository, Little Britain, City, on Thursday, December 29, 1842, at Twelve o'Clock precisely, Ten superior, young, fresh, seasoned Horses, Harness, Clothing, &c., which have been working the Omnibuses from the Railway Station to Tunbridge Wells, the whole of which must be sold without reserve, in consequence of the opposition in which they have been employed being entirely discontinued.

The Omnibuses are remarkably light and nearly new, built by Gowar, of Stratford, only four months since, cost, with their extras, £140 each, carry 10 inside and 6 out.

The Harness is also nearly new.

The Horses are in good condition, fit for immediate work.

On view two days previous to the sale, when catalogues may be had.

AN ELEGANT AND USEFUL PRESENT.

Just Published, in One Volume, price 5s. 6d., handsomely bound, with gilt leaves, sides, and back, and illustrated by

FOUR HUNDRED ENGRAVINGS,

PICTURESQUE EXCURSIONS; forming, by means of its engravings and descriptive letter press, a complete Guide to, and Remembrancer of, all scenes of interest connected with the following places and their neighbourhoods:—Richmond, Hampton Court, the river Thames from Kingston to the Nore, Margate, Ramsgate, Dover, Hastings, St. Leonard's, Brighton, Shoreham and its Railway, Worthing, Bognor, Southampton, Netley Abbey, Lymington, and the Isle of Wight. Edited by ARTHUR FREELING.

"A work in which the elegant and the useful are eminently combined."

London: Ackerman, Strand; *Railway Times* Office, Tilt & Bogue, and Bell & Wood, Fleet-St.; and all Booksellers.

PROPOSED RAILWAY COMMUNICATION BETWEEN BERLIN AND HAMBURG, on the right bank of the Elbe, passing through the Danish and Mecklenburg territory, situated on the lower Elbe.

By an Advertisement of the undersigned Committee, constituted at Berlin for the above undertaking, the public is apprised that the result of the preliminary works, combined with the most careful calculations of the probable traffic, leave no doubt of the practicability and rentability of the undertaking. A more ample notice has appeared in the *Hamburg and Leipsic Gazette*, accompanied by an invitation for parties desirous to become Subscribers, a list of which will be opened on the 1st January, 1843, and with a notice that the following mercantile firms have been authorised to receive such subscriptions, viz.:—

London—Messrs. B. Hebeler and Co.
Copenhagen—Messrs. Fr. Tutein and Co.
Hamburg—Messrs. Luttgroth and Co.; Mr. Salomon Heine; Mr. Paul Mendelsohn Bartholdy.

Regarding other particulars, and the Conditions for the Shareholders, information may be had of the above-named firms after 20th December, 1842.

Berlin, 25th November, 1842.

Committee of a Company by Shares for the Construction of a Railway between Berlin and Hamburg:—

Anhalt and Wagener.	Mendelsohn and Co.
Conrad and Klemme.	Von Moltke.
S. Herz.	M Oppenheim Sons.
Jung.	M. Robert.
Kunowski.	F. A. Von Witzleber.

SIR W. BURNETT'S PATENT PRESERVATIVE FOR TIMBER, CANVASS, CORDAGE WOOLLEN, &c.—This process is a very cheap one. It effectually protects even the commonest domestic or Colonial Timber and Deals from Dry rot, and other causes of premature decay; and it renders them equal to the best Timber from the Baltic. No doubt can exist of its efficacy in the preservation of all the above-named articles, after the Official Reports from the heads of various Government Departments, which may be seen, together with the specimens, at the Company's Office, No. 4, Castle-court, Birchin-lane, Cornhill, London.

MANCHESTER AND BIRMINGHAM RAILWAY.—TO ENGINE MAKERS, MANUFACTURERS AND OTHERS.—To be sold by Private Contract, at Longsight, Three Cylindrical Boilers, each 6 feet diameter; one 40 feet, one 37 feet, and one 15 feet in length, made of superior half-inch plates, seams double rivetted, and with hemispherical ends. The Boilers have been used for the purpose of tacking Railway Sleepers, and have constantly sustained a pressure of 200lbs. per square inch, and are admirably adapted for high-pressure Boilers.

Also, Two Second-hand Low Pressure Boilers, of 20 and 30 horse power, and in excellent condition.

The above are being disposed of in consequence of the Railway Company having no further use for them.

For further particulars apply at the Resident Engineer's Office, Manchester and Birmingham Railway.

By order,
E. J. CLEATHER, Manager.

Manchester, Dec. 14, 1842.

PATENT ELASTIC STEEL IRON, MADE (EXCLUSIVELY) BY THE YSTALYFE RA[illegible] COMPANY, BY THE USE OF ANTHRACITE COAL WITH COLD-BLAST.—Mr. Mushet, the author of the celebrated *Treatise on the manufacture of Iron and Steel*, who has made a series of most elaborate experiments on this extraordinary iron, in concluding remarks:—"From these and the former comparative experiments, it is abundantly evident, that the pig iron now making with cold blast and anthracite, at the Ystalyfera Iron Works, greatly exceeds in strength, in deflective powers, and capacity to resist impact, any iron at this time manufactured in the United Kingdom. It now remains for me to mention a property peculiar to this iron. The property referred to is one of great springiness or elasticity, which evinces a tendency to the bar in deflection and breaking to resume its rectangular form. Bars that had obtained a permanent set of 2-10ths, when afterwards broken, presented but a slight deviation from a right line, and in no case did the acquired curvature exceed one-fourth of a tenth. It was also remarked, that most of the fractures in breaking presented a regularity of grain throughout, resembling the structure of unhardened steel.

(Signed) "DAVID MUSHET."

The following comparisons are drawn from Mr. Mushet's trials and Report:—The Ystalyfera cold-blast anthracite iron, as cast from the furnace, is 36 8-10ths per cent stronger than the Yniscedwyn hot-blast iron, made with a mixture of coke and anthracite. It is stronger than the Yniscedwyn hot blast iron, made with anthracite alone, by 22⅞ per cent. The Ystalyfera cold blast anthracite iron, remelted in cupola, was found stronger than Mr. Mushet's results on the Yniscedwyn hot-blast iron, remelted in cupola, by 28 7-10ths per cent. The Ystalyfera cold blast anthracite iron, from the furnace, surpassed Tredgold's average of remelted iron by 22⅞ per cent. When remelted in the air furnace it surpassed Tredgold's average by 36¼ per cent. When remelted in cupola, with anthracite, it surpassed Tredgold's average by 58 per cent. Mr. Mushet's results on the Ystalyfera cold-blast iron, compared with the extensive series of most elaborate experiments made by Mr. Richard Evans, on their hot-blast iron, are as follow:—Cold-blast iron, remelted in cupola, superior to hot blast remelted, in strength, 35 8-10ths per cent.; in deflection, 2, 3 10ths per cent.; in power to resist impact, 69¼ per cent. As compared with Mr. Fairbairn's well known table of results on cast iron, the Ystalyfera cold-blast anthracite iron was found superior to Fairbairn's hot-blast iron trials, in strength 4[illegible]-10ths per cent.; in deflection, 24 6-10ths per cent.; in power to resist impact, 79 per cent. To Fairbairn's cold blast iron this was found superior in strength, 247 [illegible] per cent.; in deflection, 18 8-10ths per cent.; in power to resist impact, 68 2-10ths per cent.

The Ystalyfera Iron Company will [illegible] comment on these results, [illegible] the attention of Engineers, Iron Founders, [illegible] Smiths, &c., to the extraordinary merits of their [illegible] of modern complaints are now universal [illegible] pig iron, they hope they have [illegible] a metal deserving to be received in the [illegible] most elastic machinery iron. [illegible] soundness, extent of shrinking, [illegible] it is all the [illegible] Company [illegible] to the notice [illegible] The Ystalyfera Iron Company [illegible] an iron peculiarity calculated to [illegible] blast pig, to which it imparts [illegible] recommend their No. 2 as an iron [illegible] useful purpose; it is very [illegible] carries a honeycombed face. The [illegible] are prepared to execute, with [illegible] chairs, cast tyre, tram-plates, [illegible] articles, for which their elastic [illegible] adapted. Their prices are very [illegible]

Ystalyfera Iron Works, Swansea, December 21.

TO RAILWAY CONTRACTORS, COLLIERY OWNERS, &c.—For Sale by Private Contract, a quantity of round-bottomed Iron Rails, averaging from 22 to 28 lbs. per yard: also a number of Earth Waggons, and other materials, suitable for railway purposes, the whole of which are now lying at Mr. Listers's Foundry Yard, Darlington.

For particulars apply to Mr. John McCall, Thornley near Durham, or to Mr. John Gowland, Railway Contractor, New Elvet, Durham.

Thornley, December 6, 1842.

LONDON AND BIRMINGHAM, GRAND JUNCTION, CHESTER, LANCASTER, MIDLAND COUNTIES, NORTH MIDLAND, YORK AND DARLINGTON, RAILWAYS.—In connection with the above lines of Railway, Places can be secured by

NEW EDITIONS of the following useful Works are just published at the *Railway Times* Office, 122, Fleet-street.

I.

CRUCHLEY'S MAP OF THE RAILWAYS for 1842 of ENGLAND and WALES to the Capital of Scotland, carefully coloured, distinguishing the Lines open from those in progress, and showing the nearest route by Railway to the Continent, the north and south of Ireland, and the Lakes of Westmoreland and Cumberland. The cheapest Map ever published.

Mounted in cloth, 1s. 6d.; in paper covers, 1s.; mounted on canvas, in cloth case, 2s. 6d.; on rollers, 3s. 6d.

II.

ROBINSON'S RAILWAY TIME AND FARE TABLES, containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources, with Map, and an official List of Coach and Cab Fares to all the Metropolitan Railways. Corrected to August. Price 1s., in cloth.

III.

ROBINSON'S RAILWAY DIRECTORY FOR 1842, containing the Names of the Directors and principal Officers of the Railways in Great Britain, derived from authentic sources, price 1s.

IV.

TABLES OF HACKNEY CARRIAGE FARES from the BIRMINGHAM RAILWAY to all parts of the METROPOLIS, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand, with a Map of London. Price 6d.

V.

TABLES OF HACKNEY CARRIAGE FARES from the GREAT WESTERN RAILWAY to all parts of the Metropolis, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand, with a Map of London. Price 6d.

TO DIRECTORS OF RAILWAYS.—A Gentleman having a thorough and practical knowledge of Railway Accounts and Traffic, is desirous of an appointment as Accountant to a Railway Company, or as Superintendent of a Terminal or large First-class Station.

Unexceptionable references will be given. Address, prepaid, A. M., care of Mr. Norris, 137, Aldersgate street.

GLASGOW, PAISLEY, AND GREENOCK RAILWAY COMPANY.—NOTICE is hereby given, That the Half-yearly General Meeting of Proprietors will be held, pursuant to Act of Parliament, on Tuesday, the 6th day of January, 1843, in the Sheriff Court Hall, Greenock.

The Chair will be taken at Twelve o'Clock.

ROBERT D. KER, Chairman.

The Transfer Books will be Closed on the 31st instant, and will remain so until after the Meeting.

WYNDHAM HARDING, Secretary.

Railway Office, Greenock, 17th December, 1842.

RAILWAY STATION, DERBY.—The Proprietor of the BRUNSWICK RAILWAY AND COMMERCIAL INN, adjoining the Station, begs most respectfully to inform his Friends and the Public, that being suddenly, and without any cause assigned, deprived by the Secretary of the North Midland Railway Company (to which Company the above House belongs, and the only one their own property) of the privilege of sending his Porter to meet the Trains at the Station, to convey Luggage, which he had done from the opening, seven months since, by order of the Secretary of the said Company.

The Proprietor now wishes to assure those who may continue to honour him with their patronage that his House will still be open to them at all hours, and the charges remain on the same moderate scale, viz., Beds, 2s. per night, &c., and no Fees allowed to Servants.

The Public are cautioned not to be deceived by being taken to any other House but the BRUNSWICK, as that is the only one where superior accommodation and moderate charges are combined, without the impositions enforced at some other Railway Hotels.

THE TWELFTH THOUSAND.

MANHOOD: the Causes of its Premature Decline, with plain Directions for its Perfect Restoration; addressed to those suffering from the destructive effects of excessive indulgence, solitary habits, or infection; followed by observations on the treatment of Syphilis, Gonorrhœa, Gleet, &c., illustrated with cases, &c.:

By J. L. CURTIS and Co., Consulting Surgeons, London.

TENTH EDITION—Published by the Authors, and sold by Burgess, Medical Bookseller, 28, Coventry-street, Hay Market; Mann, 39, Cornhill; Strange, 21, Paternoster-row, London; Guest, 51, Bull-street, Birmingham; C. Philip, Sowler, No. 4, St. Ann's-square, Manchester; G. Philip, South Castle-street, Liverpool; Fannin and Co., 41, Grafton street, Dublin; Drummond, 114, High street, Edinburgh; and sold in a *sealed envelope*, by all Booksellers.

OPINIONS OF THE PRESS.

"This work, *a tenth edition* of which is now presented to the public, *ten thousand copies having been exhausted since its first appearance*, has been very much improved and enlarged by the addition of a more extended and clear detail of general principles, as also by the insertion of several new highly interesting cases. We feel no hesitation in saying that there is no member of society by whom the book will not be found useful, whether such person hold the relation of a *parent*, a *preceptor*, or a *clergyman*."—*Sun*, evening paper.

"This is a work that we fear there exists too much need for to cause us to hesitate to recommend it for general perusal. Every branch of those frightful maladies, whether the result of immoral habits or secret vices, is here succinctly treated, and divested of all medical technicality, plain and easy directions are given for the best mode to be pursued in all cases, however complicated or apparently hopeless. To the married, as well as the unmarried, this little work alike affords consolation and cure in peculiar cases, and we are doing a service to society in recommending it to general notice."—*Essex and Herts Mercury*.

"Messrs. Curtis's work, entitled MANHOOD, is one of the few books now coming before the public on such a subject which can lay claim to the character of being strictly professional, at the same time that it is fully intelligible to all who read it. The moral and medical precepts given in it render it invaluable."—*Magnet*.

Messrs. Curtis and Company are to be consulted daily at their residence, No. 7, Frith-street, Soho-square, London.

Country Patients are requested to be as minute as possible in the detail of their cases. The communication must be accompanied by the usual consultation fee of £1, and in all cases the most inviolable secrecy may be relied on.

LONDON: Printed by JOHN THOMAS NORRIS, 137 and 138, Aldersgate-street, in the Parish of St. Botolph Without, Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet-street, (facing Saint Bride's Church), in the Parish of Saint Bride, Fleet-street, Middlesex.—Saturday, December 24, 1842.

Tenders, expressing the sum, the term of years, and the residence of the Lender, to be addressed to the Secretary.

By order of the Board of Directors,
ROBERT FLETCHER, Secretary.

Bristol Office, Exchange-Buildings,
November 7, 1842.

MANCHESTER, BOLTON, AND BURY CANAL NAVIGATION AND RAILWAY.—LOANS.—The Committee of Management are prepared to receive Tenders for the Loan of a limited amount of Money, in sums of not less than £1,000 each, to be secured by the Bonds of the Company, bearing interest at 4 per cent. per annum, payable half-yearly. Period of the Loans to be either for three, five, or seven years, the term preferred to be mentioned in the Tenders, which must be addressed to the undersigned.

By order,
JOHN HAWKSHAW, Clerk of the Company.

Canal and Railway Office, Salford, Sept. 22, 1842.

NORTH MIDLAND RAILWAY.—Wanted, a Person of practical knowledge and experience in Railway Management, to undertake the joint office of Secretary and Superintendent of the North Midland Railway, at a salary of £500 per annum.

Applications with Testimonials to be sent in, on or before the 3rd day of January next, to

R. FROST, Secretary.

Secretary's Office, Derby, 30th November, 1842.

EASTERN COUNTIES' RAILWAY COMPANY.—The Directors are ready to receive Tenders for Loans of Money, to be secured by the Loan Notes of the Company, bearing Interest at 5 per cent. per annum, payable half-yearly. The Tenders to be for sums of not less than £500, and for periods not exceeding three years.

By order of the Board,
A. BULKELEY, Secretary.

Offices, Shoreditch Station, December 7, 1842.

THE *HINDOSTAN* STEAM-SHIP and H. M. FRIGATE *PENELOPE*.—The two above-named grand Steam-Ships are entirely fitted with ANDREW SMITH'S PATENT WIRE ROPE for their Standing Rigging; thus demonstrating that practical experience is daily and progressively establishing its superiority over all other Standing Rigging. For all Mining and other purposes it is already proved to be the best and most serviceable description of Rope, superseding Hemp and Chain.

For further particulars, address Mr. Andrew Smith, 2, White-Lion court, Cornhill, London.

RAILWAY SLEEPERS, from 9 inches diameter and upwards, Posts and Railing of the best quality, Prop Posts for Coal Pits, &c.—The Advertisers are ready to furnish to Railway Companies a very considerable number of Larch Sleepers of first rate quality and growth, from sixty years and downwards. Parties requiring Posts and Railing can be supplied with Larch Wood suitable for that purpose, and colliery owners may obtain an extensive quantity of Prop Posts cut to the requisite lengths. The plantations being favourably situated for the east and west coast of Scotland, the proprietors are thereby enabled to ship their wood to any market. Every information can be obtained on application to Ballantyne and Co., Elderslie Cottage, near Johnstone, Renfrewshire.

Elderslie Cottage, 26th December, 1842.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secrecy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

THE PARISIAN BITUMEN COMPANY take leave to inform their numerous friends and the public that offices are established at 4, Great Winchester-street, Broad street, for the City, and at 8, Denbigh-street, Belgrave-road, for the West-End and its vicinity, where every information will be promptly given.

Temple Mead, Bristol.
December 1, 1842.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is no a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

PATENT RIVET WORKS, SMETHWICK, NEAR BIRMINGHAM.—ROBERT GRIFFITHS, Manufacturer of every description of Railway Fastenings, Railway Spikes, Bolts, and Screws; Engineers and Coachmakers Bolts and Nuts; Boiler, Gasometer, and Tank Rivets of every description; Square and Hexagon Nuts; punched Washers, &c. &c.

IMPORTANT TO THE RAILWAY PUBLIC. —Engineers and Managers of Railways, at Home and abroad, who have not yet availed themselves of the advantages attending the use of the PATENT TRAVERSING SCREW-JACK, are respectfully solicited to communicate with the Patentees, who will forward them an Engraving and full Description of the Machine, "*free*," to any part of the world.

G. England & Co., Patentees and Sole Manufacturers, Pomeroy-street, Old Kent-road, London.

LONDON AND CROYDON RAILWAY COMPANY—SPECIAL MEETING.

A special general meeting of the proprietors of the London and Croydon Railway Company was held on Tuesday, at the London Tavern, Bishopsgate-street, City; William Arthur Wilkinson, Esq., in the chair; "for the purpose of obtaining the sanction of the proprietors to a proposition of the Directors for relinquishing the carrying trade hitherto conducted by the Croydon Company."

The meeting was very numerously attended.

The proceedings having been opened in the usual way,

The Chairman said, the present special meeting had been called because the position in which the Company were now placed was of so important a character that, although the Directors were prepared to take upon themselves the whole responsibility of the step which it was proposed to recommend, and from that responsibility would not shrink, they were anxious to receive the sanction of the proprietors. The Secretary would now read the Report, which would in a great measure explain the reasons which had led the Directors to their present conclusion, after which he would take the liberty of stating any additional reasons which might occur to his mind, and which it might not have been desirable to embody in the Report. He might just mention that, the meeting being special, no other business than that for which it had been called could be transacted; but of course the Directors would feel great pleasure in giving any explanations that might be required as to their past or future policy.

The Secretary (R. S. Young, Esq.) then read the Report as follows:—

REPORT.

Gentlemen,—Your Directors have called you together for the purpose of submitting to your consideration the course they think desirable to be adopted in the present state of your affairs; and, in order that you may be the better enabled to judge of the present position and future prospects of the Company, it is deemed proper to revert somewhat at large to past circumstances, by which your Directors have been guided.

In the autumn of 1839, when your Directors came into office, a few months after the railway had been opened to the public, they found the fares established at a moderate, or what was then considered a low rate, and the number of passengers surpassed the expectations of the proprietors. It however soon became evident that the permanent expenses of a railway circumstanced as the Croydon Railway is, must necessarily be so high, that unless they could be divided amongst a still larger number of passengers than the then fares were likely to induce, the profits could be but small. As the general charges upon a railway are but slightly affected by the numbers carried, it was clear that the remedy for this state of things was to be found only in such an increase of numbers, as at even a lower rate of charge would produce a larger gross revenue; and your Directors had a strong belief that this result might have been obtained. Such an increase, however, would have been wholly profitless to this Company if subjected to a constant and undiminished expense per passenger, and of this nature was the fixed toll of 3d. payable to the Greenwich Company. It was obvious, therefore, that some modification of this toll must be effected before any means could be successfully adopted for increasing the numbers, by diminishing the charges to the public. For this purpose it was necessary to approach the Greenwich Company with a view to some arrangement; but just at this period a new difficulty had arisen, and one of the greatest importance to the future welfare of the Croydon line.

The Select Committee on Railways had published a Report, in which it was stated to be highly inexpedient that the expected traffic of the Brighton and Dover Companies should be *allowed* to pass over the Greenwich Railway, as then constructed, in addition to that of the Greenwich and Croydon Companies already passing over it; and there had been laid before the Committee three plans for obviating this difficulty, two of which involved an avoidance wholly, or in part, of the Croydon Railway; and the third proposed a widening of the Greenwich line. No doubt could be entertained as to which of these plans it became the duty of your Directors to promote, the traffic of the Brighton and Dover Companies having ever been regarded as the main source of profit to the Croydon Company; and as the Greenwich Company was at least equally interested in the matter, the question of the toll, although the most immediate, was deferred as of secondary consideration, and your Directors applied instantly to the Directors of the Greenwich Company to know what course they intended to pursue with respect to the other grave subject of inquiry, at this important crisis. Dispatch was the more necessary, as the time was fast passing away within which the requisite Parliamentary notices for any railway works must have been given. The Greenwich Directors, however, notwithstanding the earnest and repeated applications made to them for that purpose, evinced no desire to meet us, until the period for giving Parliamentary notices had elapsed. In this emergency, to avoid disappointment, we took upon ourselves to give the necessary notices for powers to widen the Greenwich line: and, when the period had expired for giving such notices, we were invited to a conference with the Greenwich Directors, and then, in answer to our application, they informed us that they intended to do nothing, for that they were much better satisfied with the Croydon revenue alone, than to expend a large amount to insure the traffic of the Brighton; that as the South-Eastern Directors were bent on procuring a distinct entrance into the metropolis, that therefore they could not reckon upon the traffic from that line; and moreover if the South-Eastern should succeed in procuring such a line, a considerable portion of the Brighton traffic would be diverted from the Greenwich, and they invited us to join them in attempting to prove to Parliament that the existing two lines would be sufficient for all the expected traffic. To this we replied, that we depended mainly upon the traffic of the longer lines, that the suggestions of the Parliamentary Committee must be complied with, and public opinion respected, and that if they did not take the necessary steps for this purpose, however unwilling we might be to interfere with what was properly their business, we should be compelled to apply to Parliament ourselves. They promised to consider the matter. Several other interviews followed, without being attended with a different result.

During this time your Directors were not inactive, but immediately opened negociations with the other Companies, it being evidently our policy so to unite with them, the more effectually to ensure the passage of the traffic over our railway, and even should it become necessary to incur a large outlay for the purpose of widening the Greenwich line, it could not but be desirable that this should be done on a joint account; by this means the Croydon Company would be secured of the traffic of the longer lines on the one hand, and the Brighton and Dover Companies would obtain an independent footing at London Bridge on the other. This negociation ended in the sale of two-thirds of the London Bridge station to these Companies, and the future negociations with the Greenwich Company on the subject of widening the railway, which were concluded by the contest in Parliament, were subsequently conducted jointly by the three Companies. In the progress of these negociations, which were carried on for the purpose of avoiding the Parliamentary contest, an offer was made to the Greenwich Company, that the three Companies would take upon themselves the whole expense of constructing and maintaining the new line of railway, and would pay the Greenwich Company at the rate of one penny per passenger for all passengers passing over it, as a compensation for the value of the land.

This and other offers having been refused by the Greenwich Directors, the three Companies jointly applied to Parliament for powers to widen the Greenwich Railway, or rather to construct a new line upon land originally taken by the Greenwich Company for that purpose, which land was proposed to be purchased at a fair valuation. In Parliament they were met by the Greenwich Directors, who proposed to make the new line themselves, but to force the three Companies to pay for its construction, by the imposition of an additional toll of 3d. per passenger until the sum expended should be repaid. After a contest of some weeks Parliament granted to the Greenwich Company powers to widen their line, and at the same time the right to levy an additional toll of 1½ per passenger, without limitation as to time. It had now, however, become apparent, that the toll of 3d. per passenger was more than the traffic would bear, because under its operation the Croydon Company would be obliged either to pay over its profits to the Greenwich Company, or to charge such fares to the public as would effectually prevent the realisation of any profit at all. Of this the Greenwich Directors were fully apprised; and it was pointed out to them, that if a toll of 3d. were too high for the interests even of the Greenwich Company, a toll of 4½d. must necessarily be ineffectual for that purpose. The Greenwich Directors, however, thought otherwise, and stated to their proprietary, that as the toll of 3d. had produced, from the Croydon traffic, a revenue of 6,000*l.* per annum, a toll of 4½d. would *therefore* produce a revenue of 9,000*l.* per annum from the same source, and under this erroneous impression the money was raised, and the work of widening the Greenwich line commenced.

Meanwhile your Directors made to the Directors of the Greenwich Company a proposition for improving the position, and increasing the profits, of both Companies. This proposition was a modification of the toll, or an alteration of the principle upon which it was levied, which would probably increase its gross amount, and at the same time the Croydon Company would be enabled, by lowering its charges to the public, to induce a very large number of passengers. Under this arrangement the Croydon Directors undertook to guarantee the Directors of the Greenwich Company against any diminution of their then revenue, and intimated at the same time, that unless some such arrangement were complied with, they, the Croydon Directors, would be under the disagreeable necessity of raising the Croydon fares, which would certainly have the effect of diminishing the number of travellers, and according to the present plan of a fixed toll, the income of the Greenwich Company.

This proposition, and others urged at various times on the consideration of the Greenwich Board, were uniformly rejected; the fares on the Croydon line were raised; the expected results followed—the amount of toll fell off, without, however, a corresponding reduction in the receipts of the Croydon Company; and this state of things continued through another year, with very small profit to the Croydon, and a constantly diminishing toll receipt to the Greenwich Company.

The time now arrived when, the works of the new line being completed, the Greenwich Company was empowered to levy the additional toll. To have allowed the imposition of this toll, without again raising the fares on the Croydon Railway, would have been to submit to the transfer of any remaining portion of the already small profits of the Croydon Company, to the Greenwich proprietors. Before, however, any further steps were taken, the Greenwich Directors were apprised of the necessity which existed for such an increase of the rate of fare as would prevent this result, and at the same time indemnify the Croydon proprietors for the loss of traffic which must ensue; and rather than have recourse to these means, an offer was made to the Greenwich Company of 6,000*l.* per annum, in lieu of all toll from Croydon traffic alone, for five years: this offer was refused by the Greenwich Directors, and the fares were again raised.

The effect of this measure, at a time when the great competition for traffic on the road, occasioned by the reduction of the stage coach duty, calls imperatively for a lower rate of charge on the railway, has so reduced the number of passengers on the Croydon line, as to prevent the possibility of carrying these passengers without loss, and yet, to resort to lower charges for the sake of augmenting these numbers, while they are subjected to the present toll arrangement, would be merely to swell the amount of such toll, without any addition to the profits of the Croydon Company; [See Appendix No. 1.] whereas any part of this traffic which is now, or may be hereafter, carried by the other Companies, must yield in toll to this Company a sum more than double that which the Greenwich Company can derive from the same source.

Under these circumstances, and having exhausted all the means in their power to endeavour to persuade the Greenwich Directors to modify their toll, your Directors, after mature and anxious deliberation, have come to the unanimous resolution, that it will tend *to your advantage* in the present state of your affairs, to discontinue the carrying trade of the Croydon Company: and having regard to the best interests of the Company, they do not hesitate to request your sanction for the adoption of this important measure. Arrangements lately agreed upon with the South-Eastern Company will enable us without difficulty to effect this object, and likewise to resume the traffic whenever a fitting opportunity shall present itself. [See Appendix No. 2.]

Due notice has been given to the Greenwich Company of the intention of your Directors to recommend the course now proposed, and to this notice merely a formal acknowledgement of its receipt has been given. [See Appendix No. 3.]

In order, however, that no obstacle may be opposed, but on the contrary, every facility afforded to the other Companies for conducting this traffic upon terms which would yield the Croydon Company a fair proportion of the profits, your Directors have requested a conference with the Directors of the Brighton, Dover, and Greenwich Companies, and have offered to let to them the stations on the Croydon line, at a rent equal to 5 per cent. per annum on the cost price, with an addition of 2 per cent. per annum upon those additions, the repairs, rates and taxes of which, would still have to be defrayed by this Company; and, although your Directors might reasonably be expected to demand on all the intermediate traffic the full Parliamentary toll, so long as the Greenwich Company insist upon their maximum toll of 4½d., yet they have proposed to substitute a reduced toll of 1d. per mile per passenger, the charge over the Greenwich Railway being equal to 2¾d. per mile per passenger. These Companies, however, have declined to rent the stations of the Croydon Company, and as there is no possibility of conducting the intermediate traffic without the use of these stations, your Directors conclude that it is not their intention to make the attempt. At this determination your Directors feel no surprise, since there can be no reason to suppose, that having the same or greater expenses to encounter, these Companies can hope to obtain a profit where the Croydon Company has failed.

Your Directors cannot close this Report without expressing their firm belief that the traffic between Croydon and London cannot be profitably carried on by any parties under the operation of a fixed toll of 4½d. per passenger; and that the various proposals made by them to the Directors of the Greenwich Company for the modification of this toll, would have been fully as advantageous to the proprietors of the Greenwich as to those of the Croydon Company. Having this belief, they cannot but lament the unfortunate adherence of the Greenwich Directors to a mistaken course of policy, the practical result of which is highly detrimental to the best interests of their own proprietary—injurious to the rights of others having the misfortune to be connected with them—and especially annoying to the public, for whose convenience the railways were undoubtedly allowed to be constructed.

WILLIAM ARTHUR WILKINSON, Chairman.

APPENDIX No. 1.

Low charges can only succeed upon the supposition of larger numbers to be obtained thereby, and the success of these larger numbers at lower fares depends again entirely upon the assumption that the expenses do not increase in proportion to such numbers. In order, therefore, to see clearly the effect of a toll which does increase exactly in proportion to such numbers, take the following case:—

The number of passengers carried on the Croydon Railway during the last six months has been 188,532*l.*—the amount of money received for whom has been £14,000

Less the expenses of their carriage 7,500

£6,500

Toll actually paid on 188,582 passengers, being mostly at 3d.....		2,362
Profit.....		£726
Suppose a diminution of one-third charge, and that the numbers have been doubled, then.....	£10,642	
Deduct one-third	3,547	
	7,095	
Add for double numbers....	7,095	
377,164* passengers at one-third less fare		£14,190
Suppose expenses the same		7,554
		6,636
Toll on 377,164* passengers at 4½d.		7,071
Loss.....		£435

The above does not profess to be an exact calculation, but is sufficiently so for the purpose of illustration.

APPENDIX No. 2.

It is to be borne in mind that this suspension of a trade which brings no profit can entail no loss, or in any way diminish the present resources of the Croydon Company, and would have been recommended long since by your Directors, had they not felt themselves bound, first to exhaust every means within their reach to obtain an object which they believe to be perfectly practicable, that of so conducting the traffic between London and Croydon as to produce a considerable annual profit to the Croydon and Greenwich Companies. As, however, your Directors have been hitherto entirely defeated in this object by the pertinacious adherence of the Greenwich Directors to a mistaken policy, the impossibility which has lately occurred of conducting this traffic without a loss, and its consequent abandonment for the present, is merely the postponement of an advantage never yet enjoyed by this Company, until such time as the proprietors of the Greenwich Company shall see fit to urge their Directors to adopt a different policy, or to entrust the management of their affairs to other hands; whenever this time shall arrive there is an undoubted advantage to be realised for both Companies, and in the meantime the Croydon Company may safely depend for a fair income upon the traffic of the longer lines, which, fettered as it no doubt is by the restrictive toll of the Greenwich Company, cannot fail to emancipate itself, yet sooner than the shorter traffic, from the trammels in which it is just now held.

The net toll payable to the Croydon Company, by the Brighton Company, since the last half yearly account was rendered, viz —from the 1st of August to the 4th December, is.....	£5,960	4	0
Ditto, ditto, ditto, by the South-Eastern Company, from the 1st of August to 30th November.....	2,615	2	2

The Government duty in both cases being deducted.

APPENDIX No. 3.

This notice was considered to be only courteous, since the toll payable to the Greenwich Company had already fallen from 6,000*l.* per annum, which it had attained under the imposition of a 3d. toll, to 3,000*l.* per annum when a 4½d. toll was imposed—the very reverse of what was predicted by the Greenwich Directors—and there seems to be every probability that it will fall still lower when the traffic between Croydon and London shall be abandoned to the care of the Brighton and Dover Companies.

The CHAIRMAN said, he was afraid the Report was rather long, but as it had been for some days in the hands of the proprietors, he hoped there would be no objection on that score to its being taken into immediate consideration, and therefore he would move that it be received, adopted, and printed for circulation in the usual manner. He trusted no opposition would be offered to this motion, for it was not intended by the adoption of the Report to pledge the proprietors to any particular course, as the Directors desired to take a specific vote relative to the subject on which they had called them together. In taking this vote, it was the wish of the Directors to leave it to the *bona fide* consideration and decision of the proprietors whether the step recommended in the Report was likely to prove advantageous or otherwise. Of course the Directors felt the deep responsibility of advising such a step, and if the proprietors adopted their views, his colleagues and himself would still feel that responsibility. If, on the other hand, the meeting took a different view from that suggested in the Report, the responsibility would, in a great measure, fall upon themselves, the Directors being prepared in either case to carry out the wishes of their constituents, as anxious only to promote the best interests of the undertaking. In taking the question into consideration, they seemed to be in this position: for the last eight weeks, as far as the Directors could ascertain—but in these matters there was always some considerable difficulty, and of necessity certain things were mere matters of estimate, since statistical returns for short periods were usually affected by some disturbing cause which detracted from their perfect accuracy—as far as the Directors could ascertain, the expenses of the last eight weeks had been 190*l.* 13s., or about 200*l.* a week, while the receipts had fallen short of that amount by about 10*l.* or 12*l.*—

Mr. SHEWELL inquired what was included under these expenses.

The CHAIRMAN said, he referred solely to the expenses of the traffic, and carrying on the business of the Company, exclusive of the expenses of the maintaining the road.

Mr. SHEWELL inquired if the expenses referred to included the salaries of the different officers of the Company.

The CHAIRMAN said, of course the salaries of the booking clerks, as well as cost of locomotive power, were comprised under this item.

Mr. GOODALL presumed, that it was according to the division of expenses made at the last meeting?

The CHAIRMAN replied in the affirmative. The fact was, they were making no profit, if judged by the traffic of the last eight weeks. If they took periods further back, and went into the summer months, or into the whole year, he was aware the results would be somewhat different. But it was not merely that they were working for nothing. They carried at present about 700 passengers weekly between London and Croydon, and it was but fair to presume that, supposing the Croydon trains discontinued, of these at least 600 would be carried by the other Companies, unless the Brighton Company should raise their fares, which he hardly thought would be the case, for to do so would be to confess that they had been competing, at a disadvantage to themselves, with the Croydon Company for the Croydon traffic. From each of these 600 or 700 passengers there would be a toll of 1s. paid to the Croydon Company, or about 30*l.* a week. If they could let the stations—which, however, they could not do—this amount would be increased. One part of their establishment, indeed, they had let by arrangement with the South-Eastern Company, namely, the New Cross station. On that establishment the Croydon Company had expended a capital of 58,000*l.*, on which they would receive from the South-Eastern Company 5 per cent. interest, and which interest they were now losing. This brought the weekly loss they were now sustaining by carrying on the traffic to 100*l.*, or about 5,000*l.* a year. There was, moreover, always a risk in carrying on business, and the Directors did not think that such risk should be incurred, unless something handsome could be realised. In connection with the interest of the proprietors, there certainly was to be considered the inconvenience which the discontinuance of the traffic would inflict on the public—an inconvenience which the Directors greatly deplored. The Directors, indeed, felt perhaps a greater interest than any other gentlemen in that assembly in keeping up the traffic, for it must be to them a source of mortification to abandon what they had so anxiously laboured to establish, and therefore the proprietors would do them the justice to believe that they would have been the last persons to recommend it, could it have been avoided with due regard to the interests of the proprietors, especially when the convenience and accommodation of the public were so much involved. Many gentlemen who were in the habit of travelling by the line were also proprietors; and no doubt the measure contemplated would greatly inconvenience them. They had among them at the Board one gentleman, a resident on the line (Mr. Lawrie), and he (the Chairman) could wish that other proprietors, being travellers, were equally in a position to judge of the propriety of this step, for then they would see that it was inevitable. Then, as to the policy of the question:—It would be seen from the Report that the Greenwich Company had refused an offer of £6,000 a-year, in lieu of all tolls payable by the Croydon Company for the traffic on their own line. Now, the Greenwich Directors could not be justified in thus throwing away £6,000 a-year of their constituents' money, in order to spite the Croydon Company; and no doubt, in answer to such an allegation, it would be said that the Greenwich Directors had no such object, and that if the Croydon Company did not carry the public, the other Companies would; and thus the toll would equally accrue to the Greenwich. If it were so, the advantage to the Croydon Company would be still more striking. To reach the Greenwich Railway all these passengers must go over a certain portion of the Croydon line, and it was found by experience that this portion was an average distance of 6¾ or 7 miles—but call it 6. As the toll payable to the Croydon Company for these 6 miles was 1½d. per mile per passenger, the total toll would be 9d., or just double the 4½d. of the Greenwich Company. In other words, supposing the Greenwich Company still to get their 6,000*l.*, the Croydon Company must get 12,000*l.*, and so in regard to other amounts of toll, the toll of the Croydon being, for the six miles, double that of the Greenwich for their two miles. Now for the last three years, as the meeting were aware, the Croydon Company had made nothing by their traffic, while the Greenwich had secured a sum varying from 6,000*l.* a year, which it was during the 3d. toll, to 3,000*l.* which it now was under the 4½d. toll; so that supposing the Greenwich Company to be right in their expectation that the other Companies would give the some amount of toll, it was clearly the policy of the Croydon Company to discontinue their trade. As regarded the policy of the measure, therefore, either the Greenwich Company would be throwing away this 6,000*l.* a year, or they would not. If they were throwing it away, it was not to be supposed that their constituents would long tolerate such a course; if they did *not* throw it away, then for every 6,000*l.* the Greenwich got from toll, the Croydon would get 12,000*l.* It was said the Croydon Company were not, but the Greenwich were, in a position to wait the decision of this question, whereas he thought the very reverse was the fact. The Greenwich by their Act had power to charge a toll of 4½d. per passenger, while the Croydon could charge 1s. 4d., or together 1s. 8½d., and it was not to be expected that the public would come over their lines if charged at that rate, while at a reduced charge they might do so, although it was not reasonable to suppose that the Croydon Company would lower their fares merely to add to the profits of the Greenwich. Then only

* The whole of these passengers, in both cases, are supposed to pass over the Greenwich Railway, which was not the case in the first instance, but would probably be so in the last.

Digitized by Google

2 miles of the Greenwich, but 8 miles of the Croydon, were to be avoided; and surely in the latter case there was greater difficulty than in the former, notwithstanding they were threatened by the Brighton Company with another line from Croydon, which, however, he (the Chairman) did not much fear, looking upon it as a *brutum fulmen*. At any rate, it was much easier to make a new line to London from the junction with the Greenwich than from the junction with the Croydon, and hence they (the Croydon Company) were in no great danger as to their position. In thus stating the views of the Board, he had doubtless omitted to touch upon several points of interest and importance, but he thought one thing was clear, namely, that to abandon the traffic would be an act of policy. The only thing to be lamented was that they should disoblige the public, to whom this line had been much indebted—so much indebted, indeed, as to make him and others exceedingly sanguine that with an opportunity of reaping their fair share of the profit, instead of handing the whole of it over to the Greenwich, a handsome return might be secured from the local traffic alone, and which caused his colleagues and himself personally to regret the necessity of carrying the present measure into effect. He should now be glad to hear, and as far as possible to answer, any objections that might be made to the plan, and would conclude by again moving the adoption of the Report. (Applause.)

Mr. SMYTH seconded the motion.

Mr. MAUBERT differed totally from the Directors on this question. For the last three or four years the Company had had a staff of servants scarcely equalled, but certainly not surpassed, upon any railway in the kingdom, and these were now to be discharged at a fortnight's notice. [The CHAIRMAN—It is not yet done.] They had at least received notice to hold themselves ready to be discharged in a fortnight from the 31st December. The public too had supported the line, and houses had been taken and furnished at Sydenham, Norwood, and other parts of the line, in the confidence that there would be an easy means of access to London. If these parties were now scattered—

Mr. FLOOD rose to order. He thought that, as a substantive motion was to be brought forward, the observations of the honourable proprietor had better be deferred.

The CHAIRMAN was of the same opinion. There was no desire on the part of the Directors to stop discussion, but it would be more in order if the Report were adopted. (Hear, hear, hear.)

Mr. ADAMS thought, if a Report containing certain recommendations were adopted, the meeting would be pledged to these recommendations.

The CHAIRMAN said, the Directors had no objection to the omission of the word "adopted;" it would be sufficient if the Report were received.

Some conversation followed on this point, but ultimately the motion was so amended as to apply only to the reception of the Report (it having been already printed), and in that state it was put to the meeting and carried unanimously.

The CHAIRMAN then brought forward the following motion:—

"That this meeting approves of the proposition of the Directors for relinquishing the carrying trade hitherto conducted by this Company, until by some arrangement with the Greenwich Company the same may be resumed, with a remunerative profit to this Company."

Mr. LAWRIE (a Director) seconded the motion.

Mr. MAUBERT inquired from what time it was proposed that the resolution should take effect.

The CHAIRMAN said, the Directors would take the feeling of the meeting on that point. The 31st of January naturally suggested itself, as the accounts of the Company were made up to that date.

In answer to a question from Mr. Maubert it was stated, that the meeting of the Greenwich Company was usually held towards the end of January, or in the early part of February; Mr. Maubert's object being apparently to give the Greenwich proprietors an opportunity of considering the matter before the discontinuance of the trains should be carried into effect.

Mr. MAUBERT resumed his former argument, and contended that it would be highly impolitic to disperse the population which had been attracted to the neighbourhood of the line.

Mr. ADAMS said, it might save trouble if the Chairman would state the terms of the arrangements which, according to the Report, had been entered into with the South-Eastern Company.

The CHAIRMAN said, he would notice that point when Mr. Maubert had concluded.

Mr. MAUBERT proceeded, and alluded to the buildings now going forward at Sydenham. He himself had no interest in them, but was it fair thus to depreciate the value of property which the line had as it were called into existence? Then the Company had disposed of the Sydenham reservoir, and had held out as an attraction that the spot was between two stations, and had thereby obtained a higher price for the property; and was it just—was it honest—that they should now disappoint the purchasers? Nothing but sheer necessity should drive them to it. (Hear, hear, hear.) It was said they were working at a loss, but this he denied. The traffic returns given in the Report had, he must say, been made up ingeniously, for they extended only from the 13th of October to the 13th of December, thus on the one side avoiding Croydon fair, and on the other the Christmas holidays. There was no railway in the kingdom which for that interval did not exhibit a diminution of traffic. The summer traffic on the Croydon line was double that of the winter, and if 200*l.* a week were taken now, surely they might calculate upon 300*l.* a week during the summer months; and in that case they would work at a profit instead of a loss; and therefore, would not be justified in shutting up the line. One word as to the finances of the Company. At the last meeting the Directors had been empowered to borrow 36,000*l.* on loan notes, but he believed not a third part of that amount had been received, which proved that the undertaking was not in very good odour with the public. The only object in abandoning the traffic seemed to be to compel the Greenwich Company to come to terms, but he did not think they would succeed. The Greenwich Company might lose the traffic from some of the stations, but from Sydenham and the Dartmouth Arms he believed omnibuses would be put on in connection with the Greenwich Railway, so that instead of 4½d. the Greenwich would receive 1s. or 9d. per passenger. He must say that the course which the Croydon Directors had pursued in this matter was not straightforward. Immediately the widening of the Greenwich line was effected, the Croydon Directors commenced hostilities with them, by putting on omnibuses from New Cross, and taking other means to encourage the traffic to that point. The Greenwich Company said—and said fairly enough—that they had not had an opportunity of testing the value of their line. Let the traffic be conducted for six months on equitable principles, and he had no doubt that, if the position of the Directors were correct, the Greenwich Directors would listen to reason and justice. It was stated in the Report that the line had been offered to the Brighton and Dover Companies at a toll of 1½d. per passenger, with 7 per cent. on the stations, but the Directors must have known when they made it that such an offer would not be accepted. If the trade were abandoned, they would still have to keep up the permanent way. This would cost 10,000*l.* a year, and added to 11,000*l.* interest on bonds and other charges, would make at least 22,000*l.* a year to be deducted from the tolls paid by the other Companies. If the tolls amounted to 30,000*l.* there would be a dividend of about 5s. a share, but he was sure some arrangement might be made with the other Companies which would raise that dividend to 10s. or 12s. per share. Without further troubling the meeting he would move as an amendment—

"That this meeting is of opinion that the traffic on the line should be continued for six months, from the 1st January next, at the following fares:—

"Croydon, Jolly Sailor, Anerly, Sydenham, and Dartmouth Arms—1st class, 1s. 6d.; 2nd class, 1s. 2d. Intermediate, at moderate fares. Annual tickets, 30*l.*"

After some conversation between Mr. Maubert and Mr. Goodall, as to the average takings on the line,

The CHAIRMAN said, he held in his hand a return of the receipts from the 1st of August to the 13th December. During that period the net receipts had been 5,299*l.*, which was not much more than 300*l.* a week, and this although during some part of the time the 3d. toll only had been in operation. The fact was, they were working without a profit. If any charge could be brought against the Directors on this head, it was, perhaps, that they had allowed the traffic to go on so long.

Mr. LEVY inquired how much of the 200*l.* a week expense would cease on discontinuing the traffic.

The CHAIRMAN said the whole of that amount would cease, as the maintenance of way was not included.

Mr. LEVY was of opinion that there was a great misapprehension as to the reduction of traffic consequent on the raising of the fares. It was true they had a great deal of traffic in the years 1839 and 1840, but it was principally because of the novelty of the undertaking, for he had never known even of a toll-bridge that did not in the first year or so take more than at any future corresponding period. Then, again, the Brighton and Dover Companies now carried passengers to Reigate, whereas formerly passengers to that part used to go down the Croydon line, at the further terminus of which a number of carriages were constantly in waiting. All this fuss about low fares amounted to nothing, for even if they could carry passengers at a much lower rate, they would not get more profit. However, without giving any opinion as to the propriety of discontinuing the traffic, he certainly thought that, if it were to be done at all, it should be done at once, as they *must* lose in the months of January, February, and March. He had great respect for the opinions of Mr. Maubert, but he could not agree with that gentleman that they had anything to do with builders at Sydenham or elsewhere. They as railway proprietors had invested their money in the line, and had a right to look after their own interests. (Hear, hear.) As for the parties at Sydenham, they would doubtless find omnibuses to take them to town. He would again say, that if the trade was to be given up at all, it should be abandoned immediately, for he had been connected with the roads in that part of the country for the last 35 years, and had never found, and did not expect to find, that in these months the traffic would be at all considerable.

The CHAIRMAN asked who seconded Mr. Maubert's amendment.

There was no answer, and of course the proposition fell to the ground.

Mr. SAMSON RICARDO said, the question now before the meeting was one of very great importance. It would be a matter of much more difficulty than some persons imagined to resume the traffic, if it were once abandoned. He thought, therefore, that one more effort should be made to bring about an arrangement with the Greenwich Company. He himself was fully convinced, and after the remarks of the Chairman, he had no doubt the meeting would agree with him, that it was utterly impossible, under the present toll arrangements, to carry on the traffic at a profit to the Croydon Company. (Hear, hear, hear.) Perhaps too much feeling had been displayed in the discussion of this question, and the Greenwich Directors felt a little sore upon it; but he could not believe that upon more mature and sober reflection, and casting aside all personal feelings, they could do

Digitized by Google

otherwise than listen to what was so much to the advantage of both Companies. (Hear, hear, hear.) He would propose, therefore, that a further attempt at conciliation be made, and that a Committee of Croydon proprietors should be appointed *to confer* with the Greenwich Company. (Hear, hear, hear.) He would therefore move, not an amendment, but an addition to the Chairman's *proposition*. The hon. proprietor (who stated that he held 1,000 shares in the Croydon Company, and therefore, as might naturally be supposed, felt deeply interested in this motion) concluded amid applause, by reading the following rider to the Chairman's motion :—

"But that the Directors be requested to defer carrying the above Resolution into effect until the 1st March; and that a Committee of Proprietors of this Company be appointed to negociate with the Greenwich Company, with a view to some arrangement which may render a step so inconvenient to the public, and so detrimental to the interest of both Companies, unnecessary.

"That such Committee consist of Sir Ralph Howard, Bart., Mr. J. Nix, Mr. Jas. Capel, Mr. R. Ricardo, and Mr. C. S. Mortimer."

Captain Page, Mr. Liddiard, and one or two other proprietors, simultaneously seconded the proposition.

Mr. POLLARD inquired if it were intended that the Committee should confer with the Directors of the Greenwich Company or with the proprietors.

Mr. S. RICARDO said, the words of the motion were "the Greenwich Company," which would include both. Perhaps the Greenwich Directors would nominate an equal number of their proprietors to communicate with the Croydon Committee.

The CHAIRMAN said, there could be no possible objection on the part of his colleagues and himself to the plan now proposed. They had exhausted every means in their power, but they would rejoice to find that the efforts of a Committee of proprietors was attended with better success. It was perhaps impossible to carry on a discussion for years without an exhibition of feeling, but he must deny on the part of his colleagues and himself any desire to act offensively or in a hostile manner towards the Greenwich Board. (Hear, hear, hear.) Perhaps fresh parties might be able to reason the question more calmly and effectually.

Mr. S. RICARDO, while giving full credit to the statement of the Chairman, that no offence had been meant, was still of opinion that some temper had been displayed, even in the periodical Reports of the Directors.

Some conversation took place as to the names of the Committee. It was thought at first that no proprietor in the Croydon Company who was likewise a proprietor in the Greenwich ought to be nominated. This, however, would have excluded Sir R. Howard (who stated that he held a few shares in the Greenwich), and as it was deemed desirable that his name should be retained, the objection was waived, a proprietor remarking that as the negociation, if successful, would tend to the benefit of both Companies, there was no impropriety in parties who were interested in the two lines acting on the Committee. It was incidentally mentioned by the Chairman, that with perhaps the exception of Mr. S. Ricardo, Sir R. Howard was the largest shareholder in the room.

Mr. GOODALL, in a speech of considerable length, expressed an opinion that the Chairman coloured too highly the probable effects of low fares. He (Mr. Goodall) did not think that the Croydon Railway could successfully compete with the river steamers as regarded pleasure traffic. He had no objection, however, to give very low fares a trial—("hear, hear," from the Chairman)—but he trusted the Directors would not enter into any permanent arrangement with the Greenwich for a fixed sum for a certain number of years. (Hear, hear.) Let the experiment of low fares be first made properly and prudently. He thought the residents at Croydon would not be subjected to any great inconvenience from the discontinuance of this Company's trains, inasmuch as they had now 28 trains daily from the Dover and Brighton Companies, whereas when the Croydon was in its greatest prosperity, and before the other lines were opened, they had only 11.

Mr. FLOOD (also in a speech of some length) stated that he himself had intended to move a resolution, somewhat similar to that brought forward by Mr. S. Ricardo, to whose influence he paid a high compliment. He thought, however, that before they abandoned the Croydon traffic, they should make investigation into the practicability of the arrangements and terms proposed by the Greenwich Board. He did not say it offensively—for they could not have a more able or zealous Chairman—(hear, hear, hear,)—but he thought there had been a good deal of bitterness displayed during the discussion of this toll question. He had read all the documents issued by both parties, and he must repeat his regret at the manner, if not the matter, of some of them. He was not prepared to say whether the 4½d. toll would be beneficial to either Company, but he thought, as the Greenwich was a losing concern, some indulgence should be shown to the Directors who, no doubt, took the course which they believed would be most beneficial to their constituents. He thought the Croydon traffic ought not to be abandoned until they had first given a fair trial to the plans of the Greenwich Company, unless these plans were palpably absurd. Moreover, he had never heard that the question had been referred to the decision of arbitrators not proprietors of either Company, whereas he had reason to know that there were parties connected with the Board of Trade who were prepared, if requested to do so, to give an opinion upon the matter of tolls—indeed, the Government by their late alteration in the system of railway taxation, had themselves given an opinion as to the principle upon which such charges should be made. (Hear, hear.) He could not agree with an honourable proprietor (Mr. Levy) that novelty alone had led to the large traffic which for a time characterised the Croydon line. All railway experience tended to a very different impression. (Hear, hear.) The Birmingham Company began with a traffic of about 7,000*l.* a week, but had since touched, nay, he believed had exceeded, 20,000*l.* (Hear, hear, hear.) Railway traffic was invariably found to depend upon the accommodation afforded—for accommodation must of course precede. (Hear, hear.) He himself was an advocate of low fares. The Greenwich Directors thought differently, and how was a satisfactory decision to be come to upon such a question without a proper trial? He would repeat that he did not think the Greenwich plans had been fairly tried, but that on the contrary, as Mr. Maubert had very properly remarked, an attempt had been made—he hoped the Chairman would pardon the expression—almost to bully the Greenwich Directors into the adoption of the views of the Croydon Board. He spoke the more freely on this point, because, not only was he not a Greenwich proprietor himself, but he did not believe he had the honour of the acquaintance of any such proprietor. Nevertheless, although it was after all perhaps not much to be wondered at that some feeling should have crept into the discussion of this question, he had strong hopes that when it was re-opened by new parties who were not responsible for, nor bound, by any of the documents hitherto issued, the matter might be amicably and satisfactorily arranged. (Hear, hear, hear.) It was but fair to give the Greenwich Company—if they were in the wrong—a *locus penitentiæ*, and with that view he cordially supported the motion now before the meeting. (Applause.)

The CHAIRMAN said, it was quite true, as the worthy proprietor said, that the Croydon Directors had not tried any of the Greenwich plans, for the very excellent reason that they had never been favoured with any such plan. It was true that the Greenwich Directors had once assented to part of a proposition emanating from the Croydon Board, but it was with such omissions as altogether to impair its efficacy. All that the Greenwich Board had done was to fall back upon their Parliamentary toll of 4½d. Much had been said as to high and low fares; and he would not take up the time of the meeting by entering upon the question at that time. He might just be allowed to state, by way of illustration, that an average fare of 2s. from Croydon to London would so reduce the number of passengers, and of course increase the expense of carriage per passenger, that little more than a net profit of 4½d. per passenger would be secured, whereas an average fare of 9d. would so increase the number of passengers, and consequently diminish the expense of carriage per passenger, that the net profit of 4½d. would still remain. But if the Greenwich Company were to take the whole of that 4½d., of what use was it to the Croydon Company to continue working the line, supposing even that there were nothing to be gained by relinquishing the traffic, as already explained? He would repeat, that nothing had been done by the Croydon Board as against the Greenwich Company; but with respect to the diminished rate of fare between New Cross and Croydon, if they were precluded from low charges to London Bridge by the Greenwich toll, surely they had a right to furnish what accommodation they could where their line was not subjected to this toll; and surely, if ever there was a case in which a body of individuals had a right to do what they liked with their own, it was this case of the proprietors of the Croydon Railway. (Hear, hear, hear.) One word as to the other Companies. The Croydon Board had every desire to enter into negociations with the other Companies for their mutual benefit, and already they had effected two successful arrangements with the South-Eastern. The same offers had been made to the Brighton Company, but for reasons to which he would presently allude, had been refused. And here he might take occasion to say, on the part of his colleagues and himself, that they fully, and he believed unanimously, reciprocated the sentiments expressed by Mr. Baxendale at the late meeting of the South-Eastern Company, and were strongly of opinion that until the Companies were made one, until they were thoroughly amalgamated, the proprietors in the several lines would never reap the full benefit of their investments. (Applause.) A resolution to that effect had been passed by the Croydon Board, and a copy forwarded to the two other Boards, from one of which (the Brighton) it had met with a direct rejection, while the other wished only for a postponement as to time. (Hear, hear.) In some respects the delay might not be injurious to the Croydon Company, since time would thus be afforded for the full development of the resources of the undertaking, although it could not be denied that in other respects postponement would be hurtful to all the Companies concerned. As respected the arrangements already entered into with the South-Eastern Company, the principal was that relative to the locomotive department, whereby two establishments had been concentrated into one. The expenses were apportioned between the two Companies exactly in proportion to the use made by each of the locomotive power, while the capital embarked by each Company in the buildings at New Cross was credited to them at 5 per cent. The effect was this, that if it were now resolved to discontinue the Croydon trains, the Croydon Company would have to pay nothing for locomotive expenses, and would receive 5 per cent. interest on the capital embarked in the station and workshops at New Cross, while if at a future day they wished to resume their trade, they would only have to give notice to the South-Eastern Company, and would then be furnished with whatever power they might require, paying fairly for as much as they used, and for no more. (Hear, hear.) It was extremely desirable that the Brighton Company should have entered into a similar arrangement, but the Directors of that Company, for reasons no doubt of their own, —for he was not in their confidence—had declined to accede to it, as they had likewise declined, equally for reasons of their own, the offer of amalgamation. He alluded to this matter, because it might appear strange to some that they should be entering

Digitized by Google

into arrangements with the one Company and not with the other. It was not from any special love they bore to the Dover, as compared with the Brighton Company; both were their customers and with both they were anxious to be on terms of friendship and mutual advantage. The fact was, however, that these two Boards took different views of the position of the Croydon Company. The South-Eastern admitted that the London and Croydon Company having made a railway from London to Croydon, had a right to all the profit that might be gained on that line, just as they themselves having formed a railway from Dover to Croydon (or nearly so), had a right to the profit on *that*. The Brighton Directors, on the other hand, seemed to think themselves entitled to some part of the profit made on the Croydon line, and had always calculated upon the possession of it at some future period; such at least was his (the Chairman's) inference from their conduct, and he thought such inference was fairly to be drawn, not only from the competition set up for the Croydon traffic, but also from the offer which had been made to the Croydon Company to lease their line, which offer, as the proprietors were aware, had been rejected by them—in consequence of which rejection, they might observe that the Brighton Board were now seeking (as had been officially intimated to the Croydon Directors only that day) to carry a line from Croydon to Vauxhall. (A laugh.) He would repeat that the Brighton Board refused to acknowlege the position of the Croydon Company, and this they had shown, not only by their rejection of the arrangement adopted by the South-Eastern, and of the proposed amalgamation, but by their refusal to co-operate in securing a west-end terminus for the joint benefit of the three Companies. He certainly had hoped that the results of the Croydon traffic would have been more successful. As stated in the Report, the tolls would produce a fair return; and although, from the circumstances connected with this toll question, they were at present shut out from what he was sanguine enough to estimate at 10,000*l.* or 15,000*l.* a year, he hoped and believed that it was merely a postponement of a benefit which, as yet, they had never enjoyed. (Applause.) The honourable gentleman concluded by reading his own motion, and Mr. Ricardo's rider, as follows:—

"That this meeting approves of the proposition of the Directors for relinquishing the carrying trade hitherto conducted by this Company, until by some arrangement with the Greenwich Company the same may be resumed with a remunerative profit to this Company;—but that the Directors be requested to defer carrying the above Resolution into effect until the 1st March; and that a Committee of Proprietors of this Company be appointed to negociate with the Greenwich Company, with a view to some arrangement which may render a step so inconvenient to the public, and so detrimental to the interest of both Companies, unnecessary. That such Committee consist of Sir Ralph Howard, Bart., Mr. J. Nix, Mr. Jas, Capel, Mr. R. Ricardo, and Mr. C. S. Mortimer."

Mr. STERRY said, he agreed with much that had fallen from the Chairman; but he thought that ample notice should be given to those who, on the faith of enjoying railway facilities, had taken or built houses near the line. He found, on looking at the list, that about two-thirds of the whole traffic came from the intermediate stations, and he thought that the convenience of these parties, nay, common justice required, that time should be given for making the necessary changes. He should like, therefore, to move that the 1st of April be substituted for the 1st of March, and this would have the advantage of giving time to the Greenwich proprietors to consider and determine the question at their general meeting — which was not held last year till the 14th of Feb., and of affording the Committee an opportunity of consulting what was best to be done after that decision had been come to. (Hear, hear.) The loss to the Croydon Company, even taking it at the worst, would only be, as explained by the Chairman, about 12*l.* a week, or for the additional month 48*l.*

Mr. LEVY was sure it would be of very little use to go to the Greenwich Company with a petition in the one hand and a threat in the other. The honourable Chairman had now the means of holding out the olive branch by the abandonment of the Grange-road scheme. As the tact of a General was shown in nothing so much as in making a good retreat, he hoped that the Chairman, now such an opportunity was presented, would not hesitate to retrace his steps. (A laugh.) The Chairman had been prominently mixed up with the Grange-road project, and now that the South-Eastern proprietors had at their last meeting resolved to go on with it by themselves, he hoped the Chairman would go to the Greenwich Board and state that he had withdrawn himself and the Company, whom unfortunately he had drawn into the project, from this Grange-road business.

Mr. LAWRIE was sure the Directors would not take upon themselves to dictate to the Committee.

This remark appeared to be misunderstood by Mr. LEVY, who replied with a good deal of energy, which, from the honourable proprietor's peculiarities, caused some amusement. In stating that a threat was held out by the resolution, he was met by loud cries of "No, no." It was also denied that the Croydon Company were "petitioning" for anything. He referred to the Bill for the Grange-road Approach, which had, he said, not simply been *thrown* out, but *kicked*, out in the last session of Parliament.

The CHAIRMAN said, he had no wish to enter upon this matter of the Grange-road, as it was foreign to the object of the present meeting. At the same time, as it had been so pointedly alluded to, perhaps the meeting would for one moment excuse him. Some persons seemed to think that this Grange-road scheme was meant merely to annoy and attack the Greenwich Company. It was, however, no such thing. He would assure them, not for the first or second, but for the twentieth, time, that the object in view was totally different. True, the construction of such a line might, to a certain extent, interfere with the use of the Greenwich Railway; but everyone knew that it could be of but small use to the traffic of the London and Croydon Railway Company, the major part of which must always come to London Bridge. The advantage, however, of a west-end terminus for the longer lines, especially of a station for their goods' traffic, was very important—nay, so vitally important was it deemed by the proprietors of the South-Eastern Company, that, as intimated by the honourable proprietor (Mr. Levy), they had at their last meeting resolved to follow up the scheme themselves even should the Croydon Company desert them, which he (the Chairman) hoped and believed would never be the case. With a good west-end terminus—with the best they could attain at a moderate expense (for that was the main point, and the terminus at the Bricklayers' Arms was in every respect sufficient)—with such a terminus they were quite safe, and having obtained it, who was there could believe that any other west-end entrance into London, more especially a branch to Nine Elms, would be sanctioned? (Hear, hear, hear.) So important was this to the Croydon Company that they ought to secure it at almost any cost, but how much more so when the South-Eastern Company were prepared to bear two-thirds of the expense? For his own part he did not believe that either Company would ever be called upon to lose a shilling upon this branch. An arrangement had been entered into with the South-Eastern Company to make the tolls received upon the branch line chargeable with the interest of the capital expended, and he believed this would be fully sufficient. All that the Croydon Company had to do was to guarantee one-third of any deficiency that might arise, and even if the tolls produced nothing, this would not exceed 2,500*l.* or 3,000*l.* a year. (Hear, hear, hear.)

Considerable discussion followed as to the day on which the traffic was to cease. The 25th of March was named by Mr. Sterry, and acquiesced in by Mr. Ricardo.

Mr. GOODALL wished to know if Mr. Ricardo had any reason to believe that the Greenwich Directors would appoint a Committee of their proprietors to meet the Committee now to be appointed.

Mr. S. RICARDO said, he had no means of judging whether it would be so or not.

Mr. GOODALL thought that in that case it was useless to appoint a Committee.

Mr. S. RICARDO said, it was generally supposed that feeling had interfered with a satisfactory settlement of the question, and it was only right that another effort should be made. (Applause.)

Mr. LIDDIARD wished that no time should be fixed for giving up the traffic.

Mr. ADAMS believed the opinion of the public to be, that the Directors were not sincere in their profession of abandoning the traffic, and, therefore, it was doubly necessary to fix a specific date, so that the Greenwich Directors might see they were determined. The period of closing the line was, nevertheless, of much importance. By shutting it up without due notice they would give offence to those who had supported the Croydon Railway, not merely for their own sake, but as a public work beneficial to the country. The honourable proprietor concluded by expressing his concurrence in the proposition before the meeting.

Mr. LIDDIARD could relieve the anxiety of an honourable proprietor who thought the Greenwich Company would not meet the Committee. He (Mr. Liddiard) was quite certain—he believed he might say so on authority—that the Greenwich Directors *would* appoint some of their proprietors to meet the Committee. (Applause).

In the course of some further conversation on this point,

Mr. NIX said, he should decline to act with any body of Greenwich proprietors not appointed by the Directors, or at a public meeting.

Mr. STERRY stated, that to his knowledge several large proprietors in the Greenwich Company did not approve of the course taken by their Directors on the toll question, and that they would bring the subject before the next general meeting.

The CHAIRMAN thought it better to leave the Committee unfettered. (Hear, hear, hear.) The Directors had tried every plan to effect the object in view, and although his worthy relative (Mr. S. Ricardo) seemed still to think that there had been a display of temper, he (the Chairman) could only repeat that it had not been intentional, although it might have arisen from infirmity of nature. (A laugh.)

Mr. GOODALL said, there had already been a Committee of Greenwich proprietors, and nothing had come of it.

Mr. S. RICARDO thought there would at least be no harm in trying again.

Mr. LAWRIE said, there had hitherto been no Committee of Croydon proprietors.

The motion, as amended, was then put, and carried unanimously.

Mr. MAUBERT suggested that the fares between London Bridge and New Cross should be proportioned to the fares on the rest of the line. This would show the Greenwich the real value of their property, and probably tend to soothe and conciliate them.

The CHAIRMAN was not aware that there would be any serious objection on the part of the Board to such a step. At any rate the matter should have due consideration.

On the motion of Mr. NIX, a vote of thanks to the Chairman was carried by acclamation.

The CHAIRMAN made an appropriate acknowledgment, and the meeting broke up.

On Friday last a preliminary meeting was held at the Victoria Hotel, Preston, the Mayor in the chair, with a view to form a Steam Navigation Company, to trade between Fleetwood, the eastern coast of Ireland, the western parts of Scotland, and the Isle of Man. [This is in connection with the Preston and Wyre Railway.]

NORTH MIDLAND RAILWAY—THE ENGINEMEN AND FIREMEN, AND THE DIRECTORS.

To the Editor of the Railway Times.

SIR,—I have many particulars to refer to which have never come before the public, and by your kind and able assistance, I hope I shall be able to produce some good not only to the proprietors and many of their depressed servants, but what is of infinite importance, to the public safety. You have already done much; much is still to be effected; so that the extraordinary economy, which seems to be the order of the day among the railways, may not be carried into effect by subjecting the labouring servant to hardships and cruelty.

You stated, immediately after the last general meeting of the Midland Counties' Railway, that however much you admired that every system of economy should be carried into effect, you were afraid that it would be carried too far. This prediction has now come to pass on the North Midland Railway, to the fullest extent you could imagine. That the Directors and their locomotive superintendent on that line have used their enginemen and firemen in a most unjustifiable manner no one will attempt to deny; they are not only putting the property of the Company in danger, but having commenced running trains driven by men not only totally unacquainted with the line, but who have never had sufficient experience in the riving of a locomotive engine, they are thereby putting the lives of the passengers in jeopardy.

I shall first point out the cause of the present difference existing betwixt the enginemen and the Directors, and the locomotive superintendent of the line, and leave the matter to the public to judge for themselves which of the parties is in the wrong. I am no engineman myself; but I am of opinion that it is the duty of some one to bring the matter before the public, and particularly under the notice of General Pasley and the Board of Trade, to whom the Government have intrusted to look over the general management of all the railways in the kingdom, to take care that no set of men shall have it in their power to act in a reckless and inconsiderate manner, that the safety of the public would be placed in danger. That such a course of management has commenced on the North Midland Railway I shall shortly and clearly prove.

The Directors of the North Midland Railway sometime ago gave the enginemen and firemen to understand (through Mr. Marshall, their locomotive superintendent), that by the end of the year an alteration would take place in their wages; and having learned the nature of the reduction, the men last week sent in a letter to the Directors, stating that they would not submit to any reduction, but that they were perfectly willing to serve the Company to the best of their power at the present rate of wages and number of working days—that is 7s. per day for enginemen, and 4s. per day for firemen, running the trains three days, and in the shed one day, overhauling his engine and resting; running in this manner two weeks and piloting one week. This system continued would give these men entire satisfaction: let any person inquire minutely into all the circumstances, and he will find that the men are not unreasonable.

The alterations these men were given to understand by Mr. Marshall are 7s. per day for the enginemen, and 3s. 9d. per day for the firemen, to run the trains every day of the week, except one day for rest, and on that day they are to stop at home and receive no pay; and to do away with the night pilot, and thereby increase the labour of the men.

You will observe the wages of the enginemen are nominally as before, for it appears that even the Directors do not think 7s. too much for a steady man to have to run a train 73 miles up and 73 miles down, which makes the man's day's work 146 miles; but this he is to be obliged to do every day in the week, except one day for rest, which he is not to be paid for. On this day's pay, and doing away with the night pilot, hangs the difference betwixt the men and their Directors.

Let us inquire into the policy of retaining the pay of the "rest" day. I shall endeavour to show that it is unjust in point of economy to the interests of the Company, as it is unjust in principle to the enginemen.

If a man runs a train 146 miles per day, exposed to all sorts of weather, out night and day alternately, and all the time his life in danger from unforeseen accidents that are liable to take place under the greatest care, 7s. per day is not surely too much; but when the day of rest is taken from him, two days in the fortnight, and he is obliged to run his turn on the Sundays, it reduces his wages under 6s. per day. I maintain that he should not be docked of this rest day's wages, and I also will point out to you clearly, that by paying for the rest day the same as the others the Company would be no losers, but gainers, for on that day the engineman would then have nothing to do but to thoroughly overhaul and examine his engine, and see it repaired by the fitters; but instead of seeing it done himself it must be left to the fitter and the petty-superintendent, or should-be fireman, (but they assume the title of superintendent, and therefore must have it,) and it is just a peradventure if he would condescend to take his hands out of his pocket and examine the engine thoroughly himself, and even although he did, I doubt very much if he would know; but I repeat again, into whose hands can the repair of the engine be placed to see that the fitter does it properly but the man's who has to risk his life upon it? There can be no fear but he would see that it was put in the most complete state of repair, and perfectly safe for running a train.

It has often been the case—in fact, it is of every-day occurrence—that when a fitter has been sent to repair an engine, he has been compelled to apply to an engineman to point out to him what was the matter; and at other times, when the fitter has said he has put the engine in repair, after it had been examined by the engineman it has been found that it was not properly done. It is also an undeniable fact, that among the petty locomotive superintendents, who are as numerous upon the railways as locusts, and are as vain and intelligent as peacocks, nine-tenths of them could not tell what was the matter with an engine unless the engineman informed him. I am of opinion, therefore, that when the engineman is on his rest day he should be required to attend to the repair of his engine, and be paid the same as on other days.

I shall now refer to the night pilot, and you will then be able to judge of the propriety or impropriety of its discontinuance. By a pilot is meant an engine always to be in readiness in case it should be wanted to go out to render assistance, and to shift carriages, waggons, &c., about the station, so that the pilot enginemen cannot be allowed to be absent from the station one minute. The night pilot is often required to assist the mail train out from Derby, and in many instances another engine is required to assist the goods train out (when it is heavy), which follows the mail train soon after. Then, when the night pilot is discontinued, whom will the duty fall upon? Why, the day pilot engineman, who had been in attendance above fourteen hours, and, perhaps, had been called out and run many miles. These men, after they finish their day's work go home, not knowing whether they will be called out or not; but with the understanding that if the mail train want assistance they will be called, they, of course, would retire to rest, and, after the fatigue of the day, are called upon about two o'clock in the morning in a dozing state, and obliged to go out with the mail train. Again, the goods' train becomes heavy, and another engine is required, then this duty falls upon two men who must be even more fatigued than the former; they also have to be called out, and proceed with the goods' train. Thus, there are four men sent out to render assistance (I should rather say to cause mischief), for no one can say that these men are fit persons to be called upon to perform such duty, the first two having been kept running about for fourteen hours, and the latter two having run one hundred and forty-six miles, and, perhaps, on a very stormy and inclement day. Could you advocate such a system, for it is not only one day in a week, but these men are liable to be so called every night during the week, and so on with all the others in their turns? Should sleep overtake the engine pilotman, who takes the lead of the train (and we all know the powerful effect sleep has upon an overworked and fatigued man), the consequences would be of the most serious description, not only in the immense loss of property, but of human life; and this uncalled-for risk for the paltry saving of 42s. per week to an engineman, and 24s. per week to a fireman.

In treating of the reduction of threepence per day upon the firemen, I shall point out to you the most extraordinary and dangerous work they have to perform upon that line. You will be astonished that men can be got to perform it at any price; it is such that no other line has to do to the same extent. When the rails, from the state of the weather, are so slippy that the wheels of the engine will not adhere to the rails, the fireman is obliged to go forward and stand upon the buffer bar, and throw sand upon the rails, and it has been known that the fireman has had to perform this most frightful duty for a distance of twenty miles at a time. You and the public may now judge whether strangers, totally unacquainted with the road, are fit and safe persons to drive the trains. Under all these circumstances, I do think 4s. per day is quite little enough for the duty of a fireman, for it is a well-known fact that his life has always been in imminent danger, for, in all the fatal break-downs, the firemen have invariably lost their lives; but it appears that the North Midland Directors are quite callous about property and life, for on Saturday last the Directors paid off all the enginemen, and started with the trains on Sunday morning with the new hands, the efficiency of which will appear. The first train from Leeds was sent out on Sunday morning by a new hand, quite unacquainted with the line of road, and who, it is reported, has had very little experience in the driving of a locomotive engine; and this appears to be the fact, for Mr. Marshall thought proper to accompany him. The first ten miles they lost a quarter of an hour, and they did not run a great many more miles till the engine stopped altogether. Neither the new engineman nor Mr. Marshall could understand what was the matter; but a bystander (whether a wag or not I don't know) called out that a broken valve was the cause. The astonished engineman and his master took it for granted it was so, and used the usual means resorted to in all cases of that nature to supply the defect; but, alas! when they tried the engine it was "no go"—the engine would not stir. In this dilemma all was anxiety and confusion throughout the train. One lady, dreadfully alarmed, called out—"Oh, we shall all be blown to pieces!" At last they tried if the engine would back, which she did; and it was so far lucky that they were not a long way from a station, where there is a turn-table, on which they got the engine turned, and came back to the train, and then proceeded on with the engine-tender first (*there is an express bye-law on all railways, that if an engineman proceed with his train tender first, he shall be fined, it is considered so dangerous*); however they reached their destination two hours and a quarter behind their time! This delay caused the following expense of special trains, which of course will fall upon the North Midland Company, which will be pretty expensive for the first day's trial of cheap driving. By the train being behind time, the Sheffield and Rotherham Company were obliged to send one of their engines on specially with the passengers, and when the Leeds train reached Derby, another special train had to be sent on to Rugby, and at Rugby another to go to London. Now, all this extra expense and alarm to the passengers, was caused by a paltry saving of

Digitized by Google

a few shillings of wages to the most important and the most useful set of men that are employed upon the railway, and putting inexperienced men upon the engine; for if an engineman of ordinary experience had had the charge of the engine, he would have been able to have remedied the defect in about ten minutes, causing no alarm to the passengers, or delay upon the road. What Mr. Marshall can say about the above circumstance I know not (I speak only of him in his public capacity), but it appears very extraordinary to me that Mr. Marshall should be held out to be possessed of such extraordinary and pre eminent abilities, and such a thorough knowledge of the working and manufacture of a locomotive engine, when this fact appears to show the contrary. The defect referred to was easy to be seen, and the remedy so simple, that I should be ashamed to make it public.

Let us see how the evening train came on with the other new engineman. His standing as an engineman is reported to be something similar to the other, and it would appear his master thought so; for Mr. Scott, a superintendent, proceeded along with him, and they reached their destination just one hour and twenty-five minutes behind time,—a gentleman remarking, as he stepped out of the train upon the platform, that the horse-coach had better be started again, for it was disgraceful to see the trains driven with so much danger, causing fear and trembling among the passengers, under the excitement that is existing betwixt the Directors and the enginemen, between whom the greatest harmony should prevail.

I am, Sir, your most obedient servant,

VERITAS VINCIT.

Birmingham, December 26, 1842.

MIDLAND COUNTIES' RAILWAY—RAILWAYS AND FREE TRADE.

To the Editor of the Railway Times.

Sir,—In your publication of the 17th instant, I observe that the workmen employed at the Midland Counties' Railway have issued an Address to the Directors of that Company, requesting that a proposed reduction of their wages might not be enforced.

The Chairman has publicly and truly stated, that, though a member of the Board of Direction, I am not one of the Committee of Investigation appointed to examine into the affairs of the Company; and until all the circumstances bearing upon the question of improved economy be publicly known I should not be justified in expressing any opinion as to the propriety of the extent of reductions in wages, &c., which the prudent management of the Company's affairs may reasonably require. Nevertheless, under these circumstances, I feel myself at perfect liberty to remind the workmen that they admit that the contemplated reductions could not have been forced upon them, had the attempt been made some time back, when the trade of the country was generally more flourishing than at present—in which opinion I entirely concur; and pursuing the same line of argument, I infer that the proposed reductions could not be now maintained, were it not for the generally depressed state of trade; or in other words, that the worth of their labour having depreciated in value, from want of demand in the labour market during the last four years of scarcity and dearness of food, they are not exempt from the overwhelming pressure, that, from that cause, has come upon all. The tens of millions of decreased consumption in every article of manufacture, caused by the high price of food, having absorbed a portion of the hard-earned wages in every labourer's hand, that would otherwise have been spent in them, has, to the extent of the diminished demand for them, thrown out of employment one class of operatives after another, till the stagnation in trade has reached the most skilled artizan. And as to the surplus rural population, dear food, by stopping the demand for manufactures, has wholly closed the only labour market open to them, which in prosperous times relieves their never ceasingly increased numbers from the pauperism of unmitigated competition.

Seeing that the deplorable and humiliating prostrate condition of the honest labourers throughout the country can be irrefutably traced to legislative commercial restrictions, would it not have been more rational, I ask the workmen at the Midland Counties' Railway, if, instead of pleading like paupers for a gratuitous advance of wages above the rates obtainable in the open labour market, they had gone at once to the source of their grievance, and petitioned Parliament, which suggestion I earnestly recommend, to remove from English labour those restrictions which prevent the products of English industry from being exchanged for the millions of quarters of grain, and millions of cwts. of animal food, sugar and coffee, &c., which Englishmen want, and which would by God's bounty supply the deficiency of our home production, fill our beloved country with *plenty*, feed the starving multitudes, remove destitution from the poor man's home by finding busy and well-paid employment for all, and would crowd our railways with such an influx of goods and passengers as would enable every working man on railways, with the honest independence which his Maker gave to him as his birthright, not cringingly to ask as a boon "a fair day's wage for a fair day's work," but to demand it on the *irresistible* plea, that if not granted, he could and would obtain it elsewhere in the free and open labour market of this prosperous country?

The immensely increased revenue flowing in upon the proprietors of railways by the transmission over them of the prolific productions of UNIMPEDED and busy industry, both at home and abroad, would render the compulsory necessity of advancing the wages of the workmen at the Midland Counties' Railway to their former, or even higher, level, a very pleasing duty to be performed by the Directors, in doing which they would have the most heartfelt and cheerful concurrence of the whole Company. The disappointed speculation of the proprietors, to which the workmen at the Midland Counties' Railway allude, would cease, under the benign influence of free trade, to be an obstacle to hinder them from receiving the generous reward of their honest toil, and its blessed effects would extend everywhere. It would attend the speculation of him who puts his hand to the spade—who throws the shuttle—who lifts the sledge-hammer to make the machine, that enables both to pour forth *plenty*—and of him, also, who, possessing the accumulated remuneration of past labour, frugally stored, expends it in constructing cheap means for distributing this plenty to the *poor*. The speculation of all, for they are all speculators, would no longer be deprived of the liberal reward due to those who carry the blessings of cheap food and raiment to the door of the poor and destitute. The rich and middle classes can afford to have, and will have to the full, the necessaries of life—however scarce they may be—at any cost of production, reckless who may suffer privation.

Plenty and cheapness are not essential to them, though they partake of the benefit, *but they are emphatically for the benefit of the poor*, to sustain them, and to save their families from absolute want. In conclusion, I would say to the workmen at the Midland Counties' Railway, and to all the workmen in the kingdom, join and aid the Anti-Corn-Law League in their righteous efforts to obtain, through the force of enlightened public opinion, the blessing of universal free trade for the benefit of every class, but especially of the labouring class, who are sunk in the paralizing poverty of restricted commerce. This advice is tendered by one who devoutly wishes to see all labour which is actively engaged in producing something for the benefit of all, *richly, independently*, and *justly* remunerated and who knows that free trade must accomplish this desirable object.

I am, Sir, yours, respectfully,

LAWRENCE HEYWORTH.

Yewtree, near Liverpool, December 24, 1842.

[The above is of somewhat too political a cast for our columns, but to oblige an old correspondent, and that correspondent one who has so large a pecuniary interest in railways as Mr. Heyworth, we for once waive the enforcement of a very necessary regulation.—Ed. R. T.]

RAILWAY MANAGEMENT, &c.

To the Editor of the Railway Times.

Sir,—A crisis in railway affairs is at length approaching, which threatens to create a complete change in the existing body of Directors. I allude to the agitation in favour of the appointment of Committees of Investigation.

The late unbounded confidence in Directors is fast disappearing, and a distrust as unlimited is taking its place. I do not wish to discuss the cause or reasonableness of this change of opinion, but being a holder of railway stock for investment, I am naturally anxious lest the present desire for a sweeping reform may become as injurious to railway interests as the late indiscriminate confidence.

That Committees of Investigation will be appointed by nearly all Railway Companies is a very prevalent expectation, and, therefore, it is of the utmost importance for proprietors to be prepared with measures to prevent such Committees becoming "a mere scramble for place," and, at the same time, a substitution of "men of straw" for the former substantial, although perhaps extravagant and indolent Directors.

I should be very glad, Sir, if you or any of your correspondents would propose a means of obviating these probable occurrences, and in the meantime I beg leave to suggest that when any such Committee shall be appointed, the half-dozen largest proprietors in the Company (for the time being) be *ex-officio* members of it, and also that in the event of the Committee becoming (as it often must) the directing body, that the same rule be continued.

In conclusion, I see no disadvantage in the publication of the number of shares held by each proprietor, as a further check to rash innovation; it could be no injury to holders for investment, and others ought not to be favoured at their expense.

I am, Sir, your obedient servant,

R. R.

BRISTOL AND EXETER RAILWAY.

To the Editor of the Railway Times.

Sir,—With all proper deference to your correspondent "H. T. K.," I must submit that he has not quite correctly stated "the true facts" respecting the bridge by the Cattle-market. The subject is scarcely worthy of controversy, but I believe, on inquiry in the proper quarter, he will find that the bridge was never considered insecure by the Engineer; and though, as a matter of *caution*, the centres were replaced, little or no weight has rested upon them. On the work being opened, the interior masonry was found quite substantial and sound, and the cause of the irregular settlement which took place in the *face-work* of the bridge appears to have been from the contractors having set the face-stones too closely, so that when the arch settled to its proper bearing, the outer work could not follow the interior, and the stones were displaced and crushed. But not the slightest trouble has been found in maintaining the roadway over the bridge at its proper level, traversed as it is by 16 or 18 trains a day, and now that the face-work has been restored by the contractor, there *is* nothing (and I spoke of the *present* state of the bridge) which can be considered "disgraceful" in its condition. I understand that the centres have been left standing merely as an extra precaution (the same is the case with the Great Western Railway bridge over the Harbour), and that they will soon be removed.

I am, Sir, yours, &c. CRITO.

GREAT NORTH OF ENGLAND RAILWAY, &c.

To the Editor of the Railway Times.

Sir,—In your paper of the 24th instant, at page appears a letter signed "A Brother Share-r," commenting upon the Great North of nd Railway, and the Stockton and Darlington tors. My impressions on first reading this were those of unqualified disgust; and did I nceive that its false and despicable insinua- might mislead and prejudice the minds of s at a distance, it should have been left by me l in its slander unnoticed.

resume "A Brother Shareholder" would his readers to believe that the Directors of the ton and Darlington Railway have been parties unjustifiable expenditure of the funds of the North of England Railway Company. Now, are the facts? In the session of 1836, when reat North of England Bill was under discus- a most energetic opposition was organised the promoters of the Bill by Mr. Cookson, prevent defeat, it was resolved by the Pro- al Directors and the Company's Solicitor, to se the whole of Mr. Cookson's Hermitage Mr. Storey having advised them that a large might be effected by carrying the line nearer welling-house, to avoid Parliamentary ex- ; and taking into consideration the sugges- made by their Engineer, the Provisional Di- and Solicitor, I believe, sanctioned the se of this estate. It will not do to come for- ow, and say that the Bill would have been *lost*. This is a kind of after-wit, in which persons are particularly apt; but pray what e Stockton and Darlington Board to do with *Durham Farm?*" Did they either directly ectly interfere in the matter? Most assu- ot. Now, as to the "Croft Branch," let me A Brother Shareholder" if he knows how cres of valuable land—some of it adapted for g sites—went along with the Croft Branch? he know the amount it saved the Great North gland Company? Let him inquire these on the spot, and then let him dare to impugn otives of high-minded and honourable men.

line surveyed by Mr. Harris for continuing ockton and Darlington Railway towards estle, commences 3 miles southward of the n tunnel, not one fractional part of which could be used for carrying the line to New- What, then, can "A Brother Shareholder's" sinuation about the Shildon tunnel amount : this—a wish to mislead, and fan venomous ice. The Shildon tunnel was made exclusively ure a locomotive line into the rich Weardale ts; for this only was it made at an immense the projectors.

I ask "A Brother Shareholder" to lay aside sk, to attach his name and address to his s. If he will do this, and let the full blaze light appear on his writings, instead of ting to stab and injure *a la Italien*, I also ater the lists with him, and, perhaps, we iscover the true reason of the financial diffi- in which the North of England has been ; peradventure we may find that certain her shareholders," big with spleen, have not *their calls*—that the amiable and ener- reasurer of the Company has added many a to his forehead in carrying on the works of lway, such *furrows* equitably and really be- to "brother shareholders;" but I venture —we shall make more discoveries—we shall hat the Stockton and Darlington Directors during the construction of the line, had no ce in controlling the expenditure of the Com- funds; and probably we may find that Mr. on being called into the Board-room, prior opening of the line, pointed out certain not derable savings in the Company's still august hops. And it is not unlikely we may discover s Messrs. Backhouses, at one time the then rs of the Company, refused to discount the ny's paper. And who came to the Company's aid at that dread moment, with the money-market as tight and rigid as it possibly could be, calls unpaid up, everything looking dark as midnight—who came to the Company's assistance? Did "A Brother Shareholder?" Did a certain splenetic would-be "Railway Attorney"-General—or did the Company's present Treasurer incur responsibility fearful to contemplate?

But time and space fail me. If "A Brother-Shareholder" will come out with his name, we shall probably "discover" something more; provided always his observations are worthy of time, pen, and paper. Your constant reader,

EISENBAHN.

London, December 27, 1842.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

Sir,—I have been unable earlier to resume a promised communication relating to the state and prospects of the Great Western line and its branches.

I propose at present to advert to some points of temporary interest, as bearing on the amount of dividend now forthcoming, and that it may be reasonable to expect for the future.

In estimating the dividend for the current half-year, two opposite mistakes have been committed by those among your correspondents who entertain different views on the subject: on the one hand, some have rated the working expenses at 35 to 38 per cent., when there is no good cause to reckon on *less* than 40; and, on the other, some have overlooked the fact that the interest paid by the Company for the two half-years has been respectively 73,882*l.* and 72,438*l.* only.

Now on these data, and with the knowledge that the present receipts are 343,930*l.*, and may be reckoned for the half-year at least as 364,000*l.*, with a balance undivided 2,600*l.*, the following calculation may be fairly made:

DEBTOR.

40 per cent. on total earnings	£145,600
Interest, after deducting all interest received, say	75,000
Reserve	10,000
Rent and tolls	28,500
Dividend on 3,015,013*l.*, at 7 per cent. per annum	105,525
Balance	1,975
Total	£366,600

CREDITOR.

Balance	£2,600
Earnings	364,000
Total	£366,600

whence it appears that it is in the power of the Directors to declare a dividend of 3½ per cent. for the current half-year. Whether or not it would be prudent is another question, to which I would answer in the negative, and trust they will pay a 3 per cent. only, leaving a balance to 1843 of 17,000*l.*

My chief object, however, is less to trouble you with estimates such as the above, than to point out, as bearing on it, a deficiency in the published accounts of the Company, with relation to interest. Thus, they afford no means of ascertaining on what data the item which appears half-yearly, viz., "Balance of interest paid to ———, after deducting all interest received"—is established. With reference to this point the shareholders may fairly ask, and should receive answers, to the following inquiries:—1st, The rate of interest at 5, 4½, or 4 per cent. of the loan notes and debentures, and the amount on which such rate is payable, together with a statement of the interest received, and from what sources. In short, in addition to a capital account and revenue account, there should be a brief interest account, half-yearly.

This is not a matter of mere curiosity, but has a direct bearing on a point deeply interesting to the shareholders, viz. the possibility of paying 6 per cent. *on the whole of the share capital when called up*, and the *chance* of ever exceeding that amount. If the total share capital (when paid up) be taken at 6,300,000*l.*, and it will certainly not be less, then the working expenses remaining, 40 per cent., and rents and tolls, together with reserve, at the present rate, it is easy to prove that a receipt of 758,000*l.* per annum will be required to meet those engagements, and at the same time continue the payment of a 6 per cent. dividend. Seven per cent. would require 855,000*l.* Now the lowest of these two sums could only be met by a weekly receipt throughout the year exceeding that of the current half-year, which may fairly be reckoned extraordinary; whilst the higher would demand a weekly return throughout the year, averaging 2,500*l.* more than has been earned in the best half-year the Company has had. The inference appears inevitable that with the present expenditure and sources of revenue, the dividend will continue at 6 per cent. and will not very easily reach 7 on the total share capital. I remain, Sir, your obedient servant,

INVESTIGATOR.

December 22, 1842.

DUNDEE AND ARBROATH RAILWAY.

To the Editor of the Railway Times.

Sir,—With reference to a paragraph in your journal of the 24th inst., on a proposed junction of the Dundee and Forfar Railways, I beg leave to state that, though not a Director, yet I am most decidedly opposed to a junction of these Companies. There are no preferred shares in the stock of the Dundee and Arbroath Railway. It is one of the best constructed, and has cost less money than any other line of equal extent in Britain. It is true that at the last annual meeting no dividend was declared, but it should be noted that the Directors *could* have paid 3½ per cent. on the whole capital from the *bona fide* funds which they had on hand, after an amount of expenditure for the year which, from a combination of circumstances, is not ever likely to recur. Therefore, we have reason to expect a handsome dividend at the next meeting, in June; and also that measures will then be adopted to secure, if possible, a like happy result in all time ensuing. I am, Sir, your obedient servant,

A SHAREHOLDER.

Glasgow, December 27, 1842.

South-Eastern Railway.—The stupendous works of this railway along the cliffs, between here and Folkestone, continue to progress as rapidly as the rugged course of the line will admit. The most active preparations are just now making to throw down, by blasting, a large portion of Rounddown Cliff, immediately beyond the Shakspeare tunnel, to make way for the sea-wall. On Thursday and last night experiments with the galvanic battery, for igniting the blast, were tried by the miners below the cliffs, between Archcliff and Shakspeare's cliff, under the superintendence of Lieut. Hutchison; and Colonel Pasley, who conducted the operations on the wreck of the *Royal George*, at Spithead, will also be present at the blasting of the Rounddown Cliff, which is expected to take place in a week or two. This blast will be effected by the force of 18,000 lbs. of gunpowder, to which the electric spark will be communicated by wires 1,000 yards in length. The experiments on both evenings proved highly satisfactory, and we are told they are to be repeated several times previous to the grand blast, which is expected to dislodge tens of thousands of tons of the chalky cliff.—*Dover Chronicle.*

Accident at the Railway Station, Nottingham.—Last Thursday morning an accident occurred at the station-house, Nottingham, which, although of a serious and rather alarming nature, was happily unattended with any personal injury. It appears that the driver of the 7 o'clock train from Derby, consisting of a first-class carriage, a second-class carriage, and a parcels van, omitted lowering the steam at the proper time; the consequence was, that the train dashed down the station-house yard at the rate of a dozen miles an hour, and such was the force of the concussion that the engine drove a coal-waggon (containing 5 tons of coal) against two beams of wood, (each about 52 inches in circumference, with a cross-beam attached, 8 inches by 13) smashing them and the station-house buffers to pieces, and driving the waggon on to the platform, knocking down a pillar, and forcing in the window-frame and stone sill of the counting-house. The waggon, of course, was very much damaged. Robert Smith, the guard, displayed great presence of mind and courage, keeping his place on his carriage to the last; the stoker and driver jumped off between the gates on the road to Wilford and the engine-house shed. Mr. Lightfoot, who resides in the station-house, describes the concussion as so violent, that it resembled an earthquake.—*Notting. Mer.*

NOTES TO THE TRAFFIC TABLE

(on the opposite page.)

Main line, 53 miles; Tewkesbury branch, 2. — Total ength, 55 miles.

The total length of line and branches is 25 miles:—15 miles of passenger and general traffic, and 10 miles of oal traffic alone. The Company are now before Parlia- nent for power to raise the capital to 500,000*l.*

The total amount of stock on which dividends are pay- ble is 750,000*l.*

Receipts include the Northern and Eastern toll, &c.

. Capital of 1,957,800*l.* is exclusive of the Chester and rewe line, which cost 458,333*l.* The receipts include hose derived from the use of the Liverpool and Man- hester and Chester and Crewe lines, as also the toll rom the Manchester and Birmingham Company. The ivisor employed to ascertain the daily receipts per mile , 121 (85+15+21.) The Company do not now carry oods to Manchester.

. The receipts include those derived from the Chel- nham and Exeter lines; the former opened for 18 iles, and the latter for 44¼. The divisor employed to scertain the daily receipts per mile is therefore 180¾ 18¼+18+44¼.) The *rent* of the branch lines is together bout 1,163*l.* per week. There is likewise a *toll* payable the Exeter Company of a farthing per passenger and er ton of goods per mile travelled.

. The dividends have been hitherto (up to 31st Decem- er, 1841) appropriated to completing the line and works.

. Ten per cent. is the maximum dividend allowed by e Company's Act.

. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of ylesbury line. The dividend is *nominally* at the rate 10*l.* per cent., but to the original shareholders it is ual to upwards of 11*l.* per cent., as the dividend on the iginal shares is paid upon 100*l.*, although only 90*l.* has en called for. In calculating the receipts per mile, the ven miles of the Aylesbury line are included.

. At the last meeting no dividend was declared, the sposable balance from the previous six months' work- g being only 1,472*l.* 10s. 9d.

The length stated includes the Shoreham branch. he Croydon and Greenwich tolls are not deducted from e amount stated in the Table. The traffic of the six onths produced 63,326*l.*, and there was a balance from e previous half-year of 12,479*l.* Out of these two mounts combined, the dividend (after making certain ductions) was paid.

The capital of 741,000*l.* includes the new capital for ndon and Brighton station. The amount in the ble does not include the Toll from the Brighton Com- ny.

Capital of 993,300*l* includes new capital for widening e line, &c. The dividend of 7s. 6d. per cent. does not fer to the preference shares on which 5 per cent. is aranteed. The amount in the Table includes the re- pts from the footpath, but is exclusive of the Brigh- , Croydon, and Dover toll.

The dividend is calculated on the money actually paid , a portion of the shares having been issued at 50 per nt. discount.

Including Toll, &c., from Sheffield Company, and er deducting omnibus charges, &c., and subject to pay- nts to the Grand Junction Company.

Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The eipts given are however those from the railway only.

The 3,966*l.* 11s. 3d. are the receipts after deducting nibus charges, and payments to other Companies.

The receipts for goods, &c., include, horses, 116*l.* 19s. ; carriages, 36*l.* 19s. 6d.; dogs, 1*l.* 16s. 6d.; parcels, 8*l.* 2s. 9d.; cattle, 28*l.* 7s. 6d.; corn, 13*l.* 15s. 1d.; avy goods, 369*l.* 8s. 9d.; coal and lime, 159*l.* 9s. 0d. Total, 964*l.* 18s. 1d.

The amount of stock *created* is 3,000,000*l.*, on which idends are payable; and the sum of 850,000*l.* is bor- ved money at interest. The 3,000,000*l.*, however, is minal, inasmuch as the shares were some of them is- d at a discount, which reduced the actual amount to 99,500*l.*, viz.:—15,000 shares at 100*l.* = 1,500,000*l.*; 00 of 50*l.*, issued at 40*l.* = 600,000*l.*; 22,500 of 33*l.* 8d., issued at 21*l.* 13s. 4d. = 480,500*l*; total 99,500*l.* The details of the receipts are as follows— ssengers, 2,358*l.* 18s. 3d.; carriages and horses, 271*l.* . 1d.; parcels, 319*l.* 8s. 4d.; mails, 50*l.* 5s. 9d.; rchandise, 1,030*l.* 12s. 2d.; minerals, 275*l.* 14s. 1d.; le, 24*l.* 4s. 0d. — Total, 4,330*l.* 12s. 8d.; including rth Midland proportion of Manchester and Leeds &c, and amount received for Sheffield and Rother- a Company.

The receipts are after deduction of Liverpool and nchester toll.

The returns are subject to the deduction of rent to Eastern Counties' Company (about 134*l.* weekly), and toll of 4d. on such portion of the passengers as pass r their railway. The 32¼ miles stated as being open for 5c, include the portion of the Eastern Counties' line sed over by this Company.

The capital of 533,000*l.* includes that provided for iour and works as well as railway. The dividend r a year (since opening of line).

The returns are inclusive of Manchester and Birming- toll.

The length stated includes branches.

The traffic stated does not include the Leeds and y.

TO CORRESPONDENTS.

Investments in Railways.—We are constantly receiving applications for advice with respect to the sale or purchase of particular shares. We have repeatedly stated, that we are very unwilling to offer any opinion upon such points, and, indeed, our readers have the same data as ourselves whereby to form a judgment. Nevertheless, as they *will* have our opinion, we cannot refuse to give it. We wish them, however, to bear distinctly in mind, that we do not, in any instance, hold ourselves answerable for the event. The course we recommend to our correspondents, is simply what we ourselves would follow, were we buyers or sellers under the circumstances detailed by them respectively. With this caution, which we shall take care to keep before parties who apply to us on such subjects, we proceed to notice the applications of the week. We may just add, that the figures and letters have no reference whatever to our traffic list, or to the initials of any railway. We cannot notice questions where this rule is violated. In order that we may not be subjected to needless questions, we must have the name and address of every inquirer, although the answers may be given under a fictitious designation:—W. C. *(Yorkshire.) Do* not *purchase* Alpha. *About* 5 *per cent. will accrue from* Beta *at present prices. Do not sell* Gamma. *They will improve.*—R. G. *does not give his name and address, and therefore cannot be answered.*—Vindex. *Do not sell at present. We trust the spring will bring brighter prospects.*—J. T. *(near Ipswich.) We cannot take upon ourselves to "recommend a broker that will do justice." You must judge for yourself.*—J. R. A. *The best by far are Nos.* 8 *and* 2; *after these Nos.* 3, 9, 8, 1. *Have nothing to do with No.* 4 *or No.* 6, *especially the former, otherwise you will bitterly repent it.*—H. *(Harrow.) You will get not much more than* 5 *per cent. in any of the lines at* present *prices. The most permanent we should say were Nos.* 1 *and* 2. *We do not think No* 2 *will go lower for the next six months. There is "a well-grounded hope" of an increased dividend in No.* 1.—Werburgha. *We would hold on in all the lines, but especially in No.* 3. *They will all improve, and we think No.* 8 *in particular, before this time next year.*—P. P. *(Cambridge.) Nos.* 4 *and* 6. *To the question in the postscript—Yes.*

An Old Subscriber.—*Inclusive of the toll.*

A Constant Reader *(Clonmel.)—Our opinion remains unchanged. We shall notice the undertaking in an early number.*

Philippo *is amusing enough, and not a little* instructive, *but far too personal for our columns. It is with the system, not with the man, that we are at war, and therefore we shall not rake up tales of family "arrangements" or of commercial difficulties. In one thing, however, we quite concur with our correspondent, namely, that "there is not a sane man in the empire who would have dared to offer a hundred pounds [or a hundred times a hundred pounds] to the Chairman of the Birmingham, or Great Western, or South-Western, or any other respectable Company under such circumstances" as he comments upon.* Philippo's PRIVATE *communication shall be carefully attended to. We thank him, and have no doubt that at the proper time his assistance will be very valuable.*

Heptoprotos *is well written, but we think the discussion as to Sunday travelling has proceeded far enough for the present.*

Birmingham and Gloucester Railway.—Incog. *is referred to the following resolution passed at a special meeting in May last:—"That the Directors be empowered to apply to Parliament for an Act to enable them to create* 10,000 *quarter shares of* 25*l. each. That the registered proprietor, or in case of transfer the holder of each scrip, shall, within six months after such Act shall be obtained, receive one of such quarter shares, in exchange for the scrip, and until then interest after the rate of* 5 *per cent. per annum shall be paid on each instalment, from the day on which it is made; the first payment of interest to be made on the* 25*th day of May,* 1842, *and after that period by half-yearly payments." If an Act of Parliament be obtained the holder of scrip will have no option.*

Nameless *is, as usual, thanked. We shall be glad to have the promised communication.*

F. F. F. *will see that the question has taken a new turn. Perhaps it is as well to say as little about it as possible for the present.*

T. P.—*We cannot undertake to return rejected letters, all of which indeed are immediately destroyed. Even had it been otherwise our correspondent gives no name or address.*

Amicus *puts a question to us which we cannot answer, nor do we believe can any one else. We should say, however, that the event to which he refers would take place in about a month from this time.*

Mr. Downing's *and several other communications on Four-wheel and Six-wheel Engines, are unavoidably postponed.*

TRAFFIC OMITTED.

Grand Junction Railway —*For the week ending December* 17.—*Gross receipts, including toll from Manchester and Birmingham Company, passengers, parcels, and mails,* 5,097*l.* 10s. 3d.; *merchandise and live stock,* 1,852*l.* 0s. 7d.; *total,* 6,949*l.* 10s. 10d.

Brandling Junction Railway—*For the week ending December* 17.—*Receipts from passengers (No. of passengers* 8873) 321*l.* 16s.; *goods,* 422*l.* 17s. 6d., *total* 743*l.* 13s. 6d.

THE RAILWAY JOURNALS.

The Stamp Returns for April, May, and June, just published by Order of the House of Commons, enable us to complete the Returns for the year ending the 30th of June last. The results, as affecting the railway journals, are as follows:—

RAILWAY TIMES	**146,374**
Railway Magazine	68,500
Majority in favour of the RAILWAY TIMES	**77,874**

from which are to be deducted 10,874 Supplement stamps used for double numbers, still leaving the ordinary circulation of the *Railway Times* just about double that of its contemporary.—*September* 17, 1842.

THE RAILWAY TIMES.

SATURDAY, DECEMBER 31, 1842.

THE reductions in the wages of the North Midland Railway staff have within the last few days been carried into effect, as respects the engine-drivers and firemen; and the results, as reported by different parties, are very conflicting and unsatisfactory. We shall endeavour to state both sides of the case as fairly as we can.

It seems, from a statement put forth by the drivers and firemen, that "about a fortnight back, a notice was posted in the Locomotive Department shed, announcing a reduction throughout that department, but not stating to what extent that reduction would be. Soon after, a notice was sent from the proper quarter, stating that the proposed reduction was as follows: viz., that the drivers were to receive 6s. 8d. per day, but no pay for Sunday (*which day is nineteen hours*), and the firemen 3s.9d. On this being objected to, another proposition was sent to the men, offering 6s. 8d. per day and pay for Sunday. Immediately after followed another notice, stating [say the parties] that we should receive 7s. per day, but run every day and no rest, which would amount in the week to more than 1,000 miles, which we are not able to perform, and we refer you to the decision of any medical gentleman. We were led to believe by the foreman of our department, that we should receive, each man, a written notice (a week) to leave, did we not approve of the reduction; and it was our intention to a man not to leave the Company's service without giving *them* a week's notice, according to printed rules posted up, in which it is inferred that both the Company and the servant shall receive a week's notice; but to our surprise we were all discharged on Saturday without any notice whatever." This certainly appears sharp practice on the part of the Management, but the principal point as affecting the public manifestly is, How do the new arrangements work? Here the opinions are very contradictory.

In another column appears a letter from a

Digitized by Google

known correspondent, who has opportunities of ascertaining the real facts of the case, wherein a most startling account is given of the delays and dangers resulting from the employment of new and (according to him) wholly incompetent drivers. We are bound to say that similar accounts have reached us from other quarters; nay, one of our London correspondents, who passed along the line on Monday, is highly indignant that we should have failed to caution the public against the jeopardy to which he himself was exposed—just as if we could have suspected that any step so rash and ill-advised as the discharge of the experienced servants of the Company at a moment's notice was in the contemplation of the Directors. The statements contained in the letter to which we have already referred seem to be borne out by those of the drivers and firemen, who (after stating that the names can be given if necessary) proceed as follows:—

"The Foreman of the Locomotive Department at Derby put the following questions to a young man who is employed to get the steam up, previous to the driver going his journey. This gentleman requested to know if this young man was combined with the workmen against the reduction? To which he replied, 'No;" as he had received no notice of being reduced himself. The Foreman then asked him if he had any objection to *attempt* to drive an engine? The answer he made was, that he did not think he was capable to fill so responsible a situation, he bearing in mind that the public safety and the interest of the Company were depending. He was then told, unless he complied with the Foreman's wishes, he would forthwith be discharged. * * * * *

"What occurred last Sunday is a striking proof of the mismanagement of the Locomotive Department. The foreman at the Leeds end placed a man in the charge of an engine named William Coulton; the consequence was, that the first train from Leeds arrived two hours behind time. This was occasioned through a slip of one of the eccentric sheaves of the engine, a circumstance which might have been rectified in ten minutes by an experienced man. After a delay of nearly two hours, it was found that the engine would work in the back-gear, and brought the engine on, (tender first,) subjecting the passengers to great danger. To prove this, had there been any obstacle on the rails, or the road in bad repair, the tender and engine might have been thrown off the road, dragging with them the whole of the train, there being no guards before the tender that would remove any obstacle on the line; and considering the lightness of the tender, and that the oscillation that it would occasion, is fearful in the extreme. The other trains have also all been late; and on Monday evening, as the 6 p.m. train was about to leave the Derby station, with two engines attached, the Superintendent of the Locomotive Department asked the driver of one of the engines if he knew which engineman was to put the steam on first, and he was answered in the negative. He then asked the other, and received the same answer; both parties being ignorant. They even had to place the guard of the train upon the foot-plate of the engine, to instruct the driver."

Thus much as to the alleged incapacity of the new drivers. On the other side, we are informed from a quarter on which we can place the fullest reliance, that General Pasley has within the last day or two gone over the whole of the railway, and having investigated the qualifications of the new drivers and firemen, is about to make a Report to Lord RIPON, President of the Board of Trade, expressing his strong approbation of the state of the line, and the manner in which the traffic is conducted under the new system.

Our own opinion most certainly is, that the new Directors have taken a very imprudent step in lowering, or attempting to lower, the wages of the drivers and firemen. We are aware that among Engineers and Directors a different opinion prevails, but we think, and always have thought, that even by the most liberal of the Companies this useful class of men is greatly under-paid. So much depends upon their unceasing attention, so important is it that they should feel themselves at ease in their situations, not subject, on the one hand, to capricious treatment on the part of those placed immediately over them, nor on the other to the "screwing" system which Boards of Direction or Committees of Investigation may feel desirous of carrying, or be compelled to carry, into effect—so responsible, we say, are the duties of these men, that, instead of reduction, we should be glad to see an augmentation of their wages.

We sincerely trust that the experiment now going forward on the North Midland Railway will not be attended with any bad effects; but we must say that we have our doubts. Let the public once become distrustful of the travelling arrangements adopted on the line, and the whole of the drivers', firemen, and porters' wages would be but a very poor compensation for the loss which would inevitably accrue. We must once more protest against the system of reducing the wages of inferior servants to starvation point, feeling satisfied, that the same energy displayed in carrying out that object would, if applied in another way, open up to the railway new sources of revenue which would render any such questionable schemes of so-called economy wholly unnecessary.

We beg to call the earnest attention of our readers to the meeting of proprietors of the Croydon Railway, held on Tuesday last. We think this meeting just what a meeting of proprietors ought to be. It was very numerously and respectably attended, and evinced a strong desire to support the policy of the Directors, in whom a becoming confidence was generally and fervently expressed, without any slavish subserviency to the views put forward merely because they were those of the Board. So far from this being the case, the meeting took the initiative itself, and proposed a course of proceeding in the difficult circumstances in which the Company is placed—a proposal in which the Directors had the good sense to acquiesce.

It will be seen that the Directors having exhausted all the means within their reach to effect an arrangement with the Greenwich Company—without which they contend the traffic between London and Croydon cannot be profitably carried on—proposed to relinquish it at once, or on the 31st of January next, leaving it to the other Companies to carry such part as might suit their convenience. The Croydon Company is just in the position to take this course with the least possible damage to itself, and the least possible inconvenience to the public. The traffic proposed to be relinquished has never produced any profit worth naming to the proprietors, and its abandonment can therefore occasion no loss. The Company has been placed by the judicious arrangements of its Directors in such relation with the South-Eastern Company as to be able to give up its locomotive establishment for the time, and resume it, if need be, without any sacrifice to the proprietors; and the running of two other Companies upon the line must afford the best alternative which circumstances will admit against the necessary inconvenience which the public must, we fear, nevertheless sustain. To a proposition for this purpose, however, the meeting proposed a [illegible], to the effect that the resolution in question should not be carried into operation till the 25th of March, to afford time to a Committee of proprietors appointed on the spot, to try what *they* might be able to do towards effecting an arrangement with some of the Greenwich proprietors, whose appointment for that purpose was to be requested of the Greenwich Board.

So unanimous was the feeling of the meeting in favour of this proposition, that several proprietors seem to have come prepared, independently, to move some such resolution as that brought forward by Mr. SAMSON RICARDO, which was ultimately appended to that of the Directors, and carried without a dissentient voice—the only proprietor offering the slightest objection to this course being Mr. MAUBERT, who previously moved an amendment which, for want of a seconder, fell to the ground. We never remember having attended a meeting more flattering to a Board of Directors, in the sense in which we have spoken of it; indeed it seems to us that this Board has laboured under the disadvantage of working rather in advance of the proprietors, who are only now beginning to understand and appreciate its policy, and are therefore disposed to afford such support as it must have in order to be effectual to the well-being of the Company. We speak rather confidently upon this point, because we have given more than usual attention to the views put forward from time to time by the Croydon Board upon the toll question; for having entertained opinions somewhat at variance with these views, we were led to bestow upon them more reflection than we can often afford to individual objects, and have, as we believe, by the process of ratiocination thus induced, arrived at a tolerably distinct notion of the subject in all its bearings. Having said thus much of the character of the meeting, and our own pretentions to form a judgment of its merits, we shall proceed to offer a few remarks, with our usual freedom, upon what fell from the worthy Chairman in the course of his address.

It is always with some difficulty that a reporter can follow this gentleman through a long speech, for his rapidity of utterance is so great as to render a faithful transcript no easy task. We are aware too that the post of Chairman, which is likewise generally that of expositor at these meetings, is one of some difficulty, and that he is often obliged to forego advantageous opportunities of reply, rather than run the risk of prolonging the sitting of the meeting beyond the time at which it may be most conveniently and profitably closed, and that observations, perhaps called for from him, may have the unhappy effect of drawing on some tiresome discussion from speakers who seem to be born to weary the attention of their hearers, and distract them from the business of the day. Still, with all these allowances, we scarcely think Mr. WILKINSON made as much as he might have done of several points that were opened to him in the course of the debate. Our previously acquired knowledge of the subject may, perhaps, have made us hypercritical, but it appeared to us that the objection to the offer of 6,000*l.* per annum to the Greenwich Company in lieu of toll admitted of a ready answer. Anybody who is familiar with the correspondence which has passed between the two Companies, must be aware that this offer formed no part of the plan for the toll arrangement originally proposed by the Croydon Directors, but was only made when other propositions had failed. We [illegible]

able to effect some arrangement of this toll question. Should the Committee's efforts prove unsuccessful, the Croydon will be the first railway that has been stopped by excessive toll. Then will arise a grave question which we may take a future opportunity of discussing—a question which we should not feel surprised to see occupying the attention of the legislature. Railways were permitted for the public benefit, and to secure that object, inconvenience (and in some cases serious injury) was inflicted upon individuals. Should circumstances, easily controllable, lead to the practical abandonment of any of these works, it remains to be seen whether the power which called them into existence may not feel itself called upon to interfere for the protection of the community. In the meantime we may fairly congratulate the Croydon proprietors on their future prospects. The toll of the Brighton and Dover Companies, for the last four months, exclusive of goods, has amounted to 8,575*l.* 6*s.* 2d., or at the rate of 25,725*l.* per annum, with every prospect of increase from the further opening of the Dover line.

A PAPER, which appears to be the organ, as it is the apologist, of the Brighton Railway Board (and which certainly is in every respect worthy of its patrons), announces that the "Directors are about to appoint some of their body as a Committee of Investigation, to go into the whole of their expenditure, and see what reductions can be safely made."

The object of this step, on the part of Mr. JOHN HARMAN and his colleagues, is palpable enough; they hope thus, by a sham inquiry, to postpone the real—the searching—the damning inquiry which, sooner or later, MUST be, and very speedily *may* be, undertaken by other parties, and after another fashion. We will not insult the proprietors by affecting for one moment to believe (even the Directors' advocate does not venture so far as *that*), or by supposing others will believe, that so transparent a trick will prevail. The inquiries of the recent Committee—contracted as these inquiries were, and the startling facts suggested rather than expressed in their Report, were of themselves sufficient to excite suspicion; and if subsequent events, such as the circumstances connected with the accounts on the South-Eastern portion of the line, the attempt to keep the capital account open for an indefinite period by the project of a new railway from Croydon to Vauxhall—if these and other facts have not strengthened such suspicion tenfold, the shareholders are indeed the most long-suffering set of men that ever the railway system, notorious as it has heretofore been for credulous apathy, has exhibited. That the suspicion of mismanagement is strong, very strong indeed, the appointment of Committees of supervision at York, and Leeds, and Liverpool, abundantly testify; and what principally surprises us, is that the London shareholders should have been so tardy in following so excellent an example.

Investigation *may*—although we do not believe that it can with safety—be deferred for another six months or so, but that it will and must eventually be forced upon the Board is, we repeat, most certain—not a mock investigation by the culprits themselves, or by the puppets of the prime culprits, but by those whose confidence has been so scandalously abused, whose capital has been so *unnecessarily* (our readers will probably apply a harsher term) and so UNACCOUNTABLY expended, and whose prospects are now from that cause so sadly overcast.

In few cases can delay be so full of peril as in this. If the present Board are to proceed unchecked, another half million or upwards will, we make not the smallest doubt, be expended (or, which is the same thing, liabilities to that amount will be incurred) within the next six months. Surely the proprietors will bear in mind the threat of the Chairman at a recent meeting as to the calling up of the 5*l.* per share, from which they believe themselves to be exempt. We would not have them make too sure that *even* YET this 5*l.* may not be called for—aye, and *enforced!* Let them look to it at once. Let them inquire whether the South-Eastern money is not already *bespoke*, and what other resource their Directors will have to fall back upon when the Vauxhall scheme is (to use Mr. LEVY'S expression) "kicked out of Parliament," as most assuredly it will be. Every day's disclosures (putting aside all the rumours which are current on the subject) strengthen our frequently expressed opinion that the Brighton Railway will not be *finished* under three millions sterling—nay, we question if even *that* sum will suffice. Shareholders, do not rely upon our bare assertion; appoint a COMMITTEE OF INVESTIGATION, and judge for yourselves. Rest assured (and we say it with sincere regret) you will find that we have nothing exaggerated nor aught set down in malice.

IN accordance with a rule from which we never swerve, of throwing open our columns to all who, whether reasonably or unreasonably, fancy they have cause of complaint against us, we publish to-day a letter which Mr. HUMPHREY BROWN has written to us, or rather, as we suspect, which some kind friend has written for him, seeing that it is *only* rude and unmannerly, and not much graced with those felicities of diction which, to our cost and sorrow, characterised the previous effusions of Mr. HUMPHERY BROWN *prior* to their appearance in our journal. In fact, we have something more than internal evidence on this point, but let *that* pass; our readers would scarcely thank us for occupying our space with matters affecting Mr. HUMPHERY BROWN alone.

It seems we were not literally correct when, in our last, we described Mr. HUMPHREY BROWN as "a discharged servant of the *Company*;" he is merely the discarded of the *Directors*—the discarded and something more. He was employed in getting up the traffic case, and in giving evidence before the Parliamentary Committee, in which services his peculiar qualities became sufficiently known to the Directors. Having been unsuccessful in his applications to the Birmingham and Gloucester Company (and, if we are not mistaken, to other Companies also) for further employment, but having, by dint of those attainments already adverted to, succeeded in obtaining a recommendation from certain shareholders, the Directors in their Report of February last found it necessary thus to notice him:—

"In November last, the Committee received a paper signed by 124 proprietors, recommending to their favourable consideration, for the office of Superintendent or Manager, Mr. HUMPHREY BROWN. The PARTICULAR INQUIRIES which the Committee felt it their duty to make in consequence, led them to the unanimous and decided opinion, that this recommendation ought not to be complied with."

Mr. HUMPHREY BROWN, then, has not been discharged—he has only been disappointed. No doubt his opposition to the Board would be well repaid, could they be ousted, and others

Digitized by Google

more awake to the merits of the would-be Manager appointed in their stead.

He does not deny, that at the period of the general meeting, when he held the proxies of which he brags, he was only a *nominal* shareholder; he probably is so still, and the only "business" of ours in the matter, is to caution the *real* shareholders how they listen to the representations of *such* "Reformers."

With respect to the hole-and-corner meeting in London, he tells us, that "there was not a dissentient voice in the room, as to the necessity of the proposed inquiry;" but he forgets to say, *how many* "voices," besides those of Mr. HUMPHREY BROWN himself, and the parties who are at once his instigators and his dupes, had a corporeal habitation in the room referred to. Mr. HUMPHREY BROWN should bear in mind, that not *always* does silence give consent. One will at times not utter a "dissentient voice," just to see how far the force of impudence will go.

It seems that the omission of an invitation to us "to fully report the proceedings, arose from one of two causes—forgetfulness, or a doubt of" our "usefulness." We beg to say, we do not feel *greatly* disappointed at not having had the pleasure of listening to Mr. BROWN'S eloquence, which even the journalist who *was* invited has deemed it judicious to leave unrecorded. Mr. HUMPHREY BROWN may well entertain some doubts of our "usefulness" to him or his schemes, but we must confess that his "forgetfulness" mortifies us not a little. The time has been when whole quires of foolscap reminded us that we lived in our friend's affections. Great men, however, are proverbially oblivious of their *quondam* friends, and we can only hope that *now* Mr. HUMPHREY BROWN will not allow us to slip from his memory. If we hear much more of him, we may probably supply a further remembrancer.

We may just add that an experiment similar to that tried last week in London was recently made in Bristol. We cannot say whether Mr. HUMPHREY BROWN had any hand in *that* affair, but it is very likely, for it turned out to be a miserable failure.

THE inhabitants of Macclesfield are swelling the cry of complaint which is heard from all parts of the country against the present management of the Post-Office. Mr. GRIMSDITCH having, in behalf of his constituents, strongly pointed out to the authorities the grievances to which the district is subjected, and urged the necessity of a safer and more expeditious mode of conveyance than that now in use, has received an official communication from the Postmaster-General, stating that "his Lordship has given the subject his consideration, and that under present circumstances, he does not deem it expedient to make any use of the Manchester and Birmingham Railway for the service of the Post-Office." Mr. GRIMSDITCH might have spared himself the trouble of an appeal to my Lord Lowther; but he has an excellent opportunity of doing a public service by exposing, in his place in Parliament, the grievances in the matter of the mails to which, not Macclesfield alone, but scores of towns of far greater commercial importance, have for a long period been subjected.

A CORRESPONDENT of the *Times* complains that, notwithstanding the occurrence many months ago of a very serious accident on the Great Western Railway, the Directors have not yet adopted the precaution of placing an empty waggon between the engine and the passenger carriages of the ordinary trains, although this is done when Royalty condescends to patronise the railway. It is scarcely fair to single out the Great Western Directors for rebuke, when nearly every management in the country is in this respect equally to blame. At the same time we would recommend all and each of the Boards very seriously to consider in what position they will stand, should loss of life follow the omission of so simple and so inexpensive a precaution. After the late accident on the Birmingham line, and the warning then given, it will be no easy matter to satisfy a Coroner's jury (not to mention the Board of Trade, or the public at large) that Directors who persist in a practice which has been so generally condemned are by any means free from blame.

THE following appeared in the *Worcestershire Chronicle* of Thursday:—

"On Friday night last a woman was killed on the Bromsgrove Lickey incline of the Birmingham and Gloucester Railway, by a truck running over her. She was a widow, with a large family, residing at Finstall Heath, and on Friday had been out washing at one of the cottages on the incline. As it was not train time, *she was allowed to walk some distance on the railway*, to save her from going home by a very dirty and much longer road. Some of the overlookers being at the top at the time, got into a truck to let themselves down. It is supposed that she did not perceive them approaching until they were close upon her, and when it was too late to escape, for she was knocked down, and the truck passing over her, she was killed upon the spot. The persons who were in the truck hastened to the station, and taking an engine back to the spot, brought the body down, but found it was too late to render assistance. An inquest was held on the body on the following day at two o'clock, when a verdict of 'Accidental Death,' with a deodand of 1s. upon the truck, was returned."

In our opinion very great blame is due to those parties, whoever they may be, who allowed the poor woman to walk upon the line. On no pretence whatever ought so dangerous a practice to be permitted, and we hope the Directors will give strict orders that, for the future, whether it be "train time" or not, greater caution shall be observed.

LAST week we published a "Proposal for the Formation of a Society under the title of the *Railway Officers' Fund*," emanating apparently from gentlemen connected with the Great Western Company. We have since received several communications approving of the scheme, and urging upon the Directors of the principal Companies to lend a helping hand. In this recommendation we cordially join; and we trust that no petty feeling of jealousy, because the project has originated with the Great Western, will prevent the officers of other Companies from forwarding a plan which, if adequately carried out, cannot fail to benefit every railway clerk in the kingdom.

—o—

IT appears (says a correspondent) from a circular issued by the Directors of the Great Western Railway, that the holders of the fifth shares have the option of postponing the call due on the 12th of January next, until the year 1847.

—o—

IN our advertising columns will be found an announcement of a forthcoming work on the "History and Mystery" of the Thames Haven scheme. We look forward to its appearance with much interest. From what has come to our knowledge within the last fortnight, the experience of the concoctors of this notable project will, if faithfully given, throw great light upon the getting-up of Companies. The forthcoming work will form an appropriate pendant to Lieut. Amsinck's recent pamphlet, and will, we have no doubt, amply prove that the gallant Secretary is something more than an eminent proficient in literature and science, and in the mysteries of railway *management*.

—o—

WE understand that within the last few days a collision has taken place on the Grand Junction Railway, whereby several goods' waggons have been smashed to pieces; but the particulars have been kept very quiet..

—o—

AN advertisement has been put forth in the local papers, stating that a special meeting of the Cheltenham and Great Western Union Railway is to be held on the 10th of January, "for the purpose of considering the propriety of the said Company entering into an arrangement or contract with the Great Western Railway Company for the leasing to the said Company of the line of railway from Kemble to Cheltenham, either alone or jointly with the line of railway from Swindon to Cirencester, and connected with such leasing to consider of the propriety of authorising the Directors of the said first-mentioned Company to enter into an arrangement with the Great Western Railway Company for the raising of the money which may be requisite for the completion of the railway from Kemble to Cheltenham, and for the re-purchase from the Birmingham and Gloucester Railway Company of a moiety of the line of railway between the depots at Gloucester and Cheltenham, and of the Cheltenham tramway, on the said Great Western Railway Company agreeing to guarantee the payment of the interest of such money; and also to consider the terms of the security for re-payment of such interest to the said Company; and also separately, or in connection with the matters aforesaid, to consider the propriety of selling and conveying to the said Great Western Railway Company the whole or any part of the said Cheltenham and Great Western Union Railway; and if the said meeting shall think proper to authorise the Directors of the said Cheltenham and Great Western Union Railway Company to enter into any contract or contracts with the said Great Western Railway Company for effecting all or any of the said purposes, either alone or connected with each other; and to make and execute all such leases, conveyances, or other instruments, as shall be deemed requisite to carry into effect any of the objects which may be agreed on at the same meeting; and for the further purpose of declaring a dividend out of the income of the railway for the half-year ending the 25th day of December last."

RAILWAY OFFENCES AND OFFENDERS.

THE following paragraph, from the *Standard* of Thursday, shows that "Railway Offenders" in Prussia do not get off quite so easily as their brethren in this country too frequently contrive to do:—

"On the 11th of October last an accident occurred on the railroad between Cologne and Aix-la-Chapelle, when the engine ran off the rails, in consequence of the negligence of one of the attendants. The stoker was severely wounded on the occasion, but fortunately no one was killed. The attendant, to whose inattention the accident was owing, has, after a long protracted investigation, been found guilty, and the following sentence has been passed upon him:—'*Three months' imprisonment, a fine of five dollars, payment of all the*

Digitized by Google

costs of the procedure, a dismissal from his office, and a prohibition against his ever being employed again on any Prussian railroad.'"

The last item in the punishment we would recommend to the notice of English Companies. If the several Boards of Management would enter into a compact with each other that no person convicted of an offence upon one line should, under any circumstances, find employment on another, the result would, we are quite sure, be highly beneficial to all parties.

A lad named William Hart was brought before the Mayor of Reading on Wednesday last, charged with having wilfully placed a piece of iron upon one of the rails of the Great Western line, with the view of obstructing the free passage of the same. From the facts deposed to in evidence, it would seem that, at a few minutes before 9 o'clock on Tuesday morning last, the policeman on duty at that part of the line which passes immediately opposite Battle Farm, observed something on the rail, at a distance of nearly half a mile from him, which he supposed to be a rabbit, until its stationary appearance excited a suspicion in his mind that he was mistaken. As the train was at that moment in sight, he, after some litile hesitation, ran towards the spot with all possible speed, and had hardly succeeded in kicking off the iron when the engine passed by. There is no doubt, from the construction of the intended obstacle, and from its peculiar position on the rail, that in 9 cases out of 10 the effect would have been to throw the engine off the line, and, in the present instance, to send it down an embankment 22 feet in depth. The prisoner, who is a farmer's labourer, and only 16 years of age, pleaded guilty to the charge. We hear that this wanton and reckless youth has been before repeatedly seen loitering on the railway, and frequently chastised for so doing by the Company's officers. *He was fined 5l., and in default of payment committed for three months.*

At the Manchester Petty Sessions last week, before C. Royds and Wm. Chadwick, Esqrs., magistrates, William Taylor, 60 years of age, was charged by Mr. Fletcher, inspector of the Manchester and Leeds Railway station, with having been found in a state of intoxication walking along the line about half a mile from the Rochdale station. Mr. Fletcher stated that defendant had a very narrow escape with his life; the down train had passed a few moments previously. He was fined 20s. and expenses.

ACCIDENT ON THE LONDON AND BRIGHTON RAILWAY.—On Tuesday morning, about a quarter before 12, an alarming accident occurred on the Shoreham branch of the London and Brighton Railway. It appears that the train was proceeding to Shoreham drawn by an engine called *The Brighton*. Shortly after passing the Hove station, about two miles from Brighton, several of the tubes of the engine burst with a loud report. A number of persons were immediately attracted to the spot, when it was found that the engine-driver, named William Cavan, was most severely scalded on the legs and abdomen, The stoker and Mr. Meredith, one of the chief engineers to the Company, who happened to be on the tender at the time, miraculously escaped unhurt. The connecting-rods and other parts of the machinery were found by the policeman stationed at Hove, at a considerable distance from the spot where the accident occurred. Although Cavan is severely scalded, it is expected he will in a short time be able to resume his duty.—*Daily paper.*

SEYSELL ASPHALTE (CLARIDGE'S PATENT.)—The following are two testimonials showing the applicability of this excellent invention to railways:—"Winchester, June 2nd, 1840.—SIR,—I am glad to inform you that the large brick tanks at the 'Winchester and Andover Road' stations, containing about 40,000 gallons each, and the smaller tank at the 'Woking station' of the London and South-Western Railway, are perfectly water-tight. The Asphalte adheres to the bricks in a very satisfactory manner, and has proved itself to be a most efficient material for this purpose.—I am, Sir, your most obedient servant. (Signed) EDWARD DIXON, Resident Engineer."——"42, Fish-street-hill, 16th July, 1840.—Sir,—In reply to your inquiry in regard to the degree of success which may have attended the use of your Asphalte on a portion of the London and Greenwich Railway, I have much satisfaction in stating that I employed that material for covering the whole of the arches (about 114 in number) between High-street, Deptford, and the station at Greenwich, with a view to prevent the rain-water from filtering through the brickwork, and that up to this time it has answered that purpose in a most perfect manner. It may, perhaps, be satisfactory and fair that I should add, that the trains have already passed about 67,000 times over those arches since the Asphalting has been applied, without, however, producing any perceptible leakage or derangement in the work.—I am, Sir, your most obedient servant. (Signed) GEORGE LANDMANN."

GREAT WESTERN RAILWAY—POOR-RATE.—A Petty Session was held at the Lamb and Lark Inn, Keynsham, on Friday last, when an appeal was brought by the Great Western Railway Company against the amount for which they had been assessed in respect of that portion of their line which passes through the parish of Keynsham. Mr. F. Ward and Mr. Knapp attended on behalf of the Company, and Mr. J. L. Simmons supported the interest of the parish. After hearing the arguments of both parties, the magistrates dismissed the appeal, confirming the rate as claimed by the parish—namely, 1,200*l.* per mile for three miles, in the present instance amounting to 90*l.*, or nearly one-fourth of the whole rate. We understand that the Company intend further to appeal to the Somerset Quarter Sessions.—*Bath Chronicle.*

NEWCASTLE AND DARLINGTON RAILWAY, &c.

WE have been favoured with the following Comparative Statement by a gentleman who has access to the best sources of information:—

Gradients and Distances of the Line of Railway from Darlington to the Durham Junction Railway, adopted by the Newcastle and Darlington Junction Railway Company.

Commence at intersection of the Great North of England Railway with the Stockton and Darlington Railway, going North.

	Miles.	Yds.		
Parliamentary line of Great North of England Railway, and proposed deviations.	1¼	12	ascends	1 in 220

RANGER *v.* GREAT WESTERN RAILWAY COMPANY.—This very important cause, upon the issue of which the fate of claims by Mr. Ranger's creditors here, for large amounts, depend, is appointed to be heard before the Lord Chancellor on Monday, January 2nd. Mr. Sergeant Wilde will lead for the assignees of Ranger, and Sir William Follett for the Railway Company. The amount at issue is stated to be nearly or quite 200,000*l.*; and the intricate character of the accounts, embracing the details of immense railway contracts, renders it almost equal to the famous suit of Attwood *v.* Small, which ruined the British Iron Company.—*Reading paper.*

—*o*—

FORFEITURE OF A RAILWAY.—On Wednesday, the 21st instant, Sir Henry Hunloke, Bart., of Wingerworth Hall, proceeded, along with Mr. Brown and other witnesses, to take possession of the branch line of railroad leading from Hopton Bridge to Timber-lane (known as the Duke's line), which the North Midland Company has forfeited to him under certain arrangements.—*Derbyshire Courier.*—[What does this mean?—ED. R. T.]

CHESTER AND BIRKENHEAD RAILWAY.

To the Editor of the Railway Times.

SIR,—I am very much pleased to see in your Chester correspondent's letters, sentiments and observations upon the management of the Chester and Birkenhead line exactly agreeing with my own views. I am also an unfortunate holder of shares for which I paid a *premium*, and am perhaps much less able to endure the tremendous loss I have suffered in their decline. I would caution the Directors, and assure them there is a strong under-current of dissatisfaction at their tortuous and ambiguous conduct, growing among the hitherto placid shareholders. It was by no means unobserved, that at the Midsummer meeting there was an effort to screen some defaulter in the concern, since the accounts furnished previously to that date were completely cancelled, and all had to be approved over again, in consequence of some unexplained mismanagement of a chief officer; moreover, one of the Directors declared, respecting the account then submitted to the meeting, that he for one would not vouch for their accuracy, as he knew nothing, and he believed the rest of the Directors knew very little, about them. The apathy and carelessness evinced by the Directors really seems as though they were in league with the Grand Junction Company, to do all in their power to damage the Birkenhead line, so that it may fall into the Grand Junction Company's power, by producing disgust and weariness. If the shareholder from Chester, who writes in your paper of the 24th, will only propose resolutions in accordance with this spirit, at the next meeting, he will find more than one to support his motions.

I am, yours, truly,
A FRIEND TO WELL-MANAGED LINES.

Manchester, December 26, 1842.

BIRMINGHAM AND GLOUCESTER RAILWAY—MR. HUMPHREY BROWN.

To the Editor of the Railway Times.

SIR,—Having noticed your uncalled-for and scandalous attack upon me, I am reluctantly, in my own defence, compelled to question your consistency as well as your veracity. I am fearful your columns are become wilfully guilty of two of the worst faults of a journal—partiality to one party, and reckless denunciation of the other.

My position at the London meeting was unsought by me. An invitation was sent me by the London shareholders to attend, which I declined; and it was only at the urgent solicitation of some shareholders here, on Monday morning, that I proceeded to town to be present at the meeting on the following day. So far from the meeting having been a private one, which shunned discussion or inquiry, circulars were issued in London, and sent to every known shareholder in the neighbourhood; and when the intelligence and importance of that body is considered, daring indeed must that man be who would attempt to cajole or impose upon their understanding. There was not a dissentient voice in the room as to the necessity of the proposed inquiry, and if *you* were not invited to fully report the proceedings, it arose from one of two causes—forgetfulness, or a doubt of your usefulness.

Your assertion, that I am a discharged servant of the Company, is nothing more or less than a falsehood, and, I fear, a wilful one, springing from a vicious desire to injure an individual, and to serve the pitiful feeling of yourself and of others, whose mammon you too fondly worship. I never *have* been a servant to the Company. I was engaged by the promoters of the railway to prepare and prove the Parliamentary traffic evidence, on the conclusion of which I received the thanks of the Provisional Committee, and it was from an opinion of the correctness of my estimates, and of my knowledge of the capabilities of the line, that many capitalists were induced to become proprietors. Disappointment has been continually expressed at the great difference between my anticipated and the present actual revenue; more particularly after a Committee, subsequently appointed by the Directors, had re-taken the traffic, and returned it at an amount considerably higher then my Parliamentary estimates; whereas, after two year's working the line, only 68¾ per cent. on the former, and 63¾ per cent. on the latter, has been secured. Is it extraordinary that the dissatisfied shareholders (some of them the largest proprietors, and personal friends of my own) should call upon me to give an opinion upon such discrepancies? I *have* done so, to the annoyance of the Directors—at all events I stated my opinion fearlessly, but still without any intention to give offence.

I cannot conclude without a reference to your professed desire to purify your columns of articles under assumed signatures. I never sent any article to you for publication without giving my name. It was for fashion's sake only that the articles did not bear my signature; but in every instance the signature was a true character. If I was a registered shareholder, was it any business of yours, or your Birmingham *official* correspondent, whether I purchased the shares, or whether they were given to me? And did your *official* and *officious* informant tell you that a large shareholder paid me the compliment of offering to transfer any number into my name, that might be necessary to give me an important position in the proceedings? Further, did he tell you that at the general meeting I held upwards of 30 proxies, many of them representing a very large interest?

I am, yours, respectfully,
HUMPHREY BROWN.

Gloucester, Dec. 28, 1842.

NORTHERN AND EASTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—Since I wrote the letter which was in your paper of last week, I have learnt that our Directors, *who are under a pledge to resign*, and who, according to their pledge, *ought to have resigned the first week of this month of December*, have JUST APPOINTED one gentleman to conduct the coal trade of the Company, and another to the carriage department.

These appointments may be good or bad—of that I say nothing; but for Directors on the eve of resigning, who ought indeed to have already resigned, to fill up such important appointments, is conduct at which it is impossible to express too strong indignation: and whenever I meet the Directors face to face, I will not only denounce it, but move that the appointments be *reconsidered*. Surely the Directors have not delayed their resignation in order to exercise this patronage?

Yours, most obediently,
A SHAREHOLDER.

N.B. Please point out that the second letter under this signature in your last number was not mine.

GRAND JUNCTION RAILWAY.

To the Editor of the Railway Times.

SIR,—A writer under the signature of "A Proprietor in three of the Eastern line Companies," talks a considerable deal of nonsense in your last number, relative to the Grand Junction. He hugs himself in the idea that the receipts of this line have fallen off, consequent on the diminution of the *Irish* and *Scotch* travelling. Now, from inquiry, I happen to know the reverse is the case, and that both have *increased*. The writer of the letter in question must be very much out of the railway world if he is ignorant of the fact that the opening of the Manchester and Birmingham Railway has caused the decrease of traffic—the whole of that trade being now diverted from the Grand Junction. This little circumstance shows how carelessly those who pretend to instruct the public, by printing their ideas, proceed in their work.

I have *carefully* watched the effect of one kind of opposition after another on the receipts of the Grand Junction, and although they have felt the blows that have been levelled at them from time to time, there appears a buoyancy in their traffic that causes it soon to recover its tone. The line has now been the effect of its first rival, and what is the result? The receipts last week, I observe, are 6,900*l.*, against 7,200*l.* corresponding week 1841, when Manchester formed a part of its resources!

A great deal has been said about the Junction having opposing interests to the Midland Counties—what does this mean? The Manchester and Birmingham *may* have an adverse interest, but how the Grand Junction can clash with the eastern lines passes my understanding. Would any one dream of going from Liverpool to Nottingham to get to London? Perhaps your correspondent can explain his meaning.

Yours, obediently,
ANTONY.

December 27, 1842.

ELECTRO-MAGNETIC POWER.

To the Editor of the Railway Times.

SIR,—Having an hour to spare the other day I visited Mr. Davidson's exhibition, at the Egyptian Hall, Piccadilly, and examined his methods of applying this new power. I am now satisfied of its applicability to all those purposes to which steam, as a *power*, is now applied. Its simplicity, economy, safety, and compactness, render it a far more valuable motive power than steam, on railways and in navigation. Skill and capital alone are now required to perfect it, and to introduce it, practically, as a substitute for that clumsy, dangerous, and costly machine, the steam-engine.

Mr. Davidson is a poor man, and can neither patent his discoveries nor extend them, without money. It might be greatly to the interest of the Railway Companies, especially, to test this new power fully and fairly, at once; they have the means and facilities for doing so, and ought not to allow Mr. Davidson to return into seclusion without aid or trial.*

How many millions of capital are now invested in railways, navigation, mills, &c.! And, to what extent may not that enormous mass of capital be increased by the use of a simple and cheap power, like Electro-Magnetism!

I am, Sir, your obedient servant,
L.

HULL AND SELBY RAILWAY.

To the Editor of the Railway Times.

SIR,—A letter appeared in your last week's paper, signed "An Original Shareholder," inquiring "how far the Directors of this line will be justified in taxing their almost exhausted treasury by pursuing an expensive opposition to the Dock Company in a dispute as to the best site for a new dock at that place."

I take it for granted that the writer of the letter is not a resident in Hull; had he been so, such an inquiry would probably not have been considered needful. The great importance of a new dock (which has so long been wanted at Hull) being made in a situation to be convenient for the railway must be apparent to every impartial person, and so parties are so deeply interested in the question as the shareholders. It is notorious that the Directors of the Manchester and Leeds and York and North Midland Railway Companies, have felt so strongly the necessity of a new dock at Hull being made in a convenient position for the delivery of goods by railway, for exportation, and the transmission into the interior of those imported by that conveyance, that they have united with the Directors of the Hull and Selby Railway in endeavouring to accomplish this desirable object; they are parties to the expense of the survey, &c., made by Mr. Stephenson, of the West Foreshore, which was considered by the Dock Company to be an ineligible site, but which he pronounces to be the best in the neighbourhood for the purpose.

The question is not a municipal one, but the Corporation, as such, is deeply interested in the

* We entirely agree with our correspondent.—ED. R.T.

BURGH AND GLASGOW RAILWAY.

To the Editor of the Railway Times.

—In your number of 18th of June last I that this line would doubtless, as opportunity , be extended about 1¼ miles, to a more con- t terminus in the heart of the City of Edin-

ve now to inform you, that notices have been of an intention to apply to Parliament for rpose; and for a suitable increase of capital.

Your obedient servant,

SCOTUS.

December, 1842.

ONDON AND DOVER RAILWAY.

To the Editor of the Railway Times.

—Your correspondent, "A South-Eastern," ems sadly vexed with me for alluding to the 0*l.* required at the meeting on the 2nd in- and denies that money was required, because required in the *usual way*, is gloomy enough dict that Parliament will not sanction what rectors so justly deem essential to the success undertaking—a Grange-road station.

, as the Chairman explained, that an infor- respecting the Standing Orders of the House stopped the Bill last session, I think "A South-Eastern" may be assured that the impediment will be removed, and the desired sanction obtained next session.

To avoid misapprehension as to the capital of the Company, I beg to recapitulate the items which have already been reported in your columns:—

56,000 shares of 50*l.* each; half issued at par, half at 25*l.*		£2,800,000
Loans raised	£716,000	
Loans authorised on the 2nd instant to be raised	£220,000	
New capital proposed on the 2nd instant	400,000	
	620,000	
		1,336,000
Total		£4,136,000

which capital the Directors seem to think will suffice to complete the line, inclusive of the Dover and Grange-road stations.

The line will probably be opened throughout about the 1st January, 1844. As to its profits, the question is difficult: I am inclined to think that the Paris traffic will be its chief support, but that it will be deprived of a material portion of that traffic by the Brighton, Dieppe, and Rouen route, and the Southampton, Havre, and Rouen route, until the Paris and Boulogne Railway be constructed, which is not likely to be done for half a dozen years at least; that line, however, once made, the lost traffic must revert to it, in addition to which so expeditious a conveyance will certainly create an amount of traffic not at present dreamt of.

For half a dozen years to come, then, I entertain an unfavourable opinion of the line; I do not expect the average weekly receipts to exceed 4,000*l.*, and, from the numerous cheap competitors, think the fares must be kept so low that the working expenses and tolls will amount to at least 50 per cent. of the gross receipts, The following is my estimate of the profit to an investor at the price of 23*l.* per share, 56,000 shares, amounting to 1,228,000*l.*

Weekly traffic, 4,000*l.*		£208,000
Deduct for tolls, working expenses, &c., 50 per cent.	£104,000	
Interest on 1,336,000*l.*, at 5 per cent.	66,800	
		170,800
Leaving for interest on 1,228,000*l.* being at the rate of 3 per cent. per annum.		£37,200

I am, Sir, yours, &c.

IDEM.

27th December, 1842.

CALEDONIAN RAILWAY—No. 1.

To the Editor of the Railway Times.

SIR,—I was one of those who agreed to giving power to our Board of Directors, to support the extension of the Lancaster line to Carlisle, called "Caledonian Railway, No. 1;" not that I could convince myself, as others appeared to do, that once this northern line made, the passengers who now go by *our* commodious and superb steamers, would all go by this railway, nor did I believe that the number of such passengers would be doubled, much less did I believe that, upon such northern line being made, we should secure along our Grand Junction line all those who now travel by steamers on the eastern coast; yet I did consider, that were *this the only* line of railway to connect London and Scotland, we should get a great many additional passengers, and lose none.

However, matters have wonderfully *changed*, for now I perceive by your advertising columns, that instead of this being Caledonian Railway "No. 1" it is "No. 2," and very much 2! for not only has the eastern coast line the start of us, having obtained their Act of Parliament, but are, as I understand, now *at work in the construction of that line*; if this be fact, what becomes of all original expectations of our securing the traffic of the *eastern* line, and *Edinburgh* passengers; and what becomes of the assertions constantly reiterated, that the eastern line would not go forward?

The simple question then is, what traffic are *we* to gain? None, except those few individuals going to or from Glasgow, who may not mind paying double, rather than go by steamers. Is it not, then, worse than blind delusion, to aid further the Caledonian extension line? If the people of Carlisle and Kendal require a railway, let them make it themselves, and with anybody's money but ours.

I may be wrong in my conclusions, and shall be happy to see these, to me, startling difficulties removed if they can be. Some may say, "ask your Directors," but I answer, "I would rather *put the question publicly, and get a public reply.*"

I am, Sir, your obedient servant,

A SHAREHOLDER IN THE GRAND JUNCTION RAILWAY.

Liverpool, 25th December, 1842.

SOUTH-EASTERN RAILWAY.—Our respected member, E. R. Rice, Esq., with Captain D'Aeth, Mr. Hodges, and another gentleman, visited the Shakspeare and Abbot's Cliff tunnels last week, when they expressed themselves highly gratified with their appearance, as well as with the progress made in the Abbot's Cliff tunnel, nearly one-third being completed. On their return, they were further gratified by having a view of a blast of two barrels of gunpowder, as a specimen of the manner in which many tons of the cliff over the sea-wall have been brought down within the last few months, and in which it is intended to bring down the Round-down. We are happy to hear that all the persons who lately received injury on these works have, with very few exceptions, returned to their employment, and that none of the accidents have proved fatal to life or limb, save in the case of the poor boy Lorden, some three or four months back. —*Dover Chronicle.*

TWENTY-TWO CART HORSES, BRICK CARTS, HARNESS, &c.—To be Sold by AUCTION, by Mr. DIXON, at his Repository, Barbican, on Friday, January 6, 1843, at One o'Clock, Twenty-two valuable, fine-shaped, good, seasoned Cart Horses, with the Thill and Chain Harness; Ten Brick and Rubbish Carts, sold in consequence of having completed a Contract.

Colours—Blacks, Bays, Browns, Chesnuts and Greys.

☞ The above Stock of useful seasoned Cart Horses are worthy the attention of Brickmakers, Farmers, Contractors, Carmen, Wharfingers, Warehousemen, and Tradesmen, as they are from constant and hard work, and for absolute sale.

On view, and catalogues may be had, two days previous.

A great variety of New and Second-hand Carriages of every description, always on Private Sale at this establishment, remarkably cheap.

TWENTY-FIVE SUPERIOR MACHINE HORSES, FOUR-HORSE HARNESS, CLOTHING, &c.—To be Sold by AUCTION, by Mr. ROBINSON, at his Repository, Little Britain, City, on Thursday, January 5, 1843, at Twelve o'Clock precisely, Twenty-five superior, short-legged, fast, good, seasoned Horses, which have been working that celebrated fast Coach, the *Shannon*, between Chadwell and Chelmsford, and sold solely in consequence of the Proprietor discontinuing to horse the same; also, the Harness and Clothing—the whole of which genuine stock will be sold without reserve, exchange, or addition.

The above superior Stock of Horses are well worthy the attention of Gentlemen, Job Masters, &c. requiring neat short legged Buggy, Phaeton, or Brougham Horses, as well as Coach, Post and Omnibus Masters, Cab Proprietors, Commercial Travellers, Tradesmen, and others wanting really useful Horses in first rate condition for immediate work.

Colours—Greys, Bays, Browns, and Chesnuts.

On view two days previous to the sale, when catalogues may be had.

BANKS'S PATENT.—TO RAILWAY DIRECTORS AND ENGINEERS.—T. Banks has great pleasure in announcing that, by the application of his patent improvement to the repairs of the Tires of Carriage and Engine Wheels, a working surface is restored of several times greater durability than any before used.

The Testimonials already received of the efficiency and economy of this plan, are too numerous to be placed in an advertisement.

Licences will be granted to Railway Companies, or other suitable parties.

For further particulars, address Thomas Banks, Engineer, Bengall street, Manchester.

N.B. Patents are obtained for Foreign Countries, as well as for Great Britain and Ireland.

TO CIVIL ENGINEERS, &c. &c.—A Civil Engineer, who has obtained the highest mathematical honours, having a few hours daily at his disposal, is anxious to obtain a few private pupils, to whom that theoretical knowledge considered so essential to the Engineer of the present day, would be imparted at a moderate expense.

For further particulars, address to C. E., *Railway Times* Office, 122, Fleet-street.

Great North of England Railway Office,
28th December, 1842.

GREAT NORTH OF ENGLAND AND THE NEIGHBOURING RAILWAYS. — SIR,—An Address, taken from the *Gateshead Observer* of the 17th instant, and emanating from a meeting at Newcastle of some shareholders of this Company, having been laid before the Board on the 27th instant, its first meeting after the publication of the same, the annexed Address from the Directors to the shareholders of this Company, was ordered to be printed and circulated among the proprietors.

I am, Sir, your most obedient servant,
W. O'BRIEN, Secretary.

Not unmindful of the attacks that have been made upon them by various anonymous writers in provincial and other papers, the Directors of the Great North of England Railway have been anxiously looking forward to the next half-yearly meeting as the proper time to answer any inquiries, and to give the fullest explanation of every circumstance connected with the undertaking; and they feel satisfied that they will then be able to convince every candid mind of the unfairness of the charges that have been made against them. The Address, however, lately issued by a meeting of some of the proprietors at Newcastle and its neighbourhood, and circulated among the shareholders, has decided them on not remaining silent any longer, as they are convinced, should the proprietary be induced to afford their support to the authors of this Address, and thus enable them to carry their objects into effect, that a serious blow will be struck at the prosperity of the Company, at the very moment when the worst is at last passed, and brighter prospects are opening.

The first part of the Address gives an account of the originating and constructing the railway, up to the period when the adoption of the junction line was recommended by the Directors. On this there is little to remark, as the facts are undisputed: but a fuller statement would have shown that the Directors in the first instance took the best means in their power to obtain accurate information; they sought the opinions of engineers of the highest authority of the day, both as to the line of railway and cost of its construction. And even those who now join in condemning them will, on reflection, admit that it would have been unwise in any Board of Directors to have preferred their own opinion to the opinions of eminent professional men, in a purely engineering question. Experience, however, has since shown that the course of that portion of the line now abandoned was not the most eligible one, nor the estimates even approaching the inevitable cost of the works. It is nevertheless made a subject of reproach that the Directors anticipated the result of experience, that they abandoned the northern portion of the line even at a considerable sacrifice, and that by so doing they offended the "less fortunate shareholders" of Newcastle and its vicinity,—but saved the whole concern from irretrievable ruin. And this is the conduct which some shareholders have no hesitation in insinuating was guided solely by a dishonest wish to consult the "selfish schemings of the Stockton and Darlington Directors," and to proceed no further north than Darlington. This charge is made, notwithstanding the parties making it are fully acquainted with the fact, that no sooner had the Directors obtained the sanction of the legislature to their first Act of Parliament, than they *forthwith* purchased a great portion of the land required for the execution of 9 miles of the line in the neighbourhood of the city of Durham, where the works were heaviest, and advertised for tenders for the execution of the contracts. A panic occurred at this time in the money market—railway shares of all kinds, which up to this period had been eagerly sought for, became unsaleable at any price—and this, together with the fact of a great number of shareholders refusing to pay up their instalments, induced the Directors to pause until the Company's second Act was obtained for the execution of the southern portion of the line; they then devoted their energies in the first place to the completion of the railway from York to Darlington, in order to extend the railway communication from the metropolis as far north as possible, and thus to realise an available income before engaging in the most expensive portion of the line.

Before examining the remainder of the Address, the Directors take this opportunity of stating, that the Stockton and Darlington Company is, and must always be, independent of the Great North of England Company, the originator of its own measures and responsible for its own actions; and they maintain in the most unequivocal manner that they are equally independent—and, notwithstanding the confidence with which false accusations have been made, they defy their boldest detractor to point to one single action in which they have failed to maintain the independence of the Board, or sacrificed the interests of this Company to those of the Stockton and Darlington Railway, or of any individual whatsoever.*

The Address then gives an account of various proceedings of the Stockton and Darlington Company after the junction line was submitted to the shareholders. It will be recollected that the first proposal as to a junction line was based on the plan of the Companies availing themselves as much as possible of existing lines of railway—and there is high authority for the opinion that it would have been advantageous to the Junction Company to have used part of the Stockton and Darlington Railway. But it is undeniable, and it is important, that the shareholders should not allow themselves to be deceived on this point, that the Board of the Great North of England Railway Company did not arrive at any such conclusion. This was not left for a moment in doubt; having pledged themselves irrevocably to the independent line, none were more decided in its support than the deputation in London, when the Bills were before Parliament—none were more firm at the Junction Board than the Great North of England Directors, and at their own Board they refused even to consider the proposal of the Stockton and Darlington Board, unless previously sanctioned by the guaranteeing Companies.

The next topic of the Address is the recent Parliamentary notice issued by the Stockton and Darlington Company. It is not the business of the Directors to condemn or defend the Stockton and Darlington Company—but solely to protect this Company from any injurious consequences which might result from their measures or those of any other body; and this, in conjunction with the other guaranteeing Companies, they are fully prepared to do should circumstances require it.

The avowed object of the Address is to dismiss some of the Directors: the real object may be inferred from the speeches. It is not only to turn out the Directory, but to substitute in their place such men as shall "truly represent the interests of the shareholders"—that is, as usual in such cases, the interests of those shareholders who took the lead at the meeting, and took so much trouble to get it up. The alteration of the motion so as to include the Treasurer and Solicitor being deservedly considered by one of the speakers as useless; for as he explained, "that if a proper Board of Directors were obtained, the two gentlemen under consideration would soon be discharged,"—and though it is not intimated who are to be chosen as successors, yet it is probable that point has not been entirely overlooked. The same gentleman also complains bitterly of injuries sustained by the Durham and Sunderland, Hartlepool, and other railways, in the competition with the Stockton and Darlington Railway, for the Newcastle traffic; this traffic is now divided between the Stockton and Darlington Railway, the road coaches, and the coast lines: and the Great North of England Company preserving *strict neutrality* towards all, have in consequence offended all;—the competition may or may not be injurious to each or all of these parties, but it is clearly a benefit to this Company, and therefore it is quite possible that those Directors who should truly represent the interests of gentlemen residing in Newcastle, Sunderland, and the adjoining districts, may not so truly represent the interest of the Great North of England Railway Company.

The Directors cannot help asking, what many of the gentlemen who attended the meeting at Newcastle have *done* to support this railway? They refused to pay their calls, until compelled to do so by the Directors; an offence not readily foregiven. But it will not be forgotten that when the Directors, and they must add the Treasurer also, were involving themselves in serious personal liabilities to carry the concern through its difficulties, these parties, regardless of what they owed to the other proprietors, did what they could to destroy the undertaking altogether, by withholding their subscriptions, and thus put the Company to an immense additional expense, the whole blame of which they do not hesitate *now* to attribute to the Directors.

With regard to themselves, the Board feel that the points on which explanation or remark may be wished, divide themselves into two heads—the construction of the line, and its present working.

The cost of formation having so far exceeded the original estimates is a fact which has occasioned no less disappointment to the Directors than it has to the Shareholders. That in the expenditure of 1,200,000*l.* many errors have been committed is not attempted to be denied. It is impossible it could have been otherwise; and those who have had to conduct works of similar magnitude, and of a nature which in every instance without exception has falsified the conclusions of professional skill, will be the first to admit that these errors are rather subjects of regret than for severe reprehension. Experience on this line as on all others has shown that the original estimates were far too low. But they were grounded on the best authority that could then be obtained—and however inexcusable these errors on the part of the Engineers may be now, they were then universal and inevitable. The Directors affirm they were greatly misled (they do not say intentionally) by the estimates of their Engineer, the proofs of which are ready at Darlington for those who may wish to examine them; and every one knows that in such works as railway contracts with extra works by schedules of prices, the most extensive mischief may be done before the Directors can apply a remedy. Still, if due allowances are made for these errors, for the inevitable sacrifice of capital on the abandonment of the northern end of the line, and for the expense of obtaining money to carry on the works, occasioned by the shareholders refusing to pay their calls, it will be found that this line has not cost more than others of similar character, executed at the same period, and which now stand high in favour.

The Chairman of the Newcastle meeting stated, and the truth is indisputable, that as men of business their wisest plan would be to consider the past as beyond recall, except for the purpose of devising a better mode of management for the future. Adopting this view, the Directors proceed to explain the present management as the most important matter which can now occupy the attention of the proprietors.

When the line was opened for public traffic, the Directors resolved on fixing the working expenses at the lowest possible point consistent with perfect efficiency; and they now challenge [illegible] has excelled them in their [illegible] sant with these matters, it will [illegible] with ten passenger trains, ten [illegible] running with coal trains, besides [illegible] trains, the total annual cost of [illegible] working the line, is only £477 per [illegible] ever, that no opportunity of [illegible] they took advantage of the [illegible] investigation into the management of the [illegible] Railway, to submit their establishment to the [illegible] amination of both parties, and they [illegible] tee of Investigation to inspect the [illegible] of the railway. They selected those [illegible] of their determined views of [illegible] placed in them by the public, the [illegible] sessed of the subject, and [illegible] rested parties they were clear of all [illegible] prejudices. The invitation was [illegible] want of time and inclination to [illegible] task, and one of the most influential [illegible] shareholder in this railway) on the ground that [illegible] the knowledge he possessed of the [illegible] Company, little or no saving could be [illegible] therefore saw no benefit to arise to the [illegible] such an investigation." What is still more [illegible] the expression of a favourable opinion, no [illegible] been made to the Board of any improvement, [illegible] lines, standing deservedly high in public estimation, making not inconsiderable changes, [illegible] example of economy set by this Company.

The Treasurer having been appointed [illegible] ers, the Directors are not responsible for [illegible] demerits; but as he and his friends have [illegible] ney to a very large amount in this undertaking, and [illegible] there is nothing to be gained by changing the [illegible] the Board do not see any advantage, but rather a [illegible] vantage, in removing him from office. And they [illegible] take this opportunity of stating, that while Mr. [illegible] Pease has in no one instance interfered with the [illegible] ment of this railway, he has rendered good service [illegible] Company, not only in his character of Treasurer, but [illegible] coalowner, a member of the Stockton and [illegible] Board, and a Member of Parliament; and [illegible] this much, which it is right the shareholders [illegible] know, they will no further intrude between Mr. [illegible] and those parties who undertake to engage his [illegible]

The Board are answerable for the appointment of [illegible] Mewburn and Hutchinson as their Solicitors, and [illegible] any charges are substantiated against them, or [illegible] gible persons pointed out, the Board consider that [illegible] then be time enough to change them or any other [illegible] Company's servants.

To those gentlemen who have [illegible] Directors feel called upon to perform the duty [illegible] that their conduct has been strictly honorable, [illegible] tended to the advantage of both Companies. The [illegible] interests of the two Companies were connected, [illegible] afforded valuable assistance in adjusting mutual [illegible] and securing mutual co-operation—where the [illegible] not completely identical, they withdrew from the [illegible] and allowed each Board to pursue [illegible] pendent course of action.

It has long been the intention of this Board [illegible] their number so soon as the expiration of certain [illegible] liabilities might render this practicable; but to [illegible] once to seven would be fraught with danger, [illegible] indeed be illegal. As was stated last August, they [illegible] reducing their number to twelve at the next [illegible] There are at present fifteen Directors; five go out by [illegible] tion in the spring, including the only two Directors [illegible] seats at the Stockton and Darlington Board, who only offer themselves for re-election.

With regard to their future conduct, the Board [illegible] alder that their duty will be to direct the [illegible] attention to the working of the railway, which [illegible] now giving—to maintain and foster a feeling of [illegible] goodwill between themselves and the Boards of the [illegible] ferent Companies whose traffic is much connected with theirs—to preserve the independence of this Company from any encroachment, whether it comes from the [illegible] west, north or south—to make themselves the [illegible] no party—to study the interests of the Great [illegible] England Railway Company solely; and the Board [illegible] if supported in this course by the proprietors, [illegible] anticipate a steady progress in prosperity [illegible] sition or competition.

In conclusion, the Board request the [illegible] sider the following facts:—The railway [illegible] the object of all should be to realise [illegible] attainable profit; under the present [illegible] torious that no money is spent that can [illegible] traffic lost that can be got—that where [illegible] investigation, and afforded the fullest [illegible] inquirer, there can be nothing to conceal—[illegible] personal credit of the Directors is so much [illegible] must be deeply interested in success—[illegible] boldest railway reformers cannot suggest [illegible] there is little to be gained by change. To [illegible] speakers at the Newcastle meeting, the Board [illegible] thing to say, being aware that in pursuit of [illegible] jects, any argument drawn from considerations [illegible] ral good, would be alike unheeded and [illegible] many of them, however, the Board [illegible] unfeigned respect; they believe that with [illegible] personal feelings will be overruled by [illegible] higher description; and trusting that a [illegible] dispassionate examination will [illegible] sent views, they entreat them, [illegible] respectfully, to consider well the [illegible] of the measures to which they [illegible] their names and influence—[illegible] a struggle, the [illegible]

* The purchase of the Croft branch from the Stockton and Darlington Company having been named, it will be sufficient to state the following facts, to show how anxiously the shareholders were consulted at every step. The matter was laid before the general meeting of the 27th February, 1838; this meeting was adjourned to the 10th April, 1838, for the purpose of giving the subject fresh consideration. At the general meeting of the 4th September, 1838, a Report was received, and the purchase ordered. The whole was condemned at the general meeting of the 5th March, 1839, having thus undergone the scrutiny of no less than four general meetings.

EDINBURGH AND GLASGOW RAILWAY. —NEW STOCK, QUARTER SHARES.—The Third Call, being Two Pounds Ten Shillings per Share, falls due, in terms of the Resolutions of the Shareholders, on Tuesday, 10th January, 1843. Interest at the rate of 5 per cent. will be charged from the above date on the amount of the Call unpaid; and interest will be allowed by the Company, at the same rate, on all Calls paid in advance.

The Proprietors will please observe, that the receipts for all the Calls subsequent to the first, must be given by the Bankers *on the Scrip*, no other evidence of payment being admissible. Scrip may be obtained by forwarding to this office the receipt for the first Call.

Parties who are still in arrear of one or both of the First and Second Calls, are requested to make *immediate* payment of them with interest.

H. G. WRIGHT, Secretary.

Edinburgh and Glasgow Railway Office,
Glasgow, December 28, 1842.

RAILWAY ACCIDENTS.—To the Directors of the Railways of Great Britain.—Gentlemen,—Having invented a simple and strictly practical method of protecting passengers by Railway from injury in case of accident from collision, slips, wilful obstruction, derangement of rails, breaking of axles, &c., we beg most respectfully to submit to you the following proposition, viz.:—That we will divulge it to any Engineer whom you may collectively appoint to subject it to the necessary proof, on receiving a pledge from the Directors of each line of railway to remunerate us at the rate of £10 per mile on the length of their respective lines, such sum to be paid to us when the plan is proved to accomplish what we state. We may remark, that we can prove that had this apparatus been then in use, none of the passengers could possibly have been injured by the frightful accident on the Versailles Railway, or by several recent and fatal ones in this country. We have the honour to be, Gentlemen, your most obedient humble servants,

REDDELL, Brothers.

Bow Common, Limehouse.

We should be happy to treat with any gentleman willing to introduce the improvement on Foreign Railways.

SIR W. BURNETT'S PATENT PRESERVATIVE FOR TIMBER, CANVASS, CORDAGE WOOLLEN, &c.—This process is a very cheap one. It effectually protects even the commonest domestic or Colonial Timber and Deals from Dry-rot, and other causes of premature decay; and it renders them equal to the best Timber from the Baltic. No doubt can exist of its efficacy in the preservation of all the above-named articles, after the Official Reports from the heads of various Government Departments, which may be seen, together with the specimens, at the Company's Office, No. 4, Castle court, Birchin-lane, Cornhill, London.

TWO HORSE-BOXES REQUIRED by the Chester and Birkenhead Railway Company.—Any Railway Company having a surplus stock will be treated with; or parties wishing to contract for the same may obtain full particulars on application to Alfred Yarrow, the Company's Engineer.

Birkenhead, December 29, 1842.

THE ARCHITECT, ENGINEER, AND SURVEYOR, or London Monthly Journal of the Engineering and Practical Sciences, and of Architecture and the Fine Arts. The first number of the new series is published this day, containing many valuable papers, by able practical men, on various subjects connected with the Professions.

N.B. The 3rd Volume (for 1842) of the above work is just published, price 18s., and, with Vols. I and II, may be had of all Booksellers.

London: Bell and Wood, 186, Fleet-street.

FENCING RAILWAY.—THE LLANELLY RAILWAY AND DOCK COMPANY will Let by Contract, the Repairing and Maintaining, for Seven Years, the Fences on their main line and branches. The Specification and Conditions may be seen at the Offices of the Company, No. 9, Old Jewry, London, or at the New Docks, Llanelly, Carmarthenshire. Tenders, sealed, addressed to the Secretary, 9, Old Jewry, London, superscribed, "Tender for Fencing," will be received up to Wednesday, the 18th of January next. The Committee will not bind themselves to accept the lowest Tender.

By order of the Committee of Management,
JOHN BIGG, Secretary.

9, Old Jewry, December 30, 1842.

Preparing for Publication.

THE HISTORY AND MYSTERY OF THE THAMES HAVEN DOCK AND RAILWAY COMPANY, from its projection in 1835, to the close of 1842, containing a full, true, and particular Account of this very extraordinary Undertaking, and of the Parties who have from time to time honoured it with their sanction and support. Also, an Appendix, containing the Prospectuses, Advertisements, and Accounts periodically issued, with a choice Selection from the Correspondence of the Secretary and other Officers of the Company.

N. B. Any communications on the subject, of an authentic character, will be thankfully received, and may be addressed to A. B., at the Office of the *Railway Times*, 122, Fleet-street.

BOLTON AND PRESTON RAILWAY COMPANY—TENDERS FOR LOANS ON MORTGAGE.—The Directors of this Company are prepared under the powers of their Acts of Parliament, to receive Tenders for the Loan of Money, in sums of not less than £200, and for terms of 3, 5, 7, or 10 years, and to grant Mortgages of the said undertaking, and of the Rates, Tolls, or monies arising therefrom, as securities for such Loans, bearing interest at the rate of £5 per cent. per annum.

Interest Warrants, for the whole term for which the Loan shall be made, will be delivered to the Lenders along with the Mortgages, and be made payable half-yearly, at the Company's Bankers in London or Bolton, as may be preferred.

The Tenders are to express the sums, and the term of years for which the same are proposed to be lent, and to be addressed to the Secretary, at the Company's Office, Bolton.

By order of the Board of Directors,
PETER SINCLAIR, Secretary.

Bolton, 24th May, 1842.

PATRONISED by all the principal Architects and Builders in this Country and Abroad.—SEYSSEL ASPHALTE.—In consequence of the daily attempts made to imitate this valuable mineral production, and of the name of "Asphalte" being given to most of the spurious and "cheap" materials, the Directors of this Company particularly recommend Architects, Builders, and others (for the purpose of securing the use of the genuine article), to insert in their Specifications "The Seyssel Asphalte, Claridge's Patent," and not merely "Asphalte," or "Bitumen," as, in many cases where these terms have been used, gas-tar and other worthless and offensive compositions have been introduced. For the information of those residing at a distance from London, and of those who, having employed the spurious composition, may, from its failure, have become prejudiced against the use of Asphalte, the following are mentioned as some of the distinguishing qualities of the genuine material. The Asphalte of Seyssel is of a light colour, closely resembling Yorkshire stone, has a smooth surface (without being slippery), and joints almost imperceptible; it is also free from smell, is not acted upon by change of temperature, and is at all times dry and warm, and remarkably pleasant to walk upon, and, from its elasticity, never cracks. The factitious material, on the contrary, has a dark and dirty looking appearance, presents a rough and coarse surface, and from its brittleness, is liable to crack, particularly in frosty weather. In consequence of the above qualities, the genuine material (being perfectly impervious to wet) has been used with great advantage for roofing; it can be laid down to any extent, presenting one uniform surface, and is far superior to lead, as it is not liable to expansion or contraction in consequence of any change in the temperature. For covering of arches (to prevent the percolation of wet) it is invaluable; the Greenwich Railway Company alone having covered upwards of 400 000 superficial feet. It has also been used on the Great Western, Birmingham, Midland Counties', South-Western, Brighton, Blackwall, and other Railways; at the joint Stations, London Bridge, and at the South Metropolitan, Highgate, and Nunhead Cemeteries. As proof of the great durability of the genuine Asphalte, it need only be mentioned that the first work executed in this country with this material (amounting to 3,952 feet), was at Whitehall, opposite the Horse Guards, in the month of April, 1838, and which, although only half an inch in thickness, has remained up to this time (a period of four years and eight months) in the most perfect condition. Books of Testimonials, with Scale of Prices, may be obtained on application to

J. FARRELL, Secretary.

Seyssel Asphalte Company's Depot, Stangate, London.

Note.—Neither the pavement in Parliament street, London, nor the works at the Model Prison, at the Abney-park Cemetery (which, from its failure, has since been removed), or at the Hotel at the Slough Station of the Great Western Railway, were executed by this Company.

AN ELEGANT AND USEFUL PRESENT.

Just Published, in One Volume, price 5s. 6d., handsomely bound, with gilt leaves, sides, and back, and illustrated by

FOUR HUNDRED ENGRAVINGS,

PICTURESQUE EXCURSIONS; forming, by means of its engravings and descriptive letter-press, a complete Guide to, and Remembrancer of, all scenes of interest connected with the following places and their neighbourhoods:—Richmond, Hampton Court, the river Thames from Kingston to the Nore, Margate, Ramsgate, Dover, Hastings, St. Leonard's, Brighton, Shoreham and its Railway, Worthing, Bognor, Southampton, Netley Abbey, Lymington, and the Isle of Wight. Edited by ARTHUR FREELING.

"A work in which the elegant and the useful are eminently combined."

London: Ackermann, Strand; *Railway Times* Office, Tilt & Bogue, and Bell & Wood, Fleet-St.; and all Booksellers.

RAILWAY IMPROVEMENT.

On the 5th of January, 1843, will be published, in one Vol. 8vo., with 28 Plates, price 10s. 6d. in cloth boards, a new Work, entitled

EXAMPLES OF RAILWAY MAKING; which, although not of England Practice, are submitted, with Practical Illustrations, to the Civil Engineer, and to the British and Irish Public, by John Weale, 59, High Holborn

---

SMOKY CHIMNEYS CURED AT ONCE—The Advertisers have discovered the cause of Draughts, Downward Currents, &c., and they undertake a few hours to perfect the Draughts of the most [illegible] chimneys. The cure is effected by a simple and [illegible] process, at a stated moderate charge when [illegible]

W. H. Phillips and Co., Potteries, 4, [illegible] square. References in all parts of London.

N.B. Contracts made to warm Conservatories and [illegible] houses in a genial manner, at one-fourth the [illegible] cost.

EQUITABLE GAS-LIGHT COMPANY.

DEBENTURES.—Notice is hereby given, That the Directors of this Company, under the [illegible] of the Act of Parliament, 5th Victoria, cap. 56, are ready to receive Tenders for £60,000 upon Debentures at 5 per cent. to be payable at periods of 5, 7, or 10 years, at the option of the lenders, in sums of from £100 to £1,000.

Persons desirous of tendering are requested to send their Proposals in writing, specifying the number of Debentures and their amounts, addressed to the Secretary, Mr. G. J. Gregory, at the Company's Office, 2, Adelphi-street, Adelphi.

Dated this 15th day of November, 1842.

By order of the Board of Directors,
G. J. GREGORY, Secretary.

A considerable portion of the above sum is wanted under the Act of Parliament to be applied in payment of the Company's mortgage debt, the interest upon which is 6 per cent., has been regularly paid half-yearly.

OPINIONS OF THE PRESS.

"This work, a *tenth edition* of which is now presented to the public, *ten thousand copies having been sold since its first appearance*, has been very much improved, enlarged by the addition of a more extended detail of general principles, as also by the insertion of many highly interesting cases. We feel no hesitation in saying that there is no member or society to whom it will not be found useful, whether such person holds the position of a *parent*, a *preceptor*, or a *clergyman*."—Evening paper.

"This is a work that we fear there exists many for to cause us to hesitate to recommend it to the perusal. Every branch of those frightful maladies, whether the result of immoral habits or secret vice, is succinctly treated, and divested of all medical [illegible] plain and easy directions are given for the best [illegible] pursued in all cases, however complicated or [illegible] hopeless. To the married, as well as the [illegible] little work alike affords consolation and [illegible] cases, and we are doing a service to society in [illegible] ing it to general notice."—*Kings and Lords* [illegible]

"Messrs Curtis's work, entitled MANHOOD, [illegible] the few books now coming before the public, [illegible] ject which can lay claim to the character of [illegible] professional, at the same time that it is [illegible] all who read it. The moral and medical precepts [illegible] it render it invaluable."—*Magnet*.

Messrs. Curtis and Company are to be consulted at their residence, No. 7, Frith street, Soho-square.

Country Patients are requested to be as minute in the detail of their cases. The consultation fee [illegible] accompanied by the usual consultation fee of [illegible] In all cases the most inviolable secrecy may be relied on.
